The reporter had been "out on the line." He had seen young Thompson under the fire of emergency. He had seen an old bridge toppled into the river and a new steel bridge raised into its place, all within twelve minutes' time and without delay to a single train, thanks to the genius of this twenty-nine-year-old engineer.

Let's leap over the twenty-odd years, and see what happened to the prophecy.

The United Gas Improvement Company of Philadelphia, with the hundred concerns in which it has holdings or owns outright, is a billion-dollar aggregation. It is a holding, management, engineering, and contracting company, controlling and managing gas works and electric light and power plants throughout the country, and a builder of gas and electric plants. The total gross earnings of all its interests exceed $257,000,000 annually. The plant and other investments are in excess of $1,152,000,000, and the total capitalization is $1,077,000,000. Its presidency is a mighty big job.

And yet, a few months ago, this great industrial empire elected as its president the man who could smile at six in the morning with a toothache, and who to-day, at fifty-one, still is able to meet trouble before breakfast, and smile.

Now, anybody can smile when the going is good. The politician smiles when he seeks your vote. You smile if the boss doubles your salary, or the home team wins the pennant. Anybody *can* smile then; and so can A. W. Thompson, for he is a very human sort of a chap.

But—

Thompson can smile also when he smiles alone, when a smile is the weight of a hair's difference between winning and losing. He has smiled as a public utility chief in a hostile and angry city, and made that city, to a man, smile with him. He has smiled at what men said were impossible engineering problems, and broken world's records in doing them. He has smiled when a slip meant disgrace and his job, and jumped from that job to a bigger one. As a boy he smiled when the hometown bank failed and stripped his family of its last penny, saved by his mother to send him through college; and he went through college anyway, "on his own"!

EIGHT years ago the street railway system in Pittsburgh was in the hands of receivers. Its equipment was dilapidated. The cars were out-of-date. The owning company was cartooned by the newspapers.

One of its directors, tired of meeting deficits, said, "The company is criticized as being inhuman and soulless. Then let's humanize it, let us give it a soul. There is one man I know who can do this, if he will."

The name he mentioned was that of Arthur Thompson, then a vice president of the Baltimore and Ohio.

Thompson came to Pittsburgh, a steam railroader trained, a mover of freight, and a builder of bridges. In no sense was he a street railway man. Admittedly, he was brilliant. Some said he was a genius. But brilliancy, and even genius, could not have won Pittsburgh. The city was out for the street-car system's blood.

Seven years in all, Thompson was in Pittsburgh, the head not alone of its railways but also of its gas and electric services. And September last, when he left to take the job in Philadelphia, the street railway deficit had been turned to a profit. Stock quoted at nineteen when he took hold had risen to seventy-five. New cars were on the streets, and new tracks. Fares had been lowered. A vast program of reconstruction and expansion, backed by banks and business alike, was under way.

But Thompson's victory was greater than mere material changes possibly could suggest. During those seven brief years he had won Pittsburgh and its citizens. He had won the mayor and the city government. He had won the newspapers and the banks. This victory belonged to the man himself.

He had come to Pittsburgh to assume what friends warned would be a thankless task. He left, a popular idol, with an honorary degree conferred by the University of Pittsburgh, and a high place in the public's esteem.

There is one thing sure: a scowl didn't win Pittsburgh to Arthur Thompson, nor did it win him his post with the United Gas Improvement Company.

The latter company has no financial troubles—it hasn't missed a dividend in thirty-five years. But it also operates public utilities; its day-in and day-out business is with cities, and towns, and *people*. It has use for a president who can smile!

Thompson, christened Arthur Webster, was born in Erie, Pennsylvania, in 1875, the only boy in a family of four. Through his mother, he is descended from the famous family which gave John Webster, one of Connecticut's early governors, to the Colonies, and Noah Webster, author of the dictionary, to America. His father, Sheldon E. Thompson, and his paternal grandfather were both veterans of the Civil War.

They weren't rich, these Thompsons, nor lucky. Sheldon Thompson, after the failure of two enterprises he was connected with, chose railroading. He helped build the water services of the Lake Shore and Michigan Southern, in Illinois; was an erecting foreman with the Michigan Central, the Indianapolis and St. Louis, and was among the pioneers who drove the Atchison, Topeka and Santa Fé through from the Missouri River to the Pacific Coast.

THIS was adventure, the kind that a boy dreams about. Arthur, shuttled from one railroad camp to another, saw the steel rails of progress cross deserts, pierce mountains and span chasms.

"Gee!" he announced, with all the fervor and faith of age five, "I'm going to build railroads too, when I get big!"

And when he skinned a shin or hurt a finger, he choked back the tears and laughed, as the men did. There is something about this railroad building that gets into the blood.

When the boy was seven, his father returned to Pennsylvania to become a foreman in the big (*Continued on page 182*)

Arthur W. Thompson

AFTER years of experience as a railroad man, Mr. Thompson entered the municipal public utility field, and is now president of the United Gas Improvement Company, of Philadelphia, a billion-dollar corporation. He was born in Erie, Pennsylvania, fifty-one years ago. He served the Baltimore and Ohio Railroad in various capacities, rising from an obscure employee in engineering to general manager and vice president. While with this road, Mr. Thompson performed many remarkable bridge-building and other construction feats. Before coming to his present position he reorganized the Pittsburgh street railway system.

Harry Pidgeon

THE lure of the sea, the mystery of remote places, and the love of adventure completely ruined Harry Pidgeon's career as a farmer. But these things, plus his own nerve, have made him one of the most remarkable adventurers now living. His voyage of 35,000 miles around the world in a 34-foot yawl is one of the epics of the sea. At the left is Captain Pidgeon's yawl, the "Islander," which he built, and in which he sailed alone to the islands and continents he had longed to visit. The voyage lasted from November 18th, 1921, to October 13th, 1925.

Around The World Alone Sailed This Iowa Farmer

When Harry Pidgeon was a boy he read of glamorous far-off places, and when he became a man he sailed away in his home-made boat to see them

By James C. Derieux

HARRY PIDGEON'S notion of the happiest possible life is to have a family and a farm. A family consisting of a wife and several children, and a farm in Iowa's corn fields, or California's fruit valleys. That's the kind of man he set out to be.

But Harry Pidgeon missed his ideal! Missed it further than any other man has ever missed a dream of contentment. Instead of settling down to the routine of farm work and to the responsibilities of a husband and father, he sailed around the world, alone, in a thirty-four-foot yawl! The Cruising Club of America awarded him a medal for this amazing feat, a medal testifying to the fact that his circumnavigation of the globe was a unique yachting accomplishment.

Three years, eleven months, and thirteen days he spent in seeing the sights of the world, and in navigating his tiny boat across the great oceans. And in these three years, eleven months, and thirteen days he had time for much thinking. Under the blazing sun of equatorial seas he sat and thought, as his little boat, the "Islander," went faithfully on her course. In the shade of tropical trees, on South Sea Islands, he thought.

It was after his remarkable cruise that I talked with him. After he had enjoyed more time for uninterrupted thought than any other man I have ever heard of. In the course of that conversation he told me that his ideal, earlier in life, was to have that family and that farm!

"I guess I'd be happier to-day," he said quietly, "if I had settled down. But somehow, I got to roving, and couldn't quit. Now, I'm nearly sixty, and it is too late to do anything but keep on roving."

Never before had I talked with a man so absolutely, so utterly free. No family, no responsibility, no particular purpose in life, no duties to perform, no particular need for money! Yes, Harry Pidgeon is a free man! He can come and go as he wills. If a place strikes his fancy, he may stay there for a week, a month, a year, or a lifetime. If it doesn't strike his fancy, he need not stop at all.

And that's the way he has worked out his life—staying in a place as long as it interested him, but not one day longer. Harry Pidgeon is not a large man. I doubt if he weighs more than one hundred and forty pounds. His hair is gray, his skin a khaki brown, burned so by his nearly four years under the hot suns of the tropics.

CAPTAIN PIDGEON'S ROUTE AROUND THE WORLD

He is happy. Of course he is. No man with such robust health, with so few cares, with such a complete freedom from fear of all kinds, and with no desire for wealth or fame could but be happy. Yet, like most of us, he feels that he has missed a greater goal than he has found. I wonder.

BY WAY of warming up for this voyage of thirty-five thousand miles around the world, in and out among islands and continents, he spent fifteen or more years in adventuring quietly along through life. In the gold rush days, he went to Alaska, came back to the States, and went again. Once, while he was in that then desolate land, he "took a walk," as he expresses it, into the interior. He was alone, for his partner had been drowned. This "walk" lasted for twenty-eight days; and in all of that time he saw no man, nor any sign of man.

"I did some thinking while I was on that walk," he said to me. "My mind got to running on some books I had read when I was a boy on my father's farm in Iowa. These books spoke of the romance to be found on some of the South Sea Islands. I decided I'd like to see those places. Before my partner was drowned, he and I planned to sail away some day into the South Pacific. If he'd lived, maybe I'd have had company for my trip around the world. But he didn't live, and I decided to see the islands anyway. I'd become a pretty good sailor while going from one island to another off the coast of Alaska. My partner and I had a little sailboat up there. It was named 'Islander,' too."

So Harry Pidgeon came back to the States again, with his mind made up to see the South Pacific islands he had read about many years before. But the trip was to be delayed. By way of developing his love for roving still more, he built a small barge, eighteen by six feet, with a cabin nine by six, and in this boat, without sails or any other power except oars, he floated down the Mississippi River from Minneapolis, out to the Gulf of Mexico. No one went with him. This trip required more than a year. He tied up when he saw a town that appealed to him; he floated on down when he saw one he didn't take a fancy to. He made photographs on his way down, and sold them for enough money to pay his expenses. He is an expert photographer. That's how he often makes what little money is necessary for his expenses.

Another extensive bit of adventuring was a drive in a wagon from Mexico to Canada along the Pacific coast, and back again to Mexico. Again he traveled alone. He had but one horse for the round trip, which took him from January to October—nine months—to complete. On this trip, too, he was thinking of the voyage he hoped some day to make to those far-off islands that had fired his imagination, when, as a boy, he followed a plow horse up and down the corn rows on his father's Iowa farm.

We were sitting in the cabin of the "Islander," anchored at New Rochelle, New York, as he (*Continued on page 194*)

Mistress Of The Bees

A Jen Culliton Story

By Nelia Gardner White

ILLUSTRATED BY HERMAN PFEIFER

JEN CULLITON had never been one to pry. She did not mean to overhear this time. She had come down-stairs with the quilting frames, and, somehow, they had seemed very heavy, and she had stood a moment, too tired to go on. "I'll call Oliver," she thought, "and get him to take them out."

But she didn't call him. She leaned the frames against a chair and sat down, a little abruptly. She knew she shouldn't have tried to carry the frames.

It was very still in the house. She could even hear the crackling of the wood fire in the kitchen stove. It was with a little start that she looked out through the kitchen doorway and saw that the room was not empty. Beside the stove stood Molly Parsons, from next door. At the back window stood her nephew, Oliver Crewe. There was a hurt in the bend of his shoulders that found an answering pain in Jen's heart.

Oliver Crewe meant a good deal to Jen Culliton. He was all Crewe, with his black hair and blue eyes and tall, lean body, and yet there was a quiet strength about him that was a very match for the strength that seemed to lie eternally in that great, awkward, beautiful figure sitting there beside the quilting frames.

So Jen loved Oliver. She was conscious often of a deep thankfulness that he was to carry on her work here on the farm.

Though she was in plain sight, Jen knew that neither of the two was aware of her. Oliver's hands were in his pockets, his eyes upon the September-golden hills.

"WELL," came his voice, levelly, to Jen through the stillness, "I suppose there's no more use talking about it. We seem to have finished."

Jen could see something almost like fright come into Molly Parsons's eyes. From a graceful, hoydenish child who grew still in the midst of a game of "Catch-a-thief" to listen to a lark's song, had come this woman, beautiful beyond even Oliver's boyish dreams of her, and with the lark's song come now to live in her slim white throat.

"Yes," she said slowly, "we seem to have finished, Ollie. It—it hurts to finish things with you—we've been friends so long."

"*Friends?*"

"Don't, Oliver. I wish I could make you see."

"I do see."

"No; you don't. You don't see how I *have* to sing, whether I want to or not. You think if I loved you enough I wouldn't care about the singing. It—it hasn't anything to do with love."

"You—you've made that clear. Let's not talk about it any more, Molly. There's a limit to what a man can bear. You'll stay for the quilting, won't you? Aunt Jen's been counting on you."

"Yes, of course, Oliver. Ollie—I—"

He turned, and Jen's heart grew tight at the hope springing into his eyes. But Molly did not go on.

"Yes?" he said evenly.

"Oh, nothing, I suppose—only, I hate to cut things off as if they'd never been. I feel like a little girl—going out into the dark."

Into his lean face the feeling came flooding.

"Molly! Oh, *Molly!*"

She made a little protesting gesture with her hands.

"Don't, Ollie. I *have* to go—even if it is dark."

He turned again to the window, did not answer. She stood hesitant, as if she wanted to go to him but could not. Jen felt that if only that still, far-away beauty

The busy, gray-haired women paused in their work,

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

of hers might be lighted into warmth, she would go. But she turned, instead, and came toward Jen in the other room.

"Aunt Jen!" she called.

Everyone called Jen Culliton "Aunt Jen," since the Crewe children had come to live with her.

JEN had risen, drawn the frames again into her arms as if she had just come down-stairs with them. The red stung her high cheek bones, for she was not used to deception. She had on a blue gingham, as she always had nowadays, and a black and white percale apron tied around her waist. She did not shrink with the years, Jen; she was as tall, as powerful as ever.

"Where's Oliver?" she found herself saying. "Thought we'd set the frames up outside. It's going to be plenty warm, and we won't get many more days like this."

"Oliver's in the kitchen," Molly said gravely, but she did not offer to go after him. "Let me take the things out!"

She took the frames in her strong young arms and got them through the doorway. Jen did not follow her. She stood still, watching her for a long moment. Molly was looking toward the house, and there was a look in her eyes as if she were seeing it as Jen often did—the peaceful, pleasant, rambling wings, the wood smoke going straight up to the clear fall sky; but Jen knew that Molly wasn't seeing it at all. She was seeing Ollie.

Jen turned abruptly and went out to the kitchen. Oliver sat at the table, his head down on his arms, all his strength gone out of him. Jen put a big hand, with unbelievable gentleness, on his shoulder.

"What is it, Ollie?" she asked.

He did not answer.

"Is it Molly?"

He did not speak, but he reached up and drew her hand under his face. Jen felt it grow hot with tears.

"There, son, it'll come out all right," she said tenderly.

"It's all over," he said dully.

He jumped to his feet suddenly, pulled his arm in an angry, boyish gesture across his eyes.

"Dandy day for the quilting," he said.

"Yes," Jen agreed; but her voice was troubled.

They put the frames up then, and Oliver and Molly Parsons laughed and joked till Jen thought she must have dreamed those moments in the kitchen. But young folks were different nowadays. She wished she could talk to Molly; but she'd never been able to of late years. Molly held you off. She'd put on so much sophistication since she'd been off studying, and Jen wasn't one to probe, unwanted. She did try to say something, though.

"ALWAYS took a sight of comfort in the farm on a day like this," she said, as she spread out the rolls of cotton. "The peace of it kind of gets right into your bones this weather."

"Yes, it's lovely," Molly replied, not looking up. "But it must be lonely sometimes—so far from folks—and things—"

"I've never found it so," Jen said dryly. "Depends on how busy you keep, mebbe. I've always had to hustle. Kind of makes me mad, anyhow, to hear folks talk like that. You, especially, Molly Parsons, born and brought up in these hills. Guess you wasn't a very lonesome young 'un, was you?"

"No; but that was different. I hadn't

their eyes upon some far-away time, as they listened to the clear, sweet voice of Allie Parsons's girl

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

known there was any other world."

"*Other world*, h'mph! It's all the same world, child. Same folks here as anywhere. I've met a sight of city folks up at my girl Marg'ret's, and while some of 'em's right nice, seems to me most of 'em are struggling and graspin', and haven't any idea what they're reachin' for. They're hunting after happiness and content, that's what. Don't know as I've seen a single face up there like, say, your mother's, or Mis' Price's, or John Simmonses. And you can't say they stay here because they haven't got brains to go elsewhere. They've done well, all of 'em; and they're about as content as folks go in this world."

"Yes—but—" Molly began hesitantly.

"But what?"

"But you might have real work out there, too."

"True enough. But I'd want to make sure it was terrible real before I gave up my place here. The land gets to be part of you—and there aren't so many city flats you can say that about."

MOLLY stood staring down through the reddening orchard a long moment, her eyes wistful. But she pulled herself back with a little jerk.

"Well, I'll have to run home to dinner, Aunt Jen. I'll be back with Mother. Don't you work too hard."

"H'mph!" Jen said scornfully.

When Oliver came in to wash up for dinner, Jen asked, quite abruptly:

"What is it, Ollie—her singing?"

Oliver grew dully crimson.

"I see 'tis," Jen answered for him. "Well, she'll see—one of these days! I can see how, if she was maybe a little better singer, she'd be right. Some folks belong to the world, like; but Molly ain't one of them."

"She's made up her mind," Oliver said. "She thinks life would be . . . narrow . . . here; but it's more than that, Aunt Jen. Her singing's some kind of a force, driving her on. But let's not talk about it, Aunt Jen, let's not."

"All right," Jen said. "But I can remember Molly Parsons, singing to her dolls out under that maple there, and I hate to see her making a fool of herself."

"Did you want me to go down and get Grandma Price?" he asked, and Jen knew she could go no further.

They began to come then. Mrs. Lora-way, old Mrs. Frazier, Mrs. Burgameyer, Mrs. Price, Allie Parsons and Molly—all the neighbors.

"Good!" said Allie. "Glad you got things outdoors, Jen. Won't have many more good warm afternoons like this. Say, I forgot my shears, Jen! You got an extra pair?"

"My, that's a pretty pattern you got, Jen, for setting the blocks together with. It's hard to get that good, old-fashioned pink nowadays—mebbe it's just because I'm so old-fashioned myself; but seems to me there's nothing like pink calico for comforters!"

Grandma Price had come now.

"NEVER get used to cars as long as I live," she said, breathlessly. "My land, I'm glad to set! Ollie's awful reckless, Jen; you ought to give him a talking-to."

"Oliver's a man now," Jen said. "Can't give him talkings-to any more."

"Well, I don't know but what he is. Sakes—don't seem possible! Why, it wasn't but yesterday that Joe and him was such little peelers they upset the whole neighborhood."

Jen was passing scissors and thread.

"Makes you know you're getting on in years," she contributed.

"Well, you bear your years well, Jen," Mrs. Frazier said comfortably.

Jen gave a little inward start. She had made that remark almost unconsciously. It was a stock remark. It did not apply to herself. She looked about at the pleasant, friendly faces and, for the first time, it came to her that they were not the busy, bustling, middle-aged friends of the years past; they were elderly women, all a little tired.

THE discovery made her a little tired too, suddenly, and she sat down rather abruptly at the end of the frames. She looked up to see Molly, strong and slender and beautiful, threading a needle for Grandma Price. A swift feeling of resentment seemed to shake Jen.

Why, they were all getting old! Was she, too? Her hair was gray and, of course, she couldn't do the work she'd used to turn out; but she wasn't *old!* She'd never felt it—she'd never thought she looked it to the rest. But, just the same, maybe she did.

And yet she felt, almost fiercely, that there was a difference. She'd never thought of it before, but she did now. All these friends were glad to sit here and gossip and quilt, glad and content. They were satisfied to live in the past. But she wasn't. She liked to feel the reins of the farm still in her big hands, as they were. She still liked to drive into town and turn a good bargain. She was still, as she always had been, the head of the Culliton farm.

But as she looked about at all the comfortable faces, a feeling of wistfulness passed over her. Good, happy women, all of them, who'd done their part, and were resting now. Somehow, she had never thought of there being a time when she would rest, really rest, and yet, this fall, *she'd* been pretty tired, too. Then she was pulled out of her thoughts into their reminiscences.

"Ed's cousin Bart's pretty low," Allie said, taking a pin out of her mouth. "He's going the same way Ed's mother did—just the identical same way."

"You put in a couple of bad years with Ed's mother, didn't you?" Cora Frazier reminded Allie.

"I thought they were bad, at the time. They probably weren't. But I was just married and wanting a home of my own, and she was kind of overbearing. Do you mind the night she died, Jen? I was so nervous I got you to come over and stay all night."

Ollie reached up and drew her hand under his face. Jen felt it grow hot with tears

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"Remember about the bees? She was a great hand for the bees—she was kind of superstitious about them, and she told me to be sure and go out and knock on the hive, and tell 'em they had a new mistress—to keep on making sweet honey and not to go away. And it was so kind of still and frightening there that I felt I had to do it! You remember how she made you do things? I mind how you held the lantern, Jen, and I knocked—my hands was so cold they shook. Funny, the things folks used to do, ain't it?"

"Yes, I mind that night, Allie.. I remember I thought the bees ought to be glad of getting you for a mistress, after Ed's mother. Sorry to hear about Bart; he's always had hard luck, seems to me."

"Yes; he wanted to go off to school, and couldn't get away; and then he got a year in the aviation during the war and wanted to go in for that; but couldn't on account of that hip trouble that come on. Well, it's apt to happen that way. Me—I thought I could never stand it if I couldn't be a milliner."

MRS. LARAWAY laughed her fat, comfortable laugh.

"Well, when I was a girl some Salvation Army folks come to town and held tent meetings, and I thought if I couldn't be a Salvation Army girl with a bow under my chin, I'd die!"

"I wanted to be a missionary," Jen confessed, with her dry humor. "I guess it was that old song, 'From Greenland's icy mountains, from India's coral strand' that done it! I was always fond of coral."

"Well," Allie said, more soberly, "guess you got your wish, Jen."

Grandma Price nodded her head in slow, authoritative affirmation.

"What?" Jen asked, startled.

"Well, you've done a lot of missionary work, seems to me. I could tell a few things."

Jen flushed.

"Well, don't," she said dryly.

"Remember Reverend Meadows? Guess you did a little mission'ry work there, Jen. Made his going easy for him, anyhow. And Flint Miller—I declare, it made him over after you brought him and his boy together again."

"And those four children to bring up—that's been a chore, if they *are* your own sister's!"

"Oh, that's been fun!" Jen said. "And they've been a lot of help to me—besides comfort."

"Yes; but they weren't when you took 'em. And you've put in some of the best teachers we ever had up this way, these years you've been on the school board. The folks around here was worse 'n heathen when it came to picking out a teacher for their young 'uns. Yes, you've certainly done your share there, Jen."

"Oh, fiddlesticks!" Jen said impatiently.

"I had some pretty tough years when the children were all little," put in Katie Burgameyer, flushing. "Mis' Culliton saw to it they all had shoes and decent clothes for school—and she never went bragging of it all 'round the country, either." Katie gave a quick, loyal smile at Jen.

"Well, I heard something—straight from Nate's wife, too—about how Jen had a chance to put Nate to the wall when he couldn't meet payments on his farm. And Jen might well have done it too, for spite over the way he's acted about the school board; but she even let the interest go for a couple of years till he got on his feet. Yes—all in all—I'd say you'd done some pretty good mission'ry work, right on this road, Jen."

"Good land, Faith Laraway! What you trying to do? Make a fool of me in my old age? Shame on you! Molly, why don't you sing something for us? Seems as if it would sound good out here in the open. Sing something old, will you? We aren't much up on music out here; but some of the old things seem good to us yet. We'll quilt right along, if you don't mind."

Molly Parsons flushed. But she was unafraid, and she stood up in the shade of the big maple and sang to them: "Way Down Upon the S'wanee River," "Old Black Joe," "Darling Nellie Gray."

"Used to sing those in singing school," Grandma Price put in once, with a satisfied nodding of her head. "Sing 'Annie Laurie.'"

So Molly sang "Annie Laurie," "Seeing Nellie Home," and "Loch Lomond." And the busy, gray-haired women about the quilting frame paused in their work, their eyes upon some far-away time as they listened to the clear, sweet voice of Allie Parsons's girl.

"Guess you're pretty tired," Jen said at last, gently. "But before you stop I wish you'd sing 'Sweet and low,' Molly. Always thought a lot of that song."

"Sweet and low,
sweet and low,
Wind of the western sea—"

Very tender and beautiful and sad, the young voice was, and Jen thought of the little girl singing

(*Cont'd on page 110*)

She held out the lantern to Ollie, and went down on her knees in the damp grass, lifted a shaking hand, knocked gently

Plenty of space to play and chase around. A few Chicago Union League Boys' Club members at their summer camp in Wisconsin

"When I'm Big I Wisht I Could Be Like Him"

The boy who said this was a hero worshiper who had found his hero, and in the exclamation lies the secret of a remarkable boys' club in Chicago

By Neil M. Clark

BAREFOOT and dirty, the boy of ten stepped up to the man of sixty, and said:

"I've come to show you to the Elevated."

It was the custom of the club.

"Thank you," said the man. No other words could he utter. He was ill at ease, for it was the first evening he had spent with boys for a long while, and although eager for their good opinion he was not sure that he knew how to win it.

Off they went together, rather stiffly: the man who had earned his million, and the tatterdemalion whose parents had come over in the steerage a dozen years before. Exchanging few words, they parted gravely at the station; and the boy, returning to the club in less than no time, said to the man there:

"Say, Mr. Klees, is he coming back again?"

"I think so. He said he would. And next time you want to be cleaned up, don't you!"

The lad guessed so; but that wasn't important to him. He wanted to add something, and Klees, seeing it, said:

"Out with it, Joe. What's on your chest?"

The words came tumbling: "Gee, when I'm big *I wisht I could be like him!*"

In that remark lies the key to the story of a fine fellowship, a beautiful experiment in friendship.

Consider the man who was escorted to the station. For years he had dwelt in a world where his contacts were chiefly with business men of his own caliber; his daily life was a round of his office, his clubs, theatres, the opera, and charity by check. Other ways of living, if he thought of them, failed to touch him.

CONSIDER, too, the little Polish lad, Joe. He lived, and still lives, in one of the most congested neighborhoods of Chicago. Thousands of the parents are ignorant of the opportunities and standards of the country in which they live. Joe's father and mother knew only Polish, saw nobody except a few friends of their own nationality, and were as untouched by ways of living and ideals other than their own as was the millionaire. Neither vicious nor starved, honest enough, and loving their boy, they were abysmally ignorant of the country of their adoption. Was the lad to learn from them how to make a proper man of himself in this new world to which they had come?

Joe knew of no world but theirs until he was ten. He went to school, of course, and learned English; but his playground was the street, and his playmates boys from homes like his own.

It was part of their play, and of his, to shoot the glass out of street lights, to filch fruit from corner stands, to walk the sidings for adventure and lumps of coal, to elude railroad detectives after dark and break into locked cars, to hide from the cops. Joe's energy, normal in a boy of his age, found outlet chiefly in mischievous, disorderly, or unlawful channels. Had nothing better intervened, perhaps the easiest profession for him a little later would have been crime.

But fortunately for Joe, when he was ten there came news of a club in the neighborhood. It was located in an old dance hall, a tough "joint" that Joe and his friends had often wished they might visit. This new club was for boys, Joe heard, and although skeptical he was attracted by

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

curiosity and some stronger inducements, and became a member. There, one day, he met the man whom he escorted as a guest of the club to the Elevated station. A critical day for Joe! His world and another, poles apart, came together; the lad glimpsed this other world—yearned to know more of it—and found a hero.

Joe is still only a boy; but not quite the same boy who ran the streets wild till he was ten. He is going to make a fine man, and is one of hundreds to whom the club has meant, in one way or another, a new mode of life.

I am going to tell you the story of this club, and of the man—and men—behind it. It is not the ordinary boys' club. It is founded on the idea of providing a place where men and boys who ordinarily never would know one another, meet on common ground, and benefit by the friendship that springs up; such friendship as every boy would like to share with his father and every father with his son.

Six years ago, a member of the Union League Club of Chicago, who had an especially warm spot in his heart for boys, induced a New York leader of boys to talk about his work before a selected group of club members. They listened with enthusiasm to what he said, and when the idea was broached that they should themselves adopt a neighborhood, they responded eagerly. Within a week forty-two men subscribed forty-two thousand dollars, and, what was more important, agreed to *give of their time*. The results that followed that beginning are priceless. Boys have waked to unrealized possibilities within themselves, grasping at ideals brought to them by men (and women) of a different world than their own; the records of juvenile delinquency have gone down with startling rapidity, and a whole community is gradually changing from a tough section to one of law and order. It is all a revelation of the power of human friendship and example. Charity by check has not done it, and could not have done it. But when boys of one world and men of another become friends things begin to happen; and the boys are not the only ones who have profited!

The Union League members were not impelled by false sentimentality to organize the club, but by practical considerations. They saw crime increasing; they knew that many of the criminals came from certain districts. They also know, as employers, that some classes of employees were very undesirable, and that these employees came from neighborhoods which, although there was nothing intrinsically wrong with the people who lived there, were ignorant and un-Americanized. They doubted they could do much with the parents, but were convinced that the boys could be taught a broader conception of life. Therefore the logical place to start was with the boys. Then arose the question: "Who can direct the work?" "Get Robert D. Klees," said the New York social worker. And getting him was part of the Union League's great success. "Bob" Klees is a wonder with boys. For thirty years and more he has been dealing with them, and to talk with him about the lads is to take a new grip on one's faith in human nature. But Klees could not have done alone what (*Continued on page 84*)

(In oval) A typical group of boys who have belonged to the club for several years. (At right) The largest boy in its band—and the smallest; they have traded instruments for this photograph only. None of the boys in the band ever had an instrument in his hands before coming to the club; but the band gives concerts of which no one need be ashamed. The director is a volunteer, a professional man interested in band music only as an avocation

(At left) A group around the stamp machine which is helping the boys to learn how to save money. For every penny or nickel or dime or quarter deposited in the machine, the boy gets a certificate. These are pasted in a book, which is taken at intervals to the bank, where the amount shown is credited to the owner's savings account. Mr. Klees is the man with the mustache, at the extreme left

There's Not Much Use To Grind Unless You Advertise Your Grist

George Matthew Adams, head of a great newspaper feature syndicate service, tells how he built up his enterprise, and how he "discovered" Walt Mason and Eddie Guest

By Fitzhugh Green

NINETEEN years ago, an important Chicago firm failed. But at that time firms were failing every day; the panic of 1907 was in full swing. So it was, that, along with thousands of other men, George Matthew Adams, the young father of a pair of two-year-old boys, suddenly found himself out of a job, and with only twenty-seven dollars in the bank.

"What difference does it make if there is a panic?" Adams asked himself. "Why should I sit around and wait for the boss of some firm to give me a job? *Why shouldn't I be the boss?*"

This was all very youthful perhaps; but when George Matthew Adams erupts, there's more than smoke and noise to the phenomenon.

The first thing he did was to go over to the Fisher Building, a Chicago skyscraper. The agent, "Nick," was a chance acquaintance.

"I want an office, Nick," Adams told him. "I'm going into business for myself. I haven't any money. Will you trust me for a month's rent?"

Nick scratched his head. He looked the clean-cut, alert young man up and down. Then he peered into the earnest gray eyes that met his own. "Well, I'll take a chance on one room, George," he grinned. "Forty a month. Will that do you?"

Adams nodded briskly. As he had no special training, he wasn't yet quite sure what his business was to be. But he had a hunch.

However, he couldn't start a business office without furniture.

He hurried to the biggest retail store in town, the one which carried the most expensive class of desks and swivel chairs. "About what price?" the clerk asked. Adams confessed he had no money, adding quickly before he could be shown the door, "But I'll write you an ad that will sell a dozen desks!" Something in the way he said it made the clerk pause.

Luck played into his hands. The advertising manager was away. The manager had a new line which needed quick moving. Adams was given a chance. In a few hours he turned out a fine piece of advertising as well as a layout for a special furniture pamphlet. The manager was delighted.

Adams's new desk was delivered to his new office at eight sharp the next morning. That desk, though battered and worn, is still one of the most highly prized possessions in his handsomely appointed New York office to-day.

He got a typewriter and stand, a stenographer, and office supplies the same way; that is, by his imagination and his confidence in the people he approached.

The next thing was to build a business. Remember, this was in 1907, when we were right in the middle of hard times. Young Adams had no money; but he did have a score of nice healthy creditors, including the doctor, the grocer, and the apothecary.

Moreover, he had an idea. In his efforts to get started in Chicago, he had been studying the "want-ad" columns of the newspapers for nearly three years. The more he studied them, the more annoyed he became at the ineffective way in which most of the advertisements were written. Adams believed that people would be glad to learn how to write their small want-ads correctly. He went to the editor of the Chicago "Tribune," and explained his plan to teach readers how to phrase their ads clearly and effectively. It was no easy job to convince the busy editor that the idea would work; but eventually Adams won. This first order was more than enough to pay the office rent.

Thus began the "Romance of Want-Ads" plan that was to make the name "George Matthew Adams" known from one end of newspaperdom to the other. And thus was founded the Adams Newspaper Service, which now serves nearly one thousand American dailies and around fifty million readers.

"But why on earth should a minister's son become interested in advertising?" I asked Adams. His father was a small-town Baptist pastor, who brought up five children in Michigan on an annual salary of six hundred dollars.

"When a boy's family is as poor as my father's was," Adams chuckled, "he is likely to be interested in any work that will earn him an honest dollar. As a matter of fact, I had twenty-two different jobs before I got around to my final syndicate idea.

"I COULDN'T have been over twelve," he went on, "when I began to realize that if I were to have any sort of education, I'd have to get out and rustle for it. My mother was a great reader, and she made me see how tremendously handicapped is the man who does not absorb all the learning he can get before going out into the world. My father helped, by letting me take the janitor's place in the church. One of his parishioners arranged for me to do sweeping in the evening in the town factory. These two jobs saw me through high school.

"During the summer, I combined work with pleasure, by spending my vacations on a farm. This gave me the exercise a growing boy needs, and enabled me to save enough money to enter Ottawa University, Ottawa, Kansas, in 1897, at the age of nineteen."

A Rolling Stone Gathers a Lot of Experience!

"A ROLLING stone gathers no moss," says Mr. Adams; "and in the days of my changing from one job to another, I was gathering neither moss nor money. But I was laying away a precious store of experience that I wouldn't dare part with now. Indeed, it strikes me that a young man who is not sure what his business or profession is going to be would do well to go rapidly through a number of jobs, until his broadened perspective enables him to choose his walk in life much more intelligently."

UNIVERSITY OF CALIFORNIA

At Ottawa, Adams's struggles were multiplied. Not only did he have to look out for his clothing and board as he had done at home, but now tuition and lodging must also be paid. He met his problems with characteristic resourcefulness. Here is an incident that illustrates the way he would seize an opportunity: Between caring for the doctor's office where he was allowed to sleep, waiting on table where he ate, and other odds and ends, he carried papers. His paper was the old Kansas City "World," which was sent down early every evening by the fast express and dropped out at North Ottawa, from which point it was relayed on what was known as the "plug train," a slow local.

On the same train came the "Star," the rival of the "World." Adams tried hard to speed up the boys working for him, in order that his customers might have the "World" before anyone in town could read the "Star." But the winter days were often cold and dark; and one boy won't work much faster than another under average conditions.

So Adams conceived the idea of taking some of his gang all the way up to North Ottawa, and in the baggage car on the way back preparing the papers for delivery. The minute the train reached Ottawa proper, each boy could grab his pile and dash off, while the "Star" carriers were standing around fumbling with their unbroken packages. The plan meant an hour or so of extra-time effort for Adams, and his helpers who made the daily "plug train" trip up and back. But it soon brought results.

ALREADY Adams's sense of what people wanted in the way of news had begun to develop. "I found out that we didn't sell as many of the extra editions as we ought to. So I made a big blackboard and got the Main Street druggist to let me put it in front of his window when anything important had happened. On this board, I copied out of the extras the gist of the news. On the first trial of this scheme we sold three times as many papers as we had before. In less than a year, I had boosted my circulation to six hundred papers a day, a big figure for a small town.

"It was during this period that I was newspaper carrier for Henry J. Allen, since governor of Kansas, who then ran the Ottawa 'Herald.' I also handled—in the streets—the famous Topeka Capital edition, which ran for a week under the direction of Charles M. Sheldon, author of "In His Steps," who edited the paper as he considered Jesus would have done. About this time too, I made the acquaintance of the publisher Arthur Capper, who also later became governor, and who is to-day United States senator from Kansas.

"I mention these contacts not merely in a spirit of pride, but because even at that early day I recognized the value of knowing and studying as many important and worth-while people as possible.

"However, this propensity, in another form, was soon to get me into serious trouble. In the city library I found a means of really satisfying the yearning to read that had been gnawing inside of me for years. Chief among the books that gripped me were the biographies of great men. In my junior year I spent so much time in the library that, to my horror, I failed at the end of the term. But by doubling up in the following autumn I finally caught up, and was graduated with my class in June, 1901."

PHOTOGRAPH BY PIRIE MACDONALD

After a varied experience in nearly a score of jobs, George Matthew Adams finally hit upon his feature syndicate idea. This, at last, was the work that suited him best; and he went about it so energetically that to-day nearly one thousand newspapers buy his service. Mr. Adams was born in Saline, Michigan, forty-eight years ago. His home is now in New York

AFTER a brief visit home, where he deposited his sheepskin and announced his intention of going to Chicago to make his fortune, Adams put on his best suit of clothes and set forth. He landed in Chicago with nine dollars in his pocket and a letter of introduction from his father to Dr. Johnson Meyers, of the Emanuel Baptist Church. He wasn't sure where, or how, or why; but in his heart he felt that he was going to make good. Doctor Meyers offered him a job delivering church tracts at one dollar a day. He gladly accepted it. Meanwhile, he began to study the want-ad columns of the papers. Even his dollar-and-a-quarter-a-week room and the two-meals-a-day régime he had set himself required funds. In rapid succession, he went from bills to surveying; surveying to running an elevator; elevator to clerk in the U. S. Pension Office. He wasn't discouraged. He didn't shirk. He felt it was all a part of a great adventure. He was learning about people, and about how people did things.

"One thing that I always remember about George Matthew Adams in those days," an older man told me, "was his intense curiosity and unflagging energy. He always seemed (*Continued on page 218*)

Bill Green's Preceding Chin

He was as timid as a lamb until love and a little "new psychology" turned him into a roaring lion tamer

By Courtney Ryley Cooper

ILLUSTRATED BY GEORGE GIGUÈRE

BILL GREEN stood hesitantly by the performers' entrance of the Grand Consolidated Circus, a posy in his hand. There was a look of apologetic expectancy in his eyes and his heart thumped heavily; it thumped this way on schedule, at two-forty-five each afternoon and eight-forty-five each night. That was when Bill Green delivered his posy, and there was always the chance that as he passed it over, he might accidentally touch her hand. Sometimes it happened, thus creating a large splash in an otherwise drab existence. More often it didn't.

However, it was a twice-a-day gamble. Circuses must give their performances, and at each of those displays Mademoiselle Petite must carry into the ring her tiny bouquet. This she did, so that, after her gay ascent of the swinging tape by which she mounted in swift, overhand circlings to her trapeze, she might blow a kiss upon the posy and toss it forth to eager, upraised hands in the audience.

It made a nice little touch for the act, so, every day, Bill Green made his purchase with meticulous care, and then, breathing messages which no one but he and the flowers knew, stood in anticipatory eagerness until she should take them from him and go on through to the ring.

Not that Bill Green was only a property man. According to the pay rolls of the circus, he was an animal trainer's assistant, which meant that in addition to helping with the feeding—and taking on all the hard work when a lion got the toothache or one of the beasts escaped—he could also act as attendant outside the big steel arena during the performance. Here, thoroughly effaced so far as the audience was concerned, he shunted six lions from their chute, then with prod-fork working between the bars, sent them to their pedestals.

Thus he set the stage for the spectacular entrance of Captain Marvelloso, by his own admission the world's greatest Cæsar of Wild Animals, who, when everything was ready, walked condescendingly into the arena, attired in a leopard skin and a coat of self-satisfaction.

MEANWHILE, in his baggy uniform of brown, Bill Green continued to hover near the bars, giving a lion a poke with the prod-fork at exactly the right moment to make it seem alive with attention at every word from its trainer, while Captain Marvelloso took the applause. To say nothing of the fact that Bill Green also worked those lions himself every morning, to keep them in trim, an labor which little, she was coming forward; golden-haired, laughing, a hand outstretched for her posies. Bill Green drew a deep breath. Then he leaned forward, and blurted:

"Gee, Miss Poteith, but you're pretty in that new costume!"

Poteith becomes Petite very easily in the circus business. For just an instant Margaret Poteith looked up at him, gracious and smiling. Then, almost instantly the lines of circus tradition tightened that invisible barrier by which the gradations of the social scale under the big top are held in place. Not that there was anything wrong in the remark itself; it was the tone, the manner.

"I beg your pardon!" she exclaimed, as the smile disappeared, likewise Mademoiselle Petite—to give way to Captain Marvelloso, pulling hard at his mustache as he strode forward, his lion whip tapping angrily against a patent-leather boot leg.

TEN minutes after the interview which followed, a very miserable Bill Green sat upon the tongue of the stake and chain wagon, arms limp between his knees, jaw sagging, a man in defeat. Someone approached and halted; Bill Green did not look up. In fact, he neither heard nor noticed, until Joe Borden, head of the menagerie, caught him by the shoulder and jerked him to attention.

"Well," came in rough kindliness, "what's eatin' on you?"

"Oh, nothing." Bill Green raised his shoulders and lowered them in a hopeless shrug. "I just ain't any good. I've been thinking it over. I guess I'll draw out my money from the bank and buy me a farm again. The captain just bawled me out."

"For what? You've been taking care of his cats all right."

"It wasn't that," confessed the miserable one. "I told Miss Poteith how pretty she was."

"Oh!" Joe Borden whistled softly and looked across the circus lot toward the dressing tent, where Captain Marvelloso was escorting Mademoiselle Petite over the dusty space from the performers' door. "Oh, that, huh?" Then, after a long silence, "Well, Kid, if it's come to that, maybe you're right. You'd better go back. Somehow," he added, in a misguided effort at kindliness, "guys with faces like yours ain't got no business in love."

"Oh, I know I ain't got any looks."

"'Tain't your looks, Kid. You ain't got a half-bad face on you a-tall. That is," he added frankly, "if it wasn't for your chin."

Bill Green opened his eyes. He raised a hand to the aforementioned feature.

"What's wrong with my chin?" he asked innocently.

them like a parent through the long winter months, so that they would have their lessons perfectly committed to memory when Captain Marvelloso returned in the spring. Thus, Bill Green had many duties; it had meant only one more thing to remember, when Captain Marvelloso had volunteered him as a flower holder to the dainty Mademoiselle Petite.

That is, at first. Ever since Bill Green had sold his little inherited farm, five years before, looked about for a job by which to keep his nest egg intact, and

Captain Marvelloso

found it in the menagerie of the Grand Consolidated, he had been quite accustomed to taking on extra tasks.

But, after a time, the mechanical part of that flower-holding had faded. Bill Green had found himself taking quite an interest in those blooms, to be sure that they were the very best on the market. Then, one day, out behind the stake and chain wagon, he had raised the blossoms and kissed their stems—right where her hand would touch them. After that, Bill Green had been quite miserable. Yet happy in that misery, nerving himself day by day to a moment of open worship.

And now that moment was approaching. Mademoiselle Petite had left her dressing-room. A dainty thing of silk and

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Very alertly he stood at attention as Mademoiselle Petite came from the dressing tent. Then he put forth the bouquet. "Your flowers, Miss Poteith," he said

The menagerie boss leaned back and looked him over.

"Well, o' course," he said, with the casual air of a connoisseur, "for a guy to have something wrong with his chin, he's first got to have a chin to have something wrong with."

"I've *got* a chin!" retorted Bill Green. "Now, have you? Say, I ain't talkin' about a lower jaw. I mean a chin. Look-it!" he swung about to give his companion a full view of his profile. "See that stickin' out under my mouth. That's a chin. Got determination in it. A person who looks at me knows he's talkin' to a he-man. I got a chin on me—it sticks out where a guy can see it."

"My chin'd stick out if I let it," said Bill Green desperately.

"What're you holdin' it down for?"

"I ain't," said Bill Green. "Only,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

about ten years ago, when I was still in school, there came along an awful cold day. A bunch of us kids were coming home, and somebody made a dare that I wouldn't lay my tongue against a steel electric-light pole. I wouldn't be dared, and so I jammed my tongue right against it. I guess you know what happens to you when you put out your tongue against ice-cold steel!"

"Sure; it freezes right to it."

"That's right," said Bill. "Nobody thought to thaw it off with hot water, so I just had to yank. Pretty near tore the whole bottom of my mouth off and it was sore for four or five months. Had to hold my tongue against the roof of my mouth all the time. Try it yourself."

Joe Borden tried it. "Does pull your chin in, don't it?"

"Um-humph. By the time I was well again, I'd just got in the habit of holding my jaws that way. I've done it ever since. But I could hold it the other way now, if I wanted to."

"Let's see."

BILL GREEN straightened, and turned his face to the profile. Then he set his muscles behind his chin and shoved. Out shot the lower jaw to prognathous proportions, to waver in prominence for a moment, then, as long neglected muscles weakened, to recede to its former insignificance.

"Told you I had a chin," said Bill Green defensively.

The menagerie boss looked at him seriously.

"Anybody can stick out his chin for a minute or so," he said. "The chin that counts is the one that stays there." Then, as the elephants trumpeted from the menagerie, he rose and stretched. "I tell you, Kid," he concluded, "it ain't worth it. You've got enough tucked away for a farm; better go back to it—better'n bein' nutty about some dame you can't never get, an' walked over by a four-flushin' guy that just makes you do th' work, while he takes th' roses. Cap Marvelloso, I mean. It'll be worse when that big bunch o' lions comes on from Hamburg. There'll be twelve of 'em to keep goin' instead o' six."

The call of the elephant line was repeated, and Joe Borden, having settled the fate of his companion, went onward, leaving Bill Green to varied reflections:

Upon injustice, for instance. He had never given the matter much thought before; in fact, he had never classified anything as unjust. It had been perfectly natural that, young and inexperienced, he had procured only a menial job with the circus.

Other things had followed in sequence. The worship of Mademoiselle Petite, descending upon him with unbalancing swiftness, had worked as love will often work: to make him feel lowly, and wormlike, and unworthy even to gaze into the blue eyes which caused his adoration.

So Bill Green had accepted his condition as thoroughly just. But to be the recipient of cutting remarks simply because a member of his facial ensemble had been placed in an unfortunate position through purely accidental causes—that was something different!

"I've *got* a chin," said Bill Green, kicking angrily at a tuft of grass. To prove the matter he again shoved his hesitant jawbone forward, and held it there for a long moment.

Then the pain came, much greater than before, for this had been a more prolonged effort. Patiently Bill Green waited for it to subside; the muscles ached steadily on. At last, in desperation, he moved his lower jaw swiftly forward, pulled it back again, then shot it out in a succession of efforts to free it of its aching. Then suddenly the pain was forgotten in a blaze of inspiration.

"Exercise!" exclaimed Bill Green. "That's what you do when your leg's been broken. Exercise!" In one-two-three-four fashion, he shoved his lower jaw to its farthest extension, brought it back again to its state of natural reticence, pushed it out again, and continued the matter for a full hour. And that was only the beginning.

The next day, Captain Marvelloso, having yelled five times from the end of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the menagerie, at last strode heavily toward a man who had apparently been doing nothing more than standing at the other extremity.

"You thick-headed fish!" he announced. "Why don't you answer me?"

"Can't," mumbled Bill Green.

"Why can't you?"

"Can't talk."

"You're talking now, ain't you?"

"Can't yell," was the response.

"Got a cold?"

"No; I ain't got any cold."

In vain he shouted the usual signals for them to take to their pedestals and obey his commands. It was as though they never had seen a pedestal

"Then—" Captain Marvelloso halted. "Say, listen, you. Don't you stand there pulling any sorehead stuff on me."

"Who's sore?" asked Bill Green innocently—and thickly. His throat was stuffy, his jaws ached at their anchors. But this Captain Marvelloso did not know, nor was Bill Green indulging in confidences.

"You're sore," said the head trainer. "You'd better get over it. I don't stand for soreheads around my outfit. You, standing there with your chin set, like you owned the earth!"

Bill Green merely gaped in an astonished way, and at the first opportunity moved out behind the side-wall. Joe Borden had been right! Chins were everything!

"One, two, three, four!" he gurgled. "One and two and three and four! One and two and three and—"

"Got a fishbone in your throat, Buddy?" asked a passing workman. Bill Green merely nodded. Anything for privacy. Then, "One and two and three and four! One and two and three and four!"

Thus a month went by. To a fateful moment when Bill Green stood behind the menagerie tent, a safety razor poised, his face turned against a two-sided mirror. Long he scraped; then, his lower jaw working at its exercises by second nature now, halted long enough to dabble his brush in the lather. And as he did so, he happened to glance to one side—where half of that mirror cast a reflection in the other half, thus revealing a profile.

It was Bill Green's. Yet, it wasn't Bill Green's. There was something about the granite underpinning of the jaw which seemed to set it off, and to give it a foundation, as it were, a different expression from the visage to which Bill Green had been accustomed. At first he merely looked upon it in surprise, working the lower jaw to be sure that it was his.

THEN Bill Green began to study that reflection. Something was wrong in the picture. The ensemble didn't seem correct. The neck, for instance, stretching down to a worn collar, and revealing the Adam's apple. The frayed throatband of his jacket. The wrinkled appearance of his shoulders, where they slumped in the ill-fitting uniform.

Instinctively, he threw out his chest, and observed the effect. It aided greatly, and Bill Green held back his shoulders admiringly. But at last they weakened and slumped, so suddenly that their owner was jarred. Therefore, as he lathered his chin for the final scraping, he began a new set of exercises to work in harmony with the projections of a steadily strengthening jaw.

"Say, are you the guy I hear countin' all th' time outside the menagerie wall?" asked Joe Borden a few weeks later.

Bill Green grinned, then, deliberately turned his head for a side view. "Ain't you the guy who said I didn't have any chin?" he asked.

"I'm a sonvagun!" came the answer, and Bill Green walked on. There was something in the menagerie boss's tone which had been particularly soothing, a certain tone of admiration which Bill Green had never heard before. It struck home; Bill Green had been looking at himself a great deal in the mirror of late.

"Morning, Cap!" he said quite cheerily as he approached the head animal trainer, who stood at one side of the tent, reading a telegram. Captain Marvelloso wrinkled his heavy eyebrows and looked up.

"Morning," he said bluntly. Then, with a sudden afterthought, "Say, what'd you call me?" Marvelloso was glaring, half in surprise, half in anger. But he didn't press his question. He didn't know that the steady stare in the eyes of Bill Green was there only from a determination to hold them from blinking. That the muscles which (*Continued on page 134*)

The Little Hero Of Meriden

Joe Swedock has lost both legs and both parents, but he has made a home for his four sisters and a younger brother—The story of a boy whose cheer and courage have won the hearts of his neighbors

By Mary B. Mullett

ONE Sunday morning, early last autumn, I was to have a guest for breakfast at the hotel where I was staying, in Meriden, Connecticut. He was to come at ten o'clock; not because he was a late riser, for I knew that he would be up and at work even on Sunday morning, before six o'clock.

Ordinarily, he did not stop for breakfast until ten; but—as he smilingly confided to me later—he hurried home on this particular morning to dress up for the occasion. You see, it happened to be, in more ways than one, a very *special* occasion for him.

In the first place, being a thorough gentleman at heart, he wanted to honor his hostess by presenting an immaculate appearance. Moreover, this was to be only the second time, in all the twenty years of his life, that he had eaten a meal in a hotel!

At nine-forty-five I went out for a ten-minute walk; and as I looked up a side street, a few blocks from the hotel, I saw my expected guest coming toward me.

I wish you could see him as I did. He was riding—but in a child's little express wagon! Yet, as I have just said, he was not a child, but a young man twenty years old.

As he wore no hat or cap, I could see how well shaped his head was, and how smoothly brushed was his thick brown hair.

He sat very straight; and as the little cart came flying down the slope of the street there was something fine and free in the poise of his head and shoulders.

I stood there watching him; and as he came nearer I could see the light in his blue eyes and his quick, gay smile of recognition.

He was so young, so eager, so happy! And yet, as I smiled back at him, it was with pity in my heart. Pity and pride! I was so sorry for him—and so proud of him.

As for Joseph Swedock, my guest that Sunday morning, he is neither sorry for himself, nor proud of himself. In his case, the "pricks of Fortune" have been sharp, deep thrusts. But he has made them only spurs to greater effort. And instead of pinning bouquets on himself for having done this, he pins them on the people who have *helped* him to do it.

In all my experience, the story of "Joe" Swedock, as he is known to everyone in his home town, is unique. The people of his home town, by the way, play a considerable part in that story; a fact which Joe himself is eager to point out.

In 1906, in this same town, Meriden, a young Polish couple was living in a humble little house on Veteran Street. Both the husband and the wife were immigrants. The wife could speak almost no English. The husband, a workman in a factory, had learned to read and to write the language of his adopted country.

Their first child, Joseph, was born on July Fourth of that year. The local orators, paying their eloquent tributes to American independence, knew nothing of little Joe's arrival. Yet he was to be a living example, in that community, of the independence they were exalting.

In the six and a half years following that Fourth of July, two more members were added to the Swedock family. The proud parents named them Helen and Anna.

Up to December 24th, 1912, nothing else of particular importance had happened to the Swedocks, except that six-year-old Joe had started going to school. The Christmas vacation having begun, December 24th could be devoted to play.

RAILROAD tracks possess, for the average small boy, an irresistible lure; and little Joe Swedock was no exception to this rule. A few hundred yards below the Meriden station there was a network of intersecting tracks; and this spot, with its treacherous "frogs" and switches, was Joe's playground that day.

If it had been summer, and he had been barefooted, the tragedy might not have happened. But even small boys wear shoes in winter; and as he was running across the tracks to get out of the way of an express train—the White Mountain Flier—one shoe caught in a switch.

Frantically, but vainly, he struggled to extricate his foot. The great engine thundered closer and closer. And the train roared past—leaving a pitiful little figure prone across a rail.

Apparently no one, except another small boy, had seen the accident. He ran to the motionless form; then, in terror, scuttled away in search of help. A physician finally arrived, an automobile was commandeered, and Joe was hurried to the hospital.

"The car broke down on the way," he told me, with a smile in which there was only the merest hint of pathos, "and the doctor had to carry me in his arms the rest of the way."

Lying in his hospital cot, after the operation, little Joe Swedock knew that he would never again play as other children did; for both legs had been amputated above the knees.

But they hadn't amputated any of his courage or cheerfulness! Even nine months in the hospital did not shorten his supply of these qualities; and they continued to survive and to grow, during the following year and a half, while he was housed at home.

In those two years he did not learn much more than how to keep cheerful under difficulties. Still, he did learn something. His father taught him to read and to write English. His mother—with still another baby, Bridget, added to the household—was too busy to give him this instruction, even if she had mastered the language, which she had not.

But she did give him the best lesson of all: the lesson of example. In the essentials of character, this Polish immigrant mother did not need to be "Americanized." She was stanch and self-respecting. Without talking about it, she nevertheless gave her young son her own standards of responsibility and duty, of decent and upright living.

When he was nine years old, Joe made his second start in school; for he had grown big enough and strong enough, by that time, to use a pair of artificial legs and crutches.

The legs were stiff and straight. The fine jointed masterpieces of construction were not for him. Partly because he was too poor to have anything so expensive, and partly because, at his age, he would outgrow them too rapidly. His crutches were literally his main support. Resting his weight on them, and swinging them forward one at a time, he really "walked" with his shoulders.

At the first glimpse, it was rather painful to see him. But people forgot all that when they caught the happy light in his eyes, and found themselves involuntarily smiling in response to his own ever-ready smile.

AND so life went on in the Swedock family. Not so badly, on the whole, even though the war had come, with its soaring cost of living. There was still another mouth to be fed, too; for in 1916 Teddy was born, making the list of young Swedocks number five in all.

Then, in 1919, a few weeks before little Stephanie came, to swell that total to six, Mr. Swedock died of tuberculosis. A fraternal insurance society of which he

Joe Swedock, of Meriden, Connecticut, with his "family"

had been a member paid benefits of six hundred dollars to the widow. That, and six children, were all that her husband left her.

These two sixes were appallingly far from balancing each other. The margin had to be made up somehow and somehow it was! Mrs. Swedock, as soon as she was able, went to work in a restaurant. Neighbors were kind in Veteran Street—as they are in countless similar streets everywhere—and they looked after the littlest children during the mother's absence.

Aside from Mrs. Swedock, the only member of the family who, even by a stretch of the imagination, could be considered "adult" was Joe. His father died in August, one month after the boy was thirteen years old. But in the year that followed, Joe grew up *in spirit* more than many people ever do, even though they live to a good old age.

From the very beginning, his mother had been determined that her children should have an education; and in the face of almost overwhelming difficulties she still clung tenaciously to that purpose.

She realized especially that if her crippled son was to have the self-respecting independence which meant so much to her, he must have this asset of education. She made him realize this too.

"I KNEW I wouldn't be able to work in a shop or a factory," he said to me. "I must support myself in some other way, so I continued to go to school. But I earned a little money by selling papers. It was the only way in which I *could* earn anything, for I couldn't do chores or run errands.

"Then, only a short time after my father died, my mother also developed tuberculosis. The doctor said she must give up her work in the restaurant and must have a separate room at home. So all we had, after that, was the insurance money and what I earned as a newsboy and in a few other ways.

"I made a little extra by selling peanuts and soft drinks at baseball games and at boxing matches. People were always very kind. They never charged me anything for this privilege; and sometimes I would make as much as three or four dollars. But even then I couldn't earn quite enough to take care of us. We had to keep using the insurance money, a little at a time. When my mother died, in May, 1921, there were only a few dollars left.

"THE last few months, when she knew she couldn't live, she used to talk things over with me. I was only fourteen; and of course, because of my accident," he smiled, "I couldn't get a job, as other boys of my age could have done. Mother didn't see how I could take care of the five children. Helen, who was next to me, was only twelve then; and Stephanie the youngest, was less than two years old.

"So, although Mother didn't like the idea, she said I'd better put the little ones in an institution—after she was gone. She thought I might manage to keep the older ones with me. But I must send them to school, and I must go to school myself! She wanted me to go to college, too. It seemed foolish to talk of such a thing then. But we did talk of it; and my mother helped me to share her faith and courage.

"I can look back now and see so many ways in which she helped me. For one thing, she never 'mollycoddled' me. I never was a petted boy. She didn't want me to feel that my accident gave me the right to lean on others. I must stand on my own feet in one way," he laughed, "even if I couldn't do it another way.

"If I brought home a bad report from school, she gave me a good calling-down, and made me understand that I must do better the next time. She taught me to be self-reliant; because she knew it would be so easy for me to become dependent.

"But she was always good to me. I used to get up before five o'clock every morning and go down-town for the papers which I sold at the station. Sometimes there would be a heavy snowstorm, and my mother would beg me to stay at home that morning. But I knew I mustn't do that. I had my regular customers; and if they couldn't depend on *me* I couldn't depend on *them*.

"So when Mother found that I was going anyway, she went with me! I would sit on a sled and she would pull it through the deep snow, all the way to the station, about a mile from our house. She would go home then, get the other children up, and send two of them down to bring me back to breakfast about seven-thirty.

"After breakfast, I went to school. And after school, from three-thirty until six, I sold papers again. In the evening I studied my lessons for the next day.

"Until a few weeks before Mother died, Helen and Anna and Bridget went to school, too. By that time, Helen had almost finished the eighth grade. When Mother became so weak that she had to stay in bed, Helen left school and took care of the house. She was twelve years old then.

"WHEN my mother died, everybody was so good to us. The doctor who had taken care of her never charged us one cent for all he had done. We children have always been pretty healthy, but we have had to have a doctor now and then; and never has a bill been sent to me.

"The people of Meriden were just wonderful. For one thing, some of them offered to adopt the youngest children after Mother died. But I told them I wanted to keep the family (*Continued on page 161*)

Somewhere There's Always Someone Listening In

"Uncle John" Daggett, of KHJ, Los Angeles, says there are five distinct radio audiences who know what they want, and why and when they want it—Amazing stories of the far-reaching effect of radio

By Magner White

THE site for the big picnic and barbecue was a beautiful canyon, ninety miles from Los Angeles. "Uncle John" of KHJ, the Los Angeles "Times" radio station, had invited all his friends to be there: It was a day in February, two years ago. "Uncle John" and his staff expected a crowd—say, possibly five thousand, or maybe even as many as ten thousand.

An hour before the time for the picnic, fifteen thousand people had arrived. When the celebration started, forty-eight thousand were there. By the middle of the afternoon, however, more than fourteen thousand automobiles had gone into the canyon, bringing the total attendance up to almost sixty thousand—probably the greatest picnic crowd in the history of America.

That illustrates, in a way, the great bond of friendship that exists between Uncle John and the hundreds of thousands who hear him every day and night on the air. But here's more along the same line: In the files of Uncle John's office I found more than three hundred thousand letters!

Letters from everywhere: typewritten, scrawled, hand-printed, on letterheads of great business firms, and on society note paper; in the firm hand of maturity, and in the unsteady or uncertain writing of childhood and of extreme old age; praising, suggesting and, occasionally, criticizing—and nearly all of them beginning, "My dear Uncle John."

"Uncle John's" name is John S. Daggett. Even though radio is still in its infancy, he is a veteran in the profession. When the "Times'" station was opened, five years ago, he was the man at the microphone, and he has been there ever since.

In the studio, after more than twenty-five years as a newspaper reporter, he found his life's work. He loves people, nature, and beauty. His studio shows it. Hundreds of photographs, among them the likenesses of many famous people, look down from the walls—all affectionately inscribed to Uncle John. There are flowers all about the place. The studio canaries keep the place merry with their songs.

In this setting, one afternoon, I found Uncle John. It was a silent hour for KHJ, but Uncle John was very busy.

He had come down to the studio to help a deaf girl. The girl, about seventeen, had never heard a sound and, as a last resort, it was decided to turn into her ears all the power of the great KHJ broadcasting station, in the hope that her under-developed organs of hearing would be stirred.

While I was waiting, the miracle happened! The girl heard the voice of Uncle John saying, "Hello, Cleo, this is your friend Uncle John!" They were only sounds to her; but, transient as they were, they had meaning. She had heard. Whether the result can be made permanent or not remains for further experiments to determine. Cleo may live the rest of her life in a world soundless to her; but the memory of at least one human voice will continue to ring in her ears.

KHJ station *is* an interesting place.

An hour later, Uncle John and I escaped to a place where we could talk, uninterrupted. When he is in his studio he belongs to his great public.

"These people who listen-in on KHJ every night," I opened up, "what do they want to hear, principally?"

"There are different audiences for different times of the day," Uncle John replied. "These various audiences all have different ideas about what they want to hear. But, before I go into that, I want to say something else.

"RADIO knows no time limits. There is always someone listening in somewhere. One time we ran our station continuously for more than one hundred and fifty hours, night and day, during a lodge convention. We heard from that stunt from all parts of the United States, and every separate hour's program was commented on, showing that, no matter what hour of the day or night a number is put on the air, there is someone somewhere ready to hear it.

"But in a more local way, you find people forming into groups to listen to the radio programs. In the morning or in the afternoon, they will listen to news items, talks on interesting subjects, and lectures on special topics. During the noon hour, however, they expect a little music along with the other things.

"In the evening—early in the evening—they want songs, old and new. A few talks may be interspersed; but if they get too long the crowd will start tuning out and trying to get another station.

"Late in the evening, say around ten-thirty and after, only instrumental music will do. It may be (*Continued on page 176*)

The Cricket Cricked in Los Angeles People Heard Her in New Zealand

"ONE evening I decided to try a stunt," said Mr. Daggett. "In one of the flower pots here in the studio, I had discovered a cricket. By experimenting a bit, I discovered that if I covered the bowl with a black cloth for a few moments, and then took the cloth off, the cricket would sing.

"'Now, friends,' I said, when I got ready to sign off that evening, 'we are going to have a very special feature. Miss Cricket will sing, as our closing number, her own composition, entitled "Cricketing for You".'

"I put the flower pot down by the microphone, removed the black cloth and, much to my relief—for I didn't really know what would happen!—that cricket began to sing. She cricketed at the top of her cricketing ability, loud and clear.

"After a couple of minutes she quit abruptly, took a few steps, wiggled her legs a couple of times—and gave two final sharp snaps, for all the world as if she were saying, 'Well, how was that? Pretty good, eh!'

"That was one of the greatest hits that ever went over KHJ. It was late at night, but our telephones buzzed for an hour afterward—people calling in to report that they had heard the cricket. We got letters and telegrams by the hundred; and two weeks later, all in one batch, we got twenty-seven letters about that cricket from New Zealand—6,800 miles away, a fourth of the way around the earth!"

John S. Daggett

MR. DAGGETT, studio director of KHJ, "The Times," Los Angeles, is known to radio fans as "Uncle John." He has been on duty at KHJ since the station opened, five years ago. Born in Kansas City, Missouri, he moved with his parents to Pasadena, California, when he was nine years old. At sixteen, he became a "Times" reporter, remaining on the staff twenty-five years, when he was appointed to his present job. "Uncle John's" love for children has made for him a warm place in thousands of families whose members know him only as a voice that speaks to them every day. He is forty-seven years old.

John L. Merrill

FOR a little more than forty-two years Mr. Merrill has worked for the same company. He began as a handy boy about a small office, grew up with the organization, appointed himself private secretary to the president, and finally, in 1918, after thirty-four years as an employee, he became head of All America Cables, Inc. The man under whom he had served for so many years asked the company to name Merrill as his successor. His firm is one of the important links between North and South America. Mr. Merrill was born in Orange, New Jersey, sixty years ago, and now lives in East Orange and in New York City.

The Longest Days Are Those On Which You Pity Yourself

"I went through a period of self-pity," says John L. Merrill, president of All America Cables, Inc., "so I can talk with feeling on that subject." The story of another man's dream which Merrill inherited, and which he made a reality

By Helen Christine Bennett

WHEN I think of the story of John L. Merrill, I am bound to conclude that the gods of chance probably have a good chuckle now and then. How else is it possible to explain the building of the career of the president of All America Cables, Incorporated, upon the foundation of the passing of two pepper and salt shakers? What relation could pepper and salt shakers possibly have to the joining of two continents by cable, or to the rise of John L. Merrill from office boy to the presidency of his company?

In the winter of 1884, Merrill would have been bewildered by this question. He was eighteen; he had completed high school, and he had decided that, as family finances then stood, he had better forget his cherished ambition to go through Harvard University. The thing for him to do was to get a job. His elder brother, who at that time was cashier of an insurance company in Wall Street, invited the younger boy to come in to New York from their home in East Orange, New Jersey, to lunch with him at a club on the top floor of the building in which he worked.

The younger boy lunched at the club several times, meeting a number of men. One noon he found himself seated next to an elderly gentleman who talked with him about politics. Young Merrill was flattered by the attention, but not so much so that he forgot his manners. Thanks to a painstaking mother, he had learned always to see that others at table were taken care of. Several times during the meal, he captured the pepper and salt and passed them to his elderly companion. Mr. Samuel Blackwell, remembering that there was a vacancy in his force, turned to the well-mannered young man who sat next to him:

"I am the treasurer of two new cable companies," he announced; "the Mexican Telegraph, and the Central and South American."

Young Merrill leaned eagerly forward; this sounded promising.

"And," continued Mr. Blackwell, "if you are open for a position, young man, there is a vacancy"—here Merrill's heart leaped, only to sink heavily at the next words—"as office boy at five dollars a week."

Office boy—at five dollars a week—the young man's gorge rose. Why, even in those days, the messenger boys got more than that. And he was a high-school graduate! Here a heavy kick on his shin made him start and turn reproachfully to his brother, who followed the first kick with a second, and a tense whisper:

"Take it."

DAZED but obedient, Merrill managed to accept the offer. After Blackwell had gone, he protested to his brother.

"I know it isn't much of a job," agreed the older boy; "but that is a new concern. It has good men in it, and some big men back of it. If you get in on the ground floor, you might work up to almost anything."

The next morning John Merrill began as office boy with the firm now known as "All America Cables." As we sat in his office in the building erected by the company at 89 Broad Street, New York, he told me this story of his start, and, laughing, he added:

"Mr. Blackwell said he never would have remembered me at all had he not been impressed by the way I found and passed him those pepper and salt shakers!"

I looked about the cheerful, spacious room in which we sat, a room lined with maps of the world, so that even within its four walls you are conscious of being a part of something much bigger.

"How long did it take you to get *here?*" I asked.

"I didn't get *here* at all," he replied, smiling. "Come with me, and I will show you the room they gave me." We walked down the corridor, and he opened a door upon the most luxuriously designed office I have seen outside those of the directors of motion pictures. Mr. Merrill stood on the deep-piled rug and shook his head.

"This is my regular office," he said, "but I like my desk in the board-room better. But you asked me how long it took to reach the room, by which I suppose you mean the presidency. It took me thirty-four years, and it happened eight years ago."

As we went back down the corridor to the simpler room, I thought that the selection was characteristic. Merrill has the rare combination of dignity and simplicity. He is a powerful man of erect carriage, commanding presence, and vigorous movement; but his voice is low and gentle. As I watched his associates come and go—for our talk was constantly interrupted—I understood his universal popularity with the fifteen hundred men the company employs. Indeed, I quickly found myself agreeing with the verdict of one of Merrill's associates:

"Here is a man who reached the top of the ladder without forgetting how life looked from the bottom. He has passed out of the ranks of the men with whom he used to work, but he has not become their boss. He has become their father."

To-day the employees in the small stations throughout South America, Panama, Central America, the West Indies, as well as those in our own country, know John L. Merrill. In every way practicable he keeps in touch with them; in many cases, he is acquainted with their personal and family affairs, and it is to him that they appeal in times of trouble and distress.

It is to this close relationship between him and his working force, no less than to Merrill's business acumen and hard work that the remarkable increase in the business of the company during the eight years of his direction, is due.

IN 1918, when Merrill became president, the company was handling, exclusive of press messages—which vary too widely to be averaged—less than three thousand cables a day. At the close of the war in 1919, there was a distinct slump in business, followed by two years of depression. Yet, despite these handicaps, the business of All America Cables steadily increased. By 1926 the number of messages had more than doubled. To-day, the company is handling, exclusive of press, over six thousand messages a day, a total of over four million a year.

I have made this statement because Merrill is in the unusual position of a man who inherited a dream. Selected by the founder of the company, James A. Scrymser, as the man best fitted to carry on after his death, Merrill has had to face considerable skepticism. His close association and personal friendship with the former president, and his entire willingness to subordinate himself to the man who had conceived the idea of uniting the three Americas by cable, and who had brought his vision largely to pass, had perhaps resulted in an overshadowing of the younger man's initiative. (*Continued on page 144*)

The flock was coming back. The wanderer must have heard its coming sooner than I, for instantly his call changed to something like glad, contrite confession

Migration—The Wonder And The Mystery Of It

By Archibald Rutledge

DRAWINGS BY REX BRASHER

I LOVE the legend of Persephone. The ancients were wise when they invented the story of her abduction by Pluto, and of her annual return to the earth, in the springtime, to visit her mother, Ceres. The story has a universal appeal, because the human heart knows the bleak loneliness of winter, and the romantic appeal of the return of spring. Persephone is at home once more on a visit; and life is joyous when she is with us.

It was on a misty night in mid-March, when the warmed and fragrant sap, one knew, must be running; when the gentle wind that breathed through the stark tree branches had a tenderness, as if but yesterday, down South somewhere, it had been romping with jasmines and roses. My heart felt the spring. I was coming home over a lonely Pennsylvania field, and several times I had stopped to listen for migrating birds; for it is on just such a night that they are likely to become bewildered in their epic journey, and as a result fly closest to earth. In the moist, mild darkness I heard a flock of wild geese passing northward, honking in standard fashion. For me, such a sound has always been full of powerful suggestions, primeval, and full of nameless glamour. I have gazed, fascinated, at these flying wedges, valiantly grazing the wild moon's icy arc—led homeward by an overmastering instinct. A few days ago, they were in the delta of the Mississippi, and along the Gulf Coast; a few days hence, and they will be sporting amid the frost-rimmed sedges of some far Athabascan lake! We who are supposed to love thrills above all else should get a tingle out of that thought, suggesting as it does the heroic mood, the dim, infallible wisdom, the immense journey, the thousand perils overcome, the superb achievement of the migrating hosts.

IN THE still night I listened to the geese until they passed out of hearing. After some moments, I heard a single honker returning. Apparently he was quite near me, and he was giving a lost and lonely call. There was a note of protest in his tone, of distraction. Evidently, he had become separated from the flock. Many times he circled, crying out continuously. I heard him until I reached home. Ten minutes later I came out of the house to discover whether he was still in the neighborhood. I then heard both the flock and the stray bird.

The flock was coming back. It must have understood that it had lost one of its number. The wanderer must have heard its coming sooner than I. Instantly, his call changed to something like glad, contrite confession. The cries of the other geese changed too. He was telling them that he was sorry, and they were berating him for not having watched his step more carefully. The Royal Night-Mail had turned back to recover a straggler. The "Homeric" had hove to in order to search for a man overboard.

The whole performance seemed to me a wonder of the night, of wild intelligence, a thrilling touch to make one feel that migration is no mad escapade, no hap-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

hazard, blind dash; but orderly, precise, masterful. That incident of the recovery of the stray goose, and many another like it, has taught me that migration is no mere frantic dash into the distance. Its performance partakes of the nature of high art; it has always the rhythm of a great symphony. It requires strategy, cunning, patience, endurance, cleverness, unselfish lavishing of the strength and wisdom of the few for the good of the whole.

THAT the leaders of a migrating band are important personages, and that much is expected of them, I once saw rather humorously illustrated. I was driving along a country road in early April when there came into view a belated flight of wild geese. There were seventy-six in the flock, and the birds were flying too low for safety. I stopped to watch them. When they were almost over me, a farmer in a nearby yard began to fire at them with a rifle.

Naturally, they veered and mounted; but what amused me was the clamor that the birds set up—the wild gabble of criticism of the great gander that was leading the stately march. He, of course, was at the very point of the wedge. I distinctly saw the two geese behind him and a little on either side of him turn their heads to shout raucously at him, and at the same time each quite evidently gave him a blow with their wings. Immediately he was displaced as a leader, discredited, and fell back far in the line, all the other geese "chastising him with the valor of their tongues," and trying to strike him as he passed them.

To interpret the meaning of the behavior of the geese as a protest against their unwary leader might be considered pure imagination, were it not for the fact that I have confirmed my idea of it many times, not only with wild geese but also with wild ducks, with crows, and with other birds. The leader of a migrating flock is like a watchman that feeding crows post to give them warning of the approach of an enemy. If the sentinel permits an enemy to creep near, he is usually severely punished. I once caught an old crow watchman dozing, and managed to kill several out of the feeding flock. The frightened birds, though flapping away wildly, gave their attention less to escape than to the guard who had betrayed them. They buffeted him until he cried out for mercy. As mute sable witnesses of the fury of his comrades, many jetty feathers floated down to the field.

I have mentioned migrants seen and heard; but I am sure that comparatively few of the migrants that pass us are observed; and we have attributed our failure to seeing them to their going by in the darkness. Probably the better reason

A great bald eagle had harried the ducks all winter long

is that they fly higher than is generally supposed. On the very crest of the Blue Ridge, at a point where the hills are twelve hundred feet high, I have seen geese and ducks flying a thousand feet over my head. From the valley below they would hardly have been visible. The officials of the great Trigonometric Survey of India photograph the sun on every clear day, and at times the pictures show other things. Quite recently a flock of wild geese was photographed at a height of five and one-half miles.

When migrants pass close to the earth, their presence apparently never fails to affect their tame friends and relatives. Often in the spring, and also in the autumn, flocks of tame geese and ducks will rise from the meadows, or even from yards and pens, and fly with joyous abandon and distraction for considerable distances; and I have frequently heard domestic geese and ducks answer, with a far homesick recollection, the calls of their wild cousins from the sky.

Quail also, though they are not supposed to migrate, will often, in the autumn, rise high in the air as a covey, and fly great distances—ending their bizarre flight sometimes in very unaccountable places, such as the back yards of city homes, the trees along a village street, or the gardens of a very civilized community. The ruffed grouse, that lordly prince of the woodland, in the fall of the year is sometimes infected with the travel spirit; and at such a time I have found him far from his native haunts. I was shooting along a stream one November, a stream some five miles from the nearest mountain, when to my amazement I flushed one of these splendid birds. One autumn, while in North Carolina, I saw another of these superb aviators come dashing incontinently over a small valley and up a wooded slope, on the crest of which I had my home. The regal courier unhappily sped straight through one of the large windows of the house, and fell stunned into the room beyond. I picked it up; it soon revived, and upon being released sped off as buoyantly as ever.

The Indians believed that the autumn was the time of semi-madness for many wild creatures; and this distraction of would-be migrants, together with the fact that the fall of the year is the mating season for many of the larger animals, lends much evidence to support this otherwise apparently fanciful and poetic belief.

IN ADDITION to those that have a sudden ancient thrill to migrate, but never quite accomplish it, there are those that really would, but cannot, because of wounds or other similar handicaps.

I remember going one day in early March into the great Santee delta, in South Carolina, which is only across the river from my old home. At that season of the year the region is aglow with spring greenery. Especially in the dewy hours of morning the whole world looks like a glistening beryl, a twinkling emerald. As I paddled into that strange, still country, the tide was high; ditches, canals, and creeks were flooded; many of the old waste fields were mere shimmering expanses of limpid water.

The ducks that had wintered by the thousands on the delta had, for a week or more, been moving northward. When I invaded the reedy wastes which had been their winter playgrounds, they were silent and deserted. Here and there I

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

saw a shy king rail stepping with swift stealth, that in itself is concealment, into the tall marsh. A great bald eagle that had harried the ducks all winter long now sailed disconsolately over his spacious domain.

Suddenly, from a sunny estuary behind a clump of greening marsh, I heard a mallard quacking. He did not know that I was near; but he evidently was aware of some presence that disturbed him. Nor was it the eagle. A small flock of widgeons passed, speeding northward. That day they might not stop short of estuaries around Nags Head, or the vast bays of Currituck. A teal has been timed on a straight stretch of a river to fly one hundred and twenty miles an hour. These ducks were, I judged, going about seventy-five. This mallard saw them, and he wanted to join the flock. Why he did not, I soon discovered.

Often on a moonlight night in October I have seen the mocking bird take the air on quivering wings

PADDLING round a point of marsh, I saw him behind a fringe, still unaware of my presence. Evidently, he was wounded. Some hunter had shot him down in the marsh, possibly weeks before this; and while he had managed to escape the eagle's vigilant eye, and the prowling stealth of many a wild-cat, he could not join his comrades on their spring flight. It may be that I am overestimating his emotion; but I thought I had never heard cries so pathetic and appealing.

All of us, presumably, have experienced what it means to be left behind; and in the case of this lone mallard he was to be left a couple of thousand miles behind by his kith and kin. I heard him importunately hail the fleeing flocks; and I saw two or three of their number crane their necks and gaze downward; but they did not stop.

Later that morning I saw other ducks, and their presence comforted me. There was to be, I knew, some comradeship in misery. Indeed, there must have been joy in that fellowship; for that summer I found mallards mating on the delta. Books of science tell us that mallards never mate in the South; but Nature has a way of playing tricks on the writers of solemn books. Here were migrants that couldn't migrate; yet they managed to find life very much worth while after all. They could not go with their families; but they managed to get along quite well; and ere long their families came back to them! I guess it is sometimes so with us.

ALL of us are interested in world's champions of any sort; yet up to this time no Olympic medal has been hung on the soft gray breast of the Arctic tern, the bird that executes the longest migration flight achieved by any of the myriads of the winged hosts. It is called "Arctic" because it chooses the very far North as its nesting ground; indeed, it has been found mating as far north as land has been discovered. Its tiny chicks are reared amid latent icebergs, blizzards, and every other condition that would seem adverse to the rearing of young. One nest of this extraordinary bird has been found within a few degrees of the North Pole!

As soon as the young are fully fledged, the tern begins his epic overseas journey, airily passing lordly New York, flouting the romantic and alluring shores of Virginia, even passing the Florida Riviera, and the aromatic West Indies; following the immense length of the South American seaboard, down to the distant and dim Falklands, down past remote South Georgia, down toward the Antarctic Circle, where it delights to spend our winter; tirelessly skirting the frigid edges of that lone and disastrous region. This Odyssey of Migration represents a flight of full eleven thousand miles.

Of this remarkable air voyage, no man speaks with more authority than Wells W. Cooke, the expert on bird migrations, in the Biological Survey. He says that the Arctic terns arrive in the far North early in the summer and leave late in August, staying about fourteen weeks at the nesting site and that they probably spend a few weeks longer in the winter than in the summer home. This would leave them scarcely twenty weeks for the round trip of twenty-two thousand miles.

"Not less than one hundred and fifty miles in a straight line must be their daily task," says Mr. Cooke, "and this is undoubtedly multiplied many times by their zigzag twistings and turnings in the search of food.

"The Arctic tern," Mr. Cooke goes on to say, "has more hours of sunlight and of daylight than any other creature on the globe. At the most northern nesting site the midnight sun has already appeared before the birds' arrival, and it never sets during their entire stay in the breeding grounds. During two months of their sojourn in the Antarctic the birds do not see a sunset, and for the rest of the time

Stately birds the curlews were, with long sickle bills—heavy in the body but possessed of a certain grace that one can always associate with a game bird

Digitized by Google

the sun dips only a little way below the horizon, and broad daylight is continuous. The birds therefore have twenty-four hours of daylight for at least eight months in the year, and during the other four have more daylight than darkness."

The Arctic tern executes the longest migration flight made by any of the migrating birds—eleven thousand miles

WHILE the Arctic tern makes the longest migration flight, no other bird compares with the golden plover, when we consider the strange and marvelous flight that it takes, its achievement having much of the same powerful appeal to the imagination as a non-stop transatlantic passage by airplane. There is a regular route of migration from the shores of Nova Scotia to the Lesser Antilles, and thence to the northeastern coast of South America. It is a favorite route for many aquatic birds, but especially for the golden plover.

Breeding in those lonely wastes within the Arctic Circle known as the "barren grounds," as soon as the young can take wing the golden plover starts for Labrador; thence, after several weeks' stay, the birds repair to Nova Scotia—the jumping-off place for the most wonderful of all non-stop bird-flights. Their objective is the coast of South America, twenty-four hundred miles away over the trackless waters. Occasionally, in stormy weather, the voyagers may "put in" at Bermuda, or at some of the islands to the southward; but if the weather is favorable their immense journey is accomplished without rest or pause. Flying both day and night, these spirited and beautiful birds actually pass from Canada to Brazil without a stop.

I used to have a mocking bird—a regular pet, though he was never caged—with whom I was on the most intimate terms of friendliness—until my Delaware grapes began to ripen. Then his raids made me cool in my attitude. He lived in a dense cedar in my yard, lurking for the most part in its dusky shadows; but he would emerge often in the grape season; and occasionally to fill the world with wild music—like some moody genius who retires into solitude, whence he presently reappears with a masterpiece.

I often tried to discover how many kinds of birds this particular mocker imitated; the complete list (some little leeway should be allowed me for mistakes) was eighty; and often in a single brief concert, as spontaneous as it was inspired, he would give the calls and songs of thirty or more birds. Most of these notes, being of birds with which I have since boyhood been familiar, were not in the least difficult to identify. But what was my astonishment one day to hear him clearly imitate the note of a rare migrant—the Bartramian sandpiper—a note not native to the mocker's Southern country, one that could have been caught by him only from some high-passing migrant, fleeting eerily by under the stars. I believe science should accept as authentic the mocker's repetition of a call or a song as proof that the bird imitated has been in the neighborhood, though no human eye has seen it. I have heard this superb mimic give the notes of several birds that I could not identify; doubtless they were of migrants that stop rarely, if at all, on the Carolina coast.

HALF the joy of life seems to be in little things taken on the run—or on the fly. I love to think of the mocking bird's being able to catch the fugitive note of a far aërial wanderer, and, without any loss of its haunting strain, handing it on to me. Often, on a moonlight night in October, I have seen him take the air on quivering wings; and in lyric ecstasy voice the meaning and the mystery and the beauty of the dreaming world. Listening to his marvelous minstrelsy, and watching the moon write her silvery scattered dreams on the incoming tide that flows past my porch, I have felt him to be an interpreter of all the glamour that my heart was aware of, but was baffled to express. Any bird that can interpret wonder is worth hearing. I fully expect him at some time to let me hear the mellow fluting of the golden plover. If anyone in Carolina can hear that mystic rover, the mocking bird can.

How long the remarkable passage of the golden plover takes has not yet been ascertained, nor is it soon likely to be. But it is not unreasonable to believe that an average speed of thirty miles an hour is maintained; the trip would then be one of three days and three nights.

But upon reaching the shores of South America, the heroic journey of the golden plovers is by no means ended. They resume their flight, voyaging southward, and at length reach the pampas of the Argentine. Some go as far as Patagonia. Here they remain from the late summer until the March following. Upon their arrival in South America, they find the native plover busily nesting; but it is said that no migrant from the North ever mates in the Southern Hemisphere.

Upon their journey northward in the early spring, the plovers follow an entirely different route. Overland they speed to the northern coast of South America; then they traverse the Gulf of Mexico, entering the United States by the way of Texas and Mississippi. Up the valley of the Mississippi they go, and by the first of June are once more at their nesting ground far within the Arctic Circle. This epic cycle forms an immense ellipse, the respective tips of which rest upon the Arctic North and upon the plains of Argentina.

The golden plover of the Pacific Coast flies overseas from Alaska to Hawaii. "It seems incredible," says an authority, "that any birds can lay a course so straight as to attain these small islands lying in mid-ocean, 2,000 miles from the Aleutian Islands to the north, 2,000 miles from California on the east, and 3,700 miles from Japan on the west. And yet, year after year, the hosts of the golden plover pass from Alaska to the South Sea Islands, and thence in mating time they return to their far breeding grounds in Arctic America. Making One Hour Do The Work Of Two

By M. K. Wisehart

TO BEGIN with, I want to tell you something about the circumstances that led to the writing of this article. Some time ago this magazine printed the story of a boy who started out at bricklaying. Almost the first day at this trade, he discovered something which seems never to have attracted attention in the same way before. His discovery was simply this: No two of his fellow workmen were using the same methods in handling brick, trowel, and mortar. He was struck by the conclusion that if *one* of the bricklayers was doing the job in the *right* way, then *all* the others must be doing it wrong! And it was this notion that ultimately became the foundation of a great career.

Having learned one phase of the building trades after another, the apprentice boy became manager, then superintendent, for a construction company. Next, he was a construction engineer "on his own." Always he was turning over this idea that there must be one right way of doing anything. It was a bee in the bonnet, a sting and a goad, an obsession. Some said that it was a chimera.

But the young fellow achieved such astonishingly quick results in digging canals, in raising buildings and industrial towns, that he was sometimes asked to stay on the job after his contract work was finished; they wanted him to install his *methods* in the plant itself. In the end, he gave up construction work entirely to become a management engineer, one of the first, a pioneer.

For thirty-five brilliant, indefatigable years, Frank B. Gilbreth made a romance of digging out the one best way of doing work. He became a maker of hours, a creator of time. He came to be recognized as one of the world's greatest authorities on management engineering. He was called upon to reorganize the production methods of many of the biggest enterprises in the United States, and in many cases he revolutionized them.

While preparing that article I learned, among other things, that Gilbreth was an intensely human man. There wasn't anything under the sun that he wasn't interested in—economics, history, nature, boating, baseball, golf, horses, and especially champions of any kind, whether they were champion pitchers, typists, or cranberry pickers down on Cape Cod.

"I can't afford to collect jade," he said to me one day, "so I'm making a collection of knots. What do you think of them?"

He showed me a hardwood knot whose peculiar grain was the exact likeness of a hairy, bewhiskered Spitz. Anyone would have known it was a Spitz.

He handed me another knot. "Why, that looks like Chauncey Depew!" I exclaimed.

"Right!" he answered. "Chauncey M. Depew all dressed up in an aviator's helmet!"

One day, when putting in a call from a grocery store telephone booth, the engineer had seen this knot in a board of the booth. The proprietor of the store agreed to his cutting out the knot if he would fix up the hole afterward. So the engineer got hammer, saw and nails, and zestfully set to work, removing a chunk containing nature's capricious likeness of the distinguished lawyer, after which he repaired the damage with another board!

From all over the world, people who knew of Gilbreth's knot-collecting hobby sent him knots that they had found. Few of these were as good as his own finds, for he had the zeal of the real collector, and his own specimens were distinctively beautiful or odd and full of human interest. He once made a trip all the way from Boston to Arizona to get a petrified knot.

Frank Gilbreth was that way: an enthusiast, thorough, human in all he did. He had time for everything that he thought was worth-while.

I MADE a list of Gilbreth's hobbies, the incidental by-product activities of an extraordinarily dynamic life. Twenty-eight of them! Too many to list here. If one of these hobbies more than another could be called his passion, it was his desire to apply to the affairs of every day the principles of time-saving that he had applied in industry. Some of them couldn't be applied, of course. Marvelously effective in their sphere, they had to do with technical and intricate things. I told him so.

"But every one of us ought to engineer his time," was the response. "We need to *plan* to make the most of twenty-four hours a day."

He spoke of a day as made up of 1,440 minutes and wanted to know how long I thought it ought to take a man to unlace his shoes, take them off, put them on again and lace them up. A minute and a half was my guess.

"It can be done in twenty-nine seconds," he answered. He had found this out on an engineering job for a big shoe company that operates hundreds of stores in every part of the United States. At the start, on the average it had taken the clerks seven minutes to fit a customer with shoes and complete a sale. The engineer had reduced this time to three minutes. Of the three minutes, seven seconds were allotted for the removal of the customer's shoes and twenty-two for putting them on again.

"Starting at the bottom and using both hands," observed the engineer, "a man can button his vest in three seconds! That's laboratory, stop-watch time! It's perfectly feasible. The other way usually takes seven seconds. Accumulated seconds make minutes!"

"Great Scott!" I exclaimed. "You think as much of a minute as you do of one of your beautiful knots!" And his answer was, "You may pick up a better knot; but if a minute's thrown away, you aren't going to find another just as good!"

And he went on in this way: "Of course it isn't important that a man should cut his shaving time in half, get his shoes on in a flash, button his vest in no time at all. But it is important to *think* in elements of time. We ought to *know* how long it takes to do all our jobs—from sharpening a pencil, to dish-washing or reading a column of fine print. Find that out, and you've made a beginning as a time engineer. That's the vital thing!"

He was full of his subject. It was wonderful to hear him talk. "But isn't there another side to this time-saving question?" I asked. "Most of us are doing all we want to now, aren't we?"

"No! No!" was his earnest response. "Don't say that! It isn't true! There's something every one of us wants to do in addition to what he's *got* to do. We tell ourselves the reason we don't get at it is because we lack time. We're likely to be a little easy with ourselves in that respect. Often, the real reason is simply *the way we use time.* I tell you that if a man's life is going to amount to anything more than an incoherent series of false starts and thwarted efforts, he's got to get acquainted with the fundamental principles of time-saving."

ON THIS subject of time-saving, the engineer promised me an interview for the readers of this magazine. That conversation took place early in June, 1924. Mr. Gilbreth was then getting ready to sail for Europe on the twentieth. On June 14th, the Associated Press gave to the world the tragic news that the engineer, in a telephone booth at the railway station of his home town, Montclair, New Jersey, had been stricken with heart disease. But the swift-moving Hand of Time had not caught him napping!

The other day I went to Mrs. Gilbreth to see if she would take up the thread of this story where it had been broken. You may recall that the previous article to which I have referred was entitled "They Are Both in Who's Who." It was, in fact, the story of the joint achievements of the engineer and his wife, Lillian Moller Gilbreth.

The mother of eleven children, a home-

maker, she had nevertheless been an active partner in her husband's profession. She is the author of a number of important books, a recognized authority on industrial psychology.

Mrs. Gilbreth not only went on with the story, she also told me a number of other interesting things. The condition in which the engineer had left his affairs, the way in which his wife was able to carry on, that is an important lesson in itself.

Presently I promise you the continuation of Gilbreth's message on time, but first something about these other matters, for we have to do with a woman's story as well as the message of a man.

"During the war," said Mrs. Gilbreth, "when Frank was working at Fort Sill on the job of standardizing the methods of gunfire for the United States Army, he suffered a long siege of pneumonia. We both realized that the only way he would have freedom from the worry that his heart would go, and leave me uncertain what to do, was for him to plan everything in detail, to standardize what he would want done if he went. So, everything was put in order even more thoroughly than it had been done before. Not a single complicated duty of any kind arose for me to do.

"THE trip abroad had been arranged for England, Holland, and Czechoslovakia. We were going to attend the Power Congress in London, where Frank was scheduled to discuss two technical papers. We were going to look after our engineering jobs in foreign factories, and attend the world's first Management Congress, in Czechoslovakia. We had just six weeks in which to do everything. It was all planned on a travel chart which took care of the days, hours, and many of the quarter hours.

"I knew that the thing to do was to go on with the schedule; and I sailed on the ship on which Frank and I both had had reservations."

In London, Mrs. Gilbreth gave the two papers that her husband had been scheduled to give. Then she took up an important question with the foreign clients. Would these companies, with staffs entirely of men, want a woman to go on with the management job? They said, "Go on!" So she did the work that her husband and she would have done together.

"Throughout the six weeks," she said, "I followed the chart Frank had made. An excellent piece of planning! It was a great satisfaction to me to check up on it and to find that I was seeing it through to the last detail."

BACK home, Mrs. Gilbreth filled her husband's other engagements for lectures and technical papers—at the Massachusetts Institute of Technology, at Yale, Sheffield, Ohio State, Purdue, and the University of Michigan. And she was asked to continue all of these lectures during the following year, as well as her own lectures at the Harvard Business School, Smith College, and at Teachers College!

One of the plans Mr. Gilbreth had developed shortly before his death provided for an entirely new departure in management engineering. He had been going from plant to plant with his men, installing improved production methods as well as teaching them. Under the new plan representatives of the plants were to come to his laboratory at Montclair, learn the methods, and return to the plant to make the installations themselves.

In six months' time Mrs. Gilbreth had reorganized the business in accord with this plan. She explained the idea to one of her clients. "Go ahead!" he exclaimed. "It's a novel method. I believe it's practical. I'll send a man even if he's the only one, and pay the entire cost of the course myself!"

But more than one attended. A limit had to be put on the number admitted for the training. "The plan is fully established," said Mrs. Gilbreth. The course consists of two parts. The first part teaches how to find the one best way to do work; the second, how to teach it to others. "Now we're able to teach half a dozen men from different plants at one time, instead of taking each plant separately. In this way we get much more done."

And so I asked her some of the questions that the engineer himself had been going to answer: How we waste time? How we can save time? How we can all get more done? This is the way she answered:

"AT ONE time we had in our organization an engineer of very great talents who had a trait that is characteristic of many of us. He was forever thinking and talking about what he was *going* to do. He spent a great deal of time thinking up new methods and experiments. Sometimes months would elapse without a move to put them through.

"Mr. Gilbreth used to say, 'Our talented friend is a creature of inertia. He stops so long to look at the difficulties of a problem that he gets paralyzed. What we've got to do is to find a way of getting him started.' And Frank devised for this engineer what he called two self-starting principles, as follows:

"First: Whenever you think of something you ought to do, do something about it at once. First, of course, decide whether this is a thing you mean to carry through. If it is, get into action *at once*.

"Second: When it comes to tackling a new job, remember this: the chances are you can't do the hard things first. Don't worry about them. Do the easiest. What you do first may be nothing more than making a note in your notebook, putting in a telephone call, (*Continued on page 188*)

Mrs. Lillian Moller Gilbreth is a widely known consulting engineer, and the author of important works in the field of management. Until the death of her husband, Frank B. Gilbreth, two years ago, she practiced her profession with him; since then she has carried on her own work and his. He was one of the most distinguished industrial engineers in America. Mrs. Gilbreth is author of "Psychology of Management," and, with her husband, "Time Study, Fatigue Study," "Applied Motion Study," "Motion Study for the Handicapped," and other technical books and papers. She is the mother of eleven children, and lives at Montclair, New Jersey

Peter's Tower

Secret Service Smith goes back a hundred years to solve a mystery

By R. T. M. Scott

ILLUSTRATED BY GEORGE GIGUÈRE

"I WANT you to find a murderer," began old Samuel Andrews, as he took the easy chair beside the great work table of the criminal investigator.

Aurelius Smith lowered his lanky body into a chair upon the opposite side of the table and reached for his pipe. After applying the match and emitting the first fragrant puff, he squirmed back into his chair with evident satisfaction. As a matter of fact, he lived for his work and cared little for anything else.

"You fear that the murderer knows you, although you do not know who he is," he remarked through the tobacco smoke.

"How could you possibly know that?"

"My dear sir," returned Smith, "you are a very important New York lawyer. Instead of visiting my humble quarters it would have been more natural if you had suggested that I call at your office. Therefore, you desire secrecy. Why? So as not to alarm the murderer. Therefore, the murderer knows you. Then, again, your profession teaches you exact speech. If you knew the murderer, you would ask me to convict him instead of asking me to find him. Pray proceed."

"You might have been wrong," said the lawyer, with a smile.

"Of course. But I would soon have discovered it."

"And you were not afraid of lowering yourself in my estimation by making a mistake?"

"No," answered Smith, without a trace of emphasis. "My own estimation is the only one which concerns me."

The speech held no arrogance, no conceit whatever. The total lack of offense would have taxed a great actor.

"I like you," said Andrews. "You would have made a good lawyer."

"Thanks," said Smith.

"And now for the story of the case," continued the lawyer. "It concerns the Renfrew family, and it has an early beginning."

"Tell it," said Smith. "Tell everything."

And the old lawyer went back more than a hundred years to tell it.

In 1815, shortly after peace came among the English-speaking peoples of the world, Peter Renfrew sailed his old sloop into the mouth of the Hudson, and cast anchor off the shore at a point where the city ended in small, scattered buildings and gave place to fields and trees. With him Peter brought his wife, his son, Peter the Second, a number of slaves, and a bag of gold. Where he came from he did not trouble to say; nor did strangers ask inquisitive questions after they had noted his height of seven feet and the girth of his chest, which was equal to that of two ordinary men.

Old Peter, Peter the First, went ashore with his wife, his son, his slaves, and his gold. He bought some land at the northern end of straggling New York and gave his attention vigorously to truck farming. It was the second year, just before the snow came, that old Peter's wife died. The day of his tragedy Peter Renfrew the First took his thoughts from men and gave them to God.

Snow fell as the old man leased his farm to a neighbor and, followed by his son, carried his dead wife on board the sloop; then he summoned his slaves. To each negro he gave his freedom and a piece of gold. Never a question asked Peter the Second as the snow fell and they sailed northward up the Hudson. People said that the river would freeze and bind them, but none ventured to advise the Renfrews.

FIFTY miles up the Hudson the sloop froze fast in the ice. It was said that the white-haired giant carried his burden to the top of a high hill, built a great fire to thaw the ground, and buried her that midnight.

There was talk of the Renfrews during the following spring, but none saw them in New York. There came gossip that a great madman was building a high stone tower over the grave of his wife. It was thought that he was trying to reach heaven to join her. Peter the Second confirmed some of the story when he sailed the sloop back to New York, single-handed, in the fall. He told that his father was dead, that he had been struck by lightning on the top of his tower, that he had buried him beside his wife. People thought the end was fitting, and said that only God could have killed such a man.

Peter the Second worked the farm until the following year, when he took a wife and carried her away to the tower upon the great hill on the Hudson. It may have been because of the hunting, which he loved, and it may have been a honeymoon; none knew. Peter the Second never returned.

In a great, circular room at the top of the stone tower, during the dead of winter, Peter's bride tried to present him with her utmost reward. It was very sudden, and Peter fled through the snow, upon the rough hill tops, toward the nearest settlement for help. Upon a craggy summit his foot slipped, and he fell far down a sheer cliff—clutched a shrub, which dragged loose—clutched a crevice too small for more than finger hold, and, one arm broken, hung, swaying in the wind.

Far below, an Indian saw the fall and, there being no hope of rescue, stopped to gaze, his admiration growing as minute followed minute and the iron muscles of the dangling man fought against the inevitable.

When it was over, the Indian climbed the cliffs and followed the tracks back through the snow. In the room, on the tower top, the red man found a dead woman and a crying baby. He wrapped the child in blankets and carried him over the hills to his smoke-blackened, skin-covered tepee. Peter the Third entered life roughly, strenuously—like a Renfrew.

White people heard the tale, and the child was rescued and ultimately taken to New York, where he received considerable education and grew to manhood, while the city, bulging northward, overran the old truck farm and increased its value enormously. Peter the Third became a very rich man. In 1860 he bought the small mountain upon which rested the old tower, and built a low, rambling country house upon the summit. Nor would he move the tower, although it occupied the best site; and the result was that a library window lost much light by nearly touching the rough masonry of Peter's Tower, as it was called over the countryside.

Peter the Third was the first studious Renfrew, and he capped the tower with a revolving dome, mounted a huge telescope and indulged in astronomy and mathematics. He married and had one son, another Peter, before dying at his telescope of heart failure—a surprising death for a Renfrew. But Peter the Third had forgotten to grow beyond six feet, and had studied the stars.

PETER the Fourth—they were all Peters, these single sons—reverted to type. He grew to a height of six feet and four inches, and possessed a chest which caused tailors to gasp. As a boy, he would look at the old tower and shrug his shoulders half humorously, half reverently. On Hallowe'en he would measure the length of his great-great-grandfather's grave, and place a candle in a pumpkin at its foot. As a man, he lived mostly at his country place, riding and hunting over the hills, and swimming the Hudson like a porpoise. Strangely enough, he never gave up the rite of the pumpkin at the foot of the ancient grave. He even per-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

formed it at other times than Hallowe'en.

This Peter married and had a son who bid fair to be like himself. Four years later, in 1904, a miracle happened, and the Lord gave him a daughter, Petrovna, so like a flower that men stopped to look who had not tarried so in years. The old truck farm reached the middle of New York, and grew skyscrapers instead of vegetables. There was more money than could be used, and ten years of happiness fell upon the Renfrews.

Then came the World War. Peter the Fourth measured the grave of his great-great-grandfather, solemnly, reverently; then caught the first train northward, out of Cold Spring, for Canada. Never stopping to use money or influence to obtain a commission, he enlisted with the "Princess Pats," in a uniform which he had to buy for himself, since the quartermaster had none large enough. Two years later he returned—minus one leg and half an arm. He looked at his family shamefacedly, as if he had done something that was clumsy; then swam the Hudson amid some floating ice instead of using a bathtub.

"Which arm did he lose?" asked Smith at this point.

"Left," replied Andrews.

Smith refilled his pipe and inserted himself even more luxuriously into his chair, looking at the old narrator with a trace of the child who desires to hear more of a fairy story.

It seemed that Peter the Fourth soon forgot that he had ever had two arms and two legs, and life went on, much as before the war began, with feats of strength and a wild abandon to the joy of life, clean life, straight life—but wild. Peter the Fifth left the football field and college to join in it, lacking only two inches of his father's height. Petrovna equaled the men for agility, outrivaled the countryside for beauty. Mrs. Renfrew smiled, contented, upon her family.

MRS. RENFREW smiled till the summer of 1925, when she grew serious, like all mothers upon certain occasions, and talked earnestly with her great maimed partner. Peter the Fourth grew serious too, and roared over the telephone to his lawyer in New York. The lawyer came and went, and came again with a new will.

It was upon a summer evening that the lawyer, Samuel Andrews, brought the will and laid it before Peter Renfrew the Fourth in his library, so close to the old tower that the light from one window was destroyed. The will was signed before a servant as witness. The servant withdrew. The lawyer withdrew, closing the only door of the library and leaving his client alone, rereading his will. Twenty minutes later Peter Renfrew the Fourth, stabbed to the heart from the back, lay dead upon the library floor.

"Ah!" exclaimed Smith. "I remember reading something about the case in the papers. The coroner decided that it was a case of accidental death, that the old man had fallen off his chair with a steel paper knife in his hand, that he had flung his hand behind him and fallen on the blade. It was reported that the knife was found on the carpet beside the body. Rot! It was undoubtedly a case of murder."

"Why do you say that?"

"Because," answered Smith, "death was instantaneous, and the knife would not have come out of such a wound unless somebody removed it. I will venture to say that there was no blood upon the blade."

"That is true," admitted Andrews; "but the coroner thought that the clothing wiped it clean as it came out."

"Not at all likely," returned Smith, shaking his head thoughtfully. "Knives stick fast after deep thrusts. Soldiers, on the battlefield, often have considerable difficulty in withdrawing their bayonets. Either the paper knife did not do the killing, or the murderer withdrew it and wiped it clean. But I have a much stronger reason to think that murder was done at Peter's Tower."

"What is that?" asked Andrews.

"I don't know," replied Smith quietly; "but it is the reason that brought you here. Why do *you* think it was murder?"

"The will disappeared," answered the lawyer. "The new will was gone when I returned to the library twenty minutes later."

"Good! And you have told nobody but me?"

"Nobody."

"EXCELLENT! Now tell me everything you know about the twenty minutes during which you were absent from the library."

"Well," said the lawyer, "there is so little to tell that it makes the mystery all the greater. As I left the library I encountered Petrovna, the daughter, who was sitting in the great hall-living-room and facing the only door which led into the library. She was reading a book and waiting for her fiancé, who had gone to the village to post a letter. During the entire twenty minutes she remained where she was, so that no person could have entered the library without her knowledge. It was she who discovered the tragedy. I had talked with her for five minutes, and walked out into the garden, where—"

"Wait a minute," interrupted Smith. "What book was she reading and why did she not accompany her fiancé to the village?"

"I am afraid that I cannot answer either question," replied Andrews. "Why do you ask?"

"Books tell the characters of their readers. Lovers stroll together in the evening. Who is this careless lover?"

"Stanley Holts, who appears to be a wealthy man from Florida," was the reply. "Personally, I should not care to endorse his note; but he is a guest of the Renfrews and intends to marry the daughter of the house next week."

"Rather soon after the father's death, isn't it?"

"You don't know the Peter Renfrews," returned the lawyer. "They appreciate death; but not one of them ever bows to it more than once, since Peter the First went mad and built his tower."

"Humph!" grunted Smith. "What happened during the next fifteen minutes?"

"I went out into the garden," continued the lawyer, "where I found Miss Cora Melleville, a very pretty actress from the vaudeville stage. She, also, was waiting for somebody, for Peter the Fifth, to whom she is engaged and to whom she will be married next week."

"Ah!" ejaculated Smith. "I see the reason for Mrs. Renfrew's alarm and for the sudden changing of the will. Well, where was Peter the Fifth?"

"Gone to swim the Hudson by way of a little exercise," answered Andrews. "Beside Miss Melleville was a large police dog, apparently asleep. I sat down on the bench beside the girl and talked. From where we sat we could see dimly the only two windows of the library. Suddenly the dog raised his head with a short bark; then raised it more, and howled.

"Miss Melleville suggested that the ghost of Peter the First was walking, and we went over to the old tower, accompanied by the dog. The girl ordered the dog to enter the black interior of the tower and to ascend the winding stairway. The dog, a very clever and particularly courageous animal, did as he was ordered, and we waited in the doorway. Suddenly, the dog descended the stairs, partly falling in his hurry, and dashed past us into the night with his tail between his legs. Almost at the same moment Petrovna screamed from the house, and we found her in the library with Holts, who had just returned from the village. Upon the floor was her dead father."

"What was the nature of the last will—the one that disappeared?" asked Smith. "And what was the nature of the will which it superseded?"

"These are copies from my office," replied Andrews, taking two documents from his pocket.

Rapidly Smith glanced through the papers.

"The vanished will," he commented, "would appear to reveal the motive for the murder. There are, at the start, three suspects; but that means very little."

"Three?" asked the lawyer.

"Why, yes," returned Smith. "You, yourself, make the third one. You could have committed the murder before you left the library!"

"True," replied the lawyer, smiling; "but you really do not suspect me or you would not have made that remark."

"On the contrary, I might have made it for the very purpose of making you think that I did *not* suspect you."

"YOU should have been a lawyer," retorted Andrews; but his smile faded and he grew serious. "What do you make of the dog's howling without apparent reason? It was calculated that he probably howled at the very moment that his master met his death. Do you think that the animal could have sensed the tragedy?"

"Exactly in what direction was the dog's nose pointing when he barked?" asked Smith.

"Toward the old stone tower," was the answer, after a short pause.

"And when he howled?" continued Smith.

"Still toward the tower," answered the lawyer, after a slightly longer pause.

"Very well, I will tell you what happened," said Smith. "The dog was asleep or, at least, had his eyes closed. He heard something, too faint for your ears, and lifted his head, with a bark, in the direction of the sound. With his eyes open he saw something you did not see, something which mystified and terrified him, something he may never have seen before.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

What the dog heard and what the dog saw was probably the same thing—something which would seem to be connected with the tower."

"You do not suppose that the dog actually saw old Peter the First?" asked the lawyer, shaking his head dubiously.

"The ghost?" queried Smith with a chuckle. "The case is very interesting, but I scarcely think that it is interesting enough to contain a real ghost. There is one thing that puzzles me unusually, although I have a vague suspicion. I want to know why the murdered man formed the habit of carrying a Hallowe'en pumpkin out to his ancestor's grave. Suppose we run out there to-morrow."

SMITH and the lawyer motored out to the country place of Peter Renfrew upon the following day. The detective, who had been consulting a road map, made his first move shortly after they passed through Cold Spring, and turned into the narrow road which skirted the shore of the Hudson River.

"A case like this, Mr. Andrews," said Smith, "is more delicate than the mechanism of any watch. Justice can be done so that people suffer, and justice can be done so that people are benefited. I am glad that you told me the history of the family. I feel that I know them all—except Petrovna. By the way, Mr. Holts, Petrovna's fiancé, had returned from posting a letter, and entered the library ahead of you when Petrovna screamed. Did he not post that letter at the tiny hamlet of Storm King which we are just approaching?"

"Yes. In a box outside the post office. Nobody saw him, and there is no proof that he did or did not post the letter."

Storm King is no more than a cluster of frame houses nestling under the very crags of Break Neck Mountain. At Smith's request the car stopped before the post office, where candy, cigarettes, and groceries mingled with postage stamps. A very pretty child, sucking a lollypop, stood in the doorway.

Smith looked at the child, smiled slightly as he got out of the car, and held out his hand. Sticky fingers seized the larger ones and together the tall man and the little girl entered the post office. Behind a small show case stood a woman, from whom the beauty of the child had evidently descended.

"She never did that before!" exclaimed the woman.

"Children and dogs like me," said Smith, "if they are nice children and good dogs. May I buy some cigarettes?"

Smith paid for the cigarettes with one hand while he continued to hold the sticky fingers with the other. Before he left, he remarked that he was on his way to Mr. Renfrew's country house, and asked if there was any mail for Mr. Holts.

The woman shook her head, and at the door Smith asked another question.

"You know Mr. Holts, of course?" he asked.

Miss Melleville suggested that the ghost of Peter the First was walking . . . and ordered the dog to enter the black interior of the old tower

"Oh yes! He is the man with the dirty gold."

"Dirty gold?" queried Smith.

"Yes," answered the woman. "Twice he paid me for stamps with a ten-dollar gold piece that was all stained. I scrubbed them bright after the children were in bed."

But Smith was saying "Good-by" to the child, and appeared to have little interest in gold of any kind.

During the short remaining portion of the drive Smith scarcely spoke. As they turned into the private road which wound its way to the rambling house on the top of the hill, his eyes swept the landscape calculatingly, but he kept his thoughts to himself and asked no questions. It would seem impossible that any person could have guessed that he was a detective as he followed the lawyer into the house, carrying the latter's brief case much as a trusted and confidential clerk might have done.

The last of the Peter Renfrews stood before the fireplace, legs wide apart and spanning a huge (*Continued on page 155*)

Are You Overworking Your Conscience?

By William S. Sadler, M. D.

THROUGH the solemn stillness of the church the preacher's voice rang out with dramatic intensity: "And Jesus said: '*Every idle word that men shall speak, they shall give account thereof in the day of judgment.*'"

Seated in the congregation was a highly strung middle-aged woman of over-conscientious temperament. For some unaccountable reason—it may have been the earnestness of the preacher, or it may have been that she was more overwrought than usual that day—the woman seized this scriptual admonition, and proceeded to translate it into literal terms.

From that Sunday morning she put a bridle on her tongue that was as absurd as it was harmful. Vowing to speak no idle word, her communications consisted chiefly of abrupt sentences reluctantly forced from her as the necessity arose. She no longer chatted with her family or visited with her neighbors—her conscience condemned the pleasantries they indulged in as idle words.

Several months later, this hyper-conscientious woman was numbered among my patients. Her digestion was all awry, her sleep disturbed, her nervousness increased; even her religion had gone back on her, and had become sour and mildewed. It was a hard job to get her back to anything like a normal mental state.

I am constantly meeting people who are sick, physically and mentally, because of needless conflict with their consciences. And it is the purpose of this article to analyze some of these conscientious scruples, and to talk about conscience in its relation to health.

To make my position quite clear, let me say at the outset that I do not believe that conscience is "the voice of God to the soul." The sentiment is a pretty one which probably originated in the brain of some poet—but it isn't true.

Conscience is nothing more nor less than a name which we apply to our inherited and acquired standards of right and wrong. And these standards are tremendously influenced by education, training, association, and environment, especially environment.

In this country we can trace much of our trouble with conscience to the teachings of the Puritans. These sturdy forbears rather inclined to the idea that anything pleasant was sinful; and life with them was a somewhat dreary succession of blue laws. Even to-day I meet a number of their descendants—over-conscientious souls, who, when they discover they are having a good time, immediately become conscience-stricken, and look around shamefacedly to find out what is wrong.

Far be it from me to decry conscience! I recognize the health value of being in possession of a conscience "void of offense toward God and toward men." But I want people to realize that worry and fear, when they become wrongly linked up with conscience, are able to torment and torture the innocent soul, and produce much sickness.

Let us return to the case of the hypersensitive woman, who, in mortal fear of being called upon in the day of judgment to account for every idle word she uttered, wrecked her health physically and almost mentally.

I had to wrestle with that woman's conscience for weeks. I explained to her that, while conscience is a state of mind that tells us always to *do* right, it never tells us what *is* right. I tried to make it clear that other mental powers must be brought into service, to find out what is right—such as judgment, reason, discrimination, choice—and that it was the part of the other mental powers to determine what was right under certain circumstances, and that conscience was merely the mental monitor which admonishes us to do the right thing after we have determined on our course of action.

She and I discussed religion by the hour, and little by little the harsh grip that her conscience had on her conduct of life began to loosen. To-day that woman is getting well, having learned the part her conscience should play in normal existence.

I WOULD like to tell you about another woman who got conscience, religion, and diet all jammed up together. She happened to be one of those persons whose digestion goes on strike when she gets tired. As a result of this, she had eliminated one article of food after the other from her diet, until after eight years she reached the place where there wasn't anything left but baby food and a few special invalid preparations. From one hundred and fifty pounds she went down to ninety-one. A careful examination of her stomach showed everything was all right.

But in the midst of all this worry about her digestion, she began reading books on diet, and somehow got a religious twist to her dietetic practices. Then her conscience became involved in the matter. She decided, and rightfully so, that the laws of health were the laws of God, and imagined that she had transgressed them beyond forgiveness.

I remember well the first time I talked with her. She quoted to me the text: "Know ye not that your body is the temple of the Holy Ghost?" That is good scripture, and I think some people who are utterly careless and wholly conscienceless in their way of living would do well to heed it. But this poor soul needed rather to get hold of the text describing how the apostles ate their meat with gladness.

I explained to her that the stomach trouble was due to upset nerves, and began her reëducation along these lines. She now has her conscience pretty well under control when it tries to impinge on the realm of dietetics, although she still has a standard of right and wrong about eating.

There are certain foods that her conscience will not permit her to eat; but whether she has her potatoes fried or baked is now immaterial to her. Previously, she regarded the eating of fried potatoes as a sin. Now she knows she can eat them and other erstwhile tabooed foods without fear, if she is not tired out nervously.

A SHORT time ago I came in touch with a man who has made a religion out of physical exercise. If he doesn't perform certain exercises every morning, walk so many miles each day, and do just the same number of exercises each evening before he retires, he is exceedingly unhappy.

He actually told me that he went to church one Sunday and did not enjoy the service, because his conscience told him he had not taken his regular amount of exercise the week before. His friends are beginning to regard him as a pest; even his wife has put him in the nuisance class. His outdoor social life is spoiled because he cannot exercise as other people do. His exercise has to be individual to himself.

What am I doing for this chap? I am inducing him gradually to break away from his slavish régime by pressing home the fact that life needs variety to give it spice, and that from a health standpoint monotony is a dangerous thing.

In going to his absurd extreme in the matter of exercise, he not only enslaved himself but he enslaved his conscience. Fortunately for him, he is beginning to see the light. In a month or so, if he doesn't have a relapse, he should graduate from the nuisance class and become an ordinary, normal human being.

But this man was not nearly such a hard proposition as a pale, anemic young woman I met last winter. She had got it into her head that she must take cold baths in the morning. She didn't like them; but she thought they would be good both for her body and soul—a sort of moral discipline. Her reaction being poor, she would have headaches half the day from the cold bath. But conscience drove her on. I soon discovered that she always had some fad that she was over-conscientious about. Once she took up physical culture, and tried to walk ten miles a day, until she lost thirty-five pounds in weight.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

There is hope that some day she will be delivered from this habitual tendency to pick up fads and become hyper-conscientious over them. I'm doing my best to talk sense into her. But let this serve as a general warning: No matter how good your health fad may be, don't become over-conscientious about it.

Thomas Hood, the poet, hit the nail squarely on the head when he referred to "That fierce thing they call a conscience." I have a patient at the present time who thought it was wrong to engage in an innocent pastime that all the members of her family indulged in. Finally, she made up her mind she wouldn't be queer, and joined in with the rest. Then her conscience got overly busy and bawled her out for having a good time. In less than three months her health was hard hit by insomnia and indigestion.

She is getting over the attack, because we persuaded her that conscience was an intruder, and that it was a matter of personal choice whether or not she enjoyed this trifling pastime. She now believes it is far better to play with the members of her family than to indulge what she now says was her conscientious ego. In fact, she regards her previous hyper-conscientious reaction as Pharisaical.

ANOTHER interesting case recently came under my observation in the person of a hyper-conscientious school teacher, thirty-seven years of age. She was easily the best teacher in the group to which she belonged; but she was not satisfied with being the best teacher. She wanted to be more than superlative. She was so over-conscientious (and I think there was an element of personal pride and egotism also) that she worked early and late, and put in uncalled-for extra time on her profession. She also attended every meeting that had to do with teachers and teaching, and took advanced work every summer for ten or twelve years, foregoing all vacations and relaxations.

What was the result? Suddenly she went to pieces. For a year now, she has been resting. She said to me the other day, "Doctor, I have learned my lesson. I am not going to try to be the best teacher in the world any more. I shall be satisfied if I'm a good teacher. This breakdown has educated my conscience. Some of the things my conscience made me do to be a good teacher in years gone by, my reëducated conscience will not allow me to do in the future. I have learned my duty to myself as well as to my pupils."

In the realm of family life, I could relate scores of experiences showing how the over-conscientious mother has ruined her health by wrongfully sacrificing herself to her family. When parents have done their duty by their children, why should they worry their heads off? Perhaps the children don't do things just as we would like to have them. Maybe they have a program of their own, and run away from home to carry it out; or skip off to get married. Why should Father and Mother —particularly Mother, for she seems more inclined to do this sort of thing than Father—jeopardize health and happiness by over-conscientious worry?

The children, by the way, are seldom appreciative of this extreme conscientiousness on the part of their parents. It irks them, and is often the basis of that lack of understanding between the two generations which is so prevalent to-day.

The young mother who gets up in the middle of the night to see if the children are breathing all right is the type that had better watch her "conscientious" step. I met such a one not long ago. She was constantly worrying over her children's bringing up, and when she stopped to think that they would have to go to school in another year or two, it was too much for her. How could she bear to have any one of them out of her sight! Something would certainly go wrong in school —they would get hurt, catch diseases, choose the wrong playmates.

AS THE result of all this conscientious worry, she went to pieces, and for eighteen months had to stay away from her family. The children were left in the care of a stranger; and the father told me, confidentially, that they did very much better in the hands of this woman, that they got along better, and developed more character, than they did under their mother's solicitous care.

I am not relating this instance to detract from the value of intelligent and faithful parental training. It's the finest thing in the world, within given boundaries. But why carry things too far?

The trouble is that some people are born with an over-anxious tendency, and develop it to the point where it becomes, in medical parlance, an *anxiety neurosis*. When this tendency gets linked up with an overworked conscience—well, someone has to pay the piper.

I have seen conscience become a misshapen thing in the lives of sons and daughters, who have laid their happiness on the altar of parental duty. I admit this sacrificial spirit is beautiful—we have to admire it while condemning it—but it just isn't human. What a disastrous thing it is, for instance, when a young woman, whose brothers and sisters are all married and settled down, feels she is called upon by her conscience to devote her life to the care of her father and mother.

It may be a lovely picture of filial devotion; but what is going to happen to her when she gets old? She is seldom welcome in the homes of her married brothers and sisters. Oh, of course I know there are exceptions. But look around among your own relatives, friends, and acquaintances, and see the position of the daughter who stayed home to look after the old folks. More often than not she finds herself sitting in a doctor's office, somewhere between forty-five and sixty years of age, worn in heart and health. Usually it is too late to break the mold into which she has set; but she sees clearly that she should have got married, like her brothers and sisters, and that they should have made the care of the father and mother a joint undertaking.

GENERALLY speaking, daughters suffer from this spirit of self-abnegation more than sons; but the other day I saw a man of forty-seven who has sacrificed himself to care for his parents. Five brothers and sisters are happily married, with children of their own; and now this bachelor, as he nears the fifty mark, is growing cynical and bitter. He considers taking care of his parents an unpleasant duty. But he is determined to see it through. Some queer twist of conscience makes him regard himself as the sole bearer of the burden, because of his unmarried state; and he does not feel at liberty to change that state.

In my medical journeys into the minds of folks, I have discovered that children are not only selfish and sometimes actually ungrateful for the loving care bestowed on them but that parents are often very selfish too. I'll go further than that and say that every parent is selfish who monopolizes the life of a son or daughter, thus preventing the child from getting married and living a natural and normal life.

I grant you, in cases where for some reason or other a son or daughter does not get married, it seems only natural that such unmarried child should live with the parents and make a home for them in their old age. Please do not misunderstand me. I do (*Continued on page 98*)

You Should Educate That "Still Small Voice" of Yours!

"UNTRAINED conscience, or what you may take to be conscience, is not an infallible guide," says Doctor Sadler. "You must *educate* your conscience. It must vary, develop, and advance, as life and knowledge vary, develop, and advance. A conscience that is 'void of offense toward God and toward men' is a tremendous health giver. But an ignorant conscience gets all mixed up with worry, fear, false beliefs about right and wrong. It can wreck the most robust health. I have seen many persons who mistook some foolish belief for the voice of conscience, and then in their efforts to live up to this notion played havoc with their lives. Your conscience, if it is divorced from reason and knowledge, is bad company. Educate it! Make it keep pace with knowledge!"

Ellis Parker Butler, famous humorist, enjoying one of the wholesome recreations of the suburbanite

Why I Live In A Suburb

By Ellis Parker Butler

I ADMIT without shame that I am a suburbanite. I live in a suburb now, and have lived in one—the same suburb—twenty-one years. This surely entitles me to know something about suburban life, and whether or not it is the joke some city dwellers think it is. I understand that the birth rate in the United States has now reached something like four a minute, and I think it is time someone told the truth about the suburb, because all these newcomers will have to live somewhere, and the cities are considerably crowded.

Most people have entirely wrong ideas about the suburbs. The city dweller, especially, seems to think that the suburbanite must have something seriously the matter with him, or he would pack right up and move to the city and live in a flat. He considers the suburbanite a permanent joke, like the bossy mother-in-law, and whenever a vaudeville actor wants to get a laugh in a New York City theatre he says he lives in Flushing or Bound Brook or Bronxville, and thus gets a hearty laugh from every man and woman who lives on an airshaft and receives daily sustenance by way of a dumbwaiter.

I once read a criticism of modern books that said the trouble with them was that they were "suburban." The meaning seemed to be that anything suburban must be petty and ineffectual—a lot of old ladies sitting around a table drinking weak tea and talking thin gossip. In this same vein is the somewhat general idea that the men who live in the suburbs never amount to much; that if they were real red-blooded men they would be living in the city, where the struggle for existence is fast and furious, and only the virile can survive. The implication is that we who live in suburbs are the small, frightened men who have run away from the city because we were afraid of it.

Now, this is not doing justice to the suburbanite and his suburb. In the first place, it does not recognize one or two things that even a schoolboy ought to know. One of these is that in population alone the suburbs constitute an important part of every city.

ANOTHER thing any schoolboy should know is that the suburb is not what it once was. The suburbs got a bad name back in old Roman times, when the imperial city sat on seven hills, surrounded by a wall, and "sub" meant "below" and "urbs" meant "city." In those days, I dare say, the haughty city dwellers on the hills used to empty their ashes out of their kitchen windows onto the roofs of the miserable suburbanites below, and it could not have been very pleasant for the suburbanite. When a fussy enemy army came along, the suburbs, being outside the walls, were not a nice place in which to live. The bandits from the campagna probably raided the suburbs rather often, not being able to get into the city. Nowadays, most of the banditry goes on in the city; the suburbs are the safe and clean places.

Even a few years ago the suburbs compared poorly with the city in the matter of many comforts. Forty or fifty years ago few suburban houses had plumbing. Most of the streets and roads were mudholes. There were few decent sidewalks. Few suburban towns had gas or water. The trains for commuters were little less than disgusting. Modern plumbing has now made the conveniences of even the cheapest suburban home equal to those of the palaces of Manhattan of fifty years ago. The automobile has put good roads and streets everywhere. The advent of cement has brought sidewalks. Increased suburban population has made gas and water lines profitable, and they are in all but the most isolated sections. Electric light and power are universal. The trains to town are rapid, commodious, and comfortable.

A suburb of New York is to-day very much like the prettier residential sections of a small city—of Des Moines, Springfield, Nashville—any prosperous place. The dwellings have lawns; the streets are tree-bordered; the houses are the same as in any well-built town, and their architecture is continually improving. The business streets have excellent shops, some of the larger suburbs have very satisfactory department stores. There are good schools, churches, motion picture theatres, clubs, banks, and mail delivery.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Police and fire departments are usually better than in places of similar size that are not suburbs.

A man has to live somewhere. And usually his family—if he has one—prefers to live where he lives. However, there are two kinds of men: One has to live where his work is, whether he wishes it or not, and the other can live almost anywhere he pleases. A farmer, for example, is almost compelled to live on his farm. Anyone can see that it would be rather inconvenient for an Oklahoma farmer to live in an apartment on Riverside Drive, in New York. Especially if he kept cows. To have to get up before breakfast every morning and hustle out to Oklahoma to milk the kine and then hustle back to the neighborhood of Eightieth Street for breakfast would annoy even the sweetest-tempered farmer. On the other hand, it would be just as annoying for the janitor of the Riverside Drive apartment to live on a farm in Oklahoma.

IN THE same way, a man who is running a village newspaper in Wisconsin finds it more convenient to live somewhere in the same county. It is not customary for the editor of the "Briggstown Weekly Star" to live in London, England. It is better for the editor to live where his newspaper is published, or reasonably near by, in case the press breaks down, and he has to put on his overalls and crawl under it

Going up and down the line it is clear that most men are practically compelled to live in or near certain places. The work they have chosen dictates their places of residence. Only a few of us are fortunate enough to be able to live anywhere we please: we are the retired millionaires, tramps, umbrella menders, and authors. We are the people who can carry on wherever we happen to put ourselves, and we can put ourselves in the places we like best.

One of the questions that constantly agitates the city dweller is, Why do you live in a suburb? It is put in different forms by different people; sometimes it is, How can you *stand* living in a suburb? Another question, less frequently spoken but evidently often in mind, is, Why is a suburb, anyway?

I MIGHT quite as reasonably ask, Why is a big city? I can understand why there are cities, even quite large ones; but I cannot quite see why some of these huge overgrown conglomerations of people are considered desirable places of residence. A big city is a nucleus that has outgrown itself, and cannot stop growing because it does not know how. New York—the most tremendous mass of men and women yet known—began as an ocean port. It was logical that ship owners, merchants, and factors should live on the edge of the bay, handy to the shipping. Their clerks had to live there, also. There had to be retail shops to supply these people with food and clothing, and thus a town began.

Presently it was found that some goods could be manufactured in America, and manufacturers began to gather together at the port to which their raw materials came. More merchants were required, and tailors and shoemakers and watch repairers were needed; bankers were needed to take care of the money; blank-book makers and printers were needed to supply the merchants and bankers with books and billheads and other printed paper. Exchanges were established to make trade easier. Places of amusement were created to ease the spare time of all these people who were now so numerous

A scene in the Pennsylvania Station, New York City. More than fifty-one million passengers, counting those who come and go on the Long Island Railroad, use this station annually. It is one of the principal terminals for the Long Island Railroad, which carries more commuters than any other line running into New York

PHOTOGRAPH BY D. JAY CULVER

A Central Railroad of New Jersey ferryboat coming into its slip. In the rush hours of the morning and afternoon these ferries carry two thousand or more passengers, each—mostly commuters—not to mention the score or more of trucks, wagons, and passenger automobiles. The total ferry traffic into and out of New York City amounts to more than one hundred million passengers annually

they made a city. Because there were printing presses and printers in the city, the men who wanted to print books and magazines came to New York; the authors and illustrators came because the publishers were there; I came with the rest of them. I was one of about four million at that time.

The reason I came to New York was that I wanted to be a writer. I lived in Iowa and had begun to sell quite a few of my things. I knew that a great many of the writers I admired lived in the big cities. I also knew none of them lived in Muscatine, Iowa; and I felt I was side-tracked—off in the woods. I thought, as many ambitious (*Continued on page 212*)

There'd been times when letting him hold her hand had been the only way to keep him quiet. Now—well, now she just let him, anyway

A Girl Who Didn't Know What She Wanted

A love story

By William Almon Wolff

ILLUSTRATED BY T. K. HANNA

ANNE WARREN drove up the hill to the house as furiously as the need of shifting gears half way up would let her. It wasn't much of a hill; but her car wasn't much of a car. It had seen better days, and it had to be humored now. But she got up all right, and stopped, with screaming brakes, just outside the barn where the car lived, the Warrens not having any proper garage. She was very angry; something of that showed in the way she sprang from the car, with a whirl of her short skirt, and strode toward the house.

But she hadn't taken two steps when she remembered the stuff in the car, and going back to get it rather spoiled her attitude. She couldn't stride, either, very well, with her arms full, and two or three bottles in her burden. Her eyes were still snapping, though, and her color was still high, when she kicked open the kitchen door and went in.

"Anne dear,"—her mother turned, mild protest in her voice, from the table where she was busy with an embryonic pie—"must you be quite so boisterous?"

"Sorry—my hands were full. I got everything, I guess. Mother—they're coming. I passed them down the road, by the Thatcher place."

"Who? Leave those things. I'll put them away. Who's coming, dear?"

"The telephone men! Cutting down trees—slashing off branches—spreading ruin and destruction!"

"Oh!" Mrs. Warren sighed. This was an annual tragedy for Anne. Each year

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

ıe linemen came through, clearing a way ɔr the wires. They did a lot of mischief; ut it wasn't, somehow, quite tragic for Irs. Warren—few things were. And ıost of what they did, she supposed, ɜally was necessary, although that was ɔmething Anne would never admit. Maybe, if you speak to them—"

"Speak to them? You bet I will! The andals!"

"Now, dear, don't lose your temper. 'hey're only doing what they're paid ɔ do."

"But they're not. That's just the rouble, Mother! They don't have to lash and hack the way they do. They're ıust lazy; they'll cut down a whole tree to let out of climbing it to thin out the ranches. And—oh, Mother, if no one ver lost their temper do you think anything would ever be done?"

"I know, dear. The men are trying. But—if you could just not lose control of ourself. You put yourself in the wrong o if you do. Lunch is nearly ready; do ou want to lay the table?"

"Oh, I suppose so!" said Anne. "You ot the mail, didn't you?"

"Yes. I left the paper in the living-oom. There's a letter from Aunt Harriet oo, if you want to read it."

Anne went out, her anger still driving ıer, through the dining-room and into he living-room, across the hall. It was no ıse trying to make her mother understand.

THE house was very old, and it was full of square rooms, with low ceilings. They weren't all alike, though; it was the ɔort of house that had grown with the ıeeds of succeeding generations. And, although it was a good deal like most Colonial houses of its age, it didn't have at ıll the look of a museum. That was because its furniture wasn't all of its own ɔeriod and age, but was just what the peoɔle who had lived in it had acquired from ɜime to time, as they needed things.

Anne pushed Aunt Harriet's letter ıside indifferently; the paper was what she wanted.

She gave the front page a cursory glance; had it contained any sensational ıews she would probably have read it through. But as it was she turned at once to the pages where the columnists and the critics held forth, and was absorbed in what they had to say. Music—new plays —new books. Plays she'd never see; books she'd be lucky to come upon two or three years hence, when they'd been crowded from city shelves and brought up to the country by the summer people. And there was gossip; chatter about people whose names meant something, who were doing things. She was still reading hungrily when her mother called.

"All right, I'm coming!" she answered, and sighed, and went to lay the table for luncheon.

She was in a queer mood during that meal. She usually was after the paper came; reading it stirred her, upset her. And to-day, of course, the telephone men had excited her too. She looked at her mother, and she wondered how her life could continue to be so rich, so full, in the dullness of their environment. Hers wasn't; she was starved. Her mother was a saint, of course, for one thing; for another, she was always busy. But the things that occupied her! Cooking, keeping house, mending clothes, taking care of the garden and the chickens. Being on call when there was sickness or trouble in the neighborhood; acting as deputy for Doctor Grant whenever, in an emergency, he couldn't be reached. Mrs. Warren knew more than most doctors, Anne believed. And why not? She had been a nurse for five years, and the wife of a country doctor for twenty.

But it seemed to Anne that it didn't come to anything, when you added it all up. Her mother was a real person, with a real mind—and what good did it do her? Was the same thing going to happen to her?

LIFE seemed a horribly futile thing to Anne, that day at luncheon. It was all so narrow, so limited, so stultifying. It just made a joke of all her hopes and plans, of her reading, her study, her two years at college before her father died, her passionate struggle to learn something, to be someone. And why—why?

Because she was tied down here, of course. That was the real reason. How could she leave her mother? Oh, her mother was always saying she could, of course. She had even offered to help her if she went to New York to take a job, as she had had a chance to do, more than once.

But she couldn't do that. How could she? It was all very well to talk, but she'd never be able to bear the thought of her mother all alone up here. Why wouldn't her mother go to New York with her, sell this place? She could, for a good price, and with the insurance money they'd have quite a respectable income. And she could earn more, too; of course she could. Her mother wouldn't, though; nothing Anne had ever said had moved her.

And from the clean break, the definite step of going off by herself, Anne shrank. She didn't want to leave her mother—and—well, she was safe here. She hated to admit to herself that that was a factor in her acceptance of a life she loathed; she didn't, very often, admit anything of the sort.

If she married—well, that would be different, of course. But she couldn't just pack up and go off to live her own life.

"What are you going to do this afternoon, dear?" Her mother's voice broke into Anne's thoughts.

"Nothing—till after those men have gone. Then— Oh, I don't know, I may play golf with Arthur, and I'm supposed to go in and say good-by to the Waynes. They're going back to the city on Monday."

"I thought they went right after Labor Day. I declare, I do think it's nice, the way people keep their houses open so much later than they used to. But they'll all be gone soon."

"Yes!" Anne wanted to howl. The summer people were all that made life endurable. From the first of October, when the last of them went back to town, till the early part of May, when the first of them came back, Anne lived in a state of suspended animation.

"Listen!" said Mrs. Warren. "Bob's barking; someone must be driving up."

Anne sprang to her feet.

"It's those men!"

"Anne dear, please!"

"Now, Mother, you mustn't interfere! Please, dearest! Just for once, leave it to me. I won't lose my temper, I promise you."

She went out quickly and, sure enough, the telephone truck was at the top of the hill with its ladders and its coils of wire. Bob, having barked his warning, was making friends, now, with the younger of the two men who had come with it, and they, being busy with him, didn't see Anne at first. So she had a chance to survey them with scornful appraisal.

Both were young. Both wore khaki working clothes, with spiked leather boots, and broad belts, equipped with hooks by which they could fasten themselves when they had climbed a tree, leaving both hands free. One was just a pink-cheeked child, around nineteen. Anne eliminated him at once—he'd roll over and play dead if she looked at him. But the other was different, as well as older; he had a long, lean face, deeply tanned, and a square, almost grim, jaw, and the bluest eyes she had ever seen.

"How do!" called the child when he saw her. "We've come to thin your woods out for you."

"Oh, no!" said Anne. "Not on this land. Not this year."

Anne wanted to laugh at the way his face fell when he heard her, and at his rueful look, and his absurd attempt to keep on grinning cheerfully. But she wouldn't.

"I'm sorry." That was the older man, and his voice made Anne jump; it was so different from anything she'd been expecting. "But you can see for yourself how thick the branches are over there, in the corner of your woods, where the wires come through. We'll do no damage." He looked at the trees. "It won't hurt the trees at all; it'll do them good."

"No," said Anne, doggedly. "We won't have it, my mother and I. You come every year, chopping and slashing; there wouldn't be a tree left if you could have your way! There'd be just a barren, ugly waste, instead of all that beauty. No!"

She meant that to sound final, and it did. The boy squirmed, and looked again at the trees.

"Hey, Jimmy," he said. "Maybe, at that, we might let it go here."

"No!" said Jimmy. And the word was just as final, as he said it, as it had been on Anne's lips. "You cut along, Ed; get after that sumac down the road. I'll bring the truck when I get through here."

IT WASN'T fair, of course, to rob her of an ally like that, but Anne had to admire his strategy. And she stood, watching, while Ed, with another rueful, disarming look at her, went off. Then she turned to meet the other's cool, impersonal gaze, bent directly upon her.

"Well?" she said.

"I'm wondering how to make you understand," he said. "You see, those wires must be clear before winter. That's just the sort of place to make trouble later on; if there were an ice storm, for instance."

She didn't answer him at once, but walked over slowly, and stood looking up at a young maple.

"Look!" she said. "You simply ruined this tree last year. You came while we were away for the day, and you were too

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

There was a sickening crash; the next moment he was lying in a heap, almost at her feet

lazy to be careful; you just slashed and slashed, and topped the tree. It'll never have a good shape now—and it was beautiful. And it's still beautiful up there. Can't you see? And that mass of foliage, why, just after the sun has gone down it's—but, oh, it's no use! You wouldn't understand; you couldn't."

"Probably not," he agreed steadily. "But there's something else to think about. And that's the service. That has to go on, and it's part of my job to see that it does, that nothing that can be done to keep it going is left undone. That's a big thing, too, you know; big, as big as beauty."

"As if anything could be!" Her scorn darted at him as swiftly, as hotly, as her words. "Anyway, you sha'n't touch a tree—not a branch! It's our land!"

"Yes," he said, quietly. "It's your land. Of course, the law—but never mind that. You use the telephone, don't you?"

"Yes," she said, cautiously.

"And you don't like it when something's wrong with the line, when you can't get a number?" He laughed shortly, and Anne, all at once, realized that it was he who was losing his temper, while she was still as cool as ice. She could see the gleam in his blue eyes; she knew that he was furious.

"Naturally," she said. "Of course I don't!"

"Naturally!" He caught up the word. "But will you do your part? Oh, no! You want your beauty—your mass of shadow at sunset! You—"

"Really—" Anne wasn't angry yet, but there were warning symptoms. No one had ever talked to her as this man did. He—he was scorning her. "You've no right!"

"You get in the way of the biggest thing there is!" he said, as if she hadn't spoken. "You want your beauty—and you want your telephone. But you aren't willing to do your share. You'd be the first to complain if a wire were down and you had to walk a mile through the snow because you couldn't telephone the grocer!"

"I wouldn't! I never would!"

"Oh, yes, you would!" he taunted her. "I know your sort! Beauty! You talk a lot about beauty; and half the time you don't know it when you see it. All the beauty you ever see is on the surface of things."

"I—" She was angry now, angrier than she had ever been in her life.

"You can see the beauty of those trees; but you can't see any beauty in those wires, in the idea of all the millions of miles of wire that carry thought and speech across mountains and deserts from one ocean to the other."

"Of course I can!" She was trembling now. "But that's got nothing to do with this—"

"It's got everything to do with it."

BUT, even as he said that, he regained control of himself as suddenly, as swiftly, as he had lost it. "I'm sorry," he said. "That—that's not an apology exactly. I meant what I said, and it's all true enough. But I had no business to say it. If you care to call up the company, they'll probably—"

She stamped her foot.

"As if I'd—!" But she couldn't finish; she had to struggle for a moment to master the break in her voice. "I—I think you'd better go now. Don't you?"

He looked again at the trees, and then at her.

"Yes," he said, quietly. "I guess I'd better." Again he looked from her to the trees, and she thought she heard him sigh. "It's a pity," he said.

Then, without another word, he climbed aboard the truck, and drove off, down the hill. Anne, white and shaken, watched until he turned into the road; then she went back, slowly, to the house.

"It's all right, they've gone," she told her mother. "One of them was rather—rude. But he knew we were within our rights, of course. So he went."

She jumped as, just at that moment, the telephone rang.

"Hello!" Her (*Continued on page 205*)

The Conquest Of Night

The story of artificial light, and its development from crude torches to electric beams that rival sunlight itself—What light is, how much of it is enough to read by, and other interesting facts that scientists have discovered

By Harry A. Stewart

YOU walk into your home on the darkest night, push a button, and immediately the house is flooded with light. It's the simplest thing imaginable. here's nothing to it at all, except a little ove against a button in the wall.

Your grandfather, in his youth, would ive regarded such a thing as a miracle rought by science, and he would have een right. "This is the last word!" he ould have exclaimed. "Nothing better ian this can ever be done by way of ghting a house."

It doesn't seem a miracle to you, of ourse, for you take electric lights as an veryday affair. You grumble if you on't have them, and you fuss if a fuse lows out and throws the house into emporary darkness. That's the way we ll accept progress—as a matter of ourse, and as our *right*.

But while you would not share your randfather's amazement at light produced, seemingly, by magic, you may gree with him that nothing better than he electric lights of to-day is in store for he lighting of the homes and offices, treets and factories of the future.

"The old gentleman is right," you may ay. "Science has reached the final goal n artificial lighting."

No scientist would agree with you, owever. A scientist never admits the *inal* goal in progress along any line. He s never content with things as they are, ut is always eager to improve them. He ias a childlike mind, which doesn't admit he impossible.

Take the matter of artificial lighting, or instance. So far as you can see, there sn't anything more to be done about it. The present-day lights are good enough or you. But that has been just the attitude of the lay mind at each new step n advancement through the ages.

Away back in the dawn of human life, when primitive man wandered about in the woods and caves, chasing everything that was afraid of him, and probably running away from everything that wasn't, some wise old fellow conceived the idea of bringing a burning brand into his cave.

The effect was wonderful. He had prolonged his day. Now he had a chance to make his weapons and his plans while his enemies slept. He had advanced.

Then, a long time later, there came along a man with a splendid idea. He made the grease lamp, burning the fat of animals in it. This was much better than a firebrand, because it would burn longer, and, if not too heavy, it could be easily moved from place to place.

Again, the effect was wonderful. The conquest of night had advanced still further. On through the ages, the advance continued, the candle and the oil lamp taking their places as great achievements.

And so man came far into the modern age, artificial light being one of the great factors in his civilization. Inflammable gas was discovered, and someone thought of piping it from place to place. Another great step! Another body blow to the reign of darkness between sun and sun! And so, as time went on, came the highly improved gas lighting systems, and the electric lighting systems that we have to-day.

"No other great step in lighting is possible," *you* say.

But the scientist asks: "*What next?*" And he keeps right after this problem of lighting as though no great progress had ever been made.

A SHORT time ago I visited the research laboratory of the General Electric Company, at Schenectady, New York. There I found men working on the problems of light, and on many other problems that to the lay mind appear to have been solved long ago. My mission was to learn something about light—what was being done to discover its nature, and how scientists were learning to do new tricks with it. So in my talk with Dr. Willis Rodney Whitney, director of the laboratory, I confined myself to this particular phase of the laboratory's many activities.

The Schenectady laboratory is one of the most complete and famous institutions of its kind in the world. It was started twenty-three years ago in a small way; but now it occupies one hundred and thirty-two rooms, and employs scores of persons, fifty-eight of whom hold the Ph. D. degree. All of the scientists employed are allowed to do almost what they please. Each one is a man of some note in his line. When he comes to the General Electric's research laboratory, he is perhaps assigned to some promising subject for research, usually as assistant to a man who already has done considerable experimenting along that line. Often, however, he is given whatever apparatus he desires, and is then free to pursue his own ideas. Possibly he will discover something valuable, possibly he will not. No one can tell in advance.

This laboratory is not a philanthropic institution, however. It is run for profit, though that profit is not always immediately visible. But over a period of years, the laboratory does show a financial return to the company, for some of the many discoveries made there have high commercial value.

It is a fine example of what is sometimes called "enlightened self-interest." The General Electric Company pays highly educated men to seek any new fact that may be found, on the chance that the discovery will be of profit to the company, and of benefit to mankind.

MANY of the most valuable discoveries yet made in these research rooms have been "accidental." That is, a scientist, while experimenting with a certain definite goal in view, has come unexpectedly on a result that he hadn't in the least anticipated. For example, in seeking a way to prevent the bulbs of incandescent lights from becoming blackened, and thus useless, one of the men discovered that filling the bulb with nitrogen gas produced a light of extreme brilliancy—and from this chance discovery came the most efficient incandescent lamp ever made. During the past year, 55,000,000 were sold in America alone.

One of the most important results achieved in the laboratory with relation to light, Doctor Whitney told me, is the tungsten filament. Tungsten was first used as a filament in Germany; but the Germans knew of no method by which the tiny particles of tungsten metal could be forged into a wire. They made their filaments by mixing tungsten powder with sugar sirup. The sticky mass was forced through holes, and came out in a sort of candylike thread. After being molded into the familiar hairpin shape, it was put into a furnace. The heat carbonized the sugar and the tungsten particles were held together by incipient fusion, while the carbon was driven out by subsequent treatment.

These filaments were better than the old carbon filaments because they used much less current in producing an equal volume of light, but they were very fragile. Almost any sort of jar would break them. The General Electric Company bought the foreign patents, and sought and found a method of producing a metallic tungsten wire stronger than steel. This was one of the results deliberately sought for in the laboratory.

"Do you know what light is?" Doctor Whitney asked me, as we were talking over the discoveries that had been made in the great laboratory of which he is the head.

"Well, no," I answered; "I don't believe I ever (*Continued on page 116*)

The Wilds Gave Back To Marzolo The Faith He Had Lost

Crushed by disappointment, he sought forgetfulness in the remote mountains of South America, where he was all but killed in an accident—Eventually his health and his faith returned to him, and he became a famous restorer of rare pictures

By John Kidder Rhodes

IT WAS the rosy dawn of a Sunday morning in San Francisco. The first shafts of sunlight were touching the tip of Twin Peaks. A jangle of sound broke out on one of the hilly streets, and light sleepers wondered what it could be. A few bestirred themselves enough to catch sight of three boys with mouth organs.

Gayly they went. Tune followed tune. The morning of life, as well as of day, was in their veins. When the tunes were particularly lively, they danced. And so they passed the time quickly until they reached the newspaper office.

One of the three was a black-haired, black-eyed Italian boy whom his mates called Leo; Leo Marzolo was his name. He was barely nine years old, but sturdily built; and when the papers were passed out he shouldered a great bundle with ease and carried it to his corner—his, by right of a pair of fists that could fly as fast as any would-be interloper's. As soon as early risers began appearing on the streets, they heard Leo's voice lustily piping:

"Call, Chronicle, 'xaminer!"

His feet carried him flying to each beckoning purchaser.

He continued steadily busy until ten o'clock; by that time his last paper was sold, and he hurried home. A flight of stairs brought him to an apartment. It was very modest (the rent was only five dollars a month), and some boys might have been ashamed to call it home. But not Leo. This roof sheltered his mother.

Into her lap he counted the day's earnings, pennies and nickels, mostly, with an occasional dime. In addition to the price he paid for his papers, he had earned that day nearly fifty cents. His mother kissed him, as she always did, and put the money safely away. Every penny of it, he knew, was needed. There was no longer a father.

No one knowing Leo Marzolo in those days, thirty-odd years ago, when Sunday morning meant Sunday papers and another half dollar earned for his mother, could have guessed the curious and fascinating future in store for him. Fate weaves the fabric of a man's destiny in strange ways.

Somewhere in the books it was written that Leo should learn to love art; that he should find delight in every detail, ancient or modern, of the artist's profession; that he should study profoundly, and gain a mastery of chemistry, paints, varnishes, crayons, the qualities of paper, wood, and canvas, the action of heat on materials, methods used in all periods of painting, the lives, minds and technique of the masters; that, because of his knowledge and extraordinary patience, paintings and drawings worth thousands and even hundreds of thousands of dollars should be entrusted to him for restoration when age or ill usage threatened their value; that he should become known from coast to coast and beyond the sea, and should have a share in some adventures as engrossing as any hunt for buried pirate treasure.

Nothing of all this could be foreseen. Nor could the other side of the picture be guessed, the price he would have to pay: wanderings under far skies; lonely months in a hospital among utter strangers; vagabondage and poverty. The career of Leo Marzolo is a moving story.

Marzolo was born in a vineyard under a fig tree, literally. It was on a little farm not far from Martinez, in Contra Costa County, California. The farm was mostly given over to grapes, and in one corner of the vineyard Father Marzolo had built an arbor for a rest-house and shelter; it stood in the shade of a great fig tree. Here Leo was born, on Washington's Birthday, 1887.

THE mother had come to this country from Genoa a few years before; the father had come a few years earlier still, from Rome. They had married in California, had worked hard and owned their little farm, and their faces were set toward independence and prosperity . . . until Fate stepped in.

"When I was three," said Marzolo, "my father died. By that time a son younger than myself had been born. So there were three of us: an older brother, myself, and the youngest, just a baby, that my mother was left to care for. And there was little for her to do with.

"She sold the part of the farm containing the vineyard for eighteen hundred dollars. Just a little while afterward the Santa Fé Railroad built a line through there, and paid thirty-six hundred dollars for a narrow strip as a right-of-way across what had been our vineyard.

"Things like that, I have learned to think, happen for a purpose. Often they are hard to understand. The difference to my mother would have meant so much; but it seems that for some reason it was better for her and the rest of us, not to have it. The railroad erected a workmen's house on the property, later a store was built near by, a few houses went up

---

Comfort Yourself in Dark Hours By Remembering Dawn Will Come

"A TIME may come in any man's life," Mr. Marzolo says, "when he cannot read the signs—cannot make head or tail of things. Then I believe it is best for him to resign himself into the hands of the great Power that directs us, convinced that inevitably things will work out as they should. A way through, or over, or around will appear. Of course a man must head into the wind, obey what his heart tells him he must do, and be sure to commit no rash act that later closes the door when it is time for him to come back.

"All you can do is to keep on. Do the best you can; there is always something else waiting for you. You never know what it is.

"You may call that a mystical belief. I call it a belief in divine justice."

and the vineyard where I was born is today the little station of Vine Hill.

"We moved to San Francisco," he continued. "My mother had her little sum of money and the small income from it, but had to watch the pennies carefully. She went out to sew, and did any other kind of work she could get. We lived substantially, but modestly. What I could earn was so much relief for her. Selling the Sunday papers on the street was my first regular work, and a little later I got a delivery route for 'La Italia,' a daily newspaper, which I took to the homes of Italians.

"At twelve I quit school and got a job. My employer was a dry-goods merchant. I worked exactly one morning. By noon I knew I didn't like the place and never would, and did not go back after lunch. Immediately afterward I got another job in a picture-frame store."

THIS suited the lad far better. He liked pictures. "As a boy in school," he said, "I used to make drawings for the teacher. I remained in that store for more than two years. Meanwhile, I studied at night school, and completed what at that time amounted to the high school. I then studied art at night.

"I obtained a set of watercolor paints, and every Sunday another boy and I went sketching. We would tramp off into the hills, find some bit of scenery we liked, and make pictures. Sometimes we would paint two or three apiece in a single Sunday. By means of these I earned a little extra money. Paul Elder, the publisher and bookseller, had an art department in his store, and sold my sketches for me at twenty-five cents apiece.

"On one of these Sunday excursions I met William Keith, the noted landscape painter. He was a mature man, I a boy; but he seemed to take an interest in my work, and invited me to his home, where he had interesting paintings. We used to talk about them, and I brought him my sketches, which he criticized. My acquaintance with him meant much for me.

"Among my mother's possessions was a small madonna painted in oil colors, which had been damaged; there was a hole through the forehead. I knew that damaged places were sometimes patched in important pictures, so I got books from the library and studied how it could be done. I found that no one book could tell me all I needed to know; I had to read many. When finally I felt I knew enough, I relined the canvas, and successfully patched my mother's madonna. It was the first job of the sort I ever did, and I felt proud of it. Never afterward did I lose for very long the feeling that something like that was the work I was in the world to do.

"These various activities—working days, studying nights, painting Sundays—kept me pretty busy, and began to tell on my health. My mother advised me to stop work for a year, and devote myself wholly to studying art; which I did. I had saved enough for one year at the art school of the University of California.

"Following that, I got a job in a picture store in Oakland, across the Bay. My mother still lived in San Francisco, and I with her, and it was necessary for me to take the street car for a half-hour ride to the Bay, across on the ferry, and from there ride by steam train to the station near the store. It was a long, tiresome trip to make twice a day; but I made quite a bit of money at the store, was doing work I loved, and, besides, had an object to work for.

PHOTOGRAPH BY KOEHNE, CHICAGO, ILL.

Leo Marzolo is known all over America and in foreign countries as one of the most skillful restorers of old pictures. He was born in California thirty-nine years ago, and showed an early liking for art, finally specializing in saving pictures from the effects of age or of ill-usage. Paintings worth vast sums have been entrusted to him. Mr. Marzolo's studio is in Chicago

"I was in love, and my girl had promised to marry me. So by the time I was twenty I had saved a good bit of money besides what I always gave my mother, and had bought a house and lot in Oakland, where I was planning my own little nest. Then came a stunning blow.

"One day the girl I was engaged to marry received a letter from an aunt, inviting her for an ocean voyage to Honolulu. She asked me what I thought about it, for it would delay our wedding a little.

"'Go,' I said; 'it will be a fine trip for you.'"

A wistful look came into Leo Marzolo's eyes.

"Sometimes," he continued, "a woman will do things on water she wouldn't on land. Have you ever heard that? Sailors will tell you it is true; I don't know why.

"On the boat to Honolulu, she met a man who looked something like me, and acted like me. Within two months after she left I heard they were married.

"I do not blame her; but it broke me up. I had loved her too much to take it easily. I threw up my job, sold my house for two thousand dollars, gave part of the money to my mother, bought a ticket to South America with most of the rest, and sailed without a definite destination or purpose, except to go, and go, and go. I was twenty; had seen nothing of the world up to then except a corner of California; the woman I loved had thrown me down, and the only thing I could see to do was to lose myself for a while and try to regain my bearings."

MARZOLO landed at Callao, the seaport of Lima, in Peru, and formed a wild plan. He would strike inland over the Andes Mountains, he decided, by way of mule trails winding up three miles and more into the air, and try to follow the boundary between Peru and Bolivia. Somewhere in those lonely places among strange people and savage surroundings, he hoped to find something, if it was no more than forgetfulness, that would do his soul good.

"A time may come in any man's life," he says, "when he (*Continued on page 201*)

Things I Wish My Congregation Wouldn't Do

WHEN I stand in my pulpit and call my congregation "Beloved," I mean just that. The problems of my congregation are on my heart all my waking hours, for their burden is my burden. But sometimes I sit at my study desk, alone at night, thinking of things that I wish my good congregation wouldn't do. I would not, for the world, offend the members of my church. I am too fond of them to do that; and they are fond of me. But my interest in the ministry—in the problems of all ministers—impels me to list these unintentional sins of congregations.

First, I wish my congregation wouldn't think I can always preach a good sermon.

Sometimes I am sure that my people expect all my sermons to reach the same standard, as if they were factory-made, and turned out by the dozen from some mechanical contrivance. Preaching is no hand-organ accomplishment, but a nervous art, subject to the moods and mutations of a frail human nature. The very same sermon may be preached both well and ill. Some Sunday mornings, try how I may, my thought stumbles and falters. My words are difficult to find, and they fall heavily into the pews before me. My tongue feels weighted and my voice is badly pitched. But another time I feel the lift of some strong current, words abound, and thought rises.

Often, on the most auspicious Sundays I have preached my worst, even on Easter, with the chancel filled with lilies. I can never tell until I read my text whether it will be a good or a bad Sunday. I wish my people would be patient with me on the bad Sundays, for it is not from carelessness or from idleness I have failed. So often some parishioner has said, "Did you have a headache this morning, Doctor ——?" Others give me meaning looks. I don't eat my dinner on such Sundays. I shut myself up in my study. My wife knows that.

My second wish is that my people would not hold me responsible for everything that goes wrong in the church. I am not always responsible, even if the Sunday-school attendance is falling off. I am not culpable if the new graded lessons are not proving a success; not to blame if the young people of the Epworth League did make too much noise at their last social. It is not my fault that the janitor kept the church too warm last Sunday. The other day, a woman told me that it was my business to keep small boys off the church roof. I certainly will keep boys off the roof if I see them; but I do not grant that this chore is my business.

I am not an omniscient handy man or an indefatigable jack-of-all-trades. I do not know whether or not the strawberry ice cream has arrived for the evening entertainment of the Queen Esther Circle. I have no idea whether or not the sexton found Mrs. Jones's glove, which she left in the church two weeks ago. I do not know where the sexton keeps his hammer, nor am I cognizant of how long ago the church piano was tuned. During any day, I am likely to receive telephone calls on the following subjects:

"Would you mind going over to the church to see if I left my gold breastpin in my pew? It has the initials E. F. on the back."

"Why hasn't my little girl been promoted to the Junior Department of the Sunday-school? All her little playmates have been promoted."

"Why do I find my pew occupied by strangers when I come to church? I know I come late, but I expect my pew to be held for me."

"I put a five-dollar bill in the collection plate last Sunday, thinking it was a one. Won't you please return the four dollars?"

"The Jones boy slapped my boy in Junior League. Is that the kind of morals Miss —— teaches? Do you think you ought to have her over those children if she doesn't know how to manage them? She never said a word to the Jones boy."

Patiently and as far as I am able I answer all the questions. I could never suggest that such items were not my business, because my parish would say I did not take a "personal interest." They think that my finger should be in every pie. It is difficult for them to believe that it is not my fault if the Men's Dinner was sparsely attended. I am held accountable if the Woman's Foreign Missionary Society does not raise its budget.

Third, I wish my congregation wouldn't think I have all the leisure in the world. Perhaps that is why they call me about so many trivial things—they think I have plenty of time. Some of my flock refer to Sunday quite seriously as "your busy day." They grant me an occupation on Sunday; but they are under the delusion that I have nothing to do the rest of the week.

"ALL you have to do is to get up two sermons," they say.

To begin with, sermons worth their salt are not "gotten up." They are not concocted, scratched together, molded out of thin air. They are wrought into shape painfully, in the depth of meditation, under the shadow of brooding. A person who has never experienced the arduous excitement of meditation cannot realize how hard it is to think an hour, and write a phrase, and then to have the tenuous thread of thought snapped by a jangling front doorbell.

But still, the most of my congregation suppose that I take a sheet of paper and write down my sermon heads, "one, two, three," as fast as my pen will move across the paper. When I attempt to give each Sunday a constructive program of good living, I cannot write my heads "one, two, three." Church members do not know how difficult it is to find original, refreshing ways of developing a text.

The great, eternal truths are always the same, but I must present them differently in order to put them across. I must not repeat myself too often, or my people may accuse me of using "old stuff." I must combat all the extraneous thoughts they are trying to think down in their pews—about their business and their possessions. To do that takes time, planning, and study. It is not done by moving the pen swiftly across the paper.

AND there are a few other things besides my Sunday sermons that occupy me during the week. There is prayer meeting, and there are addresses to the Sunday-school and to the Epworth League, and a word at other church meetings, a word that must be adequate. Then I officiate at weddings and funerals, visit the sick and comfort the distressed, call on the newcomers in town, and see that all the babies are listed in the Cradle Roll. Calling on people, moreover, is not something which can always be accomplished with great speed.

"Are you the man with the mattresses?" a housewife once shouted down to me from an upper landing. When she saw that it was the new minister who was calling, she was covered with confusion. It was a half-hour before she appeared in the parlor. She must have changed her costume completely, because I could hear her excited feet patting about overhead.

My days pass fast and crowded, like every other minister's days. One afternoon I see the red leaves in the gutters, and the next afternoon the snow is on the ground—so it seems. What time do I have, in the midst of all my activities, for God? I must be the spiritual leader of my flock. Above all things, I must be that. But it takes time to be spiritual. One does not enter the Kingdom of Heaven by simply crying "Lord, Lord!"

A minister must wait and listen for the still, small voice. He must pray, and prayer takes time, and energy. Prayer is not kneeling and wishing, as the spiritually illiterate imagine. It is communication with the Unseen, and as such it is a struggle like Jacob's wrestling with the angel till dawn, a struggle from which one may emerge exhausted. And still my congregation considers I am not busy! They would have to make an appointment to see a business man for ten minutes; but they can drop in on me any old time.

They come in the morning, without apology, and spend a couple of hours talking of nothing at all. When a troubled soul comes to me for real help, I am never too busy. But seventy-five per cent of my callers want chiefly to hear themselves talk, to enjoy the luxury of free psychoanalysis, to bear gossip, and to criticize. Down in my sitting-room women go into

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

orgies of self-pity, and I can never press a button and have my secretary show them the door.

In a former charge, my study was in the church proper, and my wife rejoiced because she could truthfully say I was "out." In my present parish, I have a parishioner who is in a fright about her salvation. She is sure she has committed the Unpardonable Sin, and she wants me to reassure her. The other day I saw the open-faced watch on her wrist tick through an hour and a quarter while she told me again the story of her life. I have kept count during the past year, and I reckon over a hundred hours spent in her society. She tells me I help her—oh, so much. But sometimes I wonder.

My fourth wish is that my congregation wouldn't expect me to know by instinct if any of our members are sick. Often I hear that Mrs. So-and-so was indignant because she was in bed a week, and I never called. One such family lowered their subscription. How could I know they were ill? Every Sunday morning I say to my people, "Please inform me of any who are sick in this parish." That request is printed, also, on the church calendar. I have on my desk a "sick list," carefully compiled. But still, members will grow angry because I did not know. I find them more sensitive on that point than on any other.

Fifth, I wish my congregation wouldn't think I am like an undertaker's folding chair, useful for weddings and funerals alike, and with just about as much feeling. I weep with those who weep, and rejoice with those who rejoice, even if the rejoicing comes only a quarter of an hour after the weeping. On occasion I must go from the funeral of one dear member to the wedding of another. I must show my sympathy at the funeral, and yet people would think I exhibited poor taste if I cast the slightest shadow on the wedding. But no one seems to think that the transition from one state of mind to another is hard for me.

I wish my congregation wouldn't think I have become hardened to such duties. I have not yet acquired a professional attitude that might make each succeeding experience a "case." Even if I could do so, it would be disastrous for me to callous my heart. I must really feel with those who suffer, or I shall not be able to comfort. I know there are professional comforters, who pat the hands of the bereaved, mouth fine-sounding phrases from the Bible, and pass on quite unaffected. But I am (*Continued on page 124*)

If You Ask Me:

The man who bosses his wife doesn't love her very much

TWO young people of average intelligence meet and fall in love. They marry, and begin to get acquainted.

If neither is abnormally selfish, and neither is spoiled, the business of steering their craft through the matrimonial seas will be comparatively simple.

If one is spoiled and selfish and "sensitive"—sensitive, in this case, meaning addicted to martyrdom, and eager to be offended—and the other is generous and patient and long-suffering, the craft still may weather the storms.

If both are selfish, or both are spoiled, or both are afflicted with a sense of personal importance, pride alone can save them.

But even the unselfish and unspoiled who adventure in matrimony may unwittingly court shipwreck in calm and untroubled waters.

There is the matter of "bossing."

How many, many couples, adventuring in matrimony, pledge themselves to a policy of absolute equality and say: "Neither of us will boss. We shall be partners, sharing all things equally, and the authority of one will be equal to the authority of the other." How simple it sounds! But there is no equality, for there are no equals.

No two people have the same capacity for loving. And the one who loves least almost invariably dominates. The greater love of the other prompts sacrifice and surrender.

Which loves more, the man or the woman? There is no hard and fast rule. It is obvious that the man loves more during the period of courtship. But when the marriage takes place, a strange thing happens! The man has conquered. He relaxes, as a general will when a campaign is finished and the enemy is in hand. His love no longer is inflamed by opposition. The enthusiasm of the chase is gone. He must adjust himself to another kind of love—the lasting, placid affection that is friendship idealized, comradeship made divine.

During this period of adjustment, a change of equal significance affects the heart of the wife. She was happy in being pursued. The thrill of it was the very essence of romance. Now the thrill is gone. Her husband accepts her as a matter of course. But she is not willing thus to be accepted. She hungers for a continuation of romance. And in her eagerness to keep the thrill, she begins to love more and more desperately. If the man loved more before marriage, she now evens the score.

Here, then, is the first danger of the voyage:

We all are parasites by nature. We lean upon those who will support us, impose upon those who are long-suffering, take our ease if another is willing to do the work. Necessity is our salvation.

The man whose love is less becomes a parasite. He feeds upon the love of his wife. He oesn't realize what manner of creature he is becoming, for he falls to his low estate by slow degrees.

Why does she permit it? Is she not his equal—a partner with dignity no less than his own? She is; but she is something more than that. She is a mother by nature. As a little girl she mothered dolls; later on, she mothered her brothers. Now she mothers her husband.

His selfishness isn't inherent or premeditated. It is a product of conditions. He became a leaner because there was something to lean upon. He is the boss—not by right of masculinity or superior intelligence or greater will power, but by virtue of greater selfishness.

The other danger is similar, and to the masculine mind perhaps even more sinister.

The man may have the greater capacity for loving. Or the woman's dream of romance may be shattered by poverty, by dish water, by the hard reality of a crowded apartment, or by the sight of an unshaved chin.

If the man's love is not affected by his apparent triumph, it is because the triumph is not genuine. His lady is elusive still. Desperately he strives to win from her an affection equal to his own.

And she, a little disillusioned, a little resentful, accepts his greater love as her due and leans upon it. She is the head of the house—not by reason of nagging, but solely because he hungers for her love, and in foolish desperation makes himself a serf in an effort to win it.

If the man or the woman is a parasite, it does not follow that the marriage will end in disaster, for where there is much love on one side and a little on the other, there is always a way to smooth things over. But it does follow that the marriage will fall short of the happiness it might afford if both would give as they take, for neither ever will know the joy of real comradeship, of real partnership. There is no "boss" where each one is eager to serve.

Robt Quillen.

"Nevada"

A romance of the West

By Zane Grey

ILLUSTRATED BY STOCKTON MULFORD

Synopsis of the Four Preceding Instalments

BEN IDE and his sister Hettie had sold their fertile ranch in California, on the shores of Tule Lake, and journeyed overland to the newer country of Arizona with their family, Ben's brother-in-law, Marvie Blaine, and a long train of men, wagons, and horses. There were three reasons for this move: their mother's health, Ben's longing for a return to pioneer living, and the hope in his heart and in Hettie's that in a frontier country they might find the man they both loved.

Six years before he had come to them a stranger, known to them only as "Nevada." For two years he had helped Ben in his wild-horse hunting; he had shared in the capture of the great stallion, California Red; he had fallen in love with Hettie. And then he had recognized in Less Setter a scoundrel he had known in years past, and had seen through Setter's schemes to ruin the Ide family. He met Setter and his two accomplices, killed them all, in open fight, and escaped, with no word of farewell to Ben and Hettie.

By his deed he saved the ranch for them, and made possible Ben's reconciliation with his father and his marriage to Ina Blaine. This Ben and Hettie knew. What they did not know was that their "Nevada" was the notorious gunman, Jim Lacy, and that he had learned from them for the first time the beauty of friendship and the glory of love. It had made a new man of him—and yet to save them he had had to renounce his new self and become again Jim Lacy.

Jim went back to Lineville, where he had known Setter, resolved never to let Hettie know who he was; but to live up to her ideal of him. And again Fate intervened. He had arranged to go to Arizona with Cash Burridge, who had determined to turn from cattle "rustling" to honest cattle raising, and had bought a ranch there—and then once more Jim Lacy was called upon to kill his man and become a fugitive from the law. He came into the "Gold Mine" (Lineville's gambling hell) one night, to find a girl dying on the floor, where Link Cawthorne, in a drunken rage, had thrown her. Jim Lacy did the only thing his code allowed. And for four years no one knew his whereabouts.

Meanwhile, Ben Ide and Hettie had bought a ranch in Arizona from a man named Cash Burridge, only to find out from Tom Day, a neighbor, that Burridge had cheated them in the count of cattle; that he had passed on liens on the stock; and that the whole country was so infested with rustlers that not even Judge Franklidge, the boss rancher of the country, knew who were the honest ranchers and who the thieves.

However, Ben stuck to his guns, built his ranch houses, and hired a man named Dillon as foreman. When Ben Ide's cattle and his own began almost at once to be the chief targets for the rustlers, Judge Franklidge called Day and a trusted cowboy, "Texas Jack," into consultation. Texas Jack volunteered to go singlehanded into the Mongollons and pose as a rustler, in order to get information to break up their gangs. And when Franklidge and Day remonstrated, he confessed to them that he was the notorious Jim Lacy. So, once more, to save those he loved, Nevada made his sacrifice. He shaved off the beard he had grown, bought a new outfit, and rode into town—Jim Lacy again.

He heard much gossip in the saloons, and learned that old Elam Hatt and his son Cedar were under suspicion. Then, on the street, he ran into Rose, the only daughter of old Elam. He gained her confidence, found that she feared Cedar Hatt and Clem Dillon, and loved Marvie Blaine—and promised to help her. That night he saw her at a dance with Marvie—and he saw Hettie Ide! Hettie was lovelier than ever, and from a dark corner Jim heard Clem Dillon make love to her. Hettie repulsed his advances with scorn, and when Dillon tried to hold her by force she broke away from him and ran. Whereupon Jim stepped out of the shadow, knocked Dillon down, and got away before a crowd gathered.

That night he ran into Cash Burridge again, and made friends with him. Cash told him that Hardy Rue, one of Less Setter's men, was also in Winthrop. The next day Hettie learned that California Red had been stolen, and from a store window saw Hardy Rue shot down in the street by the notorious Jim Lacy. He came directly past the window—and she knew that Jim Lacy was Nevada.

She told no one, enduring alone the pain of her terrible secret, and trying still to cling to her old faith in Nevada. And then Marvie Blaine came to her for help in his trouble. He was very much in love with Rose Hatt; but Rose so feared her brother Cedar that she had begged him not to come to see her again. And she would not marry him, because she would not bring disgrace upon his family. Hettie was moved by this evidence of fineness in the girl, and promised to go with Marvie to see her.

HETTIE, early riser as she was, outdid herself on the Wednesday morning which was the date of her agreement to ride down into the brakes with Marvie Blaine.

There were tasks to see to, some of which she performed before her mother called her to breakfast. Hettie was still at the table when whoops outside alarmed her. Then she recognized Marvie's "Whoop-ee!" and ran out on the porch, followed by her mother.

"For the land's sake!" cried Mrs. Ide. "Has Marvie gone daffy?"

They saw him running wildly, bareheaded, up the walk toward Ben's house. "*Whoop-ee!*" yelled Marvie again. "Hey, Ben!"

Hettie realized now that something was up, so she started to run across the log bridge. When she got half way she saw Ben rush out on the porch, in his shirt sleeves, rifle in hand.

"What's the matter, Marv?" he shouted.

"*California Red's back!*" bellowed Marvie, coming to a halt.

Hettie saw Ben start as if struck. Then he ran to meet Marvie. Hettie lost little time getting over the bridge and across the grassy bench. Breathless and excited, she arrived in time to see Ben sink down on a log, as if overcome.

"Ben, I'm—so glad," panted Hettie.

"Boy, you're not playin' a trick on me—because I was sore on you?" implored Ben of Marvie.

"Nope. I saw him sure. An' I was tickled to death!"

"I reckon Dillon fetched him back," sighed Ben, in unutterable gratitude.

"Dillon, thunder!" exclaimed Marvie. "Dillon is in bed. There's nobody up but me."

"Ahuh! By George! Did you see anyone?"

"Not a soul."

"Well! That beats me. Let's go down."

BEN and Marvie, with Hettie trying to keep beside them, stalked down off the ridge, into the lane, through the courtyard, and on to the corrals. Raidy appeared on the bunk-house porch, and he carried a rifle.

"Boss, what's the bellerin' about?" he queried, as he joined the trio.

Marvie led the way through two corrals, and then across the wide square to a high pasture fence, up which he scrambled like a squirrel.

"There!" he shouted, pointing.

Ben surmounted the fence ahead of Hettie, and his exultant cry prepared her.

California Red stood not far distant, down along the fence. Nervously he jerked up at Ben's cry, and wheeled, with head high, ears up, eyes wild. How sensitive, how splendid he looked to Hettie!

Ben whistled and began to call: "Red! —Red, old boy; come here, Red!"

The stallion lost his alarm, and laying down his ears he approached slowly, step by step. Ben kept calling. Red knew the voice, and showed increasing gladness. He whinnied. Then he trotted straight to where Ben straddled the fence. He looked the worse for his absence. Ragged, scratched, muddy, somewhat thinner; he showed the effect of hard travel and probably harsh treatment.

"Come, Red; come, old boy," Ben called again. "Don't you know your boss?"

But Red would not come all the way.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

He halted, uncertain, pawing the ground. His dark eyes shone softly. Again he whinnied. Ben guardedly got down off the fence, speaking all the time, and slowly went up to Red, finally encircling the noble neck with his arm. Then he buried his face in the red mane.

Hettie's thoughts went back to the Forlorn River days, when California Red had roamed the sage hills, free and proud, when Ben had been a lonely outcast, wild-horse hunter, when Nevada had come so mysteriously into their lives; and her eyes dimmed.

Meanwhile the cowboys had arrived on the scene; Raidy had opened the pasture gate. Presently Ben led the stallion through to the square.

"Look him over, Raidy," said Ben. While the cowboys crowded around, and Hettie still stayed on the fence, the better to see, the old horseman walked around Red, feeling him, examining him, lifting his hoofs one after the other.

"Wal, boss, he's as sound as a bullet," declared Raidy gladly. "Ganted up a little an' got a couple of bad cuts. An' he's lost a shoe. Nervous an' skittish. But you can bet he's glad to git home!"

"Raidy, do you think he's been mistreated?" inquired Ben.

"I sure do. Why, man, don't you know hosses? Can't you see he's been haltered, an' hobbled?"

Raidy kept running gentle, skillful hands over Red, ruffling up the silky hair, looking with the eyes of long experience to marks and signs by which he read something of what had happened to the horse.

"See for yourself," he went on with vehemence. "Look hyar! . . . By heaven, he's been roped, too!"

At this point Hettie saw Dillon stalk around the corner of the high fence, which had obscured the men and horse. Abruptly he halted. Swift amaze and consternation leaped across his expression of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

curiosity, blotting it out. Then, as swiftly, his face changed, smoothing to a smile. What a handsome, pleasant man! Hettie marveled at his consummate control and acting. But he could not fool her again. The return of Red was actually as startling to Dillon as it had been to anyone else there.

The circle of cowboys opened to admit Dillon.

"Ha! So, Boss, what'd I tell you?" he broke out, and vigorously shook Ben's hand. "The old red son-of-a-gun has come back. Jumped the pasture fence goin' an' comin'. . . . Took a little run, an' come home. I've had many a hoss do it."

"Not wild hosses, Mr. Dillon," snapped Raidy.

"What do you know about hosses, Raidy?"

"Wal, I reckon I've forgot more'n you ever knew," retorted the older man. "I ain't doubtin' you've had a lot of hosses, Dillon; but you didn't *raise* them—you didn't *catch* them—an' you didn't *keep* them long."

This was pretty plain speaking, as was evinced by Ben's stepping between the men, and the dark flush that wiped out Dillon's geniality.

Ben raised a hand to silence Raidy. "That'll do. You're both privileged to your opinions. But don't get nasty."

"All right, Boss," replied Raidy, in an aggrieved tone. "But my word is sort of ridiculed hyar. An' I'm askin' thet you look at these marks on Red. If you won't, I reckon I'll take it as a slap at me. An' I'll quit you cold."

"Raidy!" exclaimed Ben, astounded.

"You know me, Boss," returned the old horseman sturdily.

Ben wavered. It was plain to Hettie that he hoped to keep peace between the old and the new hands, so valuable to him now. But Raidy had thrown down his gage, and he looked formidable.

"Ben," called Hettie, from the fence, "you've known Raidy all your life. He taught you how to ride. It's only fair that you listen to him."

"All right, Raidy, if you feel that bad about it," replied Ben resignedly.

AGAIN the old horseman ran his gentle, skillful hands over Red's supple body, down to the wonderfully muscled legs. "Look hyar," said Raidy, as he stooped. "He's been hobbled. See! He's been gone ten days. That mark was made no more'n yesterday."

"Reckon you're right," admitted Ben, as he slowly arose. "I apologize."

"No apology wanted," said Raidy. "All I want is for you to come out of your trance. . . . Now, look hyar. Look at Red's nose. He's been roped."

"By thunder! There's been a hackamore on him," ejaculated Ben.

Dillon was not to be outwitted, and he had swiftly followed Ben's examination of the horse with one of his own.

A man had come out of the aspen thicket. He carried a rifle, which he held by the barrel over his shoulder

"Darned if Raidy isn't right, Boss," he exploded, evidently regretful. "I hadn't even looked at Red. But there are the marks, plain as print. . . . I apologize too, Raidy. My mistake."

"Wal, Mr. Dillon, I'm acceptin' your apology," drawled Raidy, his keen old hawk eyes on the handsome foreman.

HETTIE was riding beside Marvie across the western end of the sage flat, toward the fence which marked the limit of Ben Ide's ranch land.

Marvie dismounted to open the gate for them, and when he vaulted to the saddle again he grinned. "Nobody but Raidy saw us, an' he won't tell. But Ben would stand for anythin' to-day. Gee, how he loves that red horse!"

INTERESTING PEOPLE

No Taxicab Can Run Him Down!

Captain Salisbury and his family live on a scow in New York Harbor, where the captain is employed by the Pennsylvania Railroad to receive boats loaded with cargo, and keep them until they are called for. Catherine, his daughter, is boarding the tug which takes her to school every morning

FAR away from the roar of railroad terminals and freight yards lives "Captain" George S. Salisbury and his family, on a scow in the middle of New York Harbor, where he performs duties vitally necessary to the operation of the Pennsylvania Railroad.

While the millions of inhabitants on Manhattan Island dwell in congested quarters, Salisbury and his family enjoy a permanent home on the cooling waters of the upper bay within the shadows of the Statue of Liberty, of Ellis Island, and the gray skyline of down-town New York.

A railroad man living and working on the water! Yet Salisbury can be compared to a yardmaster. It is the only job of its kind on the Pennsylvania Railroad. Day and night, he must be on the job, for the "Scow Ox," on which he lives, is never closed.

"No, sir," said Captain Salisbury, as we sat in his living-room on the scow, while the craft rocked on the waves, "a fellow does not have to work near the tracks to be a railroad man.

"The 'Scow Ox' is the same as a distribution yard on the railroad. When coal arrives at the dumpers at South Amboy, New Jersey, it is loaded on the boats that will convey it to the various piers in the New York district. Well, some place must be provided to tie up these boats in the harbor while tugs transport them, a few at a time, to their destinations. Here is where I come in. After the boats are loaded at South Amboy, they are formed into a tow, which starts for New York. The boats are towed in to the 'Scow Ox,' and tied up with us. Then tugs arrive to escort the boats to the different piers.

"Not all of the boats which arrive at the 'Scow Ox' are loaded with coal, however. Some are freighted with different kinds of merchandise, such as brick, and clay products from the Raritan River district. Therefore, the freight may come from all points on the waterways. And in the reverse movement, light boats are picked up at the many piers in the metropolitan district, brought to the 'Ox,' and made up into one large tow, to be taken to South Amboy, the Raritan River district, or other points."

When a tow arrives at the "Scow Ox," Salisbury takes the lines from the tugs and boats and makes them fast. He also keeps a careful record of the names of boats as they arrive and depart. On snowy winter nights, or in hail, fog, or rain, he must inspect the boats, to see if they are in safe condition for towing.

"Often I find as many as twenty light boats, in addition to eighteen loaded boats, moored to the scow waiting for their movement, on tide. Day and night, they come and go," said Salisbury.

"To get an idea of the average size of a tow, and what such transportation means, just picture in your mind a tow of eighteen boats, each boat carrying 1,000 tons of coal. This is equivalent to a train of 360 coal cars of 50 tons carrying capacity. Assuming that sixty loaded cars is a fair haul for a locomotive, you can see that it would take six trainloads on rail to deliver the 18,000 tons of coal. One large boat, the 'Lake Oneida,' has a carrying capacity of 2,400 gross tons, which is equal to a whole trainload of coal.

"The 'Scow Ox' is an ideal home," said Salisbury, whose family consists of his wife and daughter Catherine. "For five years we have lived here, and when I saw that the job might become monotonous, I built a chicken coop on one end of the scow, installed a radio, got a dog from a friend in New York, and cheerfully accepted conditions. Not long ago, I also placed on board several rare specimens of carrier pigeons.

"At first I was worried about school for my daughter Catherine. She was only eleven years old then, and attended a school in down-town New York. But I arranged to have a tugboat of the Pennsylvania Railroad call at the scow every morning during the school term and carry her to New York. Every evening she returns to her home on the bay in the same manner. For five years now she has

Digitized by Google
Original from
UNIVERSITY OF CALIFORNIA

traveled to school in this way, and she is affectionately called by the river men 'The Princess of New York Harbor.'

"We are happy here," said Salisbury. "When we want to bathe, we just slip on a bathing suit and jump off our front porch. Nearly every summer afternoon, Catherine swims around the scow.

"In summer it is really delightful on the scow. While New York swelters, we are so cool we have to sleep beneath blankets. There are four rooms on the scow, which constitute the living quarters. In the bow are the lamp locker, storage room for supplies, and chicken coops. The pump is directly connected to a gasolene engine, and keeps the scow free of water."

I asked Salisbury if the scow was ever cut adrift during a storm, and whether they fear heavy fogs.

"We were never really adrift," he replied. "Once we dragged our anchors. But we were soon relocated. No; we do not fear fogs. We are not lying in the channel, and our lights burn brightly during the night. Sometimes in rough weather we get shaken up quite a bit; but no worse than the other boats running up and down the river.

"When the scow is being overhauled once a year at the shops in Hoboken, we stay on it just the same, and another scow takes our place for the time being. During that period I enjoy a short vacation."

"But don't you freeze in winter out here in the middle of the bay?" I asked the captain.

"No, indeed," he replied. "Every fall a tug brings us ten tons of pea coal, and we have a large stove in the kitchen, where we take our meals. This stove heats up the entire living quarters of the 'Ox.' In summer, we cook with a kerosene stove."

"And the ice?" I asked. "Doesn't the ice flow jar you about in winter?"

"Yes; we often drag our anchors during the passage of a heavy flow of ice, and then a tug comes over with a steam derrick, replaces us in our position, and relocates the anchors in a new spot."

I asked Salisbury if he did not get a thrill, living in such a picturesque location.

"Certainly I do," he replied. "Who wouldn't? On one side is the Statue of Liberty! Across the way is Ellis Island. And over there is New York, with the big skyscrapers, and before our eyes move the great ocean liners bound for the far ports of the world.

"Yes, sir, an ideal job and an ideal home. Show me anything better."

ROBERT H. DENEHEY

This Blind Girl Edits a Magazine for the Blind

As a little girl, Helen Day, of New York City, was brought up by a great-aunt who was blind. This relative was morbidly sensitive about her affliction. Any allusion which folks made to her loss of sight was keenly resented, and she shrank from the most casual contacts. Later on, as a climax to a long series of illnesses, Helen herself became blind. And she readily fell into her great-aunt's mental attitude.

To-day, however, all that is changed. For eight years, Miss Day, though sightless, and almost totally deaf, has been one of the busiest editors in New York. Seated each day before a Braille typewriter in her office in her mother's home in Harlem, she edits copy, reads proof, and selects manuscripts for "The Searchlight," a bulky quarterly sent all over the United States to readers who cannot see.

The thought that she works under a handicap, or is less lucky than anyone else, never troubles Helen Day now. She is too busy providing interesting magazine articles for hundreds of shut-ins.

"They need to have sunshine and optimism brought into their lives through reading," she told me. "I try continuously to do this. But it is often hard to get articles. Good writers will not sell stories and poems for nothing. And we never have any money to buy manuscripts."

The day which changed the entire course of Helen's life occurred in 1914. When only six years old, she had had an attack of hip disease which made it impossible for her to go to school for ten years. Four years later, she had another serious illness, which left her totally blind.

One afternoon, after she had recovered sufficiently to go about the house, someone told her of an exhibit at Grand Central Palace. Here on display were hundreds of examples of art and handicraft work done by girls who, like herself, were blind. The exhibit was shown under the auspices of the Lighthouse, an institution maintained by the New York Association for the Blind, at 111 East 59th Street.

Helen wanted to know all about the work of the Lighthouse. She wanted to learn to do useful things. But her distrust of human contacts and her old sensitiveness held her back. Finally, however, she overcame both. She went to the head of the Girls' Club at the Lighthouse, and told her story. After that, she studied shorthand and music regularly in the Lighthouse classes. Typewriting she taught herself.

BAIN NEWS SERVICE

Helen Day, of New York City, has been blind since she was ten years old; but she attended Hunter College, and now edits "The Searchlight," a magazine for the blind written in Braille

On one occasion, after she had become a part of her new life, Helen was sent as a delegate to a meeting of the City Federation of Women's Clubs. Sitting in darkness in the big auditorium, she became particularly interested in a speaker who discussed the activities of Hunter College. The next day, a letter went from the blind girl to the faculty. She received a prompt reply. After that, in spite of blindness and ever-increasing deafness, for four years she regularly attended college classes. She concentrated on literature and composition.

But another misfortune was not far off. Helen was eventually obliged to give up college, because her deafness became so acute that she could not attend classes with any profit. In this extremity, she turned to the circulating library for the blind in London, said to be the largest of its kind in the world. She received books regularly. Soon she was an expert in Braille. So proficient did she become that she undertook Braille proof reading for the Red Cross.

Although "The Searchlight" is a very bulky magazine, it contains fewer words, perhaps, than any other quarterly in circulation. This is because of the size of the lettering. Each number contains only about two thousand words in all; but the book is so large that it is inconvenient to hold. The average issue of the magazine is two or three inches thick.

A picture of the Lighthouse in perforations is always the frontispiece. The first article is the "Postmistress's Letter," written by Miss Day herself. This is popular with the readers, and brings many letters to the editor's desk. An article of any length requires from six to ten pages of Braille in the "Searchlight." Poems of a cheerful nature are always desirable, and, as they require little space, they are frequently used.

As an editor, Miss Day tries to cover a wide range of interest. It is her ambition to make the magazine appeal to boys and girls, as well as to older persons. Blind readers like fairy tales and adventures even more than other folks. But since Miss Day cannot pay contributors, she must depend upon reprinting of material, or upon voluntary contributions.

A recent number contained a reprinted story on the community life of ants, translated from the French of Jean Henri

Digitized by Google UNIVERSITY OF CALIFORNIA

Fabre, and several geographical studies. Also, one or two poems and the tale of a British officer in India, which Miss Day thought interesting enough to clip from another publication after someone had read it to her.

During her seven years as an editor, Miss Day has brought the circulation of her magazine up to three hundred blind readers. In New York, the quarterly is sent free to all who wish it, but readers outside of New York must pay postage.

If more funds were available, the circulation could be correspondingly increased.

The "Searchlight" is published by the New York Association for the Blind. They offered her the position because they knew about the Braille proof reading that she did for the Red Cross, said Miss Day.

SUSIE SEXTON

"Jack-Knife Ben"

STEP right this way, gentlemen; this is where you get 'em!"

A brisk, businesslike voice commanded the attention of passers-by, and I stopped, as several others had already done, in front of the small man in gray who wore a blue yachting cap. In a little alcove under an overhanging roof stood a tray of knives; and as I looked on they were rapidly sold, to the accompaniment of the never-ceasing patter of the man in the blue cap.

"*That* costs you seventy-five cents," he was saying to a hesitating customer; "*this* one is a dollar. Yes, sir; you get exactly the same quality in that knife as you do in this. You pay the difference for the handle.

"Quality, sir?" he was already saying to another. "Just read that, if you please; it says 'Jack-Knife Ben' on the blade, doesn't it? That never goes on a knife unless I stand behind it."

"Jack-Knife Ben," the sixty-two-year-old knife salesman, has been in business in that same block at the Chicago Stock Yards for nearly forty years. Starting with a few dollars and a few dozen jackknives, he has built a business that to-day has a volume of several hundred thousand dollars a year.

His real name is Benjamin W. Chon, though not one in a thousand of his regular customers would recognize him by it. At heart, he is a showman, like the barker in front of the circus tent. But he is far more than a showman; he is a merchant, and an alert judge of human nature.

Ben keeps an eye peeled for the needs of every customer within reach of his voice. Not many people can sell knives as he sells them. And in the store that has gradually grown up back of his little original sidewalk stand, he also does a good business in razors, diamonds, jewelry, clothing, and men's furnishings, rain coats, leather goods, and optical instruments.

"I was twenty-four years old," Ben told me, "when I reached Chicago by box car, busted, and broke! It was late fall and cold. I had acted nearly every rôle but the bloodhound in a barn-storming troupe playing 'Uncle Tom's Cabin' up and down the states; but the paid admissions wouldn't cover the actors' salaries, let alone bed and board.

"In Chicago, I did odd jobs for a while until I got together the sum of eight dollars. Then, out of curiosity, I drifted on a visit to the Stock Yards.

"I was amazed at the number of farmers, stock-raisers, cowboys and cattlemen who came there from all over. The thought occurred to me that every one of those men needed a first-class jackknife. I asked myself why they shouldn't buy knives of *me*, and get good ones!

"Next morning I was on the job. My store was a barrel, my display case a cigar box, and my entire stock a few dozen knives I had been able to pick up at a bargain with my eight dollars. I offered the knives for sale at a quarter apiece.

PHOTOGRAPH BY REW HOFFMAN

Starting with eight dollars' worth of jackknives, Benjamin W. Chon, of Chicago, Illinois, has built up a profitable business. But he still likes to peddle knives in front of his store

"At first, it was pretty tough, sticking to it through cold, rain, snow, sleet, and sun. But people got to know me. I had a line of talk, guaranteed my knives, and took care to sell *good* knives, built the way farmers wanted them. Customers at my barrel store soon included all sorts and classes, from laborers to millionaire packers and commission men.

"But I was only a peddler. The policeman on the beat didn't understand my ambitions, and hated peddlers—me especially. Day after day he'd order me away; and I'd come back, as sure as the next sun rose. If it rained, I moved under any handy awning. If it was bitter cold, I stuck my hands through a radiator grill in the old railroad station until they were warm enough to handle cash and knives again.

"It was about eight years before I finally got my first little shop. Mr. John Ashby was then vice president of the Stock Yards Company. That company owned the real estate, and leased it out, and they wouldn't let me rent any space, even after I could afford it. But Mr. Ashby noticed I was persistent, and he had a little shack put up for me. It was just about big enough to turn around in; but I settled in it, and made money faster than ever!

"Later on, the elevated lines were built and the steam railroad was abandoned. I rented the old station, and fitted it up as a store. We're still in it. We aren't grand, like some of the stores downtown. But that's real mahogany in those showcases; when a jeweler wants to close out and quit, I can give him cash for his stock—twenty, thirty, fifty thousand dollars if need be—and get bargains for my customers.

"One of my sons now manages one side of the store, and another has charge of the other side; but I still prefer to stand out in front with my tray of knives, and sell them to all comers in all weathers. Seldom a day goes by when I sell less than fifty knives. I have sold as many as seven and eight hundred in a day.

"I pride myself on knowing more farmers personally than anybody else in the country. To a good many of them mine is one of the few city stores where they really feel acquainted.

"I have done business with a lot of famous people too. Everybody who comes to Chicago comes to the Stock Yards, and they pass my place of business. The Prince of Wales has one of my knives. President Harding had one, and President Coolidge has one.

"It's some satisfaction to me to-day, now that things are going smoothly, to have an old customer come by and remark:

"'Ben, do you recollect way back when I bought my first knife from you—when you sold 'em off a barrel? I wouldn't carry anybody else's knives in my pocket!'"

DELICIOUS TOMATO SOUP!

This is the way to "make" it!

12 cents a can

Nowadays "making" tomato soup means getting Campbell's at the store. It's so easy and convenient. And the soup is so delicious. No wonder, for it is made in the most famous soup kitchens in the world.

Red-ripe luscious tomatoes sun-sweetened on the vines. Strained through colanders of solid nickel with mesh as fine as pin-points, leaving only the pure juices and rich "meat" in a smooth puree. Golden butter and tempting seasoning make the flavor even more attractive.

Campbell's Tomato Soup is the great family favorite—first choice in countless homes. Serve it today and it will be a regular favorite on your table.

WITH THE MEAL OR AS A MEAL SOUP BELONGS IN THE DAILY DIET

"Nevada"

(*Continued from page 63*)

"Marvie, were you looking at Dillon when he first came on us and saw Red?" inquired Hettie.

"No, I wasn't. Why?"

"He struck me as being more amazed than any of us, and *not* so happy."

"Ahuh!" replied Marvie. It was evident that he chose to be noncommittal. Hettie, however, did not fail to catch the glint in his eye.

"Here's where we turn off, Hettie," he said, as he left the road. "Narrow trail, but good. Look out for the brush an' duck the branches. Ride now!"

He spurred his horse into a lope and Hettie did likewise. Soon they entered the forest, where the shade was welcome and no dust arose. Hettie had been on this trail several times, though not to go very far. It led west, toward the brakes and the frowning dark notches of the Mongollons, dim and purple in the distance.

THEY rode perhaps five miles before the trail began to penetrate deeper into the forest and to ascend into rockier and rougher country, and she soon gathered what the brakes of the Mongollons meant. The brakes were canyons, running like the ridges of a washboard, walled with brush and rock, choked with dense thickets, above which the lofty pines and spruces towered. Ridge after ridge Marvie climbed and descended, until, coming to a deeper, clearer canyon, he turned off to follow a willow-bordered stream.

As they progressed, again riding at a lope, the canyon widened and deepened, the walls grew rugged and unscalable, the fringe of pines on the rims lifted higher, and every aspect of the wilderness seemed likewise intensified. The time came when the horses had to walk again, down and down, under narrow gray shelves of stone, under the massed foliage of maple, oak, aspen, all beginning to show a tint of autumn, especially the fluttering aspens, just turning to gold. The stream grew larger, swifter, deeper, and its mellow roar filled the dreamy solitude.

At corners, where the trail turned, Marvie always exercised a caution which added more than romance to Hettie's feelings. This adventure grew with the miles. How dark, still, lonely some of the constrictions in this brake of the Mongollons!

"Somewhere along here we'll meet her," whispered Marvie fearfully. "It always scares me. That Cedar Hatt might be prowlin' along the rim to spy on us. Rose is cute, though. I've waited half a day before she came."

They wound along the crooked trail, and if it were possible Hettie imagined every vista wilder and more hauntingly beautiful than the last. The white bleached grass, the green willows, the amber rocks, the rushing, foaming brook, the thickets of oak and aspen, russet and gold, the wonderful walls rising sheer, stained and mossy, gray and purple, up to the ragged fringed rims—all these aided the movement of leaves, the flash of birds, the fragrance of pine, the utter solitude, into working an enchantment upon Hettie's senses. No wonder Marvie had fallen in love with his wild Rose.

"I see her horse," whispered Marvie, as he halted. "She'll be near. We'll get off now. I'll hide our horses."

Hettie got off to hand her bridle to him, and waited while he led their mounts out of sight. How noiselessly he moved! Marvie had become a woodsman. Soon he returned and led her off the trail into the grass.

"Anyone ridin' along behind us would sure see our tracks," he whispered. "But that's a slim chance. You see, it's an old, unused trail here. The Hatts live over in the next canyon."

"She's a brave kid, to meet you this way. And you're not such a coward, Marvie boy," returned Hettie.

He led her up a gradual grassy slope, into the protecting shelter of low pines and silver spruces. "Look at the elk beds," he whispered, pointing to round places where grass and moss had been flattened.

Hettie espied a ragged red pony, without a saddle, haltered to a sapling. Then she saw a dark curly head rise above the tall grass. Next moment Marvie was speaking low: "Hettie, this is Rose Hatt. . . . Rose, I've fetched her. This's Hettie Ide, my best friend an' sister."

As Hettie sank down, smiling, with hands outstretched, the girl rose to her knees, her eyes dilating, her face without color.

"Rose, I'm glad—to meet you," whispered Hettie, and she kissed the girl.

"Oh, Miss Ide—you're good to come," faltered Rose. She was trembling all over.

Marvie knelt beside Rose, and it was evident this was a torturing moment for him too. The romance and excitement had passed. Ide's sister was now face to face with the daughter of rustler and backwoodsman Elam Hatt, with the sister of notorious Cedar Hatt.

"HETTIE, I reckon Rose won't be so scared an' shy if I leave you alone with her," said Marvie. "So I'll keep watch below. An' don't forget we haven't lots of time."

Then, with a bright and reassuring look at Rose, he slipped off under the low-spreading trees. Hettie turned to the girl, trying to think of words to put her at ease. How like a woodland wildflower! Rose wore a buckskin blouse fringed and beaded, a ragged brown skirt, and boots without stockings. She held a sprig of tiny aspen leaves, turning gold.

"Rose, since Marvie loves you, I must love you too," said Hettie, speaking not what she had intended, but the words that welled from her heart. She did not need to be told that Rose Hatt had never had love of mother, sister, or friend. The girl gave a little gasping cry of wonder and pain, then fell into Hettie's arms, where she burst into tears.

This made the ordeal easier for Hettie, and she held the girl in silence until the paroxysm of weeping had subsided. Then she began to talk, kindly, soothingly, as if to a child, saying she hardly knew what, until the moment came when she felt she might venture a question. But before she could ask it, Rose sat up, wiped her wet face, and smiled through her tears.

"Marvie was right," she said. "It's sure good to see you, hear you, now I'm over my scare. I'll never forget you till my dyin' day!"

"Rose, you love Marvie very much?"

"Yes," replied the girl, simply. "I couldn't help it. But I didn't know at first. Not till the dance."

"Then you two have pledged your troth?"

"If you mean told our love, yes, Miss Ide. But I didn't promise to marry Marvie."

"He asked you, of course?"

"He begged me to," replied the girl, lifting her head with pride.

"Why did you refuse?"

"I love Marvie too well to hurt him with you an' all his family."

"DO YOU mean you think you'd disgrace him and us because you're a Hatt?"

"Yes, an' a good deal more I haven't told Marvie," she went on, steady of voice, though her round breast heaved. "Cedar would come down on Marvie an' you an' your brother Ben for money. An' so would another man whose name I daren't tell. He—this man—has got a hold on Cedar—an' me. He'd ruin us all!"

"Rose, that's a strong statement," said Hettie. "But, even if it isn't exaggerated, it doesn't change the fact that you and Marvie ought to wait. You're both very young."

"I'm not exaggeratin'. I could tell you more. An' about marryin'—Marvie's reason for hurry is to get me away from the life I live. It's turrible, Miss Ide. I have to cook, wash, scrub for an outfit of rustlers an' hoss thieves. Look at my hands! Look at the black marks—here—an' there. I get kicked an' beat. Marvie knows, an' he can't stand it any longer."

"Couldn't you leave this home?" queried Hettie, earnestly.

"I've thought of that. Yes; I could. My dad wouldn't care. But I'd have to be a servant—or worse."

"No, indeed. Rose, you could come to my home."

"Oh, how—wonderful!" gasped the girl, rapturously clasping her hands. "But that'd be 'most the same as marryin' Marvie, so far as Cedar an'—that other man are concerned. . . . No, it'd never do. But thank you—bless you!"

"Rose, we mustn't despair," continued Hettie, touched to the heart by the girl's sincerity. "Time will help us. If you could only escape this—this drudgery and shame."

"That's the hope which keeps me up, Miss Ide. If I could only tide over a little time! Cedar is goin' to ruin fast. He's rustlin', gamblin', drinkin' harder than ever. He's under the thumb of—the man I daren't squeal on."

"But why daren't you?"

"Because if *he* didn't kill me, Cedar would. I'm the only one outside of that

Pine Tree Outfit who *knows*. An' my life ain't worth much."

"Pine Tree Outfit!" echoed Hettie, her eyes lighting. "That's the mysterious gang of rustlers."

"It sure is. I'm trustin' you with my life, Miss Hettie. But I daren't tell more. Nobody knows how secrets slip out. You might talk in your sleep."

"Naturally. But I think you could risk it, considering I sleep alone," said Hettie. "Rose, this *is* a plot. We're all involved. Your people and mine. What a tangle! It must have been fate that brought you and Marvie together. Oh, if I only knew how best to advise you!"

"Reckon I wish so too. But I've got a hunch. It's my job to stick home—to fool my people—to learn all I can. . . . I mustn't see Marvie often, an' be sure we're never ketched. Somethin' will happen, Miss Ide. You've made me feel it. You've made things different. Neither Cedar nor *him* can last long in this country. Not now. I heard my dad say so. . . . Oh, this is the second time my hopes have risen. Oh, I wish I could tell you of another friend I found lately. I forgot. . . . But he came to my home, an' there was an awful time. I listened at night through the chinks of the logs. Cedar was wild. Cash Burridge was there. 'We've got a big deal on,' says Cash. An' that pleased all the gang except Cedar. They set to whisperin', an' I didn't hear no more."

"Rose—isn't your friend—Jim Lacy?" whispered Hettie haltingly, with dry lips.

The girl caught her breath, and drew back sharply, wonder the most predominant of her varying emotions.

"There, you have betrayed it," continued Hettie forcefully, trying to command her voice. "Call Marvie now. We will plan another meeting, then hurry home. I've enough to think of—this time!"

Rose silently slipped away under the pines, and Hettie, staring at the green-walled foliage seemed to see a ghost. "Oh, my heaven," she whispered in an agony. "Nevada belongs to this thieving, vile crew!"

FROST fell early in September on the high rims of the Mongollons. Soon after the sun set the rarified air became cold and sharp, making a camp fire something to draw the riders and hunters, and other men of the woodland.

A group of five dark-faced, dark-garbed campers sat around a beautiful opal-hearted cedar fire, at the wild edge of Black Butte, where it fell sheer into the brakes. Three of these men were playing cards, cross-legged in front of a saddle blanket, intent on the greasy bits of colored pasteboard and the piles of gold coin and rolls of greenbacks.

The other two men occupied a position on the opposite side of the fire. One had his back and his outspread palms to the blaze, while the other sat against a log.

"Well, Jim," said the standing man, "all I want to get at is this: If you'd loosen up a little more, drink an' gamble a little, especially when we run into other outfits, it'd facilitate our plans."

"I reckon, Cash," returned Jim wearily. "But how can I have a quick eye an' hand if I drink? I'll agree, though, to be more friendly an' set in a game now an' then."

"Good. Reckon that'll do. Lord, Jim, don't get me wrong. Ever since you called Hardy Rue out an' killed him, I've been ready to crawl an' wear my finger nails off scratchin' for you. I mayn't have been your friend back in Lineville; but I sure love you now! You've put me on my feet again."

"Wal, Cash, that's plain talk," replied Jim. "An' I don't mind sayin' I like you better than I used to. But I cain't love any man, or even be pards."

"Sure, sure, I understand," returned Burridge hastily. "An' I'm glad for small favors. But you needn't tell that to our gang, or any of these outfits we meet. They all think you were my pard back in California, an' are yet. Burt Stillwell would have shot me, sure; but he was afraid of you. He couldn't be himself, an' I'm tellin' you he was a bad hombre."

"Aw, bad, yes, in a sense of dirty, yellow, behind-your-back viciousness," agreed Jim, flashing a quick, eloquent hand. "I hate to throw a gun on such fodder. But he forced it. He kept still till he got a few drinks. Then he riled up aboot Ben Ide's red horse, an' put in that ridiculous claim for his pard, Cedar Hatt. Wanted a share of the divvy for the cattle—for this Hatt fellow."

"The thunder he did! Well, I wondered what it was about. But I was so glad I didn't feel no curiosity," returned Burridge. He turned around to kick the fire-logs. Then he again faced his companion. "Maybe you don't know it, Lacy, but you made a lot of friends by pluggin' Stillwell; an' one sure enough enemy."

"Who's that? Cedar Hatt?"

"He's the bird. He's a backwoodsman, Jim, like an Indian, who knows the woods. Cedar wouldn't ever try you out, unless, like Burt, he'd been lookin' at the bottle. All the same, you'll be in more danger from Cedar than from all the gun-throwers in Arizona. He's killed shepherds an' cowboys enough, believe me. He'll trail you—ambush you in the woods."

"Much obliged, Cash," drawled Jim, yawning. "Reckon I know this heah Cedar Hatt!"

"I'm givin' you a hunch of hunches," declared Burridge. "I'm darned hones' and selfish about it too. I've other reasons besides affection not to want Jim Lacy killed. Cedar Hatt will be sore enough when he hears you put Stillwell over; but say, when he learns you got that red stallion an' sent him back to Ide—my lord, brother, he'll be fire and brimstone!"

"HOW soon is he goin' to find out?" queried Lacy, with more interest. "Stillwell cain't very wal tell. An' that pard of Stillwell's—Babe Morgan, someone called him—he'll be runnin' yet."

"Cedar'll find out pronto," declared Burridge, "If not from one outside our outfit, then from someone inside. You were playin' a queer high hand, Jim, when you took the stallion away from Burt an' Babe, an' sent it back to the Ide ranch. They'd stolen it. But your argument sounded good to me. Ben Ide would raise more trouble over the loss of California Red than over a hundred thousand head of stock."

"Huh! I'll bet he would," declared Lacy, dropping his head. The twig he had been twirling snapped sharply.

"Well, to go on, your argument looked good to me. Now, I've got brains, an' most of these rustlin' hombres haven't nothin' but spruce gum in their heads. That deal looked queer to all our outfit. Still, only Hubrigg opened his trap to say so. Hubrigg likes you, though, an' I think you can gamble on him."

Here Burridge leaned over toward Jim to whisper, "If our gang seem a little stand-offish yet, it's only your reputation. Since you helped us to steal cattle an' drive them an' sell them, why, they're sure you are one of us, even if you are Jim Lacy."

"Reckon that ought to be aboot enough," returned Lacy.

He turned his ear to the faint cold wind that breathed up out of the black void below.

"Hear anythin'?" queried Burridge.

"I heah a hoss."

"Good. That'll be Stagg, unless it might be one of our hosses. I'll take a look, an' then I'll unroll my bed."

BURRIDGE stalked away in the gloom of the forest while Lacy, left alone, attended to the camp fire. Once or twice he glanced at the absorbed gamesters, with something curious, strange, and menacing in his eyes. Then he fell to contemplation of the opal heart of the camp fire. And the moment arrived when he forgot the wild environment, the gambling rustlers, to become like a statue, cold-faced, with haunted eyes. He must have seen a ghost in the radiant embers, for not until a thud of hoofs sounded close at hand did he rouse out of his trance.

Presently two dark forms entered the circle of light, and approached, talking low. Lacy got up to meet them.

"Howdy, Jim," greeted the newcomer. He was a swarthy-faced, beady-eyed white man with a strain of Indian or Mexican blood.

"Howdy, Stagg. Did you make a good job of it?" returned Lacy, with apparent carelessness.

"Wasn't no job a-tall," said Stagg, reaching bare, grimy hands toward the fire. "Soon as you-all left, the red hoss quieted down, an' I coaxed him out of thet measly leetle corral. Reckon it was nigh on midnight when we got down on the sage. I tied up both hosses, pulled off my boots, put on my moccasins, an' led the stallion five miles through grass an' sage. When I run into Ide's fence I kept goin' along till I come to a gate. I opened it an' let him in."

"Much obliged, Stagg. I—reckon it was no fool move of me—though some think different," replied Lacy, turning his face away from the fire.

"Lacy, it was the slickest piece of headwork I ever seen on this range," declared Stagg. "I hadn't time to tell you I was at Burton's ranch the next day after Stillwell stole the stallion. Ide s cowmen came rarin' over the country. Thet Raidy, he's an old hand, an' he was mad as a hornet. An' to-day, as I was climbin' the Hogback I run into a sheep herder I know. Greaser named Juan somethin'. He said Ide had plastered the trees along the trails offerin' rewards for Red."

"There, Jim! You see it was a wise move," declared Burridge, with satis-

We Advise Men—

"Don't buy, yet—

Accept, first, a 10-day tube of this unique shaving cream to try"

GENTLEMEN:

We've been in business enough years to know that major success of a product rests entirely upon the merits of the product itself—not upon advertising, not upon "selling talk."

So from the beginning we asked nobody to buy Palmolive Shaving Cream; but first to accept, free, a 10-day tube to try.

That has brought this comparatively new preparation to a top place in its field in a remarkably short time.

We made it on the expressed desires of 1000 men who told us what they wanted in a shaving cream.

They named four things—we met them all, then added a fifth to make the supreme creation.

We think it will surpass your present favorite in these 5 ways. Please mail the coupon, and prove the point at our expense.

These 5 advantages

1. Multiplies itself in lather 250 times.
2. Softens the beard in one minute.
3. Maintains creamy fullness 10 minutes on face.
4. Strong bubbles hold the hairs erect for cutting.
5. Fine after-effects due to palm and olive oil content.

Just send coupon

Your present method may suit you well. But still there may be a better one. This test may mean much to you in comfort. Send the coupon before you forget.

THE PALMOLIVE COMPANY (Del. Corp.), CHICAGO, ILLINOIS

To add the final touch to shaving luxury, we have created Palmolive After Shaving Talc—especially for men. Doesn't show. Leaves the skin smooth and fresh, and gives that well-groomed look. Try the sample we are sending free with the tube of Shaving Cream. There are new delights here for every man who shaves. Please let us prove them to you. Clip the coupon now.

faction. "Young Ide would have spent a fortune gettin' back that stallion."

Lacy stared out into the gloom of the forest.

"Reckon you're hungry?" asked Burridge of the arrival.

"Had a bite at Hatt's to-day," returned Stagg. "But a chuck of deer meat an' a cup of coffee wouldn't go bad."

LACY turned from the darkness to the firelight. "Stagg, did you see any of the men Hatts?"

"Sure, they was all home, an' had company too. Strangers to me."

"Did you tell them about takin' Red back to the Ide ranch?"

"Sure. Thought it good idee. An' I rubbed it in too. Elam's no hoss thief. He said hoss-stealin' was a low-down bizness. But Cedar swore there was somethin' crooked about a gunman an' rustler who returned stolen property. Also, he swore he'd steal the red stallion again, jest to spite you."

"Ahuh. Wal, what did Cedar say when he heahed I'd shot his pard, Burt Stillwell?" inquired Jim, in dry, caustic tone.

"What?" queried Stagg, with a start.

"You heahed me, man."

"Sure. But it—I— An' you shot Burt?"

Lacy nodded coldly, eying the fire.

Stagg stiffened a little, and after a pause glanced from Burridge to Lacy, and then out into the forest. A silence ensued, broken only by the gamblers.

"Burt's dead, then—of course?" asked Stagg presently, with an effort.

Cash Burridge broke the strange spell of the moment.

"Burt's under the sod an' the leaves, waitin' the judgment day. An' it was a darn good job, Stagg."

"No arguin' agin thet," returned Stagg. "Wal, Lacy, fact is, Cedar Hatt hadn't heard, no more'n me. An' if you're curious I can sure tell you—Cedar will be hoppin' mad!"

"I told Jim that," said Burridge impatiently. "What's it amount to, anyhow? There'll be a Hatt less, pronto."

"Wal, pards, the population of this hyar Arizonie is sure deterioratin'," returned Stagg, with a guffaw.

One of the gamesters, disturbed by the loud laugh, looked up to say, "Bill, shet your loud mouth, an' you an' Cash come set in this game. Hubrigg an' Brawn ain't very much to stack up agin."

"I'm on," replied Stagg, eagerly. "Wait till I swaller some grub."

"Gamble your heads off," said Burridge. "We needn't break camp till tomorrow. But I'm turnin' in."

"Same for me," said Lacy, and strode out of the lighted circle. Presently he had to feel his way to the black tentlike spruce tree under which he had spread his tarpaulin and blankets. Sitting down he pulled off his boots. Then he sat motionless, peering back at the ruddy camp fire. Presently he removed his coat and made a pillow of it. Next he unbuckled his gun belt, took it off, and put the gun under the edge of his coat. After that, he gazed a long time out into the spectral forest, before he rolled in his blankets.

The ring of a cold ax on hard wood awakened Jim Lacy from his slumbers. Hubrigg was chopping wood for a camp fire.

"Nifty mawnin', Hub," said Jim, by way of greeting. "I'll pack some water."

Whenever such duty as this, or other opportunity offered, Jim always took advantage of it, seeking even a moment away from the rustlers with whom he had cast his lot. That time, however long, was a blessed relief. He need not then be perpetually on the *qui vive*, watching, listening, reading the minds of his companions. In those stolen moments or hours he reverted to his old character, Nevada, lover of the open, of desert and forest, of the life and color and mystery of nature.

Upon returning to the camp fire he arrived in time to hear Brawn exclaim: "What'n hail Columbia for do we want to ring the Hatts in on this deal?"

"Say, man, there's brains back of this deal," replied Burridge derisively.

"Meanin' yours, eh? Wal, all right; but I'm from Missourie."

They ceased the argument at the approach of Jim Lacy.

"Somebody rustle the hosses," called out Burridge.

AN HOUR later, the six men, with as many pack horses, started over the rim on the trail down into the brakes. It was a trail that even the most expert and daring rider would hesitate before attempting on horseback. Moreover, it was seldom used. Lacy decided it must be a rear outlet from the rendezvous of desperate men.

But, though very steep, it was not long. It led out into the head of a canyon where the stream gushed forth from under an amber-mossed cliff, and went singing down through a winding defile, surely the wildest and most beautiful that Jim Lacy's eyes had ever beheld.

"Cash, tell me," said Lacy, at an opportune time, when they rode abreast, "is Cedar Hatt the haid of this Pine Tree Outfit?"

"Lord, no!" ejaculated Burridge, in ridicule. Then, as an after-thought, he continued: "But, Jim, I don't *know* he isn't. I mean, I've sense enough to figure he couldn't be. There's a real man at the reins of that gang."

"You're square now? You honestly don't know?"

"So help me heaven!" returned Burridge, raising his gloved right hand. "If I knew I'd tell you—even though the man was my pard. But I don't know. I never met a man who did. Of course, no one is goin' to brag about that. The Pine Tree Outfit is only three years old. It's got a brand; but sure no one ever seen it on a steer or a calf. I never seen it on anythin'. I hear it's cut on aspen trees. Sheep herders will tell you that."

"Cedar Hatt might belong to it?" queried Lacy.

"Sure. But he'd be a bad hombre to trust, unless you had some hold on him. My idea of the Pine Tree Outfit is this: Some slick rustler from other parts has ridden in here, either with a few choice men, or picked them carefully after he got here; an' he had the money an' the brains to control a small outfit.

"It's no trick to steal cattle in this country, an' it's a heap-sight easier to sell them," continued Burridge. "But to do it on a big scale, an' not be found out—I call that brains."

When they rode around a high green corner Jim gave vent to an exclamation of utmost pleasure. The brake opened into an oval valley surrounded by gray-cliffed, green-thicketed walls, rising high. A level meadow, where horses and cows grazed in deep grass, ended in a low bench of land upon which huge isolated pines and spruces towered half way to the rim. Two log cabins stood picturesquely at the edge of this rise of ground. In the background, a corral and barn, with logs awry and roof caved in, showed half hidden in a blaze of golden aspens.

"This place, where the Hatts hang out," remarked Burridge, "is like a fox den, with two holes. The one we just came down, an' a pass below, where a couple of good shots could stave off all the cowboys in Arizona. Well, old sharp-eyed Elam sees us already. He's comin' out with a gun."

The riders in advance drove the pack horses up on the bench, and followed to dismount. Burridge arrived a little in advance of Jim. The old mountaineer Hatt stood shaggy-headed, with a smile on his craggy face.

"Welcome you air, both of you," said Hatt genially. "We keep open house fer our friends. Git down an' come in. Jest turn your hosses loose. Never yit had a hoss leave hyar."

While pack and saddle horses were led back toward the aspen grove Elam Hatt walked with Burridge, while Tobe and Henny, the two sons, followed. They were uncouth, unshaven louts, with bad teeth and pale eyes, and faces that indicated very low mentality. Lacy's advent manifestly did not cause them either apprehension or interest. Tobe was barefooted. Henny leaned on a short carbine, worn shiny from long service.

"Where's Cedar?" inquired Burridge casually.

"He's hyar abouts somewhere," replied Elam. "He seen you fust."

"Hope Cedar won't take exception to our comin'."

"No tellin' what Cedar'll take," replied Hatt, with a grin. "But I'm right glad to see you. I'm wantin' news. Make yourself to home. I'll go an' see about grub. . . . Tobe, whar's your sister?"

"I dunno," replied the son.

"Find her, you terbaccer-chewin' cub," returned Hatt, and strode away toward the cabins.

Tobe Hatt might never have heard his father, for all the attention he paid to the order. Instead, he gravitated toward Lacy.

"Got any smokin'?" he asked.

"Shore. Help yourself there in my saddlebag," replied Lacy.

The other young Hatt, Henny, now moved out of his tracks, and, dragging the rifle butt over the ground, he joined in a search of Lacy's saddlebag. Finding the tobacco, they availed themselves of Lacy's offer. They took it all.

"CASH, where you goin' to bunk?" asked Lacy, presently.

"Right here in the aspens. Good a place as any. Elam will offer the loft of the big cabin. But I'd just as lief be out."

"Wal, I'd a good deal rather," drawled Jim. "Cabin lofts are full of dirt, spiders, centipedes, an' smoke. I'll throw my outfit somewhere aboot."

"Make it within call, Jim," replied Burridge, not without significance.

Williams takes up lots of moisture

Williams holds moisture—Soaks the beard soft

Why this Saturated lather

leaves your face Glove-smooth

MEN used to think that a sharp razor was the whole story in shaving—that lather was purely incidental. Williams Shaving Cream has made them change their minds. For they find out that even the sharpest razors seem sharper with Williams saturated lather.

Williams lifts the waterproof oil-film from the beard bristles. Then its moisture soaks the beard soft for an easy razor stroke. That's one reason why Williams leaves the face as smooth as a glove.

And there's another reason: *Williams lubricates the skin for easy shaving.* This prevents the razor's edge from catching in little unevennesses of the skin—lessens the chances of little microscopic nicks and scratches that make ordinary shaves so uncomfortable. Williams gives you that "barber's massage" feeling. Two sizes, 35c and 50c.

Try this remarkable lather for a week FREE. Send us your name and address on the coupon below, or a postcard and we'll send you a trial tube of Williams Shaving Cream free.

Jim sat down, ostensibly to mend one of his stirrups, but as a matter of fact he did not care to pick out his bed site under the pale eyes of these degenerate Hatt boys. He could peer through the eyes of men to their minds. Either Tobe or Henny would commit murder for a sack of tobacco. Jim decided he would carry his bed to a secluded place in the brush, and change that place every night. With covert glances, he watched the Hatt boys, and also kept a lookout for Rose.

"Wal, fellers, what about goin' on with our little game?" inquired Hubrigg.

"Sure," replied Brawn.

"I should smile," added Stagg cheerfully.

Cash Burridge shook his head dubiously; but did not voice his opinion until the Hatt boys had ambled off out of hearing.

"Say, men, I don't want to be a kill-joy; but, honest, I question the sense of showin' all that money here."

"Why not?" asked Hubrigg.

"It might not be safe. We don't belong to this Hatt outfit. They could have this canyon 'most full of backwoodsmen in no time. There's only six of us."

"Wal, listen to him!" ejaculated Brawn. "You got it wrong, Cash. There's five of us, an' Jim Lacy!"

"I just don't think it's wise," added Burridge stubbornly, ignoring the sarcasm.

"We may have to hang 'round here for a week or more," spoke up Stagg. "What'll we do? If we can't gamble, we might as well not have any money."

"Jim, what do you say?" asked Burridge, in perplexity.

"Wal, seein' that money changes hands so often, I reckon nobody'd miss it if the Hatts did get it," chuckled Jim.

"Haw! Haw!" roared Cash, slapping his knee.

"I'll set in a few hands," said Jim, good-naturedly.

Whereupon, the rustlers, in high spirits, owing to being well-fed and flush with money, repaired to the shade of a pine in front of Elam's cabin, squatted around a blanket, and emptied their pockets of coins and bills. Jim joined them, choosing a seat from which he could watch the cabins, and approach of anyone.

The Hatt boys came to look on at the game, soon growing as absorbed as the players. Old Elam came presently, and likewise fell to the attraction of the game; but it seemed that it was the playing itself, rather than the sums of money lost and won, that held charm for him.

ELAM HATT'S cabin was one of the picturesque double-cabined structures under one roof, with wide porch space between. The porch ran along the front of both cabins, and one end was littered with saddles and packs. Deer and elk antlers on the walls supported rifles and bridles. The left-hand cabin was smaller than the other, evidently consisting of only one room. The window, without glass or shutter, opened toward Jim, who had been quick to see a face peer from the darkness and draw back again.

When he caught sight of it again, he knew at once that it belonged to Rose Hatt, and that she had espied him. She stood far back in the gloom of the cabin, her face only a vague oval, but with staring eyes like black holes.

BEYOND COMPARISON—*in number of features and in quality of features, the Chrysler "60" is acclaimed as outside of all comparison in the lighter six field.*

ATTEMPT to compare Chrysler "60" features—in number, in quality—with those of the ordinary six in its price field, and the advantage in favor of Chrysler will convince you at once that comparison is impossible.

Of course, the Chrysler "60" has finely balanced seven-bearing crankshaft, impulse neutralizer, oil-filter, air-cleaner, Chrysler four-wheel hydraulic brakes, full-pressure lubrication; manifold heat control and road levelizers front and rear—has had these and many other features ever since its introduction.

But the really distinctive advantages of the "60" are its incomparable Chrysler characteristics—inimitable performance, unfailing dependability and long life, superb beauty of design, coloring and appointment—features that are *unique and must remain unique* due to the Chrysler plan of Quality Standardization.

You are cordially invited—indeed, urged—to try out the Chrysler "60". You, too, will be then bound to rate it *beyond comparison*—utterly unapproachable by any other six of its type and price.

Chrysler "60" prices—Touring Car, $1075; Club Coupe, $1125; Coach, $1145; Roadster (*with Rumble Seat*) $1175; Sedan, $1245.

All prices f. o. b. Detroit, subject to current Federal excise tax.

All Chrysler cars are protected against theft under the Fedco System.

All Chrysler dealers are in position to extend the convenience of time payments. Ask about Chrysler's attractive plan.

Billions... of bubbles

Drench the base of your beard

THIS "small-bubble" lather is the result of hundreds of experiments by Colgate chemists. It is a lather developed to soften your beard with water. Water, science proves, is the only effective beard-softener. What's more, this "small-bubble" lather is designed to soften your beard at its base. And that's where your razor does its work.

Compare the two lather-pictures on this page. Notice the amazing smallness of the Colgate bubbles. See how compact they are. The smaller the bubbles, the more water they hold; the larger the bubbles, the more air.

ORDINARY LATHER

This lather-picture (greatly magnified) of ordinary shaving cream shows how large, air-filled bubbles fail to get down to the base of the beard; and how they hold air, instead of water, against the whiskers.

COLGATE LATHER

This lather-picture of Colgate's Rapid-Shave Cream shows how the tiny moisture-laden bubbles penetrate deep down to the bottom of every hair, holding water, not air, against the base of the beard and softening it right where the razor works.

How Colgate Lather Works: The moment Colgate lather forms on your beard, two things happen:

1. The soap in the lather breaks up and floats away the oil film that covers each hair.

2. With the oil film gone, millions of tiny, water-saturated bubbles bring and hold an abundance of water down to the base of the beard, right where the razor does its work.

Because your beard is properly softened at its base, your razor works easily and quickly. The keen blade glides smoothly through the toughest whiskers—not over them. Every hair is cut close and clean. And your face remains cool and comfortable throughout the day.

One week's better shaves—FREE

Once you try this unique "small-bubble" lather, we believe you will never go back to ordinary shaving methods. Prove this for yourself—at our expense. Just clip the coupon. We will send you a generous trial-size tube—free.

In Canada, Colgate & Co., Ltd. 72 St. Ambroise St., Montreal

COLGATE & CO.
Dept. 501-C, 581 Fifth Ave., New York
Please send me the FREE sample tube of Colgate's Rapid-Shave Cream for better shaving.

SOFTENS THE BEARD AT THE BASE

"Elam, do you know draw-poker?" asked Jim presently.

"Tolerable. I wisht I had stake enough to set in this hyar game. I'd bust somebody," replied old Hatt, to the amusement of the gamesters.

"Play a few hands for me," said Jim, rising. "Change my luck, maybe. I want a drink."

"Whisky?"

"No. Water. Where'll I get it?"

"Thar, inside the kitchen door at the end of the porch," replied Hatt, rising with alacrity to take Jim's place. "My girl jest fetched some fresh from the spring. Snow water, an' thar's none better."

As Jim neared the porch, Rose came out of the cabin where he had seen her, and crossed to enter the other. She wore buckskin. He caught the flash of brown, bare legs and feet. Jim went down the porch and entered the door mentioned by Hatt. As he expected, he encountered Rose. Despite excitement manifest in her face, he thought she looked clearer of eye and skin, somehow prettier.

"Howdy, Rose. You see I've come," he said.

"I saw you the first thing," she replied.

"I want a drink, please."

SHE filled a dipper from a pail and handed it to him. Facing her and standing in the door Jim drank thirstily. It was good water.

"Will it be all right if I talk to you?" asked Jim.

"Sure. 'Cept when Cedar's around."

"Where is he?"

"Reckon he's hidin' somewhere, watchin' you-all. So we can't talk now. . . . But oh, I've so much to tell you!"

"Yes? Tell me a little—quick," said Jim.

"Marvie's fetched his sister Hettie—to meet me," whispered the girl, fearfully, yet with eyes full of glad light. "Oh, she must be an angel. She says she will give me a home—if I can ever get away from here."

"Wal, now, that's fine!" flashed Jim, vibrating to this news. "*Three* friends now—Marvie, an' me, an' Hettie Ide. Lucky girl!"

"I can't thank God enough," she breathed from a full breast.

"Keep on thankin', an' fightin'," said Jim, with ring of voice and meaning smile. Then he set down the dipper on the bench and backed out of the door, eyes still intent on Rose. She was flushed of face now, eager, hopeful, yet still fearful.

"I will. They can't stop me now—unless they kill me," she answered resolutely, with a wonderful blaze in her eyes.

"Who're they, Rose?"

"Cedar, for one. I told you," she replied, haltingly. But there seemed to be a tremendous impelling power working on her, greater, Jim sensed, than could come through him just then.

"Tell me the other man."

"Oh, I daren't—I daren't," she faltered, losing courage.

"If you love Marvie—an' if *she* will stand by you—you can dare," he shot at her, relentlessly.

She showed then a struggle over fear that had outlived childish years.

"Rose, that other man is Clan Dillon?"

"*Yes—yes,*" she whispered, in unutter-

able relief, as if she had been spared betraying him. "Are—are you to be here long?"

"Days, maybe weeks."

"Keep watch," cried the girl, finding courage. "Cedar will drag me off in the woods—to meet Dillon. If he does—follow us, for God's sake!"

"I shore will, Rose. Don't lose your nerve."

"But be *careful.* Cedar's an Indian in the woods!"

Jim Lacy turned leisurely, and with glance on the ground, apparently idle and lax, he strolled back to the gamesters.

"How comes the luck, Elam?" he asked.

"Ha! He's got no chanct on earth, Jim," said Cash. "Better set back in before we break you."

Old Elam held his own, however, evidently to his immense gratification. Jim watched for a while, much amused, until his ever-questing glance fastened upon a newcomer to the scene.

A MAN had come out of the aspen thicket. He carried a rifle, which he held by the barrel over his shoulder. This was Cedar Hatt.

Upon nearer view, Cedar Hatt turned out to possess only the walk and the shape of the Hatt family. He was darker than any of them, with beardless face of clear brown tan, small glittering eyes set close, black as coal, and of a strange intensity, sharp nose and sharp chin, with a slit between for a mouth. He wore his hair long, and it curled dark from under an old slouch hat full of bullet holes. His garb was greasy buckskin, from head to toe. There was a knife in his belt, but no shells for the rifle.

Cedar Hatt stood across from the circle of gamblers, and dropping the muzzle of his rifle upon his moccasined foot he leaned on it, and gave his restless sloe-black eyes scope of all present. If the players saw him they gave no outward show of it. The game progressed, with luck shifting from one player to another, and manifestly what seemed a long, tedious, irritating waste of time to Jim was only a fleeting of precious moments to them.

Finally, Cedar Hatt, without ever having uttered a word, shouldered his rifle, and stalked away with the spring of a deer-hunter in his stride. He went up the canyon to disappear around the green bend.

Whereupon, Lacy strolled away himself, into the golden shade of the aspen thicket, and on through darker shade to the lichened base of the cliff. He flung himself down here and leaned against the wall. Above him the quivering aspen leaves fluttered with the marvelous, noiseless movement peculiar to them. All around in the brush the lizards rustled. Nature was alive and full of treasure for the watcher, the seeker. But Jim Lacy's eyes were focused inward; his ears were attuned to a beating within. He had come there into the obscurity and loneliness of the thicket to think, to plan, to plot, to work out a course he could inevitably follow.

But how useless that was! The slightest accident or incident might change the best of his plans. If he decided on a definite thing his mind would be set. His task demanded more than that; and it involved infinite patience and sacrifice,

Yes, many oils are cheap to *buy*. The question is: Are they cheap to use?

For a while, almost any oil will "seem all right." Carbon and engine noise develop slowly.

But if you think for a moment that any oil will do, consider this fact:

30¢ a quart is a fair retail price for genuine Mobiloil from barrel or pump. (Slightly higher in Southwestern, Mountain and Pacific Coast States.)

Make this CHART *your guide*

THE correct grades of Gargoyle Mobiloil for engine lubrication of prominent passenger cars are specified below.

The grades of Gargoyle Mobiloil, indicated below, are Mobiloil "E," Mobiloil Arctic ("Arc"), Mobiloil "A," Mobiloil "BB," and Mobiloil "B."

Follow winter recommendations when temperatures from 32° F (freezing) to 0° F (zero) prevail. Below zero use Gargoyle Mobiloil Arctic (except Ford Cars, use Gargoyle Mobiloil "E").

If your car is not listed here, see the complete Mobiloil Chart at your dealer's.

No automotive engine can long stand incorrect oil. Oil chosen by guess leads to excessive carbon and premature engine noise.

The correct Mobiloil for your car is specified on the Mobiloil Chart. 609 leading automotive manufacturers approve the recommendations in this Chart. You will find that Mobiloil is by far the most commonly used oil in the personal cars of automotive engineers.

If your car isn't listed in the Chart on this page, you will find it on the complete Chart displayed by Mobiloil dealers.

Because it makes teeth utterly

CLEAN

. . . most dentists urge its use . . . most Americans buy this dual-action dentifrice

WHY do most dentists urge the constant use of Colgate's Ribbon Dental Cream?

Because germs cannot lurk where teeth are clean. Utter cleanness is the first step toward beautiful, healthy teeth. Colgate's, through its remarkable dual action, gives to teeth a protecting, attractive cleanness!

Modern mouth hygiene demands a dentifrice with a dual action. Colgate's formula is based on this principle. As you brush, Colgate's expands into a plentiful, bubbling foam. First, this foam loosens imbedded food particles and polishes all tooth surfaces.

Then it thoroughly washes the entire mouth—teeth, gums, tongue—sweeping away all impurities. Thus the dual action of Colgate's brings unequalled cleanness; removes the causes of decay.

A normal healthy mouth needs no drug-filled dentifrice. "Just keep your teeth clean," says science, "and don't fear imaginary dental afflictions."

Visit your dentist at least twice yearly. Clean your teeth at least twice daily with Colgate's. Colgate's will keep them *clean*. Only your dentist can do more.

Colgate & Co.

incredible command of geniality and good-fellowship with these rustlers, sight and sense that must grasp every little clue which might lead to the success of his venture. All this, when his spirit revolted, and his nature demanded quick, hard, fierce action.

AFTER supper, which was served about sundown on the porch between the two cabins, Elam Hatt scraped his rude seat back and arose.

"You-all who want to gamble air welcome, but I reckon some of you will want to set in to a confab with me."

He went into his cabin, followed by Burridge and Lacy. The large room was dark, except where breaks in the chinks between the logs let in light. Hatt stirred the slumbering embers in the huge yellow stone fireplace and put on chips of wood.

"Reckon they'll want the lamps, an' we don't need none," said Elam.

The door opened to admit Cedar Hatt, who advanced with his sliding, silent step, to seat himself on a bench in the shadow beside the stone chimney.

"Burridge, if thar's a lead weight on yore chest shove it off," invited Elam, bending down to lift a fiery ember with which to light his pipe.

"Are you open to a big deal?" queried the rustler bluntly.

"Always open to anythin'. But I'm careful not to change the minds of ranchers about Elam Hatt," replied the backwoodsman, shrewdly.

"Which means they think you do some two-bit rustlin' of mavericks, like any cowboy; but you never tackle a real rustlin' job?"

"Reckon that's the size of it, Cash."

"An' that's exactly why I'm goin' to spring this deal on you. No one will ever lay it to you, an' everyone will lay it to the Pine Tree Outfit. Savvy? The time's just ripe. The trap's set. We can't do it half so well without you an' your sons. We don't know the country. Otherwise, you bet we wouldn't let you or anyone else in on it."

"Sounds good. I'm listenin'."

"Tom Day an' Franklidge have throwed a big herd of stock together. Some of it's workin' with Ben Ide's big herd, the last of his stock, in what the sheep herders call Silver Meadows. They're high, an' won't be comin' down before the fall round-up. That'll come anywhere along first of October. Now, while them cattle are high up we plan to drive them—*on up over the Rim*—an' down into the Basin, where we could sell a hundred times as many head, with never a question asked. I've already got the buyer. To do the job right an' quick we need more riders, an' particular some who know how to find fast travelin' through them bad canyons up to the Rim. That's all. I leave it to you to call the turn on that deal."

"How do you know Ide's stock air runnin' on Silver Meadows? Thet's Day's range."

"I know because I saw them, an' they used to be my cattle."

"You're calculatin' thet if Ide does rare, he'll lay it onto the Pine Tree Outfit?"

"Exactly. The deal is ready-made for us."

"How much stock thar now?"

"We can bunch three or four thousand

"Runs in the Family"

POOR old souls! They think that bent backs and knotted hands are inevitable at their age. If only they had known, they could have prevented the misery of what they call "rheumatism".

For centuries all sorts of pains and aches have been charged to rheumatism. A stiff shoulder was rheumatism. A crippled arm was rheumatism. A creaking knee was rheumatism.

But now authorities agree that the term "rheumatism" should be discarded and that "rheumatic diseases" should be separated into two main divisions. In the first and more important division is placed Acute Rheumatic Fever. In the second Chronic Arthritis.

"How's the rheumatiz today, Joe?"
"Pretty bad—but got to expect it—runs in the family."
"Mine, too. Father had it before me."

Acute Rheumatic Fever is an Infectious Disease

It is caused by a germ which can be passed from person to person as the germs of other diseases are transferred. Most attacks come between the ages of five and fifteen. From then on the likelihood gradually lessens.

The grave danger from acute rheumatic fever is that the germs may attack the heart, causing that most fearsome of all ailments—heart disease.

A noted physician reports that not less than 40% of the persons who suffer from rheumatic fever develop chronic heart disease. Of the cases of heart disease in childhood, eight out of ten are the result of rheumatic infection.

The germ of acute rheumatic fever probably enters the body through the mouth or nose and may pass through diseased tonsils, infected sinuses or teeth direct into the blood, and so to the heart.

Children often have rheumatic infection which passes unrecognized by the parents. St. Vitus' Dance is one indication. So-called "growing pains" are another—it does not hurt to grow. Frequent attacks of tonsilitis may be a source of rheumatic infection. Protect your children from this menace to life and health. Have their throats, noses and mouths examined twice a year so that any possible condition which threatens acute rheumatic fever may be corrected.

Chronic Arthritis—A Rheumatic Disease

While acute rheumatic fever is caused only by a germ, chronic arthritis, which means "inflammation of a joint", may come from one of many causes. An injury to a joint, faulty posture, improper diet, the poisons from infectious diseases, germs from diseased tonsils, teeth, gall bladder, appendix or intestines—these are some of the causes.

Unless effective measures are taken to check the disease, chronic arthritis may progress to a state in which the victim is totally crippled and painfully deformed. That is just what happened in days gone by when the disease was not understood.

At the first signs of arthritis—stiff neck, lumbago, stiffness or creaking of the joints—have an expert search for the source of the trouble. Avoid needless suffering.

Rheumatic fever is the greatest known menace to the health of the heart, and heart disease causes more deaths every year in the United States than any other disease.

In a study lasting more than a year and covering 571,000 workers of both sexes and all ages, the Metropolitan Life Insurance Company learned that of all the diseases causing loss of time from work "rheumatic diseases" head the list.

A survey conducted in England showed that among 91,000 working people of all ages and of both sexes, no less than one-sixth of the total "sick absences" during a year was due to "rheumatic diseases". And this was exclusive of loss of time due to heart disease developing from rheumatic fever that had occurred during the childhood or youth of these workers.

Send for our booklet "Rheumatic Diseases". It will be mailed free and may be the means of saving you and your family much unnecessary suffering.

HALEY FISKE, *President.*

International Correspondence Schools
Scranton, Pennsylvania

Gentlemen:

I have just been reading your letter of the twenty-fourth instant advising us that Mr. - - - - - - one of our employees, has completed your course in Certified Public Accounting and has received a diploma.

We appreciate your interest in this matter, for we are always glad to know when our employees show a sincere desire to forge ahead and use their spare-time to advance their knowledge.

Should an opportunity arise in the future for a promotion, we shall be pleased to take Mr. - - - - - into account.

Again thanking you for your kindness, we are very truly yours,

Alexander Walker
Chairman, Board of Directors

AW:E

Helping Employers to Pick the Right Men

THE letter reproduced above is just one of many similar letters received daily by the International Correspondence Schools.

These letters come in reply to letters sent to employers by the I. C. S., detailing the progress of members of their organizations who are studying at home in spare time.

The name of the student may or may not be familiar to the employer, but mentally, or in more definite form, he makes a memorandum to "keep that man in mind"—to encourage him—to give him, as opportunity offers, more responsibility and more money.

The very fact that a man cares enough about his future to study his work in spare time marks him as a man of ambition and steadfast purpose. He is the man who of his own volition is striving to make his services more valuable to his employer and to himself. He is, accordingly, a preferred man in every organization—the kind of man every executive is seeking to find.

More than 145,097 letters or Progress Reports were sent by the International Correspondence Schools to employers in 1926—a truly remarkable number when you consider that each one represented a definite achievement in training by some student.

Briefly, then, the International Correspondence Schools render a twofold service. They provide the individual student with special training to enable him to *deserve* promotion, and they keep his employer advised regarding his increasing qualifications for advancement in his work. This service is an important contribution to the efficiency of modern business.

head in half a day, an' land them over the Rim in less'n two days."

"An' you've got a buyer?"

"Waitin' an' willin'. He's drivin' ten thousand head to Maricopa. How easy to run in a few more thousand!"

"Looks too powerful easy to me," returned Hatt, as if sagging under an overpowering weight.

"Easy an' safe. An' listen, Elam. Twenty dollars a head! In gold! One yellow old double-eagle for every steer!"

ELAM HATT paced the rough-hewn logs that constituted the floor of his cabin. He seemed to find strength in their solidity. His legs were the first part of him to weaken. His collapse came suddenly, with a crash to the bench before the fire.

"Cedar, what d'ye say?" he asked.

"Burridge, swear them steers air in Silver Meadow," said Cedar Hatt, his moccasined feet coming down with padded thuds, as he leaped up and leaned out of the shadow.

"Sure, I swear. Three days ago. An' the grass an' water are fine. They'll work higher for several more days. . . . Ask Jim Lacy here. Reckon you'll not be intimatin' he's a liar."

"Talk up, Jim Lacy, if you're a rustler," called the younger Hatt.

"Wal, I was with Burridge. I saw the cattle," replied Lacy.

Cedar Hatt glided into the light of the fire, to lean over his father and strike out with a lean dark hand.

"Papa, with ten riders I can run them cattle over the Rim in one day," he declared. How grotesque and striking the epithet he gave his father! He seemed the epitome of lawlessness, of the hardened rustler, yet acknowledged the endearing claim of blood.

"Thet settles it then," returned Elam Hatt, throwing up his hands as one who had his price and it had been met.

"Hold on! Thar ain't no greaser herder in these brakes who'd lead thet drive. An' I'm the only white man who kin."

"Wal, what's makin' you yap so? It's settled, ain't it, 'cept the workin' out?"

"I want my pard, Burt Stillwell, in on this."

"Reckon I see no kick to thet. But it ain't my deal."

Cedar Hatt faced round with the swift, sinister action peculiar to him.

"Anythin' agin Stillwell?" he queried.

"Wal, not any more, Hatt," drawled Jim. "I shore had a little grudge; but it's gone. When I saw Burt last I shore had a friendly feelin' for him."

"Burridge, you had no use for the Stillwells. How're you standin' on this hyar deal I want?"

"Cedar, all I say is, sure—ring your pard Burt in—if you can get him," returned Burridge, with something unnatural in his tone. And it was noticeable that he stepped more into the shadow.

"Papa," hissed Cedar Hatt, and now that word inspired awe as well as mirth, "I'm double-crossin' the Pine Tree Outfit to make us all rich on this big job."

"Air you drunk, son?" asked Hatt, slowly rising to his feet. "How'n tarnation can you double-cross them—onless you mean beatin' them to the deal?"

"Me an' Burt *belong* to the Pine Tree Outfit!" (*To be continued*)

Lovelier when your smile shows the sparkling *MOUTH of YOUTH*-

We begin to lose it in our earliest years

The numbers show where the important little mouth glands are located, three on each side. Before our teens, soft foods may have their effect of slowing up the important mouth glands. Even in childhood we may lose the Mouth of Youth. Pebeco contains the special substance that renews the vigorous, healthy action of the mouth glands. Even where the toothbrush cannot reach, Pebeco cleanses and purifies.

You enjoy every thrilling moment so much more

How gaily confident you are when you know your teeth are shining white, when others think your smiles adorable!

"I like the sharp clean taste of Pebeco," is what pleased users say. "It makes me feel so sure my teeth are always at their loveliest."

THE fine white teeth, the sound hard gums of Youth are due to six little glands in your mouth.

For when these function properly they produce the fluids which Nature intended to neutralize food acids and prevent decay. On them depend the gleaming whiteness of your teeth and healthy, hard, pink gums.

But these tiny mouth glands slow up.

Our soft foods cause them to become less active. There is too little chewing in modern diet to keep them exercised and vigorous. From childhood on, the mouth glands are gradually ceasing to provide protective fluids. Then decay begins, gums soften.

The formula that corrects this was worked out in Pebeco. As you polish your teeth so beautifully with this tooth paste, you get the full pungent taste of Pebeco's principal ingredient. This slightly salty substance safely restores the normal vigor of the mouth glands. Brush your teeth daily with Pebeco. The keen after-feeling lasts!

"When I'm Big I Wisht I Could Be Like Him"

(*Continued from page 25*)

has been done in Chicago; no one man could. It has been done by many men making friends with boys, and Klees is at the hub of the wheel.

You meet him, a big, young-looking man, in his office at the Union League Club or among the boys at their club, and are immediately impressed by the fact that he never lowers his voice to whisper a secret. If he is talking about boys, and boys are near by, they hear what he has to say; if he is talking about Union League men, they hear all he has to say. Born in Baltimore fifty-two years ago, he was educated in the public schools and at the Johns Hopkins University. While in college he worked with boys at the Y. M. C. A., and succeeded in winning the admiration of a member of the county board. After his graduation, this man induced him to take a position at the county reformatory, to see what he could do with the boy inmates.

"I expected to last about thirty days at the job," Mr. Klees told me, "and actually spent fourteen years there!"

One of his first acts at the Reformatory was characteristic. He persuaded the authorities to restore self-respect to the confined boys by giving them back their names. Before, they had been known by number.

Years of observation and hard thinking in this position convinced Klees that most of these "bad" boys were not naturally worse than other boys. He saw that they had been led astray by bad surroundings, by evil companions, or by lack of proper standards. He reasoned that if his aim was to help boys become better men he must reach the boys before they became "bad." So he went to work in the slums and city streets where ignorance is worse than poverty. Since then, his life has been spent working with boys in Baltimore, New York, Philadelphia, and Chicago. When he came to Chicago he said to the Union League members, "Let's take the community that needs us most."

With the assistance of Juvenile Court authorities, the Eleventh Ward was chosen. Here, in an area of about a square mile, live, close-packed, some eighty thousand people belonging to twenty-two nationalities. Juvenile crime was then frequent in this district, living conditions were not good, and standards un-American.

What happened? Let Klees tell.

"WE STARTED in 1919," he said, "and early in 1920 opened our clubhouse, an old building which we remodeled. The boys of the Eleventh Ward had no idea who we were nor what we were up to, and naturally they were suspicious. No boy wants to be 'made good,' and to try any such tactics would have spelt failure. I began by walking about and stopping boys I met, telling them the clubhouse was for them. They were curious, but skeptical.

"'Are ya tryin' to kid us?' they'd inquire.

A musical invention that has *thrilled* the world

The Brunswick Panatrope . . . electricity harnessed to bring you the finest music the world has ever known . . .

Joint achievement of **Radio Corporation of America, General Electric Co., Westinghouse Electric & Mfg. Co., and The Brunswick-Balke-Collender Co.**

The Brunswick Panatrope, Model P-13. Cabinet in walnut with curly maple overlays. Operates entirely from the light socket.

JUST as the electric light, the telephone . . . electricity itself . . . were in their day amazing revelations, so now in music a new principle of reproduction . . . the electrical . . . brings results which change all one's conceptions of musical tone and beauty.

So vastly beyond anything the world has known is the music of the Panatrope that early demonstrations of this instrument in New York City, and at public gatherings the country over, met with an enthusiasm probably never accorded any other instrument.

The Brunswick Panatrope is an instrument for the home. Its music may be modulated to a whisper or amplified to fill an auditorium. Always in naturalness and beauty of tone the Panatrope achieves musical results that cannot be adequately described.

The only way to realize its superiority is to hear the Panatrope. Any Brunswick dealer will gladly demonstrate without obligation. The Panatrope plays all recorded music and may be used as the loud speaker for your present radio as well. Other models combine in one beautiful cabinet the Panatrope and Radiola Super-heterodyne.

Before buying anything in the field of music or radio, hear the Brunswick Panatrope and Panatrope with Radiola. Otherwise what you buy today, no matter how impressive it may seem, may fall obsolete tomorrow before this amazing invention.

Brunswick's "Light-Ray" electrical recording (musical photography) is a remarkable development whereby the entire musical scale is recorded *naturally*. Brunswick Records by this new method make your phonograph sound like a different instrument. And on the Brunswick Panatrope the results surpass belief. New records out every Thursday.

THE *Brunswick* PANATROPE

$50 for two hours' work with CORONA

Extra money is so easily earned if you have the knack of writing articles or stories. Here is a man who often earns $50 or more in a single evening, writing articles about his own business.

Many people have this talent for writing but have never done anything to develop it.

There's just one way to start. Get a Corona and our new book of instructions for writers. Then begin to write a little *every day*.

Why successful writers use Corona

Corona is compact, portable, easy to carry anywhere—and its light, easy touch makes writing almost effortless. You'll do more writing—and better writing—when you own your own Personal Writing Machine. Mail the coupon. It will not obligate you.

L C Smith & Corona Typewriters Inc
Sales offices in principal cities of the world
Established 1903

Also manufacturers of the L C Smith Typewriter, the ball-bearing office machine

You can own this latest model CORONA

It's the finest Corona ever built—made by the world's pioneer manufacturers of portable typewriters.

A sturdy, dependable writing machine with full width (10 inch) carriage, twelve yard, two color, self-reversing ribbon, variable line spacer, everything you expect in an office machine. Yet it is compact, portable, easy to carry with you wherever you go.

Standard Keyboard

Corona has the four row standard keyboard used in all offices and taught in business schools. If you are accustomed to using a large machine, you will be at home on Corona. If you have never used a typewriter before, you'll find that it is easy to learn with Corona.

Buy a Corona on easy terms

A small deposit puts Corona in your home and then you can pay on easy, monthly terms just like rent. Your Corona dealer will gladly accept a used typewriter, any standard make, as part payment. You need not wait another day. Just look up Corona in your phone book and the dealer will send you one for free examination.

This coupon will bring you our latest literature.

L C Smith & Corona Typewriters Inc
302 E. Washington St., Syracuse, N. Y.

Without obligation to me, please send me a free copy of The Writer's Guide—and complete information about Corona.

Do you own a typewriter?..... What make?.....

Would you like to know its trade-in value?.....

"One day the circus came to town. The boys might not understand a club, or a library, a gymnasium, or a swimming pool, but they understood a circus. I asked some of them if they wanted to go. Again they wanted to know if I was kidding them! I told the first few to spread the news, and get a hundred and fifty or so boys at the club the following day. More than two hundred showed up. The elevated railroad put three cars at my disposal; the circus people said bring two or three hundred, and we saw it all! When we went back that night I had about two hundred friends, and there was no more trouble getting boys to the clubhouse.

"The next important event occurred when some women of the Drama League learned what we were up to, and asked to be allowed to help. I told them to look us over and suggest what they would like to do. They said they wanted to put on a play.

"'Fine,' I said. 'What play?'

"'Shakespeare,' said they.

"'Why not a minstrel show?' I objected.

"It struck me as comical to try to get boys in that community to act Shakespeare. But Shakespeare they wanted, and Shakespeare it was. They chose the play 'As You Like It,' with boys playing the parts of both men and women. To show you how earnestly the boys took to it, I remember Harry Lazinski, one of those in the cast, coming to me and saying:

"'Mr. Klees, who's this guy Shakespeare?'

"'Harry,' I said, and I was trying a test on him, 'I don't want you to go around telling everybody; but if you keep it under your hat I'll tell you. Billy Shakespeare was a poor boy, like you and a lot of others. He was born in New York and shined shoes for a living under the Brooklyn Bridge; but he was ambitious and got it into his head he wanted to be an actor, so he studied and worked hard, and got on the stage and wrote a lot of plays. Maybe you can do as well as he did. Put that show over big, won't you?'

"'Sure will,' he answered.

"A few days later Harry was back.

"'Mr. Klees,' he said, 'you got that guy Shakespeare all wrong. He didn't live in New York or shine shoes under the Brooklyn Bridge. He—'

"You see? He had gone and looked it up for himself.

"THE way the boys put on that play was amazing. It was produced three times, the last time at a regular downtown theatre. After the Union League Club members saw it, there was no longer any question in their minds that these boys, poor as they were, had real stuff in them. Men who had been doubtful became interested, and the faith of those already at work was justified.

"Then the personal work began in earnest. That is what really counts. It's easy for men of wealth to sign a check, but there are so many things money won't buy for boys; so many intangible things, such as standards and ideals, that come only through the right sort of personal contacts.

"Our rule is to leave volunteer workers alone and allow them to find their own common meeting ground with the boys. If

"POSITIVE AGITATION"

—*the tremendous difference it makes!*

This makes the difference

It pays to know the difference between *The* HOOVER and a vacuum cleaner

TAKE the now famous "Agitator" completely out of the machine, and the new Hoover still would be a mighty good vacuum cleaner.

But that is all it would be. And that is far from being what the new Hoover is—an electric cleaner whose plus efficiency starts where that of the vacuum cleaner leaves off.

The new Hoover cleans *deeper* and *faster* and *easier* because it has what no other cleaner ever has had—the revolutionary cleaning principle, "Positive Agitation."

So important and indispensable is this principle to the thorough and effortless cleaning of rugs, the new Hoover surpasses even the standard-design Hoover in these particulars:

1. For the first time, it makes possible "Positive Agitation" of floor coverings.
2. By actual tests, in the ordinary cleaning time, it beats out and sweeps up from carpetings an average of 131% more dirt
3. It is an even greater rug-saver; the oftener a carpet is cleaned with a Hoover the longer that carpet will wear.
4. It is virtually service-proof, every part, including the new motor, requiring no oiling
5. It increases the efficiency of its remarkable dusting tools because of its 50% stronger suction
6. Its exclusive new bag is made of the most efficient dust-and-germ-filtering cloth yet devised.
7. Its form and finish are of startling beauty; and every new feature insures greater operating ease

You buy a cleaner to save time and energy—why not be sure you get the cleaner that saves them most?

Your Authorized Hoover Dealer will deliver you the new Hoover complete with dusting tools for only $6.25 down, with the balance in easy monthly payments.

"POSITIVE AGITATION"

as accomplished in the new Hoover is *beating*—the time-tested requirement of thorough rug-cleaning—reduced to an exact scientific process. Such beating, instead of being concentrated in a few violent strokes as with the carpet-beater or broom, is modified by The Hoover into a series of swiftly repeated air-cushioned taps. This is achieved by means of a totally new appliance—the exclusive and patented Hoover Agitator illustrated above. Suction lifts the rug from the floor and floats it on a cushion of air while the Agitator gently flutters out all the embedded grit as the strong suction draws all the dirt into the dust-tight bag

THE HOOVER COMPANY, NORTH CANTON, OHIO
The oldest and largest maker of electric cleaners · The Hoover is also made in Canada, at Hamilton, Ontario

The New HOOVER

It BEATS... as it Sweeps as it Cleans

they have the right stuff, the boys will respond quickly enough; but if they haven't the stuff, rules won't help them.

"We have a band. Not one of the boys who plays in it ever had an instrument in his hands before. Now we give concerts anywhere, and are not ashamed of them. The man who coaches the band is a volunteer, a professional man interested in band music solely as an avocation. I'm glad to know that some day some of the boys may get jobs in regular bands. But what matters more is the contact the boys have with such a leader.

"We have athletic teams, a library of two thousand volumes, classes in typewriting and shorthand, a glee club, a summer camp, a course in woodwork, groups led by older men for the discussion of current topics and special interests, a course in dramatic study and another in freehand drawing; in short, almost anything the boys need or want of an educational or recreational character. The common way for men to become friends with the boys is through the groups. A man may take a group of twenty or twenty-five boys, as many as he thinks he can handle, and he can do anything he wants with them. It's up to the man, and he is merely warned that if he doesn't interest the boys, soon he will come to an empty room.

"NONE of this is done in the name of charity. The club is the boys' own. They pay dues: the smallest boys fifty cents a year, older boys a dollar, and still older boys who are supporting themselves, three dollars. Of course the dues do not pay expenses, and the deficit is made up by the Union League Foundation for Boys' Clubs.

"We have no arbitrary age limits, but take boys as young as seven—as soon as they come on the streets. We keep them as long as they want to stay.

"Our banquets are important and unique. Members of the Union League Club come as specially invited guests of individual boys. I know of no other gatherings like them. The tables are crowded with substantial and prominent men of affairs, sandwiched between lads whose fathers may be day laborers unable to speak the English language. There is no herding of the men in one place and boys in another. Every man has a boy on either side of him. Often the men have nothing on the boys beside them for shrewdness. I remember one of the boys asked for a job. The man looked him over, but shook his head.

"'No, sonny,' he said, 'I'm afraid you wouldn't do.'

"'How do you know I won't do till you try me?' the boy shot back.

"'What can you do,' said the man later, 'but give such a boy a job?'

"He has already received two promotions.

"One of our problems is to persuade the parents to let the boys remain in school. Though not poverty-stricken, they want their boys' earnings, and short-sightedly forget how much more they could earn in a few years with a little more schooling. I have in mind one of our young fellows who was graduated with honors from high school. The other day I got for him a good job with a public service company, yet after his first year in high school his

SO FEW MEN CAN DECIDE!

Can you?

THIS happened only a few weeks ago.

A man who had been promoted to a new position, with much larger income, sat talking with a friend. "It's funny what little things influence our lives," he remarked. "Three years ago I was reading a magazine and clipped a coupon from an advertisement—something I almost never do. The coupon put me in touch with the Alexander Hamilton Institute, which laid out a definite course in business reading for me.

"The first time the president of our company ever indicated that he was conscious of my existence was about a month later when I ran across something in my reading that happened to be of very immediate interest to him. From that moment he began to look on me as something more than just a name on the payroll. You know what's happened since."

The other man sat quiet a moment. Then he rose and, walking over to the table, pulled out the drawer and produced a wrinkled bit of paper.

"I clipped one of those coupons once," he said, "but I didn't do anything more about it. Here it is" . . . he held it out . . . "more than four years old."

That little incident reveals one of the fundamental reasons why some men go forward and others do not. Up to a certain point all men are interested in their business future. They will read about success and talk about it; but at that point they divide sharply into two classes. One group merely talks; the other acts.

Think of the four years that have passed since that man clipped that coupon. In that time, Charles E. Murnan, who was a clerk in a retail store, became vice president of the great United Drug Company. He says: "I would recommend the Course to anybody, if he had to borrow the money to take it."

In that time, J. A. Zehntbauer, who was a wholesale dry goods salesman, became President of the Jantzen Knitting Mills of Portland, Oregon. He says: "50% of my success could be attributed to my contact with the Alexander Hamilton Institute."

And all this while the man who was interested, but lacked the power of decision, has gone along with petty salary increases, when he might have made a direct short cut to executive opportunity and increased earning power. Some day he will arrive, but he has sacrificed the joy of succeeding while he is still young.

This is not an advertisement in the ordinary sense. It is a business editorial. Two men will read it. One will say, "That is interesting." He may even go so far as to clip the coupon, but it will never be mailed. At the critical moment of decision he will be tried and found wanting.

The other man will say: "This thing involves no obligation or cost. The Course has helped more than 300,000 men to shorten their path to the top. I have a duty to myself and my family to investigate it." He will clip the coupon and *it will be mailed.*

You have decision. Will you let us lay before you a definite plan of business reading, worked out by men who have made an unusual business success? Give one evening to it; decide, alone in your own home, without haste or pressure.

Nothing succeeds like Health

Their ills banished, new life and energy achieved . . .
by one simple, fresh food

"DANGEROUSLY close to a breakdown" . . . "At thirty-five taking a purgative daily" . . . "Had to travel but was continually subject to nausea" . . .

Their troubles were discouraging. They grew continually worse! Then—easily, naturally—they conquered their ailments, found vigorous health again, new hope and greater ambition.

Fleischmann's Yeast is a fresh corrective food. It counteracts the poisons of putrefaction in the alimentary tract, and removes the dangers of constipation. It aids digestion, clears the skin. It tones up the whole system.

Eat three cakes of Fleischmann's Yeast regularly every day, one before each meal: on crackers, in fruit juice, milk or water—or just plain, in small pieces. *For constipation eat it in hot water (not scalding) before meals and at bedtime.* You can get Fleischmann's Yeast at all grocers. Buy two or three days' supply at a time. Keep in a cool dry place. Start eating Fleischmann's Yeast today.

Write for a free copy of the latest booklet on Yeast for Health. Health Research Dept. J-38, The Fleischmann Company, 701 Washington Street, New York.

Captain UGO V. D'ANNUNZIO
Pres. Isotta Fraschini Automobiles

"SOME THREE YEARS AGO, I assumed obligations of such a character as to put me both physically and mentally under a very serious and continued strain: that kind of work which makes it impossible to live according to sense. My entire organism went out of balance and I soon felt that I was dangerously close to a breakdown. A business friend advised me to try Fleischmann's Yeast and although I was rather skeptical about it, I followed his suggestion. Inside of a month the signs of distressing exhaustion began to disappear, and gradually normalcy of functions was re-established. Since then I have continued to use Fleischmann's Yeast at the rate of 2 to 3 cakes a day."
UGO V. D'ANNUNZIO, New York City

THIS FAMOUS FOOD tones up the entire system, aids digestion, clears skin, banishes constipation.

"DRANK CREEK WATER and fought mosquitoes until I came down with chills. Chilled 8 months and constipation troubles began. At 35 years old was taking a purgative daily. In 1920 told my boys that my stomach could last but a short time. Read article "Yeast as a Food and Medicine." Was impressed and began use of Yeast same day. Ate it freely. In three months cut down medicine dose. In less than 1 year health so good had quit medicine."
J. E. WRIGHT, Ft. Worth, Tex.

"I HAVE BEEN REQUIRED to travel extensively by ocean and train," writes Mme. de Paszthory, internationally known singer. "My stomach was of a very nervous disposition and I was continually subject to digestive disturbance and nausea. I tried eating Fleischmann's Yeast. I found that the Yeast was the only thing that would settle my stomach. And I soon realized that it also kept my system clean and my complexion clear."
HELOISE DE PASZTHORY, Pasadena, Calif.

FROM WOODLAND TO HOME
Pure Drinking Water

The Water Supply of a Metropolitan City

TO give you a steady supply of clean water our reservoirs are guarded with infinite care.

Pure water from woodland springs and rivulets flows sparkling into the storage basins and eventually to your home. Fir trees planted around the watershed retain moisture and help to regulate the supply. Constant vigilance keeps it clean.

When your drinking water runs from the faucet, is it *still* clean and sparkling, with a reminiscence of the woods?

It is, if your home is BRASS-piped.

Corrodible pipe takes the sparkle out of drinking water and discolors it.

Rustproof BRASS pipe gives a full clean flow of water all the time.

BRASS pipe for a $15,000 house costs about $75 more than the best corrodible pipe—and you never have to replace it.

COPPER & BRASS

METALS THAT NEVER RUST—COPPER, BRASS AND BRONZE

parents had insisted that he must quit and go to work. I sent an interpreter and convinced them their boy had a future, if allowed to get his schooling. They finally agreed. That boy, if I am not mistaken, is going far.

"Sometimes, on the other hand, we urge parents to take out the 'thirty-minute eggs' who only waste their time over textbooks, so that the lads can get out and show what they *can* do. Education, after all, isn't a matter of books alone. But the boy who wants an education and knows why he wants it, certainly should be helped. Many of these lads see things very clearly, once their contacts with men of affairs open their eyes. One of our boys is studying at the university to be a doctor, and I asked him about his plans.

"'I think this neighborhood needs a real good doctor,' he said; 'and I intend to come back here and practice.'

"ONE of the functions of the club is to find employment for boys, and we have placed hundreds of them in jobs that no one from this district could have touched otherwise.

"Let me tell you about Henry. He was as bright as a new dollar and needed a job badly, and it was up to me to get him one.

"I kept calling up on the telephone until I found a big insurance man willing to take a look at him. He turned us over to the man who did his hiring, and the latter demurred when he heard Henry's last name, Jurkowski.

"'Mr. Klees,' he said, 'we want American boys.'

"'I don't know how you define American,' I replied; 'but I suppose it doesn't include any boy who had the privilege of being born of Polish parents; but I want to tell you if there ever was an American boy, he's in front of you!'

"The employment man reluctantly made a place for Henry; and the boy needed no more than that. He has been there a year now, and has had two promotions and one raise in salary.

"My own door swings *both ways* for every boy in the club, and they know what that means. If a boy doesn't do what he should, it swings *out*. We don't expel a boy, but we insist on his doing the right thing. I do not place my faith in rules. Human nature is too delicate to deal with by hard-and-fast regulations. Every case stands by itself. There is only one rule in the entire club: Be a *gentleman*. Used properly, that goes far enough. I have talked with more than one big fellow with a cud of tobacco in his mouth and every other word an oath, and, looking him straight in the eye, I've said to him, 'You ought to be a gentleman!' It usually soaks in!

"It's impossible to win all the boys, of course. Some will never come to the club or alter their ways. But the street-corner bums are becoming increasingly scarce in our neighborhood.

"What gets the boys themselves is *a square deal*. Not long ago I told a young man I have watched, who hoped to go into boys' club work, that he would never get a club of his own, or, if he did, it would be a failure. He wanted to know why.

"'Because you play favorites,' I told him. 'You have pets.'

"A boy who stands off and sees what a pet gets, says to himself, '*I'm* not getting

Another Britannica Triumph!

Huge Britannica Presses Kept Running Continuously for Four Solid Months To Catch Up With Overwhelming Demand

New 13th Edition

ENCYCLOPAEDIA BRITANNICA

In the Compact **NEW FORM** 32 Volumes bound as 16

YOU CAN SAVE 40%

If You Act NOW!

THE amazing success of this *new* BRITANNICA is the biggest publishing sensation of the year. The tremendous demand for the new Britannica in the world-famous NEW FORM has taken the publishers completely by surprise.

More than ninety out of every hundred purchasers of this new 13th Edition have demanded the NEW FORM *in preference* to the de luxe Cambridge Issue.

Past Records Smashed

Already, more than 25,000 sets have been delivered in the NEW FORM, and orders are still pouring in.

To meet this overwhelming demand, it has been found necessary to utilize every one of the huge Britannica presses for NEW FORM production. Another special order for a million pounds of Britannica Opacity Paper has just been delivered, and within another week it will be possible to make prompt deliveries.

If you want *your* set of the new Britannica in the preferred NEW FORM, you have no time to lose. This announcement will bring another flood of orders, which will quickly exhaust the available supply.

How You Save 40%

By the use of the famous Britannica Opacity Paper, which is made to order in tremendous quantities, a considerable saving is effected.

By printing from the *same plates* as are used in the Cambridge Issue, thousands of dollars are saved, because this makes it unnecessary to reset the 33,000 pages of type.

And, finally, by binding the 32 volumes as 16 (2 vols. in 1 cover) the binding costs are reduced one-half.

Contents Are Identical

In the Cambridge Issue and the NEW FORM the contents are *identical.* Nothing is omitted—nothing altered. Here are the 28 vols. of the latest standard edition, 3 supplementary vols. and an enlarged index, making a total of 32 vols. All the 45,000 special articles are here—all the magnificent color pages—all the beauty of workmanship.

This is the *only* work of reference ever published that gives you *all* the worth-while knowledge in the world. No other book ever written has approached it in authority and completeness.

A Million Facts for Instant Use!

Here, in 33,000 pages, are 45,000 articles—over a million facts—written by more than 2,500 of the great world leaders in every branch of human activity. No matter how important *your* position may be, if you haven't the Britannica at hand to give you information you *must have* in a hurry, you are holding yourself back from the higher achievements of which you are capable.

This NEW BOOKLET FREE

Get all the facts about the *new* Britannica in the NEW FORM at a saving of 40%. You have no time to lose. This new Booklet, fresh from the press, will tell you all about this Amazing Bargain Offer. Send for it now—it's FREE. Just fill in and mail this Coupon TODAY. Drop it in your nearest mail box before the last collection tonight.

MAIL THIS COUPON TODAY

Canadian Branch at St. Catharines, Ont.

Yale No. 192 Rotary Bolt Deadlock

YALE MARKED IS YALE MADE

that!' When a man is not square, his influence with boys is gone. They ask fair play. Give them that, and it's almost enough, all by itself: plus some tact and common sense.

"Some results of the club are very definite. There has been a great decline in the rate of juvenile delinquency in the district. It used to be one of the worst areas in the city, and there was literally war between the boys and the police. The decrease in delinquency is not guesswork, but is based on figures of the Juvenile Court. Where one hundred delinquent boys used to be brought to the court from this district, there are now but seventeen; one year the district provided 1,456 juvenile court cases, the next year only 44.

"There used to be a breakage of lights by wanton boys amounting in the whole of Chicago to twenty thousand dollars a year. Four investigators from the City Hall found that for some reason—and *no other* explanation than the club could be given—there had been a great decrease in this breakage in our district.

WHEN the club was still an idea, two members of the Union League were discussing it, one expressing much interest.

"I wouldn't be surprised," he said, "if it would do some of us men as much good as the boys."

In this he was right. Every man I talked with who has shared in the work speaks in a different tone of voice when telling about the boys. Two rather young men, for example, perhaps a little fed up on society, volunteered to take a group of twenty-five. It was a challenge when they were told they could do anything they wanted with the boys, and that the lads would stay in the group just as long as they were amused or interested, and no longer. These two men made good. But to do it, many a day they sacrificed their luncheon time to a discussion of new ways to keep their boys interested. It gave them both a new zest and interest in living.

Another man tried a group, and failed. He is popular in his own circle, but could not get across to these boys; they would not stay for what he had to offer.

The wife of a Union League member has one of the largest groups. Among other things she likes to play the piano and have the boys sing; and they like to do it—for her. But she will not allow a boy to come to her meetings with dirty hands and face. The way those boys polish themselves up before they go into her room is testimony to her splendid influence. And often boys from other groups, as well as the men, drift into her room before the evening is over, until she has a hundred or so around the piano.

One of the men, describing a group meeting at the club when he was asked to talk, illustrated how the boys tackle some subjects.

"I'll talk to you," he said to them, "by making you talk. Let's see what we know about the new traction ordinance the city is considering. Joe, we'll start with you."

"I think it'll make fares higher," Joe asserted.

"Where did you get that idea?"

Joe named a morning paper.

Following that, the catechizing went around the room, each boy being compelled to tell what he knew or thought, and usually naming the source of his opinions.

Lively folk songs . . . a half hour of violin . . . an hour of story and verse . . . a talk of China and the East. A magic afternoon!

For hundreds of thousands of homes these Radiolas mean a new day of music

In the perfecting of the Radiola, RCA has achieved musical reproduction that is unchallenged!

Why are so many great musicians playing to radio audiences today, who would not broadcast a few years ago? Is it just the lure of a vaster audience? No—it is something more than that. It is because radio today can do justice to great music, and reproduce it truly.

In every angle of broadcasting and receiving, RCA engineers have contributed tremendous strides of progress. True musical reproduction over the radio is no longer a dream of the future. RCA Radiolas of today have outstripped all earlier methods of tone reproduction in clearness and *reality*, and have taught the world new principles of acoustics.

Hear any RCA Radiola . . . hear the Radiola 20—at $115—and you will realize that there is not a competitor, of any size or any price, that can surpass it in purity of tone. In hundreds of thousands of homes, the Radiola has taken a permanent place as a fine musical instrument.

Radiola 20, with Radiotrons, $115
RCA Loudspeaker 100 . . $35

In every point of performance Radiola 20 is a brilliant example of RCA engineering. In distance tuning, it has the reach of larger sets that have more tubes . . . to magnify the faint, far signals, you just turn up the special "amplification".

In selectivity; it is *twenty times* as sharp as the ordinary set.

And it is simple to operate. A single control brings in near stations one after another—and small verniers give equal accuracy on distance tuning.

There are new principles in this RCA Radiola—but they are tested and perfected . . . not experiments. And when you have tried out and proved all its claims of performance, you will come back always to the one greatest enjoyment—listening to fine music, reproduced with clear, vivid reality!

STRIPES

They add distinction and new beauty to the plain-wall interior

In many a modern home the one-tone finish gives a background of simplicity and beauty. But to that finish is often added one touch—*Striping*. And that one touch supplies a decorative note which makes the room distinctly different from the usual one-tone finish without the striping lines.

OBTAINING the most effective results with stripes depends upon the choice of color for them and the entire wall. If you use paint made of Dutch Boy white-lead and Dutch Boy flatting oil, your color selection need be limited only by your desires.

There is practically no end to the number of shades and tints you can obtain with this *all-lead, all-color* paint mixed and tinted for the job. That is why this combination of Dutch Boy white-lead and Dutch Boy flatting oil is used so frequently in producing striping and many other beautiful and distinctive wall finishes.

Let us send you a booklet on decorating the home which shows some of these unusual finishes and gives valuable information regarding the use and selection of color in obtaining them.

With the booklet you will receive a decorator's data form from our Department of Decoration. Use this if you want help in selecting a color treatment for one room or your entire house. Specialists in this department have already aided thousands of home-owners. Just send your request to our nearest branch asking for "Booklet A."

STRIPING consists of a narrow banding line (or lines) applied directly to the side wall. It outlines all window frames, door frames and other interior trim and parallels the wood trim and the ceiling line, the distance away depending on the width of the stripe.

Choice of color for the striping is important. A color very close to that of the wall color will result in a subduing effect. On the other hand, an intensely contrasting color will add snap and brilliance.

NATIONAL LEAD COMPANY

New York, 111 Broadway — Boston, 800 Albany St.
Buffalo, 116 Oak St. — Chicago, 900 West 18th St.
Cincinnati, 659 Freeman Ave. — Cleveland, 820 W. Superior Ave.
St. Louis, 722 Chestnut St. — San Francisco, 485 California St.
Pittsburgh, National Lead & Oil Co. of Pa., 316 Fourth Ave.

THE Dutch Boy is the trademark of pure white-lead, which makes an all-lead paint. This paint prevents deterioration of property, protecting your home completely against the attacks of wind, rain and storm. It is suitable for application to practically any paintable surface, whether outside or inside your home.

DUTCH BOY WHITE ~ LEAD

for CLEANLINESS *for* BEAUTY *for* DURABILITY

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

And as the process continued, it became increasingly evident that nearly all the boys had one-sided, half-baked views on a subject clearly of interest to them. The leader gave some a tongue-lashing for lack of interest, and asked others why they did not read up on both sides. When he returned to his office, he sent them an authentic draft of the proposed ordinance.

"I was surprised to find," this man said, "when I went back next week, that *they had read it.* I wouldn't have waded through it all myself: wouldn't have taken the time. But they did, and when we met they debated it hot and heavy."

"THERE is no one way," Mr. Klees commented, "to get the boys. But whatever is done, it must interest them. They don't respond to pink teas and prayer meetings. Not that both of these aren't all right in their places, but they don't happen to interest these boys."

One sedate and dignified Union League member seldom unbends among his associates. But when he is with his group of boys he throws his dignity to the winds. He loves baseball. Recently, at a picnic at the boys' summer camp which was attended by many Union League members, this man was captain of one baseball team, while a boy led the other. Our dignified friend not only played good ball but also kept the players and fans in an uproar of merriment by walking on his hands, standing on his head, and cutting up all kinds of didoes. It is not on record which side won, and it doesn't matter; but it does matter that one of the boys said to Mr. Klees afterward:

"We like *him.* He makes fun for us!"

"Sometimes I dream," Mr. Klees continued, "and see clubs like this established with the coöperation of men of wealth and position in every city. Judge Arnold of our Juvenile Court says if we had fifty such clubs in Chicago it would halve juvenile delinquency. The need is terribly great."

"Will those clubs of which you speak be successful," I asked, "without a man named Klees?"

"I am the least part of it," he flashed back. "The contacts the boys have with our Union League members are all-important. Any number of men can work with boys and supervise such clubs. And more and more men are being trained for the work. But over and above what the trained boy club worker can do, privileged men must give time as well as money to under-privileged boys. It costs several hundred dollars a year to keep a boy or man in a penitentiary or jail or reformatory; it costs us about twelve and a half dollars a year to lead one of these boys toward good citizenship and keep him out of such institutions.

"Therefore, the success of such work as this doesn't rest with one man, but with many men. Nobody ever lost by giving the best of himself to others. And no boy ever lived but was better for having a worthy hero, somebody he wants to resemble when he grows up. That is the great thing the club provides. Our boys, through the warm friendships and contacts made here, and by worthy example, are going to have a better chance to live up to their best selves."

✣ ✣ ✣ ✣ ✣

Try 10 cigars *free!*

Send no money - just mail the coupon

NO matter what you smoke now, no matter whether you have ever ordered cigars by mail—now is your chance to try ***absolutely free*** a box of full-flavored, cool, even-burning cigars—the kind that more and more smokers every day say they've "hunted years for."

This is "my treat"

Sign and mail the coupon now. I'll personally see that you get a box of freshly made, full-flavored cigars, size and shape as in the illustration, postage prepaid.

My famous Panatela, the cigar illustrated, is a full, five-inch cigar. The genuine Cuban-grown, clear Havana filler gives it richness and rare flavor. The fine Sumatra leaf wrapper assures even burning and long white ash. This cigar is just heavy enough to satisfy, yet light enough to please smokers accustomed to cigarettes. Strictly hand-made by skilled adults in clean, airy surroundings.

You save jobber and dealer profits

For twenty-four years I have been selling cigars by the box, direct and fresh, at a price that represents only one cost of handling and one profit. Customers tell me that I save them upwards of 5 cents on each cigar.

My selling policy is simple. I make the best cigars I know how, put a box in a customer's hands, ask him to smoke ten. If he likes them, he pays. If he doesn't like them, he returns the remainder of the box at my expense. The trial costs him nothing.

Why I lose money on the first box

I don't expect to make a penny on the first box of cigars sent to a new customer. In fact, I lose money—and am willing to.

Suppose, for instance, you and 499 other men order a box of cigars from this advertisement. Dividing 500 into $3,400.00 (the cost of this advertisement) gives $6.80. In other words, it costs me $6.80 to induce you to try a box of 50 cigars. So I *must* offer an extraordinary cigar; it *must* be better than you expect. The flavor, aroma, cool, even-burning qualities *must* delight you. Otherwise you would not order again. And I would lose more and more money on every advertisement.

Snap up this offer quick!

Let me send you a box of 50 cigars at once. If, after you smoke ten, the box doesn't seem worth $3.75, return the forty unsmoked cigars within ten days—no explanation necessary, no questions asked. You will not be obligated in any way. In ordering please use your business letterhead or the coupon, filling in the line marked "Reference." Or, if you don't wish to bother giving a reference, just drop me a postcard and you can pay the postman $3.75 when the cigars are delivered. I'll pay the postage.

Order today—enjoy the cigars right away

As I said before, you take no risk. The cigars won't cost you a penny if you don't like them. Now is your chance to try a wonderful cigar free. Mail the coupon to me.

NELSON B. SHIVERS, Pres.

Actual Size and Shape

This coupon entitles you to a FREE TRIAL of my cigars.

HERBERT D. SHIVERS, Inc.
29A Bank Street, Philadelphia, Pa.

Please send me a box of 50 Panatela cigars. If, after smoking 10, I decide the box is worth $3.75, I agree to send you that amount. If I decide it isn't worth that amount, I agree to return the 40 unsmoked cigars within ten days with no obligation.

SHAVING

DELIGHTFUL

Here is a new treat for you. As bracing as the wind—as exhilarating as a shower bath.

Listerine after shaving. Simply douse on the face full strength.

Immediately it sets you up. Your whole face feels cool, soothed, yet invigorated. There is an amazing sense of exhilaration you'll like.

If the razor scrapes, Listerine stops the smarting. If the face burns, Listerine cools it. And you are left with a nice feeling of safety—for Listerine contains antiseptic ingredients that lessen the danger of infection.

Just try Listerine this way the next time you shave. We'll wager you will be as delighted as those happy ones who have written us letters about it. Lambert Pharmacal Company, St. Louis, U.S.A.

LISTE

THEY STICK TO IT!
The way we get new users for Listerine Tooth Paste is to get people to try it just once. After that they rarely switch.
LARGE TUBE—25 CENTS

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

and as an

ASTRINGENT

INEXPENSIVE

Here's good news for any woman who has rebelled at paying the remarkable prices usually charged for astringents.

Listerine is a natural astringent, neither too harsh nor too weak. One that is safe for all types of skin, yet ridiculously low in cost.

After removing the cream you merely douse it on the face full strength. Dilute if you prefer.

You can feel it firmly closing the pores. You can feel it draw up lazy, sagging muscles. Your entire face is stimulated. You look—and feel—younger.

So many women have told us how delighted they are with Listerine used this way that we want you to know about it. Lambert Pharmacal Company, St. Louis, U. S. A.

MEN!

Here's 100% Shaving Joy *at Last!*

Amazing New Way To Shave

-Without Buying Blades

Remarkable New Invention Makes Old Razor Blades Keener Than Brand New and Brings as High as 365-600 Slick Shaves from the Same Blade! See Generous Introductory Offer Below!

THINK of it! 365 keen, cool shaves a year from the same blade. That's what KRISS-KROSS is doing for American shavers everywhere—

This amazing invention marks a radical advance in shaving comfort and economy. It is more than a stropper. Rather it is a blade rejuvenator. Makes hundreds of keen, quick shaves blossom where only one grew before.

KRISS-KROSS strops your blade (any make) on the diagonal just like a master barber. Pressure decreases automatically. Nickel jig flies up to notify you when your blade is ready, with the *keenest cutting edge that steel can take!*

Special Free Offer

To introduce KRISS-KROSS, I am giving Free a new kind of razor. Possesses remarkable features. Instantly adjustable to any shaving position. A flip of the finger makes it (1) T-shape, (2) straight (old style), (3) or diagonal (new way.) Gives a *sliding* instead of *pulling* stroke. Simply zips right through the toughest crop of whiskers and leaves your face satin-smooth and cool. Made of rustless metal. Comes with 5 special-process blades and is entirely unlike anything you ever saw before!

New Kind of Razor FREE

Absolutely unique. Handle adjusts to 3 positions. Novel feature reduces beard resistance 45%. All one connected piece. Nothing to assemble or screw up. Act at once and you can get one FREE with KRISS-KROSS super-stropper.

Write for Details at Once!

This astonishing offer is limited. Send the coupon for information on amazing KRISS-KROSS inventions today. They are sold only through authorized representatives (or direct from the factory). Clip the coupon today for full details. No obligation.

AGENTS: Make Big Money

Many are making big money as KRISS-KROSS representatives. $75-$200 a week. Spare time workers cleaning up Big. Gift razor is marvelous business-booster. We have a unique sales-plan that brings unusually sizable profits. J. C. Kellogg made over $200 in seven days. And H. King made $66 profit in one 8-hr. day!

Are You Overworking Your Conscience?

(*Continued from page 49*)

not refer to such voluntary celibacy. That's a matter of personal preference. I have in mind those instances where sons or daughters have deliberately thwarted their instincts, and spoiled their own lives by devoting themselves exclusively and wholly to the care of their parents. That, I believe, is both wrong and unnatural, and results in a tragedy in later life.

This hyper-conscientiousness is found in other family relations also. I have in mind two sisters. They are trying to live together in their home; but, as time goes by, their personalities are beginning to clash. They are so fearful of hurting each other's feelings that they keep themselves in hot water all the time, trying to explain their actions one to the other. If they would go right ahead and live their individual lives, and get over this squeamishness about hurting each other's feelings, it would be much better. But they are so conscientious about not offending that they both live under a horrible nervous strain.

A great light will shine forth some day when it is recognized that for people in the same family to try to live together when they grow up is going against Nature. It is Mother Nature's plan to scatter families.

And all that I have said about hyper-conscientiousness in the family applies to husbands and wives in their daily efforts to get along together. Occasionally, a wife becomes over-conscientious about her home, to the exclusion of the needs of her husband and children. The house receives attention out of all proportion to its inmates.

I want, too, in this article to warn parents against worrying over their failure wholly to eradicate inherited traits in their children. Remember that children inherit not from their parents, but rather *through* their parents, and that when you have done your duty as parents to overcome defective heredity in your children, you should cease to worry about it. Let them go out into the game of life and gain the experience that will teach them to correct these inherent weaknesses. Too many parents try to live their children's lives for them. And what is the result? The children lack moral strength and individuality, becoming pale editions of their parents.

WHILE thinking over this article, I remembered the case of an overscrupulous fellow I met many years ago. Until he was about fourteen years of age he appeared to be an average, normal boy. Then a tendency to over-conscientiousness began to manifest itself during adolescence.

He became so over-conscientious in his high-school work that he would study until two o'clock in the morning so as to be absolutely perfect in his lessons. He would also apply himself to the athletic activities of the school, goaded on by the same stern sense of duty. By the time high school was over, he was pretty well worn out.

Starting in college, he broke down after the first year, because he took everything, including himself, too seriously. After collapsing at college, his parents sent him West. Here he met a young woman who fell in love with him. But his conscience wouldn't let him fall in love with her, because of his ill health. Then he worried for fear the girl would break down or go crazy through her love for him. The result was he got so nervous that for months he was almost unmanageable.

Of course they had to bring him home, and for more than two years he moped and worried over what the girl thought of him and his conduct.

FINALLY, I ran across this lad, and after two years of careful planning and hard work, we succeeded in getting his mind directed to other things. He was getting along well until he happened in on some revival meetings. It required his attendance at only two or three of these meetings, with their strong emotional appeal, to throw him off his balance again. He looked back over his life, and decided that all his sufferings and sorrows were due to the fact that he never really had been converted.

He gave up his position, and spent weeks trying to get right with God, talking of his sins and confessing them.

This went on for six months. Fortunately, we were then able to relieve the nervous strain by getting him away for the summer to a boys' camp, where he served as physical instructor. He came back fairly well, and secured a new position. Within a few weeks his conscience got to work again, and he began criticizing the conduct of his firm's affairs, and worrying about it. Well, to make a long story short, from the time he was twenty-five years of age until he was forty his conscience led him to seek twenty-five different jobs!

And now what has happened? As he neared forty, he veered 'round the other way, and decided he had been foolish about this matter of conscience. Life, he felt, was meant to be lived and enjoyed. But instead of following out this philosophy in a sane and sensible manner, he cut loose, and went in for all the amusements and questionable entertainments that he formerly had shunned as a conscientious duty.

Naturally, he failed to find the satisfaction he was looking for, and so he reverted to one of his conscientious spells of depression. And this time he got into real trouble. Realizing that he had deliberately gone into sin, he thought that he had committed the unpardonable sin. It took another year of effort on the part of friends, ministers, and doctors to try and get this fellow straightened out; and any minute his hair-trigger conscience may get him into hot water again!

Fortunately, very few of us inherit such a tremendous tendency to overscrupulousness. In fact, most of us who are born with this tendency have it to such a mild degree that we can overcome it without much difficulty.

JACKSONVILLE
MIAMI
TAMPA
SANFORD
WEST PALM BEACH
DAYTONA BEACH
LAKELAND

LaSalle Extension University,
Chicago, Illinois.

Gentlemen:

When I enrolled for Higher Accountancy in 1919, I was a clerk with a clerk's wage.

Now I am a member of a firm having offices in nine cities. Our staff includes fifteen C.P.A.'s and more than thirty other accountants. This rapid progress in six short years is largely due to my LaSalle training.

Our firm handles the city work in Jacksonville, Tampa, Miami, Daytona, and numerous other Florida cities, and I have personally prepared the only two state budgets that have been presented to the legislature.

Several of our staff are LaSalle members and all of our men know of our warm appreciation of LaSalle accountancy training. I only wish that every man could realize the unusual opportunity offered by this training for substantial business progress.

Yours very truly,

Rob Pentland Jr.

THE desk in the private office of Robert Pentland, Jr.—member of the Florida State Board of C. P. A. Examiners and partner in the largest firm of Certified Public Accountants in the State of Florida—is about the same size as the desk he had when he was a clerk, in 1919. And there's no great difference in *looks*—

But his income today is more than ten times as large. His firm has offices in nine cities, and employs fifteen C. P. A.'s and thirty other accountants. And he is not yet thirty!

How did he boost his earnings so tremendously—in just a few short years?

He employed three aids: First, initiative—the courage to make a start. Second, energy—the willingness to work. Third, LaSalle adult business training—the short cut to high-salaried positions.

These Free Books Show How

Mr. Pentland's first step was to send to LaSalle for information regarding home-study business training—to help him plan *intelligently.*

The coupon brought him "Ten Years' Promotion in One," the story of how one man, after many wanderings, found the path to responsibility and power. It brought him also a 64-page book, "Accountancy, the Profession that Pays," wherein he learned how he could enter a highly profitable profession, how he could step ahead to some of the most attractive and remunerative places in the entire range of business.

At the right is just such a coupon as Mr. Pentland signed. Ahead of you are opportunities as great—even greater. If, one year from today, you would look back on a twelve months' record of *achievement*—fill in, clip and mail the coupon NOW.

Find Yourself Thru LaSalle!

LA SALLE EXTENSION UNIVERSITY, Dept. 333-HR CHICAGO

I shall be glad to have your 64-page booklet about the business field I have checked below. Also a copy of "Ten Years' Promotion in One," all without obligation.

So much to do everyday everyday!

Why our hurried, nervous lives, our pleasures and our work, induce Auto-Intoxication, the self-poisoning that lowers vitality and keeps us miserable and depressed.

* * *

In these quick-step times thousands of American women are on the go from morning until night. Somehow they manage to run a household—to bring up children and to rush to parties and to dinners. They are active in society and in clubs. They work hard and they play hard.

But under the pressing demands of this twentieth century life—too many of us—men and women alike—neglect to take care of our physical selves. We are irregular in our habits—we exercise only in spurts—most of us eat more than we should.

* * *

And so, headaches, indigestion, and that "tired feeling" are common—and all too often the food we eat remains within us for longer than a day, fermenting and setting up a form of self-poisoning popularly called Auto-Intoxication. This self-poisoning is at the root of most of our modern ills.

In keeping clear of Auto-Intoxication and its bad effects, the first step is to correct the stoppage and to sweep away the enervating poisons of waste. Sal Hepatica, an effervescent saline combination is the approved way to do this quickly, safely and thoroughly. You may take Sal Hepatica on arising, or if you prefer, half an hour before any meal.

* * *

Send for the new booklet on Auto-Intoxication which tells you how to keep feeling physically fit.

For booklet please address

BRISTOL-MYERS CO.

Generally speaking, it would do us all good to take ourselves less seriously. Let us master the art of living with ourselves as we are and the world as it is. By all means, accord conscience its proper place, but at the same time clearly recognize that human reason and trained judgment have *their* part to play in restricting its sphere of action.

I have a patient at the present time who is nearly insane as the result of religious worry. For three and one-half years he has worried about having left one church and joined another. Mind you, the same denomination! One church was a little too active and expected too much of him, and he shrank from participating in so many religious activities. Finally, he left and joined the other church. He now believes he committed a grave sin, and thinks he should go back and join the former church. Even if we allowed this in his present mental state, he would only worry more.

It will probably take six months or a year to get this man clearsighted enough to recognize that there are other duties besides religious ones in the world. I shall have to show him that it's a man's duty to provide for his family and accept his share of the responsibilities of life. While he is sick, his business partners have the whole responsibility of the concern on their hands—and that's hardly fair to them.

Through over-anxiety for his flock, and over-conscientiousness in his parish duties, a ministerial patient of mine has experienced a nervous collapse. He is in the throes of nervous prostration; and now this man, who has helped many distracted souls to find peace, is obsessed with the fear that he has committed the unpardonable sin.

I am having to use on him all of the arguments and reasons that he probably used on those he labored with in years gone by; and I am having the same trouble to get him to see reason as he doubtless had with his parishioners. However, he admitted a few days ago that it was probably true that anyone who had committed the unpardonable sin, whatever it is, would be the last to worry about having committed it. For the time being, therefore, he has accepted the idea that he has not committed such a great offense, and thus is giving nature a chance to heal his distressed soul.

AND how many times are we confronted with those over-conscientious souls who, because they have had a passing thought in their minds to commit some crime or to indulge in some moral dereliction, began brooding over their "moral" downfall. The fact that they resisted temptation, and came out victorious in the struggle between right and wrong, means nothing to them. Their overworked consciences make them feel that the thought is the equivalent of the deed. It takes only a few weeks of unnecessary self-condemnation of this kind to place them in the doctor's hands.

I am particularly eager that young men and women, or those of middle life, should not allow some minor sex or social mistake to ruin the rest of their lives. I am not saying this in order to lessen our self-respect and conscientious devotion to the seventh and to other commandments; but as a physician I am constantly meeting individuals whose pathetic stories illustrate how easy it is to commit some little indiscretion in early life, and then to magnify the moral consequences of this youthful indiscretion so that its gloomy shadow darkens the whole future.

I think the time has come when the medical profession ought to deliver people from wrong notions and exaggerated ideas along this line. We can have high ideals and steer clear of genuine moral turpitude without having to go so far afield as to make false moral issues out of youthful indiscretions, many of which are committed through ignorance or innocence. I believe such people should be set free from the fear that is ruining their lives, destroying their courage, and even preventing their getting married because of a feeling of unworthiness. In the final analysis they may be guilty of nothing more than of having committed some indiscreet but casual act. By casual I mean an act that does not necessarily deserve to have lifelong effects; one that involves no innate depravity.

I HAVE on my hands at the present time a mighty interesting case. I should call this patient the professional reformer type. He has worked so hard and so continuously, endeavoring to make the world over, and, incidentally, trying to make everybody do things just as he does them, that he has gone all to pieces.

Personally, I subscribe to the theory that it is the job of every human being to try to make the world a better place in which to live; but in doing so we should preserve a sense of values and proportions. This man I speak about had lost his, and could see no hope for the future in anyone's ideas but his own. I know that this is ticklish ground I am treading on, for we all have our pet hobbies; and I am not meaning to quarrel with a single reader about this matter. But why should some well-meaning folks suffer a nervous collapse stewing and worrying over their methods of reforming the world, when it is more than likely that other people are doing the same work in a way that is just as good, and perhaps even better? At least the matter is worth thinking over.

I do not advocate a slackening of conscience. What I advocate is the education of conscience in accordance with the light of the age. We should weave our own experience and common sense into our conscience, and check up its operation by the average of our own circle of acquaintances, and by our own race and nation.

Moreover, we must recognize that we may refrain from doing something to-day that, through more light and information, we will gladly do—with a clear conscience—to-morrow. Likewise, we may be doing things to-day with a clear conscience that, as a result of more experience and advance in education, we may cease to do to-morrow, because conscience condemns it. Conscience should vary as life varies. It is not infallible, nor is it a fixed or unalterable law on which our lives should be rigidly planned, but a power of the human intellect amenable to reason and subject to education and training.

The Ten Greatest Thinkers

(*Continued from page 9*)

let him stand outside our circle, consoled with his high place in the literature of the world. And as to Seneca and Epictetus and Aurelius, they, too, were echoes of the Greeks, adapters of Zeno's apathy to a dying Rome. The old civilization was disappearing as they wrote; the strength had gone from the sinews of its people; freemen were everywhere replaced with slaves, and the proud free cities of the past were humbled with vassalage and tribute. The master class divided itself into wastrel Epicureans, or Spartan Stoics too militantly stern to indulge in the delights of philosophy. Suddenly the ancient edifice collapsed, and European civilization lay in ruins.

It began again when the Church healed the strife of factions with the mystic authority of the Word, and brought men back from the battlefields to a settled life. The emperors passed, the popes remained; the legions marched no longer, but the monks and missionaries of the rising faith created quietly a new order in which thought could grow once more. How long and dreary was that second adolescence of the conscious European mind! Even to-day we are so precariously established in enlightenment that we can yet feel, as if in memory, the fearful groping of those many years.

AND then trade grew, towns graduated into cities, schools into universities; again it was possible for some portion of mankind to be freed from toil for the leisure and luxury of thought. Abelard stirred half a continent with his eloquence, and Bonaventure and Anselm laid down in majestic theology the rationale of medieval faith. When the work of preparation was complete, another Aristotle came, St. Thomas of Aquin, a man who took the universe for his specialty, and flung a frail bridge of reason across the chasms between knowledge and belief. What Dante did to the hopes and fears of the Catholic Renaissance, Aquinas did for its thought; unifying knowledge, interpreting it, and focusing it all upon the great problems of life and death. We must quiet our prejudices and admit him to our ten.

No doubt some hearts will break at this selection, including the author's own. There are so many other names that one might here invoke more lovingly; names far more congenial to the modern world; names like Leonardo or Spinoza, which stir in us a passionate affection rather than a cold respect. Yet if we prove unfaithful to the standards we have ourselves laid down, we may as well abandon our voyage of recovery; our list would be an album of favorites rather than a gallery of great minds. It is true that the world does not follow Aquinas now, preferring a doubting Thomas to a dogmatic one; but there was a time when every intellect honored the "Angelic Doctor," and every philosophy took his gigantic "Summæ" as its premises. Even to-day, in a hundred universities, in a thousand colleges, his thought is reverenced as still sounder than science, and his philosophy is the official system of the largest Church in Christendom. We may not love him as we love the rebels and martyrs of philosophy; but because of his modest supremacy in a great century, and his vast influence upon millions and millions of mankind, we must make place for him on our rosary of genius.

AND then came a voice out of Poland, saying that this earth, footstool of God, and home of his redeeming pilgrimage, was a minor satellite of a minor sun. It seemed so simple a thing to say; we cannot be moved to fear or wonder by it now; we take it for granted that this soil on which we stand is a passing thing, transiently compact of elements that will disintegrate and leave not a wrack behind. But to the medieval world, whose whole philosophy had rested on the neighborly nearness of earth and God, this new astronomy was an atheistic blasphemy, a ruthless blow that seemed to overthrow the Jacob's ladder which faith had built between angels and men.

Copernicus's book "On the Revolutions of the Celestial Orbs" was well named, for no other volume in history has created so great a revolution. That pious Polish monk, sitting patiently before the smiling and baffling stars, had meant no harm; he had no suspicion of the bearings of his thought on the future of belief; he had lost himself in the search for knowledge; he was sure that all truth must be good and beautiful, and would make men free. And so, by the magic of his mathematics, he transformed a geocentric and anthropocentric universe—a world that revolved about the earth and man—into a kaleidoscope of planets and stars. Everything was changed—distances, significances, destinies. And God, who had been nearer than hands and feet, who had seemed to inhabit the friendly and flowing clouds, had disappeared into the far reaches of an illimitable space. It was as if the walls of a man's house had been torn down by some blindly angry wind, leaving him unsheltered in the darkness of infinity.

We do not know how profound a thinker Copernicus was, except through this immeasurable influence of his work. With him, secularism begins. With him, reason makes its French Revolution against a faith immemorially enthroned; and man commences his long effort to rebuild with thought the shattered palace of his dreams. Heaven becomes mere sky and space and nothingness, or it descends upon the earth and breeds visions of Utopia in the hungry hearts of men who once had hoped for Paradise. It was as in the fable Plato told, of the gods who had cared for man till he had come of age, and then had disappeared, leaving him to the devices of his own intelligence. It was as in the ancient savage days, when the Old Man of the tribe drove the young men forth, and bade them seek some other soil, and raise upon it their own homes and their own happiness. With the Copernican revolution, man was compelled to become of age.

He did not falter at this sudden maturity. On the contrary, the century that followed Copernicus was one of youthful audacity and courage in every field. Little

Will Anyone Accept This Pipe-Smoker's Challenge?

Twenty-one years is a long time to stick to any one product—particularly tobacco. Because even though over a period of years a tobacco may not change in flavor or quality, a smoker's taste generally does.

So it is all the more remarkable to receive such letters as that from Mr. Roberts of South Dakota, reproduced below.

Columbia, S. D.
Sept. 9, 1926.

Larus & Bro. Co.
Richmond, Va.
Gentlemen:

I am a veteran of the Edgeworth army, still in active service.

I make this claim, challenging all comers, to have smoked Edgeworth and nothing else but Edgeworth (when it was possible to get it) for a longer period than any other person within the scope of your territory.

I have smoked Edgeworth for twenty-one years and will soon start on the twenty-second.

I'll admit to having tried other brands, including so-termed high-class, high-priced blends and mixtures, enough to appreciate and satisfy myself of the superiority of Edgeworth.

In all these years I have never had one can of Edgeworth that varied in flavor or otherwise.

Yours very truly,
(signed) J. J. Roberts.

To those who have never tried Edgeworth, we make this offer:

Let us send you free samples of Edgeworth so that you may put it to the pipe test. If you like the samples, you'll like Edgeworth wherever and whenever you buy it, for it never changes in quality.

Write your name and address to Larus & Brother Company, 3-O S. 21st Street, Richmond, Va.

We'll be grateful for the name and address of your tobacco dealer, too, if you care to add them.

Edgeworth is sold in various sizes to suit the needs and means of all purchasers. Both Edgeworth Plug Slice and Edgeworth Ready-Rubbed are packed in small, pocket-size packages, in handsome humidors holding a pound, and also in several handy in-between sizes.

To Retail Tobacco Merchants: If your jobber cannot supply you with Edgeworth, Larus & Brother Company will gladly send you prepaid by parcel post a one- or two-dozen carton of any size of Edgeworth Plug Slice or Edgeworth Ready-Rubbed for the same price you would pay the jobber.

On your radio—tune in on WRVA, Richmond, Va. —the Edgeworth Station. Wave length 256 meters.

UNIVERSITY OF CALIFORNIA

"There y'are, Cap, the gas line's clear now and you ought to finish your trip without any more trouble—unless you have a blowout."

"I'm not worrying about blowouts, with Kelly-Springfields on all around."

vessels began to explore the now round and limited earth; frail minds began to explore the intellectual globe, careless of dogma, unharassed by tradition, and never dreaming that mankind would fail. Oh, the zest of those bright Renaissance days, when the poverty of a thousand years was almost forgotten, and the labor of a thousand years had made men richer and bolder, and scornful of barriers and bonds! The flash of those alert eyes, the rich blood in those strong frames, the warm color of their luxurious raiment, the spontaneous poetry of that impassioned speech, the creative, insatiable desires, the search and sweep and fearlessness of newly liberated minds! Shall we ever know such days again?

WHOM can we name as voice and symbol of that fermenting age? Leonardo? —painter, musician, sculptor, etcher, architect, anatomist, physiologist, physicist, inventor, engineer, chemist, astronomer, geologist, zoölogist, botanist, geographer, mathematician, and philosopher! Alas, our definition and criteria exclude him; he was—was he not?—an artist primarily, and only secondarily a philosopher or a scientist; it is by his "Last Supper" and his "Mona Lisa" that we remember him, and not by his theory of fossils, or his anticipation of Harvey, or his majestic vision of universal and everlasting Law. . . . Or shall it be Giordano Bruno, that forever-seeking soul, unsatisfied with finity, hungry for an immeasurable unity, impatient of divisions and sects and dogmas and creeds, only less controllable than the winter's winds, only less fiery than Etna, and doomed by his own turbulent spirit to a martyr's death?

No; it cannot be Bruno, for there was one greater than he: "the man who rang the bell that called the wits together;" who sent out a challenge to all the lovers and servants of truth everywhere to bind themselves together in the new order and ministry of science; who proclaimed the mission of thought as no vain scholastic dispute, no empty academic speculation, but the inductive inquiry into nature's laws, the resolute extension of the mastery of man over the conditions of his life; the man who mapped out, as with royal authority, the unconquered fields of research, guided a hundred sciences to their tasks, and foretold their unbelievable victories; who inspired the Royal Society of Great Britain and the great Encyclopedia of France; who turned men from knowledge as meditation to knowledge as remolding power; who forgot worship and foresaw control; who overthrew the Aristotelian logic of unobservant reason and pointed the gaze of science to the self-revealing face of nature; who carried in his brave soul, beyond any other man of that spacious age, the full spirit and purpose of the modern mind. Of course it was Francis Bacon.

From that day to ours the history of the European intellect has been predominantly the progress of the Baconian as against the medieval conception of the world. Predominantly but not continuously; there are many great figures that stood aside from this main road. In Descartes, the new order struggles in the arms of the old, and never quite liberates itself; in the great unifying soul of Leibnitz, the medieval tradition is still power-

The Speedabout
Fastest Six in the World per Dollar of Cost
Ready in March

The Spirit of Youth
at the Price Youth can Afford

4 PASSENGER
SPEEDSTER *$750*
COACH *$735*
COUPE *$735*
SEDAN *$785*

All prices f. o. b. Detroit, plus war Excise tax

This car is Youth itself—in its eager morn—for the glad highroad and the hills of far away. A chum to go loafing the world with—carefree, fleet and enduring. Rolling in fresh to dinner, with breakfast 500 miles back. A smart looking pal around town, too, dashing and swagger and suave.

What, you ask, has made such a car possible? Release of the Super-Six principle, long held in check, reveals untouched heights of power, speed, safety and performance. Youth demands all this, and youth is most enthusiastic in its appreciation. It fits the purse of youth in cost, in operation and in maintenance.

A ride in the Essex Super-Six is like flying. The old-fashioned chug-chug-chug-chug no longer appeals. The flowing purr-r-r-r of the Super-Six power leaves the strongest desire for instant ownership.

In four other new models, prices are comparably low.

Five in the red metal box cost but 30c.

ful enough to turn a mathematician into a precarious theologian; and in Immanuel Kant the voice of ancestral faith speaks amid the skepticism of the Enlightenment.

Strangely bridging these two streams of thought, the scientific and the religious, stands the figure of Spinoza: polisher of lenses and God-intoxicated man; silent devotee of lonely speculation, and formulator of the metaphysics of modern science; lover of mechanics and geometry, and martyr equally with Bruno to philosophy, dying only a slower and obscurer death. Every profound mind after him has felt his influence, every historian has attested the quiet depths of his wisdom.

But we have bound ourselves to judge these heroes of the mind in objective terms of influence rather than by personal estimates of wisdom; and even a lover of Spinoza must confess that the influence of the gentle philosopher has fallen upon the rarer and loftier souls rather than upon the masses or even the higher classes of mankind. He belongs to the islanded aristocracy of thought, and the world has not mounted to him yet.

BUT of Sir Isaac Newton there can be no similar dispute. "Every schoolboy knows" the story of his absent-minded genius; how the great scientist, left for a moment to his own culinary wits, and told to boil an egg three minutes for his lunch, dropped his watch into the water and contemplated the egg in his hand while the timepiece boiled; or how the absorbed mathematician, going up to his room to change his clothes for dinner undressed and went contentedly to bed. (It would be sad if these relieving stories were not true.) Not so many schoolboys know that Newton's "Principia" marked the quiet assumption, by science, of its now unchallenged mastery over modern thought; that the laws of motion and mechanics as there established became the basis of all later practical advance, of that reordered surface of the earth and that extended and intenser life which are the miracles of science in our day; that the discovery of gravitation illuminated the whole world of astronomy, and brought the bright confusion of the stars into an almost organic unity. "Not long ago," said Voltaire, "a distinguished company were discussing the trite and frivolous question" (alas, this is an unfortunate quotation) "who was the greatest man—Cæsar, Alexander, Tamerlane, or Cromwell? Someone answered that, without doubt, it was Isaac Newton. And rightly; for it is to him who masters our minds by the force of truth, and not to those who enslave them by violence, that we owe our reverence." Even in his lifetime the world understood that Newton belonged to its heroes.

It was Voltaire who introduced to France the mechanics of Newton and the psychology of Locke, and thereby began the great age of the Enlightenment. It will shock scholastic minds to see Voltaire included among the supreme thinkers of mankind; they will protest that his thought was borrowed rather than original, and that his influence was destructive. But which of us is original, except in form? What idea can we conceive to-day that has not enjoyed, in one garb or another, a hoary antiquity of time? It is easier to be original in error than in truth, for every truth displaces a thousand falsehoods.

An honest philosopher will admit, like Santayana, that truth, in its outlines, is as old as Aristotle, and that all we need do to-day is to inform and vary the design with our transient needs. Did not Spinoza, profoundest of modern thinkers, take the essentials of his thought from Bruno, Maimonides, and Descartes? Did not Ramus defend, as his thesis for the doctorate, the modest proposition that everything in Aristotle is false except that which he pilfered from Plato? And did not Plato, like Shakespeare, borrow lavishly from every store, making these stolen goods his own by transforming them with beauty? Granted that Voltaire, with Bacon, lighted his candle at every man's torch; it remains that he made the torch burn so brightly that it enlightened all mankind. Things came to him dull, and he made them radiant; things came to him obscure, and he cleansed and scoured them with clarity; things came to him in useless scholastic dress, and he clothed them in such language that the whole world could understand and profit from them. Never did one man teach so many, or with such irresistible artistry.

Was his influence destructive? Who shall say? Shall we abandon here the objectivity of judgment assumed in our definition of a thinker, and reject the laughing philosopher of Ferney because his thought was different from our own? But here we have sacrificed Spinoza, though some of us swear by his philosophy, sacrificed him because his influence has been, though deep, too narrowly confined. Evidently we must ask of Voltaire, not do we accept his conclusions, but did the world accept them, did his thinking mold the educated humanity of his age and his posterity?

It did; there can be little doubt of it. Louis XVI, seeing in his Temple prison the works of Voltaire and Rousseau, said, "Those two men have destroyed France," meaning despotism.

PERHAPS the poor king did philosophy too much honor; doubtless, economic causes underlay the intellectual uprising that centered in Voltaire. But just as physiological decay leads to no action unless it sends its message of pain to consciousness, so the economic and political corruption of Bourbon France might have proceeded to utter national disintegration, had not a hundred virile pens brought home the state of affairs to the consciousness and conscience of their country.

And in that great task Voltaire was commander in chief; all the rest willingly acknowledged his lead, and did his bidding proudly. Even the mighty Frederick greeted him as "the finest genius that the ages have borne."

Beneath the recrudescence of ancient beliefs amid which we live, the influence of Voltaire quietly persists. As all Europe in his century bowed to the scepter of his pen, so the great leaders of the mind in later centuries have honored him as the fountainhead of intellectual enlightenment in our time. Nietzsche dedicated one of his books to him, and drank deeply at the Voltairian spring; Anatole France formed his thought, his wit, and his style on the ninety-nine volumes which the great sage left behind him; and Brandes, aged survivor of many a battle in the war of liberation, gives some of his dying years

Scientifically Designed

BALLOON TIRE TREAD

Another Reason why Firestone Tires are Better

When Firestone engineers were developing the Balloon Tire they found it necessary to design a tread altogether different from that which is required by High Pressure Tires. The tread of a Regular Cord, or High Pressure Tire is usually designed with what is known as a wide rider strip at the center. Here the bulk of the rubber on the tread is concentrated.

With the Balloon or Low Pressure Tire this extra amount of rubber must be placed away from the center toward the outer edges of the tread. Because of the low pressure conditions the displacement is greater and most of the weight and wear is at these outer points.

Notice how the Firestone Balloon tread has a deep groove at the direct center, with narrow flexing rider strips and additional grooves on either side. These grooves nearly close up when the tire is under load, as they provide room for the rubber to spread out. Next come the outer rider strips—at the points of greatest wear—with numerous angular sharp-edge projections for non-skid qualities.

The Firestone tread was not designed with large, massive projections for appearance or to make plausible sales argument. On the contrary, the projections of the cross-and-square tread are small and the rider strips narrow, permitting the tread to yield to depressions and cling to the road, giving the greatest non-skid surface. This tough, pliable tread has the wear-resisting qualities that give thousands of extra miles of service.

The tread, however, is not the only important part of the Balloon Tire. Such a tread as this, designed to yield to every depression of the road, must be placed on the carcass that also has the qualifications to withstand the terrific flexing that this design tread permits. Firestone provides this extra strength and endurance by dipping the cords of the carcass in a rubber solution. By this process, every fiber of every cord is saturated and insulated—to withstand the extra flexing of the Firestone tread.

If you want the economy, comfort and safety of Gum-Dipped Tires—see the nearest Firestone Dealer. He will gladly explain the many features that make Firestone Tires better.

Install a Full Set

When you need new spark plugs, install a full set—and be sure they are dependable Champions. Your garage man or dealer will tell you the advantages both of a full set and of Champions. Their sillimanite insulators for strength, their two-piece construction for easy cleaning are important reasons why they are so dependable, and why two out of three motorists the world over invariably choose Champions.

A new set of dependable Champion Spark Plugs every 10,000 miles will restore power, speed and acceleration and actually save their cost many times over in less oil and gas used.

Champion X—exclusively for Fords—packed in the Red Box

to a forgivably idolatrous biography of the Great Emancipator of Ferney. When we forget to honor Voltaire we shall be unworthy of freedom.

Nevertheless, there was another side to this irrepressible conflict between simple faith and honest doubt. Something remained to be said for the creeds which the Enlightenment had apparently destroyed. Voltaire himself had retained a sincere belief in a personal Deity, and had raised "To God" a pretty chapel at Ferney. But his followers had gone beyond him, and when he died, materialism had pursued every rival philosophy from the field.

NOW, there are two modes of approach to an analysis of the world; we may begin with matter, and then we shall be forced to deduce from it all the mystery of mind; or we may begin with mind, and then we shall be forced to look upon matter as merely a bundle of sensations. For how can we know matter except through our senses? And what is it then for us but our idea of it?

When Berkeley for the first time clearly announced this novel conclusion to the world, it made a stir among the pundits, and seemed to offer a splendid exit from the infidelity of the Enlightenment. Here was a chance to reassert the primacy of mind, to reduce its threatening enemy to a mere province in its realm, and so to restore the philosophical bases of religious belief and religious hope.

The supreme figure in this idealistic development was Immanuel Kant, perfect type of the abstract philosopher; Kant, who traveled far in Königsberg, and from its promenaded streets saw the starry heavens melt into a half-unreal phenomenon, transfigured by perception into a subjective thing. It was Kant who labored best to rescue mind from matter; who argued so irrefutably, because so unintelligibly, against the uses of "pure reason;" and who, by the prestidigitation of his thought, brought back to life, magician-wise, the fair beliefs of the ancient faith.

The world heard him gladly, for it felt that it could live by faith alone, and did not love a science that merely darkened its aspirations and destroyed its hopes. Throughout the nineteenth century the influence of Kant grew; time and again, when rationalism and skepticism threatened the old citadels, men fled for strength and refuge "back to Kant." Even so matter-of-fact a man as Schopenhauer, and so rabid a heretic as Nietzsche, accepted him, and looked upon his reduction of the world to mere appearance as the indispensable preliminary of every possible philosophy. So vital was Kant's work, that in its outlines and its bases it remains to our own day unshaken and intact: has not science itself, through Pearson, Mach, and Poincaré, admitted that all "reality," all "matter," all "nature" with its "laws," are but constructs of the mind, possibly but never certainly known in their own elusive truth? Apparently Kant had won the battle against materialism and atheism, and the world could hope again.

And then Darwin came, and the war waged anew.

We cannot know now what Darwin's work may finally mean in the history of mankind. But it may well be that for posterity his name will stand as a turning point in the intellectual development of our Western civilization. If Darwin was wrong, the world will forget him, as it has almost forgotten Democritus and Anaxagoras; if he was right, men will have to date from 1859 the beginning of modern thought.

For what did Darwin do but offer, quietly, and with a disarming humility, a world picture totally different from that which had contented the mind of man before? Darwin, without attacking any creed, described what he had seen.

Suddenly the world turned red, and nature, which had been so fair in the autumn's colors under the setting sun, seemed to be only a scene of slaughter and strife, in which birth was an accident, and only death a certainty. "Nature" became "natural selection"—that is, a struggle for existence, and not for existence merely, but for mates and power; a ruthless elimination of the "unfit," of the tenderer flowers and the gentler animals and the kindlier men. The surface of the earth seethed with warring species and competing individuals; every organism was the prey of some larger beast; every life was lived at the expense of some other life; great "natural" catastrophes came: ice ages, earthquakes, tornadoes, droughts, pestilences, famines, wars; millions and millions of living things were "weeded out," were slowly or quickly killed. Some species and some individuals survived for a little while. This was evolution. This was nature, this was reality, and the world.

Copernicus had reduced the earth to a speck among melting clouds; Darwin reduced man to an animal fighting for his transient mastery of the globe.

Imagine the strain upon minds brought up in the tender philosophy of our youth, and forced to adapt themselves to the harsh and bloody picture of a Darwinian world. Is it any wonder that the old faith fought fiercely for its life, that for a generation "the conflict between religion and science" was bitterer than at any time since Galileo retracted and Bruno burned at the stake? And do not the victors, exhausted by the contest, sit sadly to-day amid the ruins, secretly mourning their triumph, secretly yearning for the old, old world which their victory destroyed?

WELL, there are our ten. Shall we see them in one glance? Confucius, Plato, Aristotle, Thomas Aquinas, Copernicus, Bacon, Newton, Voltaire, Kant, Darwin. Those whom we have omitted would make as fair a list: Democritus, Epicurus, Marcus Aurelius, Abelard, Galileo, Spinoza, Leibnitz, Schopenhauer, Spencer, Nietzsche.

The anonymity of most inventions, and the coöperation of many minds in the gradual accomplishment of some transforming mechanical innovation, has made our list inventor-less, even while we confessed that "history is the history of great inventions."

And consider the vast movements of thought which we have ignored: feminism, for example, with its great leaders, from Mary Wollstonecraft to Susan Anthony; and socialism, with its roster of hopeful theorists from Diogenes and Zeno to Lassalle and Marx. It must be so; no list could exhaust the treasures of man's

Whippet sets National Economy Record

—in Dramatic Coast-to-Coast Run

At the finish of the trip—crowds thronged around the famous Coast-to-Coast Whippet as it finished the run in front of the Willys-Overland Branch at 50th Street and Broadway, New York City

AVERAGES 43.28 MILES PER GALLON IN GRUELLING 3,559 MILE TRIP

LOS ANGELES to New York on 82¼ gallons of gasoline . . . averaging 43.28 miles per gallon. This is the sensational economy record recently achieved by a stock Overland Whippet in a gruelling 3,559 mile coast-to-coast trip.

This spectacular run shatters all previous records. It sets a new high mark for fuel economy. Never before has any car so dramatically, so convincingly demonstrated outstanding performance ability.

Under Official A. A. A. Observation

The entire test was conducted under the sanction and official observation of the American Automobile Association.

An Official Observer remained with the Whippet throughout the trip. An accurate log of the trip was kept by the observer, including the faithful entry of all fuel and oil added. As a further precaution, the carburetor was dismantled at both ends of the run and micrometer checkings made of every part. At the completion of the trip an official report was prepared by the American Automobile Association certifying every detail of this remarkable record.

Proof of Whippet Economy

This test was made under ordinary driving conditions such as encountered by average owners. Thousands of Whippet drivers are constantly reporting comparable results. 30 miles and more to the gallon of gasoline. 1000 miles on a quart of oil. With remarkably low upkeep expense.

In addition the Whippet offers you the outstanding advantage of 4-wheel brakes, brilliant performance plus greater room and comfort.

Step into a Whippet and you will be surprised to find so much spacious room. Due to its unique body and dash construction there is actually more leg room than any other car of this price. Just drive the car . . . that's the only way to judge its remarkable value.

The Whippet is available in six distinctive body styles. Touring $625; Roadster $695; Coach $625; Coupe $625; Sedan $725; Landau $755; f. o. b. factory. Prices and specifications subject to change without notice.

Willys-Overland, Inc., Toledo, Ohio. Willys-Overland Sales Co., Ltd., Toronto, Canada.

heritage or equal its infinite variety. And it is well; let us have many lists and many heroes; we cannot honor them too much, or commemorate them fruitlessly. Here, perhaps, is the true litany of saints; these are the names that should adorn our calendars, with those that gave new beauty to the world, or counseled it to a gentler humanity.

When we live with these men we understand God once more, and witness the miracle of creation every day anew. For even though our old faith may have gone from us, this new faith remains—that divinity hedges us about on every side, and the creative power lurks perhaps in our own souls. Throughout this quiet procession of planets in the sky, and this turbulent procession of heroes and frustrated men in history, we need not see merely the blind fatality of integrated matter and dissipated motion, hurrying us on to an ignominous and meaningless death. Rather, in the hunger and movement of infants, in the laughter and play of our children, in the ardor and devotion of youth, in the restless ambition of fathers and the loving sacrifices of mothers, in the crucifixion of prophets and the martyrdom of saints, above all in the undiscourageable research of scientists and the patient sufferings of genius, we may see, if we have eyes to see, the passion of life for growth and achievement, and the drama of persistent creation.

It is a world of suffering, yes; and the stars seem fairer and more enduring than our fitful race. But it is we who seek the suffering, and we who measure the stars.

Mistress of the Bees

(*Continued from page 23*)

to her dolls out beside this very tree. When Molly finished it was very still in the big yard, as if they somehow all wished to prolong the sweetness of the moment. Faith Laraway pulled a handkerchief from her pocket and openly wiped her eyes. Allie's mouth twitched, as if tears were close. Jen felt suddenly that she couldn't longer bear the moment.

"Thanks, Molly," she said. "That was powerful sweet. We won't forget it for a good long spell, I'm thinking—will we, girls? You got that piece done, Faith? Guess we can roll it up then, and get in to the table. It'll be dark before we know it."

Then they were in the house, making sure everything was in their bags, coming, neighborwise, out into the kitchen to hold their hands above the fire that made the swift, crisp shadows warm.

"My, a fire feels good—especially at my age!" Allie Parsons said.

"H'mph!" said Jen, scornfully.

They came to the table. Caroline had come down from her home to help out, and she and Molly passed things. They seemed very young and childish, even to themselves. For there was wisdom about Jen's table that night—the wisdom of women who have borne children, whose children have borne children—the wisdom of women who have toiled through twoscore or more years to wrest a living from the land—the wisdom of women who live in the country, love it, find

LOOK!

Run Any Radio from your Electric Current

And remember, it makes no difference what kind or what make radio set you have, PHILCO Socket Powers will give you *both* A and B radio power from your electric light current—*dependably and constantly.* Here is your opportunity to do away with the ordinary "A" storage battery, dry cell batteries, and "B" batteries.

One switch controls everything. Snap it "ON" and from your house current you get a strong, steady flow of A and B power. Snap it "OFF" and your radio is silent.

No Hum No Distortion

Philco Socket Powers will give you radio reception without the least hum; without the least distortion. Your electric lighting current will now operate your radio set smoothly and perfectly—*any kind or any make of set.*

No more recharging to do; no more dry batteries to replace; no more fuss; no more bother, and better still, improved reception. ***Everything contained in ONE Cabinet.***

Installation FREE

No matter where you live there is almost sure to be an authorized PHILCO dealer near you who will deliver a brand-new Philco Socket Power to your home on the day and hour you desire. He will connect it to your radio set *at no additional cost to you.*

The Philco dealer in your community guarantees you complete satisfaction.

Yours On Very Easy Payments

You can buy a PHILCO AB Socket Power on *Easy Payment Terms* from any Philco dealer in your town. You merely make a small first payment—balance monthly.

Go to your Electrical Dealer, Department Store, Electric Light Company, Music Dealer or Battery Service Station; tell them you read this advertisement and you want the PHILCO RADIO SOCKET POWER.

Trade In Your Old Storage Battery

Yes, any one of the many thousands of Philco dealers will make you a very liberal trade-in allowance for your old "A" storage battery on the purchase of a brand-new Philco Radio AB Socket Power.

It makes no difference what make of "A" storage battery you now have or how old or worn out it may be, the Philco dealer will give you a surprisingly liberal allowance.

Mail This Coupon Now

Visit the Philco dealer, or if you prefer, mail this coupon to us and we will give you the full details direct from the factory. We will send you complete information on our Easy Payment Plan and Trade-In Allowance offer for your old storage battery.

Sign your name and address to this coupon, and mail it to us today. The coupon is not an order. It does not place you under the slightest obligation. It is merely a request for the full details and free illustrated literature describing these famous Philco Socket Powers.

There can be no Compromise with Safety

peace in it, and do not hanker to live elsewhere.

And, of them all, Jen Culliton was the wisest. As she sat at the head of her table, and made them all at home, there was something stupendous about her, some evidence of a grip on life that few possess, some dignity that was hers by virtue of her contact with earth, with the growing and selling of food.

"Mrs. Burgameyer, you'll have some more ham, won't you?" she said. "You didn't tell me how your boy was. Is he getting over his lameness all right? Molly, make some more tea, will you? Nothing like a fresh cup of tea for talking things over on! Cora, I haven't heard how your mother was?"

"Why, she's a little better to-day, Jen. She had a bad spell while we was picking the early apples. I was about tuckered out between cooking for pickers and taking care of her. Goodness knows, I'm not complaining, though. Ma's done lots for me all my life!"

"Yes, she's a good woman—the salt of the earth," Jen said.

Molly Parsons, in the doorway with the tea, felt a sudden stinging mist before her eyes. *There was such kindness in this house!* It was like a strange revelation to Allie Parsons's daughter. It was as if she had been following a vision for years, and now, almost up to it, it had grown suddenly small and gray and unworthy. But another took its place. A vision of a good woman, going her simple way, doing good to others with no ostentation, bringing fruitfulness out of the soil, doing her share in making the community better, bringing up children like Ollie and Joe and Caroline and Peter—a great woman, greater far than she would ever have been, going about seeking fame!

JEN smiled up at her gently as she set the tea down, not seeing what was in her heart, but touched, nevertheless, by the shining of her face.

After a little they all went, out into the crispness of the autumn night.

"It's been a good afternoon, Jen," Faith Laraway said. "Don't know when I've enjoyed a day so!"

"Me, either!" Cora Frazier said softly, as she gathered up her bag. "Seems a long time since we girls have got together like this. Wish we could do it oftener—I always feel good after!"

"Good night, Cora! Thanks, Allie, for lending me your girl, seems like she's part mine, anyhow! 'Night, Allie!"

They were gone. Jen turned to the table.

"You leave things alone, Aunt Jen!" called Caroline's eager voice from the kitchen. "Molly and I'll attend to everything!"

"All right," Jen acquiesced, in unaccustomed obedience. "Guess I'll just let you go ahead, girls. I'm going to sit down a minute; I feel kind of tired!"

But first she went outdoors, to fetch a chair that had been left under the maple.

Molly, drying dishes, was the first to come to her. Molly had suddenly flung the dish towel aside.

"I've got to see Aunt Jen a minute," she said to Caroline. "Something I have to tell her!"

She had to tell her about the vision. But she did not tell her, after all.

Your voice is truly magnetic when you telephone. This iron magnet (shown solid) in the receiver aids in the reproduction of every fluctuation of the human voice.

Iron*-the Magnet aid to voyagers and voices

Moving mountains—to get just the iron that comes up to telephone specifications.

WE all know that the magnetic property of iron is put to use in the compass as an indispensable aid to the traveler. This same property is at the heart of your telephone instrument, for there's a magnet in the receiver which aids the voice on its journey direct to the ear.

But there is iron and iron—and just one kind that qualifies for this important part in telephone making. To find that iron is a Western Electric responsibility—just as it is our care to seek out in the ends of the earth the right quality for all the other eighteen materials that go into this instrument.

Out of such tested materials is produced economically and accurately the delicate yet durable instrument that contributes its share to your good telephone service.

Back of your telephone

"From the Far Corners of the Earth" *is the geography of your telephone. For your copy address Western Electric, 195 Broadway, New York.*

COMFORT
through flexibility

IN shoes that are made to satisfy your desire for good style, you can now enjoy true all-day comfort. The minute you see these new, Spring Cantilever Oxford models, you will be delighted with their attractive appearance. Then, when you wear them, your feet will find these graceful shoes just as comfortable as your eyes found them good-looking.

If you have never tried the Cantilever Shoe, you have yet to enjoy the complete foot comfort that only toe-to-heel flexibility can give you. Your foot itself is flexible. Nature meant it to be free. When you restrict the foot by wearing rigid arch shoes you interfere with its natural movements. You are shoe-bound. In the Cantilever you are foot-free.

You will find Cantilever Oxfords *most* helpful if you need arch support. To support the arch you have only to lace the "sprung-up", all-leather arch of the Cantilever a little more snugly to the undercurve of the foot. Then the arch is supported flexibly, your foot is free to exercise and the weakened arch muscles are building up new strength with every step.

The Cantilever Shoe fits closely under the arch and round the heel. It needs no breaking in, because the shape of the shoe follows the natural lines of the foot. There's room for your toes in the modishly rounded toe of the Cantilever. It fits so well and is so tasteful in style that you will be proud to wear it with your most becoming costume.

In most cities Cantilever Shoes are sold by one especially selected store, which is often listed in the 'phone book under "Cantilever". If you do not find it there, the Cantilever Corporation, 402 Willoughby Avenue, Brooklyn, N. Y., will be glad to send you the address.

Cantilever Shoe

MEN . . WOMEN . . CHILDREN

Jen was not in the living-room, and Molly went out on the porch, and saw her, sitting out there in the chair under the maples.

"Aunt Jen—you'll catch cold!" she called.

Jen did not answer and Molly ran to her, fell on her knees on the browning grass beside her, seized the big hands that had served a lifetime for others. But she had somehow known before ever she reached her.

ABOUT ten Molly came out into the kitchen. Oliver and Peter sat there. Peter was in Jen's old red-padded rocker by the fire, and his hands seemed to cling to the chair as if it somehow were a part of Jen. Oliver was beside the table, the light from the lamp falling on his face, bleak and agonized with its hurt.

Molly went straight to Oliver, put a hand on his shoulder.

"Where's the lantern, Ollie?"

"Lantern? What is it—do you want to go home?"

"No— Oh, no— I'm staying with Caroline! But where is it?"

He got up, hardly seeming to see her, and got the lantern from its place inside the sink cupboard, lighted it.

"Come!" said Molly.

He followed her out the door and down through the back yard. She paused at the edge of the orchard, put a quick, comforting hand on his arm.

"Ollie—somehow—it seems *right!* She would have hated being old—and it was such a happy day—so—so much love in it! I—I think she'd have wanted it—to quit—in the harness, like this! Oh, Ollie—she was—she *is* a great woman!"

"Yes," said Oliver in a choked voice.

"She isn't really dead; she'll live in every home for miles around for years and years; she's a great woman, Ollie!"

She turned then, abruptly, and went on through the orchard till she came to the far end, where the beehives stood. She held out the lantern to Ollie and went down on her knees in the damp grass, lifted a shaking hand, knocked gently.

"Don't go away, bees!" she said in the half-whisper of a sobbing child. "Make sweet honey for—for your—your new mistress!"

Oliver put the lantern down with one swift movement. He reached down and pulled Molly up into his arms. She clung to him tiredly, and his tears mingled with hers, and their hurt became eased, as one hurt. It was as if they were living in the midst of some terribly sweet, sad legend.

"Only, really," Molly said at last, her face tight against his, "there can never be any mistress here but *her!*"

COLONEL BRAXTON will soon appear in another unusual and fascinating Melville Davisson Post story, "The Leading Case," in which a smooth-tongued, unctuous hypocrite, armed with a legal document, tries to defraud a young orphan girl of her inheritance. Things are looking pretty dark for the Colonel's young client, when through a tiny hole in the questioned document streams the white light of truth. From this point the story marches to a smashing climax.

JOHANNA SILVER UNEARTHS HER HEART'S DESIRE

A new idea, like hidden treasure, often lies buried for centuries. Then, one bright day, Progress unearths it, and the world gets a new thrill. So it was with the PIECES OF 8. Generations of young brides had hungered in vain for a set of silver with enough knives, forks and spoons to take care of "unexpected company." Then along came 1847 ROGERS BROS. Silverplate with a set of silverware in "eights" instead of the usual shorthanded "six of each." Covers for eight in table essentials — 34 pieces all told — in a gorgeous Spanish Treasure Chest — retailing for . . . $49.50.

And today, wherever silverware is sold, you'll find that the already famous PIECES OF 8 Chest is the fastest-selling chest in the silverware department. . . . To match flatware in PIECES OF 8 Chest, tea and dinner services may be had in any of the 1847 ROGERS BROS. silverplate patterns.

The Conquest of Night

(*Continued from page 55*)

thought about it as something that can be defined." Then Doctor Whitney told me some of the amazing things that have been learned about light, both the natural and the artificial kind.

I can abridge a little his explanation of light by going back to what science has learned about the atom. All matter, as you learned in your physics textbook at school, is made up of molecules, and the molecules, in turn, are composed of atoms. Each of these little atoms, scientists now know, is a sort of miniature solar system in itself, with a nucleus of positive electricity, corresponding to our sun, and with electrons of negative electricity revolving around it, like planets. Study of the atom seems to indicate that all matter—wood, iron, clay, everything—is composed of nothing but positive and negative electricity in varying proportions. And it may surprise you to know that *light*, as well as matter, originates *in the atom*.

But to me the most amazing fact that science has discovered in this field is that light is merely radio of infinitely short wave length. The atom holds the record for being the smallest broadcasting station.

"Yes," said Doctor Whitney, "the radio waves are of exactly the same character as light waves. The only difference is one of *wave length*.

"You know that one radio station broadcasts on a wave of 400 meters, another on a wave of 360 meters, and so on. But if a broadcasting station were able to send out waves short enough, you would *see* them in the form of light coming from the antenna, instead of hearing them, as you now hear the longer waves after a complicated apparatus has picked them up.

"AS EVERY radio fan knows, the length of the wave sent out by a broadcasting station is governed, to a certain extent, by the length of the antenna; the shorter the antenna, the shorter the wave.

"The shortest antenna ever used to propagate radio waves was composed of two pieces of platinum wire sealed in opposite sides of a glass tube less than a millimeter—or about four hundredths of an inch—apart. You can compare this with the wave length of light, which is *one thirty-nine-thousandth* of an inch for the red waves, which are the longest, and *one sixty-two-thousandth* of an inch for the violet, which are the shortest in the spectrum."

I am going to tell you a little more about the spectrum later on in the article.

"The radio station in the atom," Doctor Whitney continued, "which sends out light waves is indescribably small. I can best give you an idea of how small it is by an illustration: Suppose we take a cubic inch of air and enlarge it until the molecules of which it is composed are the size of grains of sand. How big a beach would these sand-sized molecules make? Why, we would have to have one a thousand miles long, a mile wide and

He is Always on Time! *For he is served by a timepiece of supreme reliability*

A conference at ten, luncheon at twelve-thirty, the Century at two-forty-five—for all these the business man must be exactly timed; and he is as exactly timed as the Limited itself if he carries a Hamilton Watch. For the Hamilton is more than a pocket-piece—it is a timepiece, a timepiece that under gruelling tests has won for itself the reputation of being the watch of railroad accuracy. Indeed, it is a fact that a large proportion of the railroad men of the country are served by the Hamilton Watch.

Hamilton accuracy is a matter not only of careful planning, careful machining, careful adjusting; it is the result of testing—thorough, searching testing—over a period of months. Every day, for weeks at a time, each Hamilton Watch ticks away under the keenest scrutiny, under the closest checking. When you slip a Hamilton into your pocket you may be confident that it will give you time-accuracy, year in and year out. And in a watch there can indeed be no possible substitute for accuracy.

The Hamilton Watch is priced from $48 to $685 for pocket models; strap models, $50 to $88; women's wrist models, $48 to $60.

We should be glad to send you upon request our attractive booklets "The Timekeeper" and "The Care of Your Watch." Address Hamilton Watch Company, 883 Columbia Avenue, Lancaster, Pa., U. S. A.

The Hamilton cushion strap watch sturdily encased in 14k filled green or white gold, costs only $50.

These Models $50

The Hamilton "Jefferson" (above) is cased in a richly chased white or green filled gold, with a 17-jewel adjusted movement that gives true Hamilton accuracy.

The Hamilton "Fillmore" has a 17-jewel movement and comes in a conservatively chased case of either green or white filled gold.

three feet deep. And there are several atoms contained in each molecule.

"To sum it all up, light is produced by a radio wave almost infinitely short, propagated from an electron which has been electrically kicked away from the nucleus of the atom, and which sets up the electro-magnetic waves by its return to its place, just as the much larger group of electrons forced into a wireless antenna produce the much longer wireless electro-magnetic wave. Probably this won't give much of a mental picture to the average person; but any attempt to make it clearer would involve endless scientific complications."

Light, therefore, being a radio wave, travels at the same speed as a wave from a broadcasting station, or 186,000 miles a second. This enormous speed is, of course, practically instantaneous, so far as distances on earth are concerned. A radio or a light wave could circle the globe seven and one-half times in a second.

But there are distances between the earth and some of the stars so great as to make the terrific speed of the light wave seem slower than the pace of a snail. In our universe there are stars so far away from the earth that it takes light one hundred thousand years to reach us. In other words, if we had telescopes powerful enough to distinguish details on some of the stars of the Milky Way, whatever we saw would have occurred one hundred thousand years ago. The light from Mars requires three minutes to reach the earth; that of the moon about one and one-third seconds.

"NOT all light," Doctor Whitney continued, "is visible to the eye. Visible light is contained in a certain band of wave lengths, of which red is the longest and violet the shortest. This band of visible light we call the spectrum; and it is what you see in a rainbow. The colors run in the following order, blending almost imperceptibly to form hundreds of tints: red, orange, yellow, green, blue, indigo, and violet. The invisible rays beyond the red are called the infra-red; those beyond the violet are called the ultra-violet. These invisible rays, as well as the visible ones, are contained in all light, but their proportions vary."

Color is all in your eye. The spectrum, from red to violet, is capable of division into no fewer than three thousand different tints, or colors, by scientific instruments in the laboratory; but the human eye is capable of selecting only one hundred and twenty-eight of these. There are three primary or fundamental colors in the spectrum—red, green, and blue-violet—and by an admixture of these we can form all of the intermediate colors, including white, which is really not a color in itself but a combination of *all* the colors in the spectrum.

Perhaps you have at some time wondered why danger signals on railroads are red. Why do they put up a red light on a switch stand, instead of some other color, to indicate that the switch is open? I have heard many explanations: how red, being the color of blood, is the natural danger signal, for instance. But the real reason is quite commonplace.

White lights were barred, of course, because the engineer might mistake the light in a window, or a street light, for a signal. Red was chosen because the red rays are less easily obscured by fog or smoke than any other color (except white), and can, therefore, be seen farther under adverse conditions. The red beam has forty per cent the intensity of white light; green has twenty-five per cent, and violet is still lower.

As it is important that the danger signal be visible at the greatest possible distance, and as the red beam has the greatest intensity of any of the colors, it was chosen for the danger light. Green, on the railroad, is the safety light.

Perhaps you have wondered how light gets "around a corner." That is, how a given point, not in a direct light ray, is nevertheless lighted. For instance, there is some light inside a tunnel; or if you make a light in one room it will also light another room, provided there is an opening between them, even though this opening is not directly opposite the light. The answer is that the light in the direct rays is reflected from the minute particles of dust and water vapor in the air. If there were no reflecting particles in the air, there would be no light, except direct rays.

Color is due to light absorption. A red flower appears red because it absorbs all the other rays of the spectrum and reflects only the red. A piece of glass stained red allows only the red rays to pass, and absorbs all the others. If a red flower is lighted successively by red, green, and blue light it will appear brilliantly red in the red light, and black in the other colors, because, being red, the flower can reflect nothing but red light.

All of the ordinary methods of artificial lighting with which most of us are familiar give light that is more or less white. The candle and the kerosene lamp have a preponderance of the yellow and red rays of the spectrum, hence they give off a reddish-yellow light. Firelight contains a little more red. Gaslight is a little whiter, because it contains more blue and less red, and electric light is whiter still. The mercury-vapor lamp, used in photographic and industrial work, consists almost entirely of the green rays. Sunlight, of course, contains all the rays in the ideal proportion.

AN OLD friend of mine who lived in the country once remarked that he would not have electric lights in the house. They were hard, he maintained, on the eyes. For a good, comfortable light he preferred a kerosene lamp. I asked Doctor Whitney whether some kinds of light were better for the eyes than others.

"Habit," he replied, "has a lot to do with comfort. If you are thoroughly accustomed to kerosene light you will be more comfortable with it than with others. Eye strain is due more to quantity than to kind of light. Any light source is good, provided there is enough of it, and provided there is no glare.

"It is painful and tiring for the eye to gaze directly at the source of light; and, in some cases, it is dangerous. The direct rays from an electric arc are quite harmful to the eye. Workmen who use the arc for welding and cutting often suffer from acute eye irritation, even when their eyes are protected by a thick screen of dark glass."

The best light, of course, is that to which mankind is most accustomed—day-

Nearly seven square feet of shelf area. Adequate for the average family.

Startling low price

The lowest price for Kelvinator quality in our history. Ask the Kelvinator dealer for the price and examine this wonderful new model. Easy payments.

We can install a Kelvinator Freezing Unit in any good refrigerator in a few hours.

A New Idea in Electric Refrigerator Construction that brings Kelvination within reach of every home

The Greatest Achievement of this Electric Age

The latest member of the Kelvinator family. Beautiful in design—all-metal exterior—built like a bridge—finished in Kelvinator gray enamel.

Cannot warp. Good for a lifetime. Corkboard insulation—Kelvinator exclusive "Sealtite" construction—impervious to moisture. Every proved device to keep warm air out and cold air in.

Compact—54½ inches high—26¼ inches wide—wonderful amount of food storage space—nearly 5 cubic feet—19 inches deep (exterior) so that you can reach in easily for anything. And it gives you Kelvination—"cold that keeps"—the finest type of electric refrigeration. The Zone of Kelvination (40 to 50 degrees) is the Zone of Health.

A source of continual pride to you—and comfort—and convenience—and health—and economy. Ideal for small homes and apartments. Light—easy to move about—to take with you when you move.

Never was so attractive, spacious and useful a cabinet, with electric refrigeration of so high a standard, offered at such a low price. A truly wonderful present for wedding, birthday or anniversary.

A practical saver of money, labor and food. Makes delicious frozen salads and desserts—and plenty of those dainty ice cubes.

Kelvination costs surprisingly little to operate. And you can get it for a small down payment and easy monthly installments.

* * *

See the Kelvinator Dealer nearest you about this newest model. You'll find his address in the telephone book. Drop in for a demonstration; learn how easily you can buy one on our Household Budget Plan, or put a Kelvinator in your present refrigerator. If you investigate—you'll Kelvinate.

KELVINATOR, 2067 W. Fort Street, Detroit, Michigan

"That's what I call *perfect!*"

HANDIEST package ever invented for paste or mucilage. No cap to unscrew or lose. No brush. No water to supply. No drying up—seals itself when not in use. Clean to handle—no spreading with finger—never leaks. Operates with one hand. Handier than jar, screw-cap tube, ordinary spreader tube or water-well of stiff paste, liquid paste or mucilage.

Patented NEW Spreader Makes Pasting Easy

Just squeeze the rubber tip between thumb and forefinger to open the patented slit in the rubber tip. Then, holding the tube vertically, as you would a paint brush, place the tip on the paper to be pasted, and spread, bearing down a little as you spread. Do not bear down hard. When you paint with a brush, you bear down only enough to make the tips of the bristles bend. So only the very tip of the rubber spreader should bend. The flexible rubber tip is an ideal spreader—works better than a brush. To make paste flow out faster, squeeze tube slightly as you spread. When you stop spreading, the slit closes. The tip will work perfectly as long as there is any paste left in the tube, even though you are months using it up.

Try it—send 10c.

JUST as you use LePage's Glue for a strong joint, use LePage's Spreader Paste for quick, convenient pasting—two different products for different needs. If you ever use PASTE give yourself a chance to try this new package. Send coupon and 10 cents (coin or stamps) today for regular-size tube. Russia Cement Co., Dept. O7, Gloucester, Mass.

LE PAGE'S *Spreader* PASTE
BY THE MAKERS OF LEPAGE'S GLUE

light. Of late years bulbs have been made to reproduce the color of daylight. You have no doubt seen these lights in the department stores, where they are used for matching colors. In the old days, when a woman wanted to match a piece of goods, she had to take the cloth and her sample to a door or window, where she could compare them by daylight. Now, with the "daylight" lamp, this matching can be done equally well at the counter.

Artificial daylight is produced by making the bulb of a tungsten lamp of a glass which corrects the light approximately to the spectrum of daylight. This glass is a faint blue in color, and is made in two shades. One of these is called "north window" daylight and the other "south window" daylight.

The difference between them is this: The light which comes through a north window is composed entirely of sunlight reflected from the sky. The light coming through a south window contains, in addition to the reflected light, a little direct sunlight. It is warmer in tone.

Inasmuch as this form of artificial light is the same as daylight in everything except in intensity, you would think most people would want it in their homes—but they don't.

The reason is that artificial daylight, in the home, seems cold and cheerless. For ages, the only light men had was firelight, which is composed mostly of red and yellow rays. They learned to associate the comfort and security of the home with a reddish-yellow light. The "daylight" bulb, with its greater proportion of blue rays, makes a room seem chilly.

ONE of the recent discoveries in connection with light has had a somewhat amusing sequel, as the following story will illustrate:

One evening last winter, when a young man living in a New York boarding-house came down to dinner, his appearance astonished his fellow boarders.

The landlady, a motherly soul, inspected him closely.

"Why, John!" she said, "are you sick?"

The young fellow shook his head.

"I believe you are," she insisted. "You must be coming down with something. Why, your face is just as red as fire!"

He assured her that he had never felt better in his life.

"Well," she said, only half convinced, "maybe you are all right; but what in the world makes your face so red?"

"Sunburn," he replied calmly.

Two or three others, attracted by the conversation, had gathered 'round. When they heard his reply they burst into a shout of laughter.

"Sunburn!" gasped one of them, when he could speak. "Why, you poor fish, how would you get sunburned in the middle of winter, working in an office all day? Tell us a better one!"

But John, perhaps with a desire to be tantalizing, refused to elucidate further. He ate a hearty supper, and then went to his room.

The following evening, at the dinner hour, his friends looked at him with awakened interest. The red flush was less pronounced in tone; it seemed to be deepening into brown.

By the fourth or fifth day there was no doubt about it; John's skin had assumed a most convincing tan. He looked exactly as if he had been spending the time under the palms at Miami, instead of bending over a desk in a Northern winter. One of his fellow boarders again took up the subject.

"By George," he remarked, "I believe you *are* tanned. How did you get it?"

"Well," John explained, "as you all know, I'm from the South. This winter I haven't been feeling good; sort of lost my pep. The doctor thought maybe I wasn't getting as much light as I have been accustomed to all my life, so he has been giving me treatments with the ultra-violet rays. That's all there is to it."

"Do you mean to tell me," asked another boarder, "that you can be tanned by *artificial* light?"

John nodded. "Yep," he answered. "And there is a lot of 'Palm Beach' tan going around New York this winter that was acquired no farther south than Fourteenth Street. You put on your bathing suit, lie under the ultra-violet lamp a few minutes daily for a few days, and you've got a tan that anybody would say had cost you two hundred dollars in railroad fare alone."

Light is now being used in the treatment of several kinds of illness.

THE ultra-violet rays, as I explained earlier in this article, are those light waves which lie just beyond the violet. They are present in all forms of light in a greater or less degree. Rays from the sun are strong with them, and these rays tan your skin—and even burn it if the exposure is long enough. The tan is merely a defense which the skin puts on to protect the body from these rays, by absorbing them.

The ultra-violet rays have, however, one peculiarity: they are almost entirely absorbed by ordinary glass. You could sit in the sunshine streaming through a window pane all day without acquiring the faintest tan. The wonderful thing about the ultra-violet lamp is the discovery of a kind of natural glass through which these rays pass freely.

This natural glass is called quartz. It occurs abundantly in nature, but until recent years no commercial method was known by which it could be melted, molded, and shaped so as to be perfectly transparent. It is now done in the electric furnace.

The ultra-violet lamp is nothing more than a mercury-vapor arc, the tube of which is made of fused quartz. This form of light, which consists almost entirely of the green rays in the visible spectrum, is very rich in the ultra-violet. These lamps are quite powerful. An exposure of from three to five minutes is sufficient to redden the skin, equivalent to a slight sunburn. Longer exposure would produce severe burning, with serious results.

The ultra-violet ray is used in the treatment of certain skin diseases, with apparent success, and also for the bizarre purpose of making up light deficiency in certain persons.

The ultra-violet rays have also the property of killing germs; and one use of the ultra-violet-ray lamp is in purifying water by exposing it to the rays. This explains how sunlight purifies the water in rivers.

Why men leave home... *half fed*

ALL over the country, countless front doors bang each morning behind half-fed men, emerging to tackle the day's work. They don't know they're half-fed. They've had their breakfast. Of course they've had their breakfast. They may have hurried a bit, but they've had their usual breakfast.

They don't stop to think—and their wives don't stop to think—that this "usual breakfast" is an inadequate, poorly-balanced, starvation-diet kind of meal. A sufficient amount of *food*, perhaps, but not nearly enough *nourishment* . . .

But a small breakfast can be a safe breakfast

Stick to your small breakfast if you must—if your appetite and your morning schedule so dictate. But by all means stop to think—or get your wife to stop to think—that a small breakfast must be a particularly nourishing one. As a result of such thinking, Grape-Nuts has taken its place on millions of American breakfast tables. Eaten with milk or cream, a single serving of these delicious golden kernels supplies a generous amount of unusually well-balanced nourishment.

Grape-Nuts is made of wheat and malted barley. It gives to the body dextrins, maltose and other carbohydrates for heat and energy; iron for the blood; phosphorus for teeth and bones; protein for muscle and body-building; and the essential vitamin-B, a builder of appetite. The special baking process by which Grape-Nuts is prepared makes it one of the easiest foods in the world to digest, and gives it its characteristic flavor. A wonderfully tempting flavor—nut-like, with a delicate suggestion of malt sugar.

And then, there's the *crispness* of Grape-Nuts. Not a crispness like that of any other food—but a delicious crunchiness that *makes you chew*. Your dentist will tell you how greatly such exercise benefits your teeth and gums.

For all these benefits it can bring—put Grape-Nuts on your breakfast table. Your grocer sells it—but perhaps you would like to accept the following offer:

Two servings of Grape-Nuts and "A Book of Better Breakfasts"—free!

Mail the coupon below. We will send you, free, two individual packages of Grape-Nuts and "A Book of Better Breakfasts", written by a famous physical director.

© 1927, P. C. Co.

Grape-Nuts is one of the Postum Cereal Company products, which include also Instant Postum, Postum Cereal, Post Toasties (Double-thick Corn Flakes), Post's Bran Flakes and Post's Bran Chocolate.

Six-Room House
No. 621

Plan now your own charming Face Brick

Home of Beauty

COLORFUL Face Brick will make your new house a real home—substantial, comfortable, satisfying—one that will serve you a lifetime and pass down to your children's children, lovely with the mellowness of the years, precious with the cherished memories of family fireside and genial friends. "The Story of Brick," a valuable booklet on building. Sent free.

INTERESTING BOOKLETS ABOUT HOME BUILDING

"Face Brick Bungalow and Small House Plans" embrace 128 designs of houses, unusual and distinctive in design, convenient in floor plan and economical to build. Four booklets showing 3 to 4-room, 5-room, 6-room and 7 to 8-room houses. Each 25 cents. Entire set $1.00.

"The Home of Beauty" contains 50 two-story, six-room houses, submitted by architects in a nation-wide competition. Sent for 50 cents.

Complete plans for all these houses available at nominal prices.

"The Home Fires" tells how to build a real fireplace and shows many attractive fireplace designs. Sent for 25 cents.

"A New House for the Old." Stop repairing and painting by veneering the old house with beautiful Face Brick. Booklet sent free.

While ordinary glass absorbs most of the ultra-violet rays, some, a very small proportion, pass through. This proportion, in ordinary incandescent lights, is so small that it can hardly be detected, even by scientific instruments. But from a light of great intensity, such as a high-power searchlight, enough of the rays pass through the glass front of the lamp to produce a good case of sunburn, if the skin is exposed to it for any great length of time. Men who are employed in constructing and testing searchlights show a fine coat of tan the year around.

The commonest form of artificial light is the ordinary incandescent bulb with the tungsten filament. These vary in size from the tiny "grain of wheat" lamp to the thirty thousand-watt lamp, the size of a football. The "grain of wheat" lamp is just the size and shape of a grain of wheat. It is used in the instruments with which surgeons explore the interior of the human body.

Tungsten metal is the best filament material because it withstands the necessary heat better than any other substance. It is produced from an ore called wolframite. This is mined in Colorado, California, China, and Africa, as well as in some of the European countries. Most of that used in this country comes from China, and the crude ore is reduced to tungsten in America.

At the mine the crude ore is worth forty dollars a ton. After it has been reduced to bars of tungsten in the electric furnace it is worth four thousand dollars a ton, and after it has been drawn into filament wire, which is stronger than steel and not much larger than a human hair, it is worth seventy dollars a pound, or one hundred and forty thousand dollars a ton.

AS I stated earlier in this article, the *kind* of light we use in our homes, schoolrooms and offices is not so important as the amount. Most rooms are underlighted.

What is proper illumination? Just one thing: enough light free from glare.

The unit of light measurement is called the "foot-candle." This simply means the amount given out by a *standard candle* at a distance of one foot. The light given by a standard candle is about half that produced by the ordinary tallow candle which you can purchase at the corner store. If you held a tallow candle a foot away from the wall, the intensity of illumination directly in front of the candle would be two foot-candles. The illumination of the average office by artificial light is about four foot-candles—which means that on the desk, where the light is needed, the amount of light is equal to that of two tallow candles held one foot away from the desk.

Compare that with the light out of doors. On a cloudless day in midsummer in an open field the average illumination of full sunlight is equal to *eight thousand* foot-candles. In the shade of a tree the illumination is five hundred foot-candles. The sunny side of a street is illuminated with a light intensity of about three thousand foot-candles, while the shady side of the street has about three hundred foot-candles. The light of the full moon, in an open field, is equal to about thirteen-thousandths of a foot-candle.

150 Pounds Pressure CRANE VALVES 2500 Pounds Pressure

[*A view above the boilers in the power house of* NORTHWESTERN UNIVERSITY, *Alexander McKinlock Memorial Campus, Chicago. Consulting Engineer,* W. L. FERGUS. *Piping Contractor,* W. A. POPE. *Header and valves of Crane steel, and piping, supplied by* CRANE CO.]

An investment in knowledge

Carved in stone above the Gothic doorway of the School of Commerce, Northwestern University, are these words of Benjamin Franklin's: *"An investment in knowledge always pays the best interest."* Doubly apt is the thought, since the door also leads to the power house with its Crane valves, fittings, and piping.

Man's mastery of metals and his influence over their texture and quality are the interest on just such an investment in knowledge. As early as 1888, Crane Co. established the country's pioneer laboratory for the chemical control of raw materials. Later, a similar pioneer effort systematically determined the behavior of metals and alloys at high temperatures.

As precedent and rule-of-thumb gave way to exact science, timid advance became rushing progress, with Crane well in the forefront. Today, at the service of every human activity are Crane materials, definitely grounded on the wealth of practical knowledge gained in 72 years of study and work with metals.

You may be the consulting engineer for a vast power development and need giant gate valves or special pipe bends; you may be building a bungalow and need a sink faucet or a drainage tee. Thus requirements vary, but never Crane quality. For safety, strength, and economy, specify Crane piping equipment.

In This Wide-Open Field Where You Can Triple Your Income

While Insurance, Real Estate, and everything else you can think of, are swamped with competition, the field of FIRE PROTECTION has remained virtually undiscovered—practically untouched. There are small fortunes in this fast growing business for men who enter now . . . life-time jobs, paying $90, $100 and up to $250 a week, yours, now, almost for the asking.

START AT ONCE
No Experience Required

NOTHING is more widely needed in America than fire-fighting devices. Our national fire loss is $1,000 a minute—think of it—over $550,000,000 a year!

We make the most effective fire-fighting devices ever known. FYR-FYTERS shoot an amazing new chemical . . . harmless and stainless . . . that multiplies itself hundreds of times and snuffs out fire like a gigantic wet blanket. Fyr-Fyters are approved by the Underwriters' Laboratories. Our business is ten years old . . . the world-leader in this field . . . now growing faster than ever.

Ford, Packard, Firestone, General Motors, Standard Oil and hundreds of similar concerns have already turned to this new way to fight fire. Last year our representatives sold millions of dollars' worth of Fyr-Fyters.

Represent Us—Full or Part Time

The field is wide-open. You have millions of prospects and practically no competition. Only 5% of the market has been supplied. Everybody fears fire. Millions want this protection . . . factories, stores, homes, farms, schools, hotels, etc., etc. . . . countless new buildings, autos, trucks, garages.

Fyr-Fyters make amazing demonstration in 2 minutes and sell fast. Every property owner instantly recognizes the need for Fyr-Fyters. One customer often buys 50 to 100 at one time!

One city block is capable of sales running into thousands of dollars. Viles made a $1,700 sale. Brady took a $4,200 order. Homes or farms, alone, can pay you $4,000 a year.

Anyone can sell Fyr-Fyters. We start you . . . full time or part time. You need no capital for stock. We give you a detailed plan to follow that has doubled and tripled incomes for hundreds of men. DePries took this plan, left a job at $85 a month, and made $7,000 in one year. Payne averaged $20.77 a day profit his first 200 days.

I can't list all of our $10,000 men here. I can't begin to tell you all of the opportunities. But there isn't a single reason why you can't easily make $12 to $15 a day from the start and climb right up to $10,000 a year.

Get This Plan FREE

Let me send you complete details of this work FREE. See how easy it is. Then, with all the facts before you, decide. If you're the kind of man we want, use the coupon . . . mail it now!

In an office with large windows, a desk six feet from the window will receive, on a clear day, a light intensity of one hundred and ten foot-candles; twelve feet away this intensity drops to seventy foot-candles, and eighteen feet away to fifty foot-candles. This last figure seems small, compared with the others; but it is more than ten times the intensity of the artificial illumination provided in the same office. Most offices are lighted with an average intensity of less than five foot-candles—which is not enough light.

Indirect, or "shadowless," lighting is undoubtedly best in offices, because there are neither direct nor concentrated rays, and consequently no shadows. It is not much used in homes, because the absence of shadows makes it peculiarly ugly.

TO WORK with comfort and without eye strain, the light on the desk ought always to be from fifteen to twenty foot-candles.

This amount of illumination will be provided by a sixteen-candle-power electric light one foot away from the work, a thirty-two-candle-power light one and one-half feet distant, or a hundred-watt lamp six feet above the desk.

The light should be shaded, so that it will not directly strike the pupil of the eye, and should be set at such an angle that it will not be reflected into the eye from papers on the desk, or the polished surface of the desk itself. The easiest way to tell whether or not light is being reflected into the eye is to lay a mirror on the desk in the place usually occupied by your work. If you see the light in the mirror, then it is set at the wrong angle; and you should either move the light, or the desk, until the light itself is no longer visible. Then you may be sure that your eyes will not suffer from glare.

The amount of light necessary to light a room is determined, of course, by the reflecting ability of the walls. The best reflecting surface is pure magnesia, which returns about ninety-eight per cent of all the light which falls upon it. Any white wall reflects more light than any colored wall. A wall painted dead black would reflect least. A yellow tint seems best, both from the psychological effect on the nerves, and from the amount of light reflected.

LESS light is required at home than in the office. A living-room is most attractively and restfully lighted when just enough illumination is provided to see your way about comfortably, with spots of bright light where they are needed for reading or sewing.

This is accomplished by using heavily shaded wall sconces for general illumination, in combination with reading lamps. The best tint for the shades of lights at home is a light amber. This tint will not "fight" with the decorative scheme of the room, and, for the benefit of the ladies, light of this particular color has the peculiarly valuable characteristic of making the skin look its best.

A reading lamp fitted with three sixteen-candle-power electric lights four feet away from your book or paper will give twelve foot-candles, which is plenty; it is also sufficient for sewing.

All of this, and much more, I heard while on my visit to the research laboratories of the General Electric Company. But why the continued experiments? you ask. Well, there has been constant improvement in artificial lighting, and there is no reason to conclude that there will be no further improvements.

The scientists have discovered what light is. Maybe, some day, they will find how to broadcast it. Who knows? It is a radio wave. Very tiny, it is true, but that does not daunt the scientific mind. Radio would have been considered impossible only a few years ago. Electric lights would have been considered impossible a few generations ago. But radio and electric lights have come. No one knows what the scientists will discover next. But they will discover something. They are sure of that. There always has been progress; and there always will be.

"FOUR Heroes and a Heroine of Whom You Have Never Heard" is the story of a man who has built a fine career on the influence others have had upon him. Two of these heroes of his were preachers, one a village schoolteacher, and one a designer of machinery. The heroine was a widow who fought hard to support her children. Not one of the five ever thought of doing heroic deeds. But influence is a magic thing. Everyone exerts influence of one kind or another, and this article next month reveals clearly the undreamed-of power that you may have on the lives of others.

Things I Wish My Congregation Wouldn't Do

(*Continued from page 59*)

not one of that never-minding class. I always have a severe nervous headache after officiating at a funeral. To go into a house where death has come, to console the stricken family with the right assurances, while all the time my own heart is torn with their sorrow and the mortal doubt that comes to the strongest of us in such hours—no, that's not easy work. It is the sort of experience that puts furrows in a minister's face.

If my congregation could only understand these things, they would not feel that I do not earn my salary; that somehow I am living on their charity. I wish they didn't think that; but I know that sometimes they do. They regard me, half unconsciously, as fortunate to be their pastor; fortunate to have such good furniture in my parsonage; fortunate to get a raise of one hundred dollars last spring.

I want my congregation to know that I am no more living on their charity than

The Layerbilt patented construction revealed. Each layer makes automatic contact with its neighbors, and fills all available space.

Eveready Layerbilt "B" Battery No. 486, for all loud-speaker sets.

This is the Heavy-Duty Battery in which the new Layerbilt construction provides greater economy

THERE'S an important discovery in radio economy awaiting all users of loud-speaker sets who have been buying the smaller Light-Duty "B" batteries instead of the large Heavy-Duty size required by such sets. Because the Light-Duties cost somewhat less to buy they seem like an economy, but the surprising fact is that the Eveready Layerbilt No. 486 lasts more than twice as long though it does not cost anywhere near twice as much. It is, therefore, much more economical—we believe it to be the most economical "B" battery ever built. Certainly it has proved this by laboratory tests and the service it has given to radio listeners in their own homes during the past eighteen months.

Eveready Layerbilt's remarkable life is due to its unique construction. All other dry cell "B" batteries are assembled of cylindrical cells, with much waste space between them, and many soldered connections bridging the gaps.

Several years ago we struck boldly out, away from this tradition, seeking a better method. We wanted to avoid waste space, minimize soldering, and get more current and longer life from a given quantity of active materials. The Eveready Layerbilt is the result.

This patented, exclusive battery is built in layers of flat current-producing elements, making automatic connection with each other. Every available inch inside the battery is occupied usefully. You get more battery for your money, and that battery is more efficient.

Remember this about "B" batteries: All loud-speaker sets require Heavy-Duty batteries, and the Eveready Layerbilt has proved time and again to be the longest lasting and most economical Heavy-Duty "B" battery.

$7500 —a 900% Increase!

was the experience of C. W. Birmingham of Ohio after reading "Modern Salesmanship." Formerly he earned only $15 a week!

$3000 in 5 mo!

earned by William Shore, former cow-puncher of Neenach, California. Recently he earned $525 in a single week!

$7286 Last Year

which was an increase of over $6000 a year for F. G. Walsh of Massachusetts. He gives N. S. T. A. credit!

~and They Started By Reading This Amazing Book!

Now—For a Limited Time Only. This Remarkable Man-Building, Salary-Raising Volume is Offered FREE to Every Ambitious Man. Read It Without Fail!

Where Shall We Send Your Copy FREE?

A Book! Just seven ounces of paper and printer's ink—but it contains the most vivid and inspiring message any ambitious man can ever read! It reveals facts and secrets that have led hundreds of men to success beyond their fondest expectations! No wonder a famous business genius has called it "The Most Amazing Book Ever Printed!"

This vital book—"Modern Salesmanship"—contains some surprising and little-known facts about the highest paid profession in the world. It blasts dozens of old theories, and explains the science of selling in simple terms. And not only that—it outlines a simple plan that will enable almost any man to master scientific salesmanship without spending years on the road—without losing a day or dollar from his present position.

What This Astonishing Book Has Done!

The achievements of this remarkable book have already won world-wide recognition. The men who have increased their earning capacities as a direct result of reading it are numbered in the thousands. For example, there is J. H. Cash of Atlanta. "Modern Salesmanship" opened his eyes and he quickly raised his salary from $75 to $500 a month! W. D. Clenny of Kansas City also commenced making as high as $850 a month. And O. H. Malfroot of Massachusetts became sales manager of his firm at a salary of over $10,000 a year!

A Few Weeks—Then Bigger Pay

There was nothing "different" about these men when they started. Any man of average intelligence can duplicate the success they have achieved—for their experience proves that salesmen are *made*—not born, as some people have foolishly believed.

Salesmanship is just like any other profession. It has certain fundamental rules and laws—laws that you can master as easily as you learned the alphabet. And through an exclusive feature of the N. S. T. A. System of SALESMANSHIP training—you can acquire the equivalent of actual experience while studying.

Free to Every Man

If we were asking two or three dollars a copy for "Modern Salesmanship" you might hesitate. But it is now FREE. We can not urge you too strongly to see for yourself what it can do for you too. No matter what your opinion is now, "Modern Salesmanship" will give you a new insight into this fascinating and highly-paid profession. Mail the coupon now!

the school-teacher lives on the charity of the taxpayers. But sometimes the attitude of our church members reminds me of the time our Women's Home Missionary Society sent an orphan girl through college. Every month she was obliged to remit a list of her expenditures, which was read aloud in the meetings. My wife said that it was pathetic—two cents for a pencil, seven cents for a pad, fifty cents for cotton stockings. Once the society made an uproar because the members thought their ward paid too much for stockings. She was using their good money, and she must be careful. To me the whole procedure seemed barbarous. The girl was not allowed any pride.

But fundamentally, in the minds of my parish there is not a long distance between the orphan girl and myself. If I give evidence of having extra money, people criticize me, and say I am overpaid. They do not intend to be cruel; but they cannot help thinking I am living on their subscriptions. Every so often a parishioner takes it upon himself to tell me how well I am paid, considering that I get my house rent, telephone, water, and plumbing free. He will add up the figures, and show me how blessed I am.

"Now, I get a larger salary than you," he will say, with thumbs in his waistcoat, "and you wouldn't believe what I spend!"

I AM more fortunate than the ministers in some country districts, who have to go out and collect their own salaries from door to door, and who receive part of their stipend in vegetables. Every country minister has experienced donation parties, to which the members bring butter and sides of ham, and value each article as part of his pay. I have passed beyond all that; but I still feel the pressure of congregational interference in my daily life, and it is my sixth wish that it were removed.

I own a cheap car, of a well-known make. I can imagine only too well the public disapprobation were I to buy a more expensive machine. I would receive no more raise in salary for the remainder of my stay in my charge. Plenty of parishioners are letting their grocery bills go unpaid, and are buying four-door sedans; but no one dreams of reproving them. If I should do the same—well, I live in a glass house.

The average minister knows the walls of his parsonage are transparent, and if he desires to remain in favor he will show no signs of over-comfort.

A woman member told my wife only the other day, "Ministers' families must make up their minds to be poor." In the opinion of the congregation, there are suitable actions and clothes for ministers' families—plain and dark.

Seventh, I wish that my congregation wouldn't support an overseer Ladies' Aid, which picks out my furniture, my dishes, my pictures—everything. These good people take pleasure in choosing furniture for their own homes. Perhaps they don't realize how much my wife and I would like to select a rug, for instance. We never have selected even a rug in all our married life. We have never gone together to the furniture department of any store. It is hard for us to live with the things others buy; they are often so ugly and so cheap.

On one occasion, a parsonage committee did take my wife with them to buy a dining-room rug; but giving her a say-so was a farce. They took her past all those she liked, and stopped before a dull brown rug, saying, "There, Mrs. ——. Here is something that is inexpensive and that will wear well and won't fade. What do you think?"

We have never known the joy of planning a house, of poring over blue prints, and we never shall. All our lives we spend in houses someone else has built, houses constructed with one idea in mind—economy. Did anyone ever hear of an artistic parsonage? Why, the very name calls up shabby images to anyone's mind!

I WISH parsonage committees could know what it means to go to a new parsonage—to leave the inconveniences of one house for the inconveniences of another. All the way to the new parish we talk hopefully of the expected house. When our cab drives up the street to the new abode, we hardly dare look. We have never stopped believing that things may be better in the new home. Our emotions when we face our future furniture would take a chapter by themselves. If the parsonage committee is not there to welcome us, we let ourselves in with the key from under the mat. We hurry down to a strange grocer for provisions. Timidly, my wife tests the stove.

Eighth, I wish my congregation would not think I like to ask the Ladies' Aid for a new coal scuttle, or a new ice box, or a new screen door. If they could only hear how my wife and I talk to get up our courage.

"I simply can't make that screen door do any longer," my wife will say. "The screen is rotted off. I wanted a new one last summer, but I made it do, and the flies got in by dozens."

"They will believe we are asking just to be pesky," I will answer. "No matter, we must have it."

Then my wife must face the ordeal of sitting in the Ladies' Aid meeting while they argue whether or not they can afford the screen.

Sometimes, when I think of my high calling, my duty to lead my people toward the Light of the World, I wonder with a sort of agony how it happens that I am subject to a Ladies' Aid. It seems like a bad, wild dream. There is no higher calling than mine, and none so subject to humiliations. A street sweeper has greater liberty. The other night, in family prayers, my little son said, "O Lord—deliver us from Mrs. Grump!" My wife and I opened our eyes and looked at each other, because Mrs. Grump was the woman who had objected to my wife's new brown dress with the embroidered panels. She said it was too expensive for a minister's wife.

"I know it was dear," my wife confessed to me; "but I couldn't resist it!"

While I am speaking of ministers' wives, I want to say that I wish my congregation wouldn't think my wife is made of India rubber. That is my ninth and most earnest wish. She simply cannot belong to all the organizations, take the leading part in church work, call on the women members, and at the same time be the good wife and mother they expect her

A NATION-WIDE INSTITUTION-

J.C. PENNEY CO.

1902

A small dry goods, shoe and clothing store was opened in a small town in the west, serving a few hundred homes.

1927

The one small store has grown into a Nation-Wide Institution of 773 Department Stores serving millions of homes.

FROM ACORN TO OAK

After 25 years of growth now a nation-wide shopping service

WE are celebrating with pride and thankfulness our Twenty-fifth or Silver Anniversary—with pride for the privilege of serving the American public—with thankfulness for the generous response that has come to our effort.

Since the Spring day in April, 1902, when Mr. Penney inaugurated, in a small and inconspicuous manner, a Retail Shopping Service which was destined to become one of Nation-wide Helpfulness, a quarter of a century has passed.

It has been a period of notable growth and expansion, of winning millions of friends, of serving them faithfully, of basing achievement upon the good will of mutual satisfaction.

During all these eventful years, we have been mindful of our responsibilities to the legion of patrons who have contributed and are today contributing, so continuously and so generously, in helping make our Service one not of profit alone but of the confidence that rests on good will.

Never for a moment have we knowingly wavered from the responsibility of this relationship. It has always been to us an inspiration to reach out for greater things, that we might be the better prepared to render a Service which should prove to be more and more beneficial to the increasing numbers who come to us.

Not only is that one little Golden Rule Store of 1902—now itself grown to far larger proportions—still serving the people in and about Kemmerer, Wyoming, but there has sprung from its applied principles and policies, others to a present total of 773 Department Stores, scattered over 46 States.

All these are children of what we now affectionately term, The Mother Store; all happily operate in the Service of the public under the name of the J. C. Penney Company. The Founder of this Organization—Mr. James C. Penney—builded in his pioneering days more enduring and substantially than he knew.

His ideals and practices—square treatment alike to all always—and the extent to which he packed Value into every Dollar of purchase—these constitute the pattern according to which this enormous business has been shaped and which has caused it to grow until it has now become a Nation-wide Institution, serving more than 3,000,000 homes.

The dynamic selective and buying power of the Company created by its tremendous volume of cash sales, which, in 1926, amounted to $115,682,737.86, gives *a saving power to the public* which means much to the thrift and to the economic life of the people of every community where it operates a Store.

At this milepost in our history, we pause only long enough to express our thanks to the great American people for their continued confidence and appreciation of our efforts in their behalf and to offer the assurance that in the future as in the past we shall strive to serve not only well but better and better with each succeeding business day.

OUR ANNIVERSARY CELEBRATION BEGINS APRIL FIRST!

WRITE TODAY FOR "THE STORE NEWS"

beautifully illustrated by rotogravure, showing you how to save large sums on Dry Goods, Clothing, Furnishings, Shoes and kindred lines—standard quality goods! A post-card will bring it.

A NATION-WIDE INSTITUTION-

J.C. PENNEY CO.

Executive Offices and Warehouse—330 W. 34th St., N.Y. City

RETAIL SALESMEN WANTED

experienced in our lines, to train for Co-partner Store Managers, providing for the continuous growth of our Company and especially the expansion planned for 1927. Write for particulars.

your dog

A Dog that Built a Big Business

THE love of a southern sportsman for his dog gave life to a business that is now nationally successful.

"Sergeant," the favorite hunting dog of the famous dog lover, Polk Miller, was subject to the usual canine ills. Fifty years ago knowledge of dog remedies was meagre. Polk Miller studied the diseases of dogs to find effective remedies. His remarkable success attracted much attention among his numerous friends. He was besieged for advice and medicines.

At this time of year watch closely for signs of distemper, described on page 21 of Polk Miller's Dog Book. Use Sergeant's Distemper Medicine.

From this nucleus grew the great organization that distributes "Sergeant's" Dog Medicines to all the world.

Famous Dog Book Is Free

Polk Miller's notes were compiled into a pamphlet and distributed to dog owners. Each year it has been edited and revised by our skilled veterinarians.

Now this enlarged up-to-date book is a guide for millions of dog owners. It tells of the symptoms and treatment of dog diseases. It explains proper methods of feeding and breeding. It is crowded from cover to cover with useful information. This valuable book will be sent free to dog owners who write for it.

Your dog needs a tonic in the Spring. He should be guarded against sickness and general weakness at this time with Sergeant's Condition Pills. Page 20 in the Dog Book.

Skilled Advice, Free

If your dog develops a condition not fully answered in Sergeant's Dog Book, we urge you to write our Free Advice Department, under the direction of a famous veterinarian and dog specialist and his staff. Personal attention to every inquiry. State breed, age and sex of your dog and all symptoms. Complete instructions for care and treatment will be sent promptly without charge.

All puppies should be wormed regularly to insure good health and even their lives. The reason is given on page 15 of the Dog Book. Use Sergeant's Sure Shot Capsules.

Sergeant's Dog Medicines are sold by dealers everywhere. If you cannot obtain them, write us direct. Address: Polk Miller Products Corporation, 1560 W. Broad St., Richmond, Va.

Write for your free copy of Polk Miller's dog book.

to be. Every time the church is open, she must be there. She must be the hardest worker in all the societies, teach a Sunday-school class, have ideas about pageants and socials, and know how to sew costumes at a moment's notice. She must be wise in ways of raising money for the church budget. She must not mind when committees make raids on the parsonage after furniture for the socials.

One year our baby slept for three nights on the lounge, because the Junior League needed a crib for a play. The church people believe we should not mind lending them furniture they have paid for.

Tenth, I wish my congregation wouldn't think my religion is at fault when my boy breaks a parish window with his baseball. My children know well the fierce light of publicity that beats upon them; but being young they are not always reconciled or careful. To my son, I am not "the minister," but only a parent with failings. And I have all the modern parent's problems.

I have one daughter about whom I have always been advised. She is studiously inclined, and has reached a grade in school above that in which most of the children of her age are classed. Her rapid advancement has worried my people in several charges. They tell me melancholy tales of precocious children.

"I wouldn't push the child," they say. "You will ruin her brain."

"I would rather have my child be normal," others declare, "and be with the children of her own age."

"Do you give her cod-liver oil in the winter?" a mother will inquire. "She looks peaked. She must study too hard."

If the truth were known, our Nancy takes her lessons with nonchalance, and has never had a day's sickness in her life.

My eldest daughter has reached the marriageable age, and I wish my parish wouldn't think she is bound to keep company with boys of our denomination only. There was gossip this winter because she was accepting attentions from a member of another church. At dances, she is supposed to favor exclusively the sons of our largest givers. As a matter of fact, I think she will marry a man from out of town; and I am glad of it.

I can appreciate her problem to a small degree, because, to my sorrow, I am expected to patronize only doctors and dentists of our denomination.

MY GOOD congregation does these various things I have mentioned, not from unkindness but just because they do not stop to realize that I am human. They do not sense my humanity, partly because of my sacred calling, which traditionally sets me apart, and partly because of the frock coat I wear, which puts me into a uniform and makes of me a type figure.

I do not want my flock to think of me as "the minister," as a perambulating frock coat, vocal on Sundays. I want them to think of me as a fellow being, with hopes and fears, prides, wounds, loves, temptations, and doubts like their own. I am tempted to sin, even as they, and I have my doubts at times. It is a minister's dark secret that he has his doubts, like the least of his brethren. He would never tell his congregation that, because they would lose confidence in him, as they would lose confidence in a doctor who forgot a prescription. But religion is not a matter of remembering prescriptions, as many think. God's mysterious ways are not always clear to me, even though I know the conventional explanations. Sorrows, too, take me by the throat. Life puzzles me, as it puzzles everyone, and I have nights when I am sure of nothing at all.

But I have no pastor with whom to discuss my puzzlement. I must hold the torch of faith high for others, no matter what my own heart may feel. I am always the comforter, never the comforted—always the healer, never the healed. If I should confess to my parish some of my spiritual struggles I would run the risk of losing my position. It would be the old Crucifixion spirit of: "He saved others, himself he cannot save." But I often long to call out to my flock, and say, "Look! I am not stuffed with sawdust. I can feel those pins you stick in me. I am alive. I am a man."

MY SON says occasionally, "Gee, Dad, if they only knew what larks we have!" If my church members only knew what larks and what griefs, they would not commit any of those transgressions against my liberty which I remember now, late at night, in my study. They wouldn't expect me to be perfect in my sermons, to be responsible for everything that goes wrong, to know by instinct when a member is sick, to enjoy the patronage of the Ladies' Aid. Perhaps some of my congregation who read this will begin to say among themselves how much a minister has to be thankful for, and what his rewards are. They know a minister has his advantages. It is "the pot of salve they keep on the shelf of their consciences." Ministers themselves talk of nothing but the rewards, in the daytime. I, too, know the joy of the fields white with harvest. I have brought in the sheaves.

But the mind stands amazed at what a minister might accomplish if only the hindrances and interferences loaded on him by his congregation were out of the picture. If he were only a freer man, he might have the time to be wiser. If he were a more independent man, he might be a better leader. If he were only not harried and hurried, he might bring riper counsel and a peace unfailing as the widow's cruse. He could do twice as much for his people, if they would only let him.

These are my thoughts in the small hours, when courage is not so high as in the day. I have kept them hidden in my heart, like every other minister, but they are none the less real. My congregation are the salt of the earth; but sometimes the salt can lose its savor. As I write these closing words, I see the night is far spent. Soon it will be morning, and I will pull up the shades.

"MARRIAGE," an article by Booth Tarkington. . . . What more need be said? Such a theme discussed by such a writer has a world of significance. Next month, Mr. Tarkington reveals an amazing knowledge of what goes on inside of human beings. He digs deep into them, and shows you in a clear and definite way what sorts of marriage are happy, and what sorts go to smash.

Remington

"My typewriter problem is completely solved"

THE Remington Line alone can solve all your typewriter problems with *A Machine for Every Purpose.*

Standard Typewriters, Noiseless Typewriters, Electric Typewriters, Tabulating Typewriters, Portable Typewriters, Vertical Adding Typewriters, and Bookkeeping Machines of every kind and description—these are the components of the Remington Line. And each of these many Remingtons is the very last word in the field it covers.

The completeness of the Remington Line—a new development in the industry—enables the typewriter and bookkeeping machine user to practice selective buying to a degree hitherto impossible.

In making the right selection, the Remington representative can render you most helpful assistance. His training is as complete as the line he sells; he knows the machine which *should* be used under every given condition—and for each and every purpose. This knowledge and training is freely at your service.

Remington Typewriter Company
374 Broadway New York
Branches Everywhere

Remington-made Paragon Ribbons & Red Seal Carbon Papers always make good impressions.

The International Jury of the Sesqui-Centennial Exposition at Philadelphia has awarded the Remington Typewriter Company the Grand Prize, its highest award, for typewriters and bookkeeping machines, adapted to all purposes, and particularly commends as a notable advance in typewriters the Remington-Noiseless, Model 6.

The clerk whose name will live forever

TWO MEN lived in the same town a century ago; they knew the same people and had an equal chance in life.

One spent all his spare hours in idle talk or with the daily paper; he knew nothing beyond the day's news. The other brought to every subject a wealth of sidelight and illustration that kindled the interest of men and women, no matter where he went.

The name of the first man has long since been forgotten; the name of the other, the humble clerk in a country store, will live forever.

He talked like a man who had traveled, though his travels were confined to a few backwoods counties. He knew something of history and biography, of the work of great philosophers, poets and dramatists.

His Secret Given to You

What was the secret of his wide range of knowledge? How can a man who must work every day in a routine job find time to make himself so interesting to other men and women?

The answer is found in every biography, every anecdote of that *greatest* clerk. He owned a few great books and, in the odd moments between customers' calls, he read them systematically. It was the influence of those books that gave his mind its start; then lifted his eyes beyond the horizon of a backwoods town. Before he was fifty, the whole nation knew the name and acknowledged the power of that humble, unschooled man. His name was Abraham Lincoln.

What are the few great mind-building books? There is no more important question for you to ask yourself. It is answered in the free book that tells the scope and plan of Dr. Eliot, from his lifetime of training men for success—forty years as President of Harvard—selected the few great books that contain the essentials of *all* books—the "essentials," as he says, "of a liberal education."

Dr. Eliot's Five-Foot Shelf of Books

(*The Harvard Classics*)

Send for this FREE Booklet that gives Dr. Eliot's own plan of reading.

Your Reading Problem Solved by Dr. Eliot

Discarding all the books that waste your time, he combined these few great volumes together into a rounded library; he arranged them with reading courses and footnotes so that even in 15 minutes of pleasant reading a day a man may master them.

Think of it—the knowledge of literature and life, the broad cultural viewpoint that every university strives to give—these may be yours in the pleasant spare moments of your active days. Make yourself a bigger, more interesting man or woman this year. Send for "Fifteen Minutes a Day."

"For me," wrote one man who had sent in the coupon, "your little free book meant a big step forward, and it showed me besides the way to a vast new world of pleasure."

Every reader of this page is invited to have a copy of this handsome and entertaining little book.

MAIL THE COUPON TODAY

Reading is an essential part of every human life, and good books make the best reading. Since 1875, P. F. Collier & Son Company have not only published good books but have brought them within reach of all by the Collier plan, which enables you to pay for them while you are enjoying them.

Since 1875 COLLIER Good Books

P. F. Collier & Son Company
250 Park Avenue, New York City

By mail, free, send me the little guide-book to the most famous books in the world, describing Dr. Eliot's Five-Foot Shelf of Books (Harvard Classics), and containing the plan of reading recommended by Dr. Eliot of Harvard. Also please advise how I can procure the books by small monthly payments.

My Favorite Character in Fiction

FIRST PRIZE

Huck Finn Did the Things I've Always Wanted to Do

I'LL never forget "Huckleberry Finn," by Mark Twain. I first read about him in the merry days between twelve and fourteen, when I was in revolt against all that was respectable. "Respectable" meant the furious scrubbing of neck and ears, going to Sunday-school, speaking pieces on holidays, dressing up for relatives, and helping with the dishes. I reluctantly accepted these motions with a boy's philosophy. Perhaps my resignation was made easier by Horatio Alger, who had informed me through countless hair-raising romances that boys who minded their parents would some day rescue a train, or save a bank president's life and win bushels of money.

And then one Christmas I found the "Adventures of Huckleberry Finn" on the chair beside my Christmas stocking, and that very day I sailed down the Mississippi on a raft with Huck and Nigger Jim. Ever since I have especially admired my parents, because, although they brought me up to be eminently respectable, they introduced me to a gloriously unrespectable Huck. I took to Huck as gladly as he took to the river. He spoke my language; he saw through my eyes, and he *did* things! The whole marvelous panorama—Huck watching the villagers searching the river for his body; Huck dressed like a girl, trying to fool the old woman; Huck among those scoundrels—the Duke of Bridgewater and the "late Dauphin," Huck and Tom rescuing Jim from prison—the book held me in a mighty thraldom.

Since then I have reread "The Adventures of Huckleberry Finn" several times, and I hope to read it many times more. As I have grown in years, I have also grown to marvel at the artistry of the tale, and the delightful satire it contains. But I shall always return to the boy, Huck himself, and to the memory of my first reading. H. W. B.

SECOND PRIZE

Cyrano de Bergerac Can Make Me Laugh and Cry

WAS there ever a more lovable character in all the book-world than Rostand's Cyrano de Bergerac? How well I remember him—his hat with the long plumes, the frills about his neck, his long cape draped over his sword, his high boots. How well I remember, too, the great ugly nose he was so sensitive about. It is Cyrano who makes me laugh with his gay quips, his effrontery; it is Cyrano who brings the ache to my throat and the tears to my eyes, by the tragedy of his life! That he should be so hideous to look upon is perhaps why I feel so much sympathy for him, for I know too well the sting

Apply with the Finger Tips

When Minutes and Comfort Count

WHETHER it is the hurry-up shave of the morning, or the careful take-your-time shave of the evening, MOLLÉ is the greatest aid, today, for easy shaving.

A quick application, with the finger tips, of this delightful, emollient cream over the face; a once-over with the favorite razor and the beard is removed—cleanly, smoothly, comfortably.

It's the quickest, easiest, and best way there is to shave.

Send for a sample, if you wish, but better still get a full size tube at the nearest drug store and enjoy thirty days real shaving ease and comfort.

This White Paint does not turn dark

© N. J. Z. Co. '27

Some houses simply must be painted white. In any other color much of the charm of their style and setting is lost. If you own such a home you know that white—real white—is the most difficult color in the world to get—and the most difficult to keep.

40-40-20 is a paint for just such homes as this. It is brilliantly white to begin with, and it stays brilliantly white throughout its long life. It is made of non-darkening pigments.

40-40-20 is smooth spreading, long wearing—has all the qualities you expect in a high grade paint—and costs no more than other good paint.

Paint with 40-40-20. It will give a new and lasting beauty to your home.

40-40-20

REGISTERED TRADE MARK OF THE NEW JERSEY ZINC CO

The Permanently White Outside Paint

So well has 40-40-20 proven itself that over 100 paint manufacturers have applied for the right to make it. You or your painter can get genuine 40-40-20 readily from their representatives and dealers. These manufacturers are authorized by The New Jersey Zinc Company to use its registered trade mark, 40-40-20, on paint made from its specified products according to its specially developed formula. They make 40-40-20 in many beautiful tints, as well as in white, and in paste form for the professional painter's use. Booklet giving full information and list of authorized manufacturers sent on request.

that physical misfortunes bring. That he should be so brave—one man against a hundred—is perhaps why I admire him so much. A man with such courage, shielding the weak, and challenging the strong, is worthy of my deepest respect. But that he should love as he did, with all his heart and soul, and love in vain, with no reward, no return for it all—that is why I love him. Bold, daring, fearless, gallant, romantic Cyrano, with everything he could desire save a handsome face; with everyone to love him, save the only one he cared for! What a man, and what a hero! Life was a battle to him, and he fought it bravely, fighting even as death claimed him. Can anyone in all the book-world ever equal him? B. P.

THIRD PRIZE

I Want My Son to Know Owen Wister's "Virginian"

IF I were to name as my favorite character in fiction, D'Artagnan, Henry Esmond, or Tom Brown, I am afraid I should hear a voice within me say, "Stand up on your laigs, you pole-cat, and say you're a liar," for Owen Wister's "Virginian" has my real allegiance.

There may be a good deal of melodrama and too fortunate coincidence in the book; but the figure of the drawling Southerner stands out, nevertheless, as a real personality. His humor is racy and genuine, his strategy masterful, and there is a fine idealism and delicacy beneath his reserve.

"A cowboy hero of the movies," you may say; but how could the "Virginian" be put into a movie? Leave out his well-flavored humor, the frog-leg hoax, the midnight conversion, his reflections on Em'ly, the hen—and you leave *him* out.

He represents the best product of democracy, a mind containing native wisdom and fine feeling, which is free to develop itself. He belongs to the pioneering age, yet his serious, rugged, deep nature, and his store of humorous philosophy are typically American, and therefore enduring.

Youth demands such figures, as the Public Library copy of "The Virginian" bears witness. I shall certainly buy the book for my son; and if he fails to enjoy it I shall be almost ready to admit that there *is* a change for the worse in the younger generation. J. S. N.

EDITOR'S NOTE: In this contest—"My Favorite Character in Fiction"—Jean Valjean, the hero of Victor Hugo's "Les Miserables," was the winner, with Sydney Carton, from Dickens's "Tale of Two Cities," second. Among the other characters receiving high votes, were these: Cyrano de Bergerac, Scattergood Baines, Jo March, Pollyanna, Selina, Tom Sawyer, Huck Finn, D'Artagnan, Dot and Will (this couple from Fannie Kilbourne's stories were treated as one by most of those making this selection), Anne of Green Gables, Romola, Soames Forsyte, Maggie Tulliver, Ben Hur, Little Eva, David Copperfield, Freckles, Robinson Crusoe, Mr. Pickwick, Alice in Wonderland, Mrs. Wiggs, Kim, Penrod, and Uncle Tom.

HOUR TO HOUR SERVICE WHICH BLANKETS THE NATION

For Thirty-five years the American Radiator Company has held fast to the conviction that the one and only indestructible market is that which is rooted deep in the instinctive preferences of the people.

This is the unwritten law of business growth which rises above all artificial considerations—to supply a basic human need so completely and so economically that in the mind of the average man there is never even a thought of turning to any other source.

The American Radiator Company saw thirty-five years ago this vision of a service so widespread and painstaking that it would render itself *indispensable* in every building operation from the most modest home to the most ambitious business structure.

That vision has become a physical, practical fact, not only in the economic soundness of the product and an actual hour-to-hour service which practically blankets the nation—but also in that other more important thing, the universal recognition that American Radiator Company and heat are synonymous terms.

Wherever there is growth—wherever there is expansion—the American Radiator Company, by right of the conquest of incomparable service, becomes an immediate and most intimate part of the process.

Clear across the continent, the American Radiator Company marches hand-in-hand with the spirit of development which is the instinct of America—an indispensable factor in the nation's growth because both its product and its service are indispensable.

The American Radiator Company is proud of its privilege and conscious of its responsibilities—more eager and alert to serve today and infinitely better able to do so than at any other time in thirty-five years.

AMERICAN RADIATOR COMPANY

Showrooms and Sales Offices: New York, Boston, Providence, New Haven, Newark, Philadelphia, Baltimore, Washington, Richmond, Buffalo, Pittsburgh, Cleveland, Detroit, Cincinnati, Atlanta, Chicago, Milwaukee, Indianapolis, St. Louis, St. Paul, Minneapolis, Omaha, Denver, Kansas City, San Francisco, Los Angeles, Seattle, Toronto, London, Paris, Milan, Brussels, Berlin.

Makers of IDEAL Boilers, AMERICAN Radiators, ARCO Hot Water Supply Heaters, VENTO (Ventilating) Heaters, Heat-Controlling Accessories, etc.

Bill Green's Preceding Chin

(*Continued from page 31*)

bulged at the sides of his jaw were not of suddenly assembling revolt, but merely caused by a frantic desire to steady a quivering chin against slipping. That the straight shoulders were no more than a habit, and the spraddled stance of Bill Green affected only to steady knees which otherwise might wobble. He knew only what he saw, and decided suddenly to change the subject.

"Just got a telegram," he said roughly. "Those new lions have arrived in New York, and'll be shipped to the show just as soon as they go through quarantine. Probably be held there about three weeks before they start. Want you to be getting ready for 'em. Understand?"

Bill Green closed one eye in a long wink. The great Captain Marvelloso had been called "Cap," and the heavens had not opened. Nor the bolt descended.

"I get you, Cap," he said. Then, while he braced himself to the crossing of another Rubicon, "But, while we're at it, I want a new uniform."

Captain Marvelloso frowned heavily.

"What you want and what you get are two different things!" he snapped.

"All right," said Bill Green, and moved away. His chin had begun to slump, and with every atom of strength that his jaws possessed, he pushed it to new limits of protuberance. His shoulders slackened in disappointment; he might have known that he couldn't get away with it.

But as his shoulders began to cave, he noticed the fact, and through a purely mechanical process yanked them into the stiffness of a washboard. He shook his head, to free it of the discouragement which had settled there. Then he turned at the words of Captain Marvelloso.

"What's eating on you?" came in a voice that even Bill Green could not fail to notice contained an extremely weak note. "Can't you take a little kidding?"

"I'M a sonvagun!" said the menagerie superintendent, three days later, as a resplendent man with a full chest and very erect shoulders, to say nothing of a jaw which seemed even more prognathous than usual, strode down the center of the menagerie tent. "Where'd you get the glad rags?"

Bill Green halted. He glanced down at a grand affair of navy blue, set off on the shoulders with gold epaulets, and at the seams with equally golden braid. He flecked a bit of dust from his coat sleeve and straightened a tiny wrinkle.

"I said I wanted it," he answered. "By the way, tell those menagerie helpers to be here earlier in the mornings. Had to wait for 'em a half-hour yesterday."

"I'm a sonvagun!" said Joe Borden. "You ain't tongue-tied, are you?"

"That's just it," answered Bill Green, and pushed heavily at his lower jaw. "*You* can tell 'em nicely. I'm liable to burn 'em up and fire a couple of 'em." He halted, and tapped indicatively at his chin. "Ever since you reminded me I had this, Joe, my temper's been getting away with me!"

A minute later a very dazed Bill Green ducked under the side-wall, brushed a smudge of dust from his coat sleeve, then stood, merely gawking.

"I got away with it!" he gasped. "I wonder if I amount to something around this outfit?" After that he straightened his shoulders even more than usual. He stepped to his leanto, affixed his two-sided shaving mirror, and looked into it.

"Ain't a bad-looking guy at that!" he announced to himself. "Not with this uniform, fitting like it ought to."

There he halted, with a sudden idea.

"I never used to say 'ain't' and 'guy' till I came on this circus," he mused. At last, he took his hourly exercises, then walked to the rear of the big top. Very alertly he stood at attention as Mademoiselle Petite came from the dressing tent. Then he bowed and put forth the bouquet.

"Your flowers, Miss Poteith," he said.

Mademoiselle Petite looked up in agreeable surprise.

"Oh, thank you," she said and went into the ring. A few minutes later, when the equestrian director happened to pass her way, she asked a quite natural question:

"Who is the young man who hands me my bouquet?"

"Search me? Ain't it the same one?"

"It couldn't be. This one is so polite. And he's very good-looking."

THAT evening she paused for an instant as Bill Green made his usual bow. "I've been thinking of something," she commanded smilingly. "I believe it would be a nice touch if you would walk just behind me into the ring and hand me the flowers there. You know—so that the audience would see me get them. It would impress the fact that they were really flowers, and—"

"That's a good idea," said Bill Green. "If I may say so."

"Why, certainly!" And they went into the ring.

The next night, when Bill Green walked forth into the torch-lit streets on the way to the circus cars, his head whirled slightly and an unbidden gasp found its way now and then between his lips.

That afternoon, while wondering at a transition which had made a public worshiper of him instead of a mere holder of flowers out by the back door, he had happened to think what a terrible thing it was that Mademoiselle Petite, silken and fluffy and beautiful, should go in there to the ring with the spotlight playing upon the daintiness of her, the grace of her, the wondrousness of her, and then be lifted to the tape by a common, ordinary property man, with no collar, no style, no befitting uniform and, what was worse, no interest in the matter whatever.

It had weighed upon him, that thought. So much that he had mentioned it to Mademoiselle Petite. Mademoiselle had arched her brows at first, puckered them a moment later, frowned daintily, and at last nodded in the affirmative. On the morrow, Bill Green would accept an additional task, for which he had politely spurned money. He had not mentioned the fact that the touch of Mademoiselle's

"The supreme combination of all that is fine in motor cars."

Reputation · Enduring fame is a sufficient reward to many for a lifetime of effort and great accomplishment. Certainly a well deserved and outstanding reputation is even more difficult to achieve than financial success.

Packard has achieved both. But Packard reputation today, after twenty-seven years of service to the public, is an even greater asset than Packard's absolute financial independence.

For Packard is a name which means superlatively fine motor cars in every quarter of the globe. And this reputation, so laboriously and deliberately built up, is more jealously guarded than all the gold in Packard's surplus.

It means more. For it reflects the confidence of the world in Packard vehicles—in Packard engines. Packard power has won international renown on the land, in the air and on the water. A generation of uninterrupted success and constant leadership is the best guarantee that that excellence of reputation will be sustained.

hand, the soft embrace of her as he lifted her to the tape, would be payment in gross. But there was somebody else who guessed.

"Why don't you ask permission when you take on these new jobs?" snapped Captain Marvelloso the next day.

Green grinned genially: "Oh, I did! I told the manager all about it."

And that worked too. Principally because the captain had another telegram in his pocket. The new lion act, consisting of twelve full-grown Nubians, trained in Germany and shipped to America without their trainer, would, in one short week, be released from quarantine and sent upon their way to the Grand Consolidated Circus.

So far, the Great Captain Marvelloso, spectacular tamer of wild beasts, had never allowed his composure to be disturbed by going first into a den of unfamiliar beasts. Captain Marvelloso, so far, had been nobody's fool. He was a fine worker in an arena before an audience.

When the audience wasn't there, he was much better at staying outside that arena until someone less concerned with conserving his life and limbs had demonstrated the amiable qualities of the beasts within. These new lions might be of a rough and ravenous nature. Far better that they should chew on Bill Green than on Captain Marvelloso. So he ignored the chipper announcement.

Later on, he ignored something else: the fact that he had seen Bill Green walking across the circus lot with a fair-haired young woman, who, now that the work of the afternoon was over and she had exchanged her silk and tulle for a trim little dress of clinging brown, was just Margaret Poteith, and quite interested in the man beside her. Again there was a reason: twelve new lions had that day left New York for the Grand Consolidated Circus.

THERE even came the time when Captain Marvelloso, rushing wildly through the big top, ignored—for the moment at least—the fact that Bill Green was standing quite close to Mademoiselle Petite at the entrance to the dressing tent, and that she was accepting a box of candy.

"Get down to the telegraph office," he commanded. "Shoot Walgren a wire, right away. You know, Walgren—in New York. Agent for the Hamburg Company. Ask him what kind of lions these are."

"Oh, they're here?" asked Green.

"Yes, they're here. Come in as soon as you get back from that office. They're wild as coots. No instructions, no training signals, no nothing. I don't know whether they understand English, or whether I have to give them their commands in German."

"But what's the big rush about it all?" asked Bill Green. "Can't we just cage 'em, and wait until we hear something?"

Captain Marvelloso, his eyes glaring and his mustache out of curl, threw his hands in the air.

"How can we, when the Old Man has wired the press agent to fill every paper in Trenton with half-page advertisements that the biggest new lion act in captivity will have its première there to-morrow afternoon? To-morrow afternoon!" he exclaimed, shaking a finger at the surprised Mademoiselle Petite, as if she could do something about it. "He advertises an act for to-morrow afternoon that we don't even know anything about! Send that telegram!"

Then he rushed on, without noticing that Bill Green's chin had set, entirely of its own accord. Nor that Bill Green, for a time at least, made no move toward a telegraph office, nor anywhere, in fact. Mademoiselle Petite, in blissful ignorance, had asked a very natural question concerning the evident perturbation of the usually suave Captain Marvelloso. In other days and other times, Bill Green would have answered it as naturally.

Now he was a different William, with a preceding chin instead of a receding one, a William Green who had first allowed himself to believe a thing because Joe Borden had told him so; then, in the ordinary course of events, had allowed that belief to build the very conditions in which he had taken faith.

It did not matter, now that the results had been achieved, that the chin itself had played only the part of a prompter in a general awakening. Enough that the desired had happened; enough, too, that Mademoiselle's question had concerned something that had been on Bill Green's mind for some time. And he continued it with his speech. It concerned lions, their care and training—and who did it.

A HALF-HOUR passed in wild menagerie activities. Beside a hastily erected steel arena in the center of the tent, a dozen gawking property men stood awaiting the next order, which was countermanded as soon as it came. Over at the side wall were a dozen narrow wooden shipping cages, each containing a large, black-maned Nubian lion, whose sole ambition, it seemed, was to tear the daylights out of anyone who approached. At the entrance to the tent, stood the Old Man and Joe Borden, in violent argument.

"Don't ask me what's wrong with 'em!" shouted the menagerie superintendent. "You took the handlin' of the cat animals off my hands when Marvelloso came grand-standin' on this show three years ago. I've even forgotten what they eat. Let him handle his blamed lions!"

A statement which Captain Marvelloso, over a badly straying mustache, answered only by a glare, as he hurried to the shipping dens, dodged an outflung paw, then moved hastily away again.

"Where's Bill Green?" he shouted.

Nobody seemed able to answer the question, although there was a great deal of scurrying around and peering under the side-walls.

A distressed Marvelloso turned to the Old Man. "You'll have to call that thing off for to-morrow. I can't have these lions ready—"

"How can I call it off when the advertisement is in every paper?" asked the show owner. "You told me—"

"Yes, but I didn't know they were going to be a bunch of maniacs! Look at 'em! There isn't one of 'em that wouldn't chew your leg off if you went near 'em!"

"But I ain't going near 'em," snapped the owner. "You're paid to do that."

"How can I? When Bill Green's not here?" Then Captain Marvelloso moved swiftly forward. Mademoiselle Petite had strolled in through the front entrance,

Ingersoll

YANKEE $1.50

Advertising Experts have told us we shouldn't mention REPAIRS *in an advertisement*

Well, here goes:

You're putting chains on your car; out of your pocket comes your $1.50 Ingersoll, bang against the hub. The crystal is broken, the movement is damaged.

What to do? Few jewelers can afford to repair a $1.50 watch, but the Ingersoll Service Department, because it is specially equipped, can do it for merely a nominal charge and do it quickly.

So pack your watch carefully (your dealer will supply you with a mailing box). See that the package is properly addressed, PRINT your own name and address on it, and send parcel post insured to the Ingersoll Service Department. Your watch will be repaired and returned to you promptly.

We tell you this so that you'll know your Ingersoll will never become a tickless, timeless orphan, which is exactly what eventually happens to low-priced watches that don't have service departments back of them.

The price of the Ingersoll Yankee is $1.50. Do you know of any purchase you can make where you get more for your money? There are 15 Ingersolls in addition to the Yankee. In each you get the same generous value, and back of each is the same courteous, efficient Service Department.

A *rich, green, glorious*

MELLOW with tradition, rich in beauty and resources, Wisconsin's rolling hills of forest and meadowland form one of the most favored regions in America. Twenty-five hundred lakes sparkle amid its whispering forests. Its sandy shores are washed by the blue waters of Lake Michigan and Lake Superior. Its brooks and rivers go laughing down to the blue upper reaches of the Mississippi.

Here was the Indians' happiest hunting ground, the land of richest promise to the French voyageurs. Today it is a northern playground for the entire Nation. It is, besides, one of the richest dairylands on earth. And its cities, the steady growth of generations of social and industrial experience, are powerful world-famed communities. Wisconsin stands first in production of:

MILK: 9,062,000,000 pounds annually; farm value, $187,857,000.

CHEESE: 338,305,000 pounds; value $75,550,000. 70% *national total.*

CONDENSED DAIRY PRODUCTS: Almost one-third America's full output. Value $40,204,000.

MANUFACTURED DAIRY PRODUCTS: Value $244,865,000.

FARMING: First in silage, peas, hemp, clover and pure-bred seed. Only North Central state where farms increased in number between 1920 and 1925. Dairy farms, 178,000; milch cows, 2,050,000. Sixth in total value of agricultural products, though twenty-fifth in area and thirteenth in population. Highest average yield of farm crops. The extraordinary variety of products includes a valuable tobacco crop.

INDUSTRY: World's largest production of aluminum kitchen utensils. Ranks among leading states in production of fiber, wood and metal furniture; farm implements, automobiles, textiles; paper and paper products; paints, varnishes and stains.

MILWAUKEE: Probably the best balanced industrial city in the world. Population of metropolitan area, 750,000. *Trade depressions and industrial slumps are virtually unknown.* Lowest death rate of any major American city; lowest percentage of crime. One of the greatest construction and repair railroad plants is maintained here by the Chicago, Milwaukee & St. Paul Railroad.

Young in opportunities

Wisconsin is not new country—except in its ever-fresh opportunities.

It is one of the most delightful and livable regions. Young forests cover vast areas, affording shelter to a great variety of birds and wild game. The lakes and streams are world-famous as the habitat of trout, bass, and the gamiest of fresh water fish—the tiger muskellunge. It is directly accessible to four major cities—Minneapolis, St. Paul, Milwaukee and Chicago; and its smaller cities have a cultural and industrial background that is traditional.

A new rush has commenced into Wisconsin. The nation-wide demand for water-frontage has discovered its extensive sandy shores, its sunny lakes in the depths of glorious forests, its nearness to great cities. All business is prospering mightily as the tide rolls in.

SHORTEST AND MOST MODERN ROUTE TO THE PACIFIC AND FAR EAST

state—Wisconsin

Where the road began

RAILWAY building began in 1851 with 20 miles of track from Milwaukee to Waukesha—extending later to Madison, and then to Prairie du Chien. *This line, linking Lake Michigan with the Mississippi, was the forerunner of the vast Chicago, Milwaukee & St. Paul system.*

The Milwaukee Road is now over 11,000 miles long, employing 60,000 people. It extends a network over all the enormous block that forms the northwestern fourth of the United States—from Chicago to Kansas City, Sioux City and Omaha; to Minneapolis, St. Paul and Duluth; to Milwaukee, the Upper Michigan Peninsula, the Black Hills, all the Northwest, Puget Sound, the Olympic Peninsula and the Pacific.

Growing with the great body that forms the agricultural, industrial and commercial life of the farther Middle States and all the Northwest, the Milwaukee Road has extended its trunk lines, spurs and feeders into the richest and most beautiful regions of this section of the continent. Carrying farm implements, machinery, tools, seeds, pure-bred stock, and people in an endless stream, it brings new life to the Northwest. Across the Belt, Bitter Root, Rocky and Cascade Ranges, to shipside—it is electrified. A new pioneer step is the *equipping of its passenger cars with roller bearings.*

See it on your way to the Coast

When you make your next western trip, take this wonderful route. You will see the most diversified scenery in America—the golden plains—lush dairy country—three of the greatest rivers in the world—four tremendous mountain ranges—the glories of Puget Sound—truly an empire of immeasurable opportunities!

"Route of the NORTHERN PACIFIC *North Coast Limited"*

and stood in wide-eyed survey of the scene.

"Where's Bill Green?" shouted the excited captain.

Mademoiselle Petite stamped a dainty foot.

"Please don't think I'm one of those animals!" she exclaimed. "I don't know where Mr. Green is. He simply asked me to take his telegram to the office."

"His telegram?" Then Captain Hendrik Leonine Marvelloso asked a number of questions, to which he received some surprising answers. As he stamped and blustered, Joe Borden, over by the door, relieved himself of a remark.

"That guy's lettin' himself in for something, Boss," he said. "This here Bill Green—he's got a chin on him!"

Whereupon he was silent. The side-wall had lifted and Bill Green had walked casually into the menagerie tent.

"Lots of excitement!" he said, and winked toward Mademoiselle Petite. Captain Marvelloso crossed the tent.

"Where have you been?"

"Walking," said Bill Green.

"Walking! Walking! And me waiting here to train these lions. With the whole circus—"

Bill Green shrugged his shoulders. "Why wait for me? I'm not the trainer."

"You're trying to give that impression signing your name to that telegram. But don't stand there and argue. I want those lions put in shape for their act to-morrow!"

For a moment Bill Green merely surveyed him. "Put 'em in shape yourself then," he said quietly. "I've quit as your fall guy."

OVER by the door, Joe Borden poked a thumb into the show owner's ribs.

"Go make out a contract," he whispered. "You're about to get yourself a new lion trainer. Marvelloso ain't never goin' into that arena!"

A moment later Joe Borden was alone at the door, while across the menagerie Bill Green aided Mademoiselle Petite to a seat on a bale of hay, and turned at a shout from Marvelloso.

"Why, certainly," Bill Green agreed. "If that's all you want. Boys!" he commanded, "take a couple of cage scrapers. Sneak up to those dens one at a time on the blind sides. Hook the scrapers into the bars quickly, before the cat can knock 'em away. Then drag the dens up tight to the arena and transfer 'em through the sliding door. Take it easy, now!"

An energetic half hour began, in which Bill Green supervised the handling of the first shifting den, then, as the first lion pranced into the greater freedom of the steel training arena, moved forward in answer to a beckoning signal from Joe Borden.

"The Old Man's out at the wagon, making out a contract for you to sign if Cap shows yellow. Congrats, Kid! What'd I tell you about that chin?"

Bill Green did not answer. All of a sudden, it had struck him that something seemed to be wrong. The second and the third lion had entered the arena, to bound in excitement, to scurry along the bars as if seeking some loophole by which they could escape, to the destruction of the entire menagerie. Then, failing in their search, they turned in wild roarings and hissings at each other, in the apparent beginnings of a free-for-all fight. A fourth and a fifth—a sixth and seventh and eighth.

Bill Green rubbed a hand across his forehead. "They ought to be calming down some by now!"

But there was no calming. The ninth and the tenth were released, and the eleventh and twelfth. The great cage was a maze of tawny, plunging action. A dozen lions leaped and twisted and writhed and bellowed. They congregated at the gate, outside which a very white-faced Captain Marvelloso stood, or followed him with voracious mouthings, as he moved first to one side of the arena and then the other, in an attempt to find in at least one of them an evidence of placidity.

THERE was none—only an effort on the part of each to outdo the other in ferocity, in the viciousness of furled ears and dripping, yellow teeth, in maddened hissings and frantic, bar-foiled charges. At last, forcing himself step by step, he started toward the door, with hand outstretched as if to unfasten its leather lacing.

A gasp escaped Mademoiselle Petite—she arose hurriedly and came to the side of Bill Green. "He'll kill himself, if he does," she said. "They know he's afraid of them!"

"Can't let a lion know you're afraid," gulped Bill, then cleared his throat. He was aware of the fact that he was becoming slightly pasty-faced himself. If Captain Marvelloso should fail!

Closer to the door. Still closer. A shaking hand pulled at the strap, loosening it slightly. But as suddenly the tautness was restored, as Captain Marvelloso, mouth sagging, knees knocking perceptibly, turned his back flat upon the thunderous arena and strode straight for the front exit.

"Keep your old lions!" he quavered.

Bill Green straightened. He tried hard to grin triumphantly—but it was not very successful. Then suddenly, he grasped Mademoiselle Petite by the arm.

"Get out of here," he commanded gruffly. "Joe—take her out of here."

"Wait a minute!" It was the Old Man, hurrying into the tent. "I've kind of changed my mind. I'm afraid—"

"Because that other fellow quit?" asked Green, pushing hard at his prognathous chin. If he should hesitate now, after his boasts, after his very frank denunciations of the man who had preceded him! "I can work 'em. Where's that contract—I guess you've got the usual clause in it to release the show from responsibility if I get hurt. Well, pass it over; I'll sign it!"

There was a crackling of paper. Bill Green raised a very shaky hand and signed his name in equally shaky fashion. Then, before his chin could waver or his knees quake, he rushed toward the steel arena, unstrapped the door and leaped within.

Very faintly, in the next fifteen minutes, he heard now and then a scream in a feminine voice, and glimpsed hazily—through the cloud of twisting forms about him—the frightened features of Mademoiselle Petite, peeking, woman-fashion, under the side-wall.

But those glimpses were flashing

WHERE LIFE IS BETTER

Starting May 15th
CALIFORNIA $90.30
round trip from Chicago to SAN FRANCISCO
America's Coolest Summer City
Similar low fares from other cities
Only $18 additional fare for full Pacific Coast Empire Tour from Canada to Mexico

WHAT THE *Californian* OWNS:

Climate: Year-round producing climate. *The Californian* can work, grow crops or play every month in the year.

Growth: From 3,500,000 to 5,000,000 population in six years—three times faster than the United States average.

Wealth: Twice the national average of wealth, twice the average number of savings bank depositors and twice the average deposit. Only three states report more income tax returns; none has so many automobiles per capita.

Health: 6 of the 15 most healthful cities in the United States are in California. U. S. investigations prove California children bigger and taller, than the average.

Education: *The Californian's* schools share first rank only with Massachusetts in efficiency. Five states have larger enrollments; only two exceed California's expenditures.

Recreation: Four National Parks, a thousand miles of ocean shore, a thousand-mile-long Sierra playground, 30,000 square miles of National Forests, 42,000 miles of improved roads. Year-round motoring, golf, fishing, week-ending out of doors.

Crops: More than $600,000,000 yearly. Six million acres under irrigation with great mountain reservoirs supplying abundant water.

Industry: One of the youngest states, California is eighth in value of manufactured products.

Markets: From San Francisco's great harbor, the largest on the Pacific Coast, the Californian successfully sells his manufactures and crops throughout the Western and Eastern States, and exports enormously.

For every Californian—here or on the way—these advantages spell Opportunity.

Their home is in a San Francisco suburb

R. J.'s office overlooks San Francisco's busy streets

This Family "Discovered" California

—and here is what they told their friends

How does it feel when you move to California? How do you get along? Do you ever want to move away?

These are big questions today in thousands of American families.

And—here is a typical answer—a true answer—an answer thousands of California families might have made. Read for yourself; then write us what you think. And while you are reading, remember that this is a personal, intimate letter, written without any thought of publication and discovered by merest chance. Permission to use it was then obtained by Californians Inc., from the author whose full name and address will be furnished on request. Here's the letter:

"*San Francisco, November 15, 1926.*

"My dear Joe:—

"You ask me how I like California by this time, now that I've been out here a little over a year. It isn't a Utopia, nor an Eden, but I sure do like it.

"As I think I told you, it was not until my third trip out here, in the spring of 1922, that I began to *appreciate* California.

"When I landed in San Francisco early in February of that year, I found the sun shining brilliantly, and the air just snappy enough for a light-weight coat. I did some business, and I began to form a liking for California. From that time on, I came once or twice a year, got to know some people out here, began to understand why people boosted California so enthusiastically, and then I decided this would be a great place to live. It is! You can say what you will it's mighty pleasant to do business out here. People have time to visit with you and to play, and still a lot of business is done.

"After looking around a bit, we decided we'd like to live down the peninsula from San Francisco. We rented a house for a year, to see if we'd like it, after having been 'cooped up' in an apartment back East for so long, and last April, long before our lease was up, we bought a house that was just going up and would be ready in September.

"We've got the place now that we always hoped we could afford some day, but never could have bought back East where land values are so high. Some fellows who have been out here from 'home' have shown me, by actual figures, that my place back East, would cost easily twice what I paid for it. We don't need expensive building protection against extremes of heat and cold, or a big storage basement for fuel.

"There are no two ways about it, Joe, life out here *is* better, and easier. We aren't fighting snow, ice, cold weather, or excessive heat or humidity, at any time of the year. Our 'winter' out here, is a rainy season, from late December into March, but the rest of the year the weather is delightful, and dependable—every day is prettier than the one before.

"I bought a new car just a little over a year ago and the speedometer now reads 21,450 miles. I have a lot of business in Los Angeles and the southern part of the state and go down several times a year. There are 42,000 miles of improved roads in California, and we enjoy them.

"We live outdoors practically the year round. Only last Sunday we had a picnic in the mountains just back of where we live, and I never saw a more perfect day.

"Nearby are Monterey and Carmel, and countless other perfectly beautiful places, all within easy access by car, and open the year round.

"I don't suppose I'll ever get rich—don't think I've got it between my ears—but I'm making a good living and getting a lot more out of life than I ever did before. It certainly is a pleasure to do business out here, with these cordial, courteous people.

"As for Grace, she has served notice on me that if I go back East, I can go alone!

"Does this answer your questions?

"Cordially,—R. J."

That's what California means to this new San Franciscan and his family. That's about what it means to the great majority of half a million people who have moved here in the last few years—and what it may mean for you. We will gladly send you on request the 48-page illustrated booklet "California, Where Life is Better." *Write for it today!*

things—there was plenty of other occupation for his eyes. Such as lions which leaped at him from a dozen directions, only to be driven back as Bill Green jumped first to the left and the right, then forward and backward in his attempts to dodge them. Lions which hooked at the prod-rod with wide-spread claws, which hissed and roared and doubled upon his tracks, which came within an inch of him, mouths open, tails twisting in excited writhings above their backs.

Lions which he escaped by miracles that even he could not understand, which came at him in pairs and quartets and sixes and sevens. Which seemed to halt their attacks at the very instant of victory, as if the desperation of the man had held them for an instant from their prey. In vain he shouted the usual signals for them to take to their pedestals and obey his commands. It was as though they never had seen a pedestal.

Backward, forward, dodging and twisting, sending his whip in lashing circles about him, Bill Green covered the arena. Holding a space in the center until they drove him out of it by concerted attacks. Working his way along the steel sides, with his back against the bars, and by shouts and yells and fending weapons of defense, kicking them from him until they could formulate another animal effort at his downfall.

Again and again and again—the trainer rising paramount by that strange form of superhuman control which seems to come to a man in time of danger with caged beasts, turning until he was dizzy, that he might hold a beast from the gathering of muscles necessary to a spring, drawing himself in against the bars, or leaping from an approach with the speed of a boxer.

Minute after minute it continued. His clothes began to cling to him with the dampness of absorbed perspiration. He weaved slightly, and staggered—weakness overcoming him, it seemed, all in an instant. Then, in desperation, he threw away his prod-fork and whip and dived to his pockets for his two blank-cartridged revolvers—the last resort—to fend them off, until he could reach the door.

"Back there!" he shouted, and pulled the trigger, sending a charge of blazing yellow toward the bellowing beasts. "Back there—" He fired again, and a third time.

THE lions milled excitedly. They grunted and swerved. Then suddenly, as the shots barked anew, they seemed to form in a leaping sequence of running forms, scraping against him aimlessly as they passed in a mad race about the ring.

Bill Green looked up. Then Bill Green ducked—three of them were directly above him, where they had plunged upward along the side of the arena, there to hang suspended for an instant, then go plunging madly on again.

He shouted with sudden victory. "I've got 'em—I've got 'em!" he cried. "Back there, you!" And fired again—just as the way cleared for an instant with the ganging of the lions at the other side of the enclosure, and quick hands unstrapped the door for him to stagger through to the menagerie tent, leaving a dozen baffled, roaring brutes behind him.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Bill Green swallowed, and strove to center his eyes so that the tent would not swim so mightily before him. Vaguely he heard voices and answered them with the same vagueness. He wanted air, did Bill Green, and a chance to think it over. Now that he was out, he rather wished that he hadn't made that triumphant announcement, that he had merely let things go as they stood.

"You had 'em whipped!" came in a voice from his side, and dimly Bill Green realized that it was the Old Man. "Just that much to-morrow, and we'll be all right. After that, you can really start to train 'em. But to-morrow—just do what you did to-day. A knockout—it'll be a knockout! You had 'em licked every minute—every minute, you had 'em!"

"Uh-huh!" said Bill Green, and walked forth into the air of the circus lot. His session of training must have looked entirely different from outside the arena, which helped not at all. In fact, it meant one of two things for the morrow: either that Bill Green could again take his life and juggle it with the aid of twelve man-eaters, or that Bill Green could quit, admitting fear when those about him had seen triumph.

"OH, BILLY!" Out of the fog, someone soft and dainty and feminine had taken his arm. "I was so afraid for a while—until I saw how you just had them where you wanted them." She squeezed his arm. "Oh, you were wonderful!"

"Uh-huh," said Bill Green. "Uh-huh." Then he looked blankly about him. "Who's that calling me?"

"Your name Mr. Green?" said a messenger boy. "Sign on the third line."

"Sign it yourself," said Bill Green, and tugged at the flap of the envelope.

For a moment the words before him would not be still. They jumped and swam and darted and leaped, like fish in a brook—or lions in an arena. Then as suddenly they became sharp and clear—and comforting. Bill Green chuckled softly. Then he read it again.

WILLIAM GREEN,
GRAND CONSOLIDATED CIRCUS.

Answering your telegram regret state wrong lions shipped you. Stop. However, suggest since mistake already made you keep shipment which will quote you same price as other to avoid extra expense return, etc. Stop. Best and tamest twelve lion act we have ever put out. Stop. Trained by Hamburg himself for untamable act depicting constant attempt to kill trainer. Stop. Absolute thriller for any audience and guaranteed safety for trainer as Hamburg worked two years to get act where he wanted it. Stop. Every beast guaranteed to imitate attack to within matter of inches of trainer's body, finishing with grand leaps and circling of den on ground and in air when signal of firing revolver is given. Stop. Wire decision immediately. WALGREN.

Bill Green drew a new, exceedingly luxurious breath, and dived into his pocket for a pencil. He wrote hurriedly upon the back of the telegram.

"Rush it," he told the boy. Then, as the messenger departed, a new Bill Green took Mademoiselle Petite, in quite possessive fashion, by the arm.

"Just a wire about the lions," he said in an offhand manner. "They sent us the wrong bunch. But I telegraphed back that we'd keep 'em!"

✤ ✤ ✤ ✤ ✤

TO GET THE TRAINS THROUGH . . . SWIFTLY, SAFELY, AND ON TIME

The first railroad to use telephonic communication, the Pennsylvania operates the world's largest private telephone and telegraph system.

The wires along its right-of-way are owned or leased almost entirely by the railroad, and used primarily for conducting its operations.

A Hundred Miles Ahead

they prepare for the coming of these swift trains

AS the great Limited speeds through the night the news of its coming is flashed far ahead, warning a thousand men to stand by.

"The Broadway Limited is coming!" In a cottage ninety miles ahead a man is awakened from sleep. Two hours later he will take the throttle of The Broadway as it speeds over the next division.

"The Broadway is coming!" In a roundhouse three counties ahead the fires of a locomotive are stoked to a roaring glow.

"Clear the way for 28!" The signal flashes from tower to tower, miles ahead switches click into place, signal lights are set. And the Broadway Limited thunders on its way, guided, guarded by a thousand Pennsylvania men.

"Uninterrupted Service" is the motto of the thousands of men and women who operate the Pennsylvania's system of communication, for uninterrupted service on the wires is vital to uninterrupted service on the rails.

The Longest Days Are Those on Which You Pity Yourself

(*Continued from page 37*)

But after eight years of his direction—during which the company has progressed more rapidly than at any other time in its history—it is clear that Merrill has earned his place.

When Merrill came to the company, it was operating less than five thousand miles of cable, running from Galveston, Texas, to Mexico City, Vera Cruz, and Tampico as the Mexican Telegraph Company, and from that point on as the Central and South American Telegraph Company, across the Isthmus of Tehuantepec to the Western Coast, and south to Guatemala, Salvador, Nicaragua and Panama. From Panama it crossed to South America, down the West Coast to Colombia, Equador, Peru, stopping at Lima.

THE new office boy felt a part of a great enterprise as he looked at these names, and it was with a cheerful smile that he met his new boss, Mr. Scrymser.

"I had determined," he said, "to be worth my salt, and to put all the pepper possible into the job. But I received a shock when I was promptly set to work dusting chairs, desks, and books, and filling ink wells.

Young Merrill was hardly reassured in his resolve, never to forget that this was opportunity, by the character of the offices which he dusted. The founder and directors of the new companies had determined to make them pay, and they practiced a rigid economy in office matters. The entire force, a dozen in number counting Merrill, occupied two rooms on the fifth floor of 37 Wall Street. There was no elevator.

Before his first day had passed, Merrill was listening eagerly to what went on. It was a small office, but it was enormously proud of what it was doing. And with reason. The less than five thousand miles of cable running from Galveston to Lima, Peru, represented the first American effort to establish communication between the countries of the Americas by cable. Before these cables had been laid, the only way by which a message could be sent from the United States to Mexico, Central America, Panama, or South America had been via British cables. This meant that a message must go across the Atlantic to London, back to the West Indies, or by way of the Argentine Republic. That was a long and expensive journey. The service of the newly organized American companies had filled a real need. Their route was far shorter than the British route, and thus they were able to cut greatly the time for a message to be sent and delivered. Although even then messages traveled at what would seem a snail's pace in this year of 1926.

"A message sent by us to Lima, Peru," said Mr. Merrill, "which reached its destination and was answered the same day, was so unusual that I remember one recipient sent a special message containing his compliments to the president of our company! To-day messages travel the entire thirty thousand miles of our lines in a few minutes, and the president receives no compliments, only complaints if by any chance it takes longer."

Thrift in management meant economy of time as well as of space. The new cable office was a busy one, and overtime was expected as a matter of course. There was no pay for such extra work. Frequently the whole force stayed until nine or ten at night. The one concession made was a supper allowance.

One night young Merrill turned in a supper voucher to his friend Mr. Blackwell, who read it and shook his head.

"Sixty-five cents," he said. "Suppose you tell me exactly what you had."

"I accounted for every cent," said Mr. Merrill, "including five cents for a cup of coffee and ten for a dish of ice cream." Mr. Blackwell paid the sixty-five cents. But the next night he summoned Merrill.

"We will have to stay late to-night," he said; "and the janitor's wife up-stairs will make you a nice cup of tea and some buttered toast for fifteen cents."

"I can't remember that I *said* anything," Mr. Merrill related; "I just stood there and thought of tea and toast, and I must have looked hungry. Mr. Blackwell was elderly; tea and toast had an appeal for him. I wanted beef. As I stood there, he looked me over, up and down—and I was not small even then. Finally, he sighed, smiled, and told me to take fifty cents. I went out to get a real supper.

"I could always get a real meal after that, thrift notwithstanding, and I needed those meals. A cable office is an all-day, all-night job, and it works seven days in the week. In those early days, we spent almost all of our waking hours on the job. But they were often hours of keen enjoyment. It was impossible to be associated with Mr. Scrymser and not see at least a part of his vision.

"I have always had a strong vein of sentiment, and the office was full of romance for me. Although they were more limited than now, the messages handled covered the whole field of business, of international relationships, and of the news.

"MR. SCRYMSER had never been associated with any business of communication before; he had served as a volunteer during the four years of the Civil War and had received a captaincy. When he came from the war, he conceived the idea of joining the three Americas by cable, and found backers for his plan. He spared no study upon the subject, and in this study I joined.

"The sending of messages from point to point beyond the range of the human voice has always been one of the great problems. The signal fires of Biblical times were used to transmit various meanings throughout Israel. The smoke signals of the North American Indians and their burning arrows marked another effort of man to communicate with his fellows. The early Greeks used beacon

I got off to a good start

THERE'S a heap of satisfaction in that feeling—good health, a good job, and the best pipe-tobacco in the world! Every time I fill my pipe I feel thankful that I'm alive and well. I like to think of all the years that Prince Albert and I are going to pal around together.

I didn't waste much time prospecting around for the right tobacco. I've smoked P. A. from the beginning — off to a flying start, and out in front all the way. When I have my pipe jammed full of good old Prince Albert, I just naturally take the bit between my teeth!

I can't help being a little enthusiastic about Prince Albert, because it means so much to me. Cool as a cave. Fragrant as heather. Rich and full-bodied, yet so mild that I can smoke it as often as I wish. Which is to say, whenever I'm not eating or sleeping!

If you don't mind taking advice from a young fellow, treat yourself to a tin of Prince Albert *today*. Raise the hinged lid, inhale that wonderful aroma, fill up, light up, and—Ah-h-h! You'll know, just as I knew, that you've found the *one* pipe-tobacco at last!

P. A. is sold everywhere in tidy red tins, pound and half-pound tin humidors, and pound crystal-glass humidors with sponge-moistener top. And always with every bit of bite and parch removed by the Prince Albert process.

PRINCE ALBERT

—no other tobacco is like it!

" To Shape and Use "

". . . Not as idle ore, but iron dug from central gloom . . . to shape and use." Tennyson knew that behind the creation of wealth lies the intelligent use of natural resources.

Beneath the surface of the Southern states lie great seams of coal, easily accessible and cheap to mine. In the same areas, and almost at the doors of the furnaces, are gigantic deposits of iron ore and limestone.

Here pig iron and finished steel are produced in steadily growing volume for use in many parts of the world. And much of it is used in building the rapidly growing South.

The natural advantages and the growth of the Alabama steel industry are typical of all Southern industry—the resources of the South are being used to build a great industrial empire.

Traffic on the Southern Railway System has increased 250% in the last twenty-five years. To handle this greater traffic efficiently, the Southern, in the same period, spent $375,000,000 for new equipment and for enlargements and improvements on its 8,000 miles of lines serving the states east of the Mississippi and south of the Ohio.

The Development Service of Southern Railway System, Washington, D. C., will gladly aid in securing industrial locations, farms and home sites in the South. Address Development Service, Southern Railway System, Washington, D. C.

SOUTHERN RAILWAY SYSTEM

THE SOUTHERN SERVES THE SOUTH

fires; the Romans invented an ingenious system of communication by the flashing of the reflected rays of the sun from highly polished metal shields. Then came flags. All nations used them, and dipped and swung in various fashion they carried messages. In the American Revolution, the Colonists adopted many odd signals. Our army used all kinds of shapes hoisted to the tops of poles, baskets of various kinds, casks, barrels and boxes, all of which had a meaning.

"Then the French invented the semaphore. It was a great advance upon anything yet tried, and it seemed so miraculous that it was regarded with suspicion by the people at large. How could a machine with waving arms talk? Many of the early semaphore stations were burned, because of the superstition that they were possessed by the devil. Despite this, the semaphore slowly won its way, and was used widely through France, and later was adopted by England and Russia. It is used in our modern times in various ways; on railroads as a signal that a train is expected, or has just passed, but in these days we back up our semaphores with electric light signals, in dark or bad weather.

"Following the semaphore came modern methods of communication—the telegraph, cable, telephone, wireless, and radio."

"Did you do all your studying while you were an office boy?" I asked.

"Part of it," said Mr. Merrill. "I learned a great deal of geography as well, for, like most Americans, I knew little of other countries in the Western Hemisphere, except the United States.

"MY FIRST promotion was to the financial department, which sounds fine. However, my particular job was pasting vouchers for our payments into great books. It was tedious and monotonous, and I hated it. It was no better when I started to do a little work in computation. I detested figures. In school, I had liked geography and history and I had hated arithmetic, and I was still much of a schoolboy.

"I liked the part of my job that concerned countries and people. But when I started to work with figures it was a very gray day for me. I continued to work with figures for about twenty years, and that work had two results entirely beyond my reckoning: I learned a new part of the company business. Then, I disliked my work so much that I did it as quickly as I could. In the time I saved I looked about for something more interesting.

"In that office, anyone looking for work got it. I continued to run errands to the directors, and I also began to help the president with his personal affairs. Mr. Scrymser was more or less of a public character, a fact which helped the company a great deal. He became a leader in a number of organizations connected with the Civil War veterans, and in these as well as in company matters I managed to be of service. Little by little, I assumed charge of his correspondence. There were a few typewriters in use at that time, but Mr. Scrymser was no more friendly to them than he had been to the telephone. So I opened his mail in the morning, read it, and wrote out in long hand the replies as I thought they should be written.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"When the president came in, he read my letters. If he liked them he sent them; if not, he tore them up and wrote others. It came to be a matter of pride with me to have no letter torn up.

"I told you how I hated figures. I can conceive of no drudgery worse than the first few years I put in with them. Then I found, to my great surprise, that, although I did not actually like it, it had ceased to be drudgery. In a few more years, I actually liked what I was doing. Then I began to make out reports, and as I was untrained both in bookkeeping and finance I made many blunders.

I REMEMBER once when the financial report delighted me so much that I determined to put it before the directors in graphic fashion. We had put in our first typewriter a short time before, and I had made the discovery that it would carry a two-toned ribbon, red and black. This would help me in making my report spectacular, so I bought one of the ribbons, and as the report was confidential I typed it myself using my two forefingers and the two colors.

"As our profits were my main interest, and red was more vivid than black, I put all the profits in red. The report looked fine—to me. When I distributed it at the directors' meeting, I felt proud. But to my surprise, some of the directors began laughing as they read, and others appeared flustered. Then one of them enlightened me.

"'It is customary,' he said, 'for deficits to be printed in red ink, or with red ribbon; profits are always in black.'

"I felt pretty sheepish; but it was by always trying out something, even though I blundered, that my education in financial matters proceeded. Incredible as it still seems to me, I became in time the company's auditor. And for years I continued as auditor, adding to the work a good many other activities the title does not cover. One of these duties was to take confidential messages to the directors.

"Among the directors were a number of big business men; and while I was in their offices I kept my eyes and ears open. I intended to learn, always; but I must have been cocky at times, for I remember once when I was sent to obtain the signature of J. Pierpont Morgan. There had been a directors' meeting the day before; but it had lacked the necessary quorum, and there was another signature needed to approve the minutes. I was given the gold piece which rewarded every director, and told to get Mr. Morgan's signature. When I entered his office and presented the gold piece I said:

"'Mr. Scrymser says the minutes are all right, and if you will sign them I will go right away and not take up more of your valuable time, sir.'

"That sounded like a fine, tactful speech to make to a busy master of finance; but Mr. Morgan looked up at me rather grimly.

"'What is your name?' he asked.

"'John Merrill,' I replied, wondering.

"'Well, Merrill,' he said sternly, 'that signature of mine is worth some dollars to me.' And he took the papers and read them then and there with care, before signing."

Merrill watched him, at first chagrined, and then with admiration. He took the

The Land of Youth

Play In It This Summer

Out of the old rut, into a new environment. A new and lovely country; near, yet like a foreign land. New sights, new things to do. New interest. New vim. A summerland supreme.

CHANGE is the spice of life. Taste some of it this summer and be rejuvenated, spiritually, mentally, and physically.

Come and see the Land of Youth called *Southern California*—it's one of the coolest summer playgrounds. The U. S. Weather Bureau's figures, not for last year but for *fifty* years, show these average mean temperatures in a central (inland) city in this section: 50 Junes, 66 degrees; 50 Julys, 70; 50 Augusts, 71; 50 Septembers, 69. And we promise, too, that you'll sleep *under blankets* nine nights out of ten all summer; and that *no rain* will spoil your fun. Humidity, also, is always low.

Golf, tennis, motoring, riding, camping, fishing, hunting, hiking, mountain climbing, ocean sailing, bathing, aquaplaning, aeroplaning—Old Missions, a desert like Sahara, orange groves, strange flowers, trees and vegetation, lectures, music, art, famous hotels and restaurants.

Five thousand miles of motor boulevards, paved like city streets, connecting everything. Rest? Within two hours you're in a log cabin among the trees beside a mile-high lake, in the great majestic quiet of the mountains.

There's no monotony in this great vacation land.

Special round trip low-rate fares from May 15th until October 31st on all railroad lines.

Any ticket agent can tell you all about it. Or mail coupon below to us.

Come via Los Angeles and San Diego, return by way of Santa Barbara, San Francisco, Oakland, Portland, Seattle, Tacoma and Spokane. See the Great Pacific Coast in one memorable trip.

Plan *now* for *this* summer. The finest trip, the greatest and most beneficial *change* you've ever had.

Southern California

All-Year Vacation Land Supreme

The city of Los Angeles, with a population of well over a million, is the largest city on the Pacific Coast and is the hub of one of the country's richest agricultural communities.

The growth, wealth and marvelous resources of Southern California are indicated by the following facts and figures pertaining to the County of Los Angeles alone:

Value of Agricultural and Live Stock Products (1925), $85,912,744; Value of Citrus Products (1925), $23,241,503; Oil Production (1925), 140,000,000 bbls.; Harbor Imports (1925), 4,156,177 tons; Harbor Exports (1925), 16,154,566 tons; Total Harbor Tonnage 20,310,743.

A producing season of 365 days a year permitting year 'round crops.

ALL-YEAR CLUB OF SOUTHERN CALIFORNIA
Dept. 3-T, Chamber of Commerce Bldg.
Los Angeles, California

Please send me your free booklet about Southern California vacations. Also booklets telling especially of the attractions and opportunities in the counties which I have checked:

lesson with him when he went out from that office.

"And I have never stopped repeating it for the benefit of others, to this day," he said to me. "No paper that requires a signature is too long for the signer to read.

"I SAW Mr. Morgan many times; but on one other occasion I paid him what was to me a memorable visit. It was at the time of the 1893 panic. I do not remember my errand, but I found the anteroom crowded with bankers and financiers, all waiting to consult Mr. Morgan. I was a very small potato in that throng. I stood near the door to his office and waited. The door was partly open, and through the crack I could see that Mr. Morgan was being shaved and that the barber was Peter, who shaved me. I had no idea that Peter went about shaving the famous in the district; I had of course always been shaved in his shop. Peter turned as I looked in, saw me, and smiled.

"'Come right in, Mr. Merrill,' he said.

"Mr. Morgan raised his head a little. His face was covered with lather.

"'I cannot see you, Merrill,' he called; 'but if Peter says come in, why, come ahead.'

"So I went in before the bankers and financiers in the anteroom, and finished my business promptly, thanks to Peter.

"I struck up an acquaintance with Grover Cleveland. He had completed one term as President at that time and had opened an office near ours. I admired him tremendously. On my way home I often saw him on his usual route from the Mills Building up Broadway to Rector Street, to take the elevated train up Sixth Avenue. My father had known him, so one day I plucked up courage and spoke to him. I remember well how very kind he was to my boyish opinions, and how his replies were framed to encourage and to help me. After my introduction of myself, I walked to the elevated station with him a number of times and I am proud to remember that little friendship.

"It took some courage to approach Mr. Cleveland; but I have never believed that timidity helped a man any. Timid people are usually absorbed in thinking of themselves, and thinking of yourself usually results in feeling sorry for yourself, which is the most deplorable situation any man can get into. Again and again I see these victims of introspection develop into acute cases of self-pity. Once you get to pitying yourself, you are done for. I can talk upon this subject with some feeling, for I went through a period of self-pity myself. And I might not have come out of it if it had not been for my wife.

"I found time, even with late hours, to marry, and after marriage I continued to work late hours, to my disgust. I had a modest home of my own now, and someone waiting for me, and it did seem hard to have to stay at work so long. I began to tell myself so. Every time I stayed late I worked out a case of injury. I could argue it out all very nicely in my own interest, and I kept at it, piling up instances of fancied injustice until I was convinced that the company was using me badly.

"Once we had spent some weeks in planning what was, for us, an elaborate evening affair. We were to have a few friends to dinner and take them to the theatre. I had only a modest salary, and it necessitated considerable economy upon our part to effect such an entertainment. All the arrangements had been made, the guests invited, and the theatre tickets bought, when on the afternoon of the affair I was summoned, and told to pack a grip and leave for Boston that evening, going on south to Washington before I returned. The business was urgent. I said nothing in reply; but I went home dead tired, sat down, and poured out my story to Mrs. Merrill.

"If she had sympathized with me, I might have left the company then and there. But she laughed at me!

"'Instead of bemoaning your lot,' she said gayly, 'you ought to thank God for your opportunities!' And she showed me clearly that this was an opportunity; that I could go to the theatre at any time. I cheered up, packed my grip, and went, and on that trip I got myself in hand, thanks to my wife. I determined to stop pitying myself, and I haven't wasted much time in that direction since. Some time later I found a card with a 'Recipe for Success' on it. I do not know that it will insure progress, but it will make anyone who tries it more useful and happier. I keep it with me all the time. Here it is:

"Keep your head cool—your feet warm—your mind busy. Don't worry over trifles Plan your work ahead, then stick to it, rain or shine. Don't waste sympathy on yourself. If you are a gem, someone will find you. Don't whine; tell other people you are a failure, and they will believe you. Talk and act like a winner, and in time you will become one.

"This little paragraph became my guide, and I never had a better one. I went on from that day with a new attitude, one that directed itself as my first boyish enthusiasm had done, but that was different, in that it was self-determined and more likely to last. I did more work, and I did it with grace, and, strange to say, it failed to tire me out as it had in my days of thinking that I was abused.

"LIKE a good many Civil War veterans," Merrill went on, "Mr. Scrymser was a great story-teller. In the early days of our association, he began telling me yarns, many of them with a moral intended to point my way, some of them just yarns. I remember one of the famous Custer.

"McClellan and his army were gathered on a hill near a river. General McClellan called a division general named Smith and demanded, 'Is that river fordable?'

"General Smith hesitated, and a young officer stepped forward.

"'I'll see, sir,' he offered.

"Under the fire of the sharpshooters, he wormed his way down the slope to the river, Indian fashion, crossed it, broke off a branch from a tree on the opposite side, and returned in safety, bearing the branch.

"'The river is fordable, sir,' he reported.

"'Who is that young man?' demanded McClellan.

"'Lieutenant Custer, sir,' replied General Smith.

"'*Captain* Custer,' said McClellan, 'report to my tent at seven this evening.'

"After some years of listening to such yarns I realized that probably other people might like to hear them. I began on a new task. I wrote out all I could

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

remember, and added to the collection as new stories were told. Later, I persuaded Mr. Scrymser to let me publish them.

"In the meantime, company work increased steadily. In 1884, we had less than five thousand miles of cable. We had no connection with the eastern coast of South America. In 1886, the first direct cable to Havana, Cuba, was put into operation, and in 1892 we purchased a land line which runs from Valparaiso to Buenos Aires, one of the most remarkable telegraph lines in existence, running across the Andes. Add to this height the depth of our cables, and it makes a perpendicular journey of six miles from the lowest to the highest point, from the bottom of the sea to the tops of the mountains! In 1907 we laid our first direct cable from New York to Cuba.

"It was Mr. Scrymser's dream to extend the line to Rio de Janeiro; but because of concessions granted to certain telegraph companies, which did not expire until after his death, he was unable to complete the line. It fell to me to continue the dream, which by this time had become my dream as well. After I became president, we laid our first cable to Rio de Janeiro and Santos, and in 1925 we followed it by a second cable, and a new third cable all down the western coast.

"In 1884 the rate to Buenos Aires was seven dollars and fifty cents a word. Today it is fifty cents. To anyone with imagination, that statement carries far more than the bare fact. It means something to every citizen of the Americas, something in the increase of business, in the interchange of ideas through news, in a closer acquaintance all along the line, between country and country, firm and firm, and individual human beings. I have said that I am a sentimentalist. When I receive a message, I see in it not only the printed words upon the page, but the lines running under the sea and over the mountains, and the friend at the other end who is brought close to me.

"Don't imagine that it was all easy going for me even after my wife suggested that I had better spend my energy in work rather than in self-pity. It was thirty-one years before I became an officer. Mr. Scrymser was ill, an additional executive was needed, and the directors decided to create the office of second vice president. Mr. W. Emlen Roosevelt, vice president of the Central and South American Telegraph Company, directed me to prepare an amendment to the by-laws, creating this office.

"'I'll have it ready,' I promised.

"'You don't seem very curious as to who is going to be second vice president,' he commented.

"'You will tell me when you want me to know,' I said. I had my hopes; but it was no time to speak of them. He seemed amused and told me I was to have the place. As soon as I could, I got to a telephone booth and told Mrs. Merrill."

THREE years later, when Mr. Scrymser realized that he was dying, he wrote two letters, one to each of the two companies, asking that John L. Merrill be made president. So Merrill inherited a dream. Shortly after he became president, the two companies combined under the name, "All America Cables, Inc."

YOURS . . .

Nothing is too hard to do for them

—surely not this simple thing!

Your boy, your girl—no others like them in all the world! You want to do so much for them . . . big, hard things!

But after all, being a mother means most of all the endless doing of little things; the simple over and over tasks of every day.

It is the vital importance of some of these little things in a child's development that health authorities are making a special effort to urge upon mothers today.

They are urging one thing in particular, which they have found needs new attention from mothers. A proper *school day* breakfast!

Some very striking facts about this subject have been brought to light by school tests and experiments.

It has been proved beyond question that the kind of work a child does in school in the morning is directly affected by the kind of breakfast he eats.

These tests show that only one kind of breakfast gives a child the mental and physical energy he needs to do his best in school. A *hot cereal* breakfast.

The U. S. Bureau of Education speaks for all school authorities when it broadcasts this statement:

"A well-cooked cereal is an essential part of a child's breakfast"

As the Breakfast Rule it is posted on thousands of school room walls:

"Every boy and girl needs a hot cereal breakfast"

This is now considered so important that it has become a rule in school health programs all over the country.

The reasons why so many nutrition authorities advise a Cream of Wheat breakfast for children are very easy to understand.

First of all, it is just full of vital energy substance. And you know how much mental and physical energy growing boys and girls use up! A Cream of Wheat breakfast gives an ample supply for the whole morning's needs.

Second, Cream of Wheat is so simple to digest that even a baby's delicate stomach can handle it easily. It contains none of the harsh indigestible parts of the grain which put such a burden of extra work on the stomach, using up vital energy that should be free for other needs.

And how children love its rich creaminess! You can make it a new dish every morning, varied with dates, prunes or any stewed fruit. It cooks so quickly and easily—as simple as making the toast!

It's a little thing—this matter of the right cereal for breakfast—but how much it means! Surely you will not neglect it. Tomorrow morning really *prepare* your children for their school hours—with a steaming bowl of Cream of Wheat. Your grocer will send you a box, if you need it.

Cream of Wheat Company, Minneapolis, Minn. In Canada made by Cream of Wheat Company, Winnipeg. English address, Fassett & Johnson, Ltd., 86 Clerkenwell Road, London, E. C. 1.

© 1927, C. of W. Co.

This little girl has learned to read well because she eats the right foods. Every school morning she eats a hot cereal breakfast — *Cream of Wheat.*

To mothers and teachers

Do you want to get the enthusiastic interest of your children in forming the hot cereal breakfast habit? If so, send for attractive colored poster to hang in your child's room. Posters are designed to make a "personal success" appeal both to boys and to girls of different ages. There is a 4-weeks' record form which the child keeps himself by pasting in a gold star every morning he eats a hot cereal breakfast. We will send posters and gold stars free, also booklet on children's diet and sample box of Cream of Wheat to mothers. Quantities for school room use free to teachers. Mail coupon to Dept. P-3, Cream of Wheat Co., Minneapolis, Minn.

Migration—The Wonder and the Mystery of It

(*Continued from page 41*)

Of flights wholly over land, the nighthawk is said to make the longest migration, passing 7,000 miles from the country of the Yukon to the Argentine. The upland or whistling plover flies from Canada to Patagonia. It is one of the earliest migrants, often beginning its southward journey in July. The scarlet tanager summers as far north as Canada; its winter home is in Peru.

One effect of the annual two migrations is to bring near to us wanderers that otherwise we should never see; and I have had a good many thrills from encountering gorgeous strangers, *en route* for the ends of the earth, casually visiting my very back yard. I have seen the royal tern, and the greater yellow legs, two hundred miles inland; the golden eagle flying low over my tiny apple orchard; the nonpareil nonchalantly sitting on a rail fence more than three thousand miles from his winter home; the horned grebe among my weedy raspberries; the black-crowned night heron in a small pear tree in my yard; the woodcock beside my spring; and the shy upland plover, at home on the pampas of the Argentine, loafing in the shade of my sweet corn patch! Strayed voyagers, romantic travelers, they vividly color familiar places, touching them with the nameless charm of the luring, the distant, the strangely beautiful.

These tarriers from dim glamour-lands speak to my heart of God. They tell me that somewhere infallible wisdom dwells, guiding millions on their way. They speak to my spirit with all the unanswerable eloquence of natural beauty.

THERE seems hardly any doubt that individuals of a species return year after year to the old homes of which they have become fond. I know a sunny, secluded meadow in southern Pennsylvania, where, five years ago, I heard and saw a mocking bird. The behavior of the bird led me to believe that it was nesting there. Again, in another year, I was in the same meadow—at sunrise on a morning of late April. From the top of a huge sycamore I heard a bird caroling deliciously a melody so rich and full and tinted with the bloom of dewy radiance that it was a fit herald for the rising of a springtime sun. The whole earth was emerging roseate from her bath of dew. The meadow was greenly sparkling under the laciest of mist-mantles. My first guess was that the singing bird was a brown thrasher; he nearly always chooses the topmost bough of a tree from which to pour forth his wild, shy rapture. But then I knew it to be a mocking bird. How had it found this meadow? Was it a descendant of a bird seen long before? In human life it is common, almost infallible, for children (and grown-ups too) to inherit a passionate love for a locality. It draws them as no other influence does. Why may not the same thing be true in nature? Marked birds, such as purple martins, have been known to return to their houses year after year. Wild ducks do the same thing. For my part, I believe that most migrants not only know how to return to a given place but also love to return. A singular confirmation of this conviction is found in albinos.

These eerie white birds, which have lost the coloring matter for their plumage, have been known to return for four or five years to the same locality, even to the *same tree*, for a nesting site. I know of a robin that was a regular summer sojourner in a certain Pennsylvania village. My friend Arthur Wayne, the naturalist, who has spent thirty years in the woods and fields and marshes of the coast of Carolina, reports the following interesting case of the return of an albino: "A perfect albino of the red-tailed hawk made its appearance every winter from 1901 to 1905 on Dewees Island; but, despite all my exertions, I was unable to capture it. It arrived each year in November or December and stayed until March."

SOMETIMES a strange occurrence will utterly change the route of migration of a species. As a boy, bareheaded, I used to take a sort of romantic delight in following, in fascination, the huge flocks of long-billed curlews with which, during the migrations, the sandy bars and beaches near my home on the Carolina coast abounded. The whistling of those curlews "haunted me like a passion." Stately birds they were, with long sickle bills; heavy in the body, but possessed of a certain divinity of grace that one can always associate with a game bird.

In all that region now there is not a long-billed curlew to be found. They have been gone for more than thirty years. They were literally crowded from their feeding grounds by the smaller and less attractive species, the Hudsonian curlew.

In general, migration is far more of a drifting process than it is a sustained flight. The hardier species lead the van; the delicate voyagers, like the warblers, come last. Often the males precede the females, and cry and call incessantly until their demure mates arrive. It is often during the migration that the nuptial plumage is donned. It is often during little stopovers on the passage north that mates find each other, and finish the journey as a pair. I have frequently watched mallards and wood ducks pairing during the spring migration.

Even the most practical mind must yield to a certain fascination, a certain mystery, when ushered into the presence of the gigantic fact, the superb achievement of migration; the mighty hegira of the vast bird squadrons, thronging "the long savannas of the blue." The sheer wonder of the thing is enough to fill a man's heart with grace, and send him to his knees before the Lord of Creation.

It is the first of October. As yet there has been no frost. The flowers are bril-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

liant with those poignant colors of farewell that flaunt triumphantly, flouting the dread of winter. Most gaudy are certain gladioli; and about these a single ruby-throated humming bird is, in his dainty fashion, exceedingly busy. He is wholly concerned with the wild honey dew in those gorgeous bells, hanging, to him, like a huge carolin from the swaying spire of the stem. Yet this tiny fairy, as frail as thistledown, is on the eve of a prodigious journey, such a one, indeed, as might appall the oldest traveler. He is starting for Central America to-night. Yet he seems joyously unconcerned, probing with ecstatic bill the iridescent depths of the mighty bells. He does not appear to be buying travelers' checks. He isn't rushing around packing luggage and purchasing tickets. Something in his heart tells him that the time has come; but he knows that all is well. He has something to sustain him besides his wings. Perhaps it is what all of us must have.

Into the air he vanishes. The west is all afire; the sun has foundered, leaving a golden vortex. Up the tall oriel windows of evening the sunset roses climb. A black bat, as if performing mystically some dim religious rite, is careening on velvet wings. But my thoughts are with my tiny wanderer, somewhere out in the vast twilight settling over the world. I cannot be beguiled away from the thought of him, though from a little pine a wood-thrush is softly warbling the angelus.

THE winter is past. Spring is here, bringing me into the garden again. It is a morning in mid-May. There has been a torrential downpour the night before. Perched disconsolately on the dead twig of a dripping lilac bush is my faërie adventurer.

Safely had he come that immense journey. He had had no compass. He had traveled in the darkness, by the air route. Who had taken care of that tiny spark of life? Who had buoyed up those gossamer wings? Who had charted the course for this tiniest of aërial mariners? Who had sustained that palpitant elfin heart? I have but one answer; and the more I study migration, the more I am inclined to give it. God is in the night. And when the time comes for our migration hence to a land unknown, through a misty darkness, He will not desert us. In the huge rainy night, in that cavernous and monstrous dark, the frailest abide secure. In that flight amid other spheres than ours, I believe we shall know what it means to be sustained by Everlasting Arms.

"LIGHT Overhead, Sir!" sang out the watch on a tramp steamer. It was a dark night, and the dim, flashing light he saw could not be from the stars. An officer came up. The light overhead spelled out a message in code. The steamer answered by the winking of her lights, and then followed one of the strangest rescues made at sea: a balloon, dropping from the immensity of dark space, alighted on the deck of the ship. This, and many other adventures are related for you next month in "Riders of the Gale," a fascinating article in which a famous balloonist recounts his experiences.

At dinner...

millions enjoy this steaming hot drink...*without regrets*

COLD WEATHER. Weariness. How you need a steaming hot drink to revive your flagging spirits!

You can have such a hot drink even at dinner—without regrets. Without sleeplessness. Without jumpy nerves. Without indigestion. Millions of others do!

They find in Postum every delight that any hot drink can give. Flavor? Postum is made of whole wheat and bran, skillfully blended and roasted. From the golden grain it gets its distinctive, delicious taste. Try Postum at dinner tonight.

Make this test in your home: Use Postum as your mealtime drink for thirty days. Experience the relief from drug stimulation. Note the difference in the way you sleep—in the way you feel on getting up in the morning. At the end of thirty days you'll have *results* on which to base a wise decision.

Four out of five who make this test decide in favor of Postum. And this is a test you will thoroughly *enjoy*. Let Carrie Blanchard, famous food demonstrator, help you start the test!

Carrie Blanchard's Offer

"I will send you one week's supply of Postum, free, and my personal directions for preparing it, as a start on the thirty-day test.

"Or if you would rather begin the test today, get Postum at your grocer's. It costs much less than most other mealtime drinks—only one-half cent a cup.

"For one week's free supply, please indicate on the coupon whether you prefer Instant Postum, prepared instantly in the cup, or Postum Cereal, the kind you boil."

MAIL THE COUPON NOW!

© 1927, P. C. Co.

Postum is one of the Postum Cereal Company products, which include also Grape-Nuts, Post Toasties (Double-thick Corn Flakes), Post's Bran Flakes, Post's Bran Chocolate, Jell-O and Swans Down Cake Flour. Your grocer sells Postum in two forms. Instant Postum, made in the cup by adding boiling water, is one of the easiest drinks in the world to prepare. Postum Cereal is also easy to make, but should be boiled 20 minutes

As He Chose *his* Lady

So he Chooses —her Gift—

AS in a mirror, the gift reflects the giver. As he chooses his lady for beauty—character—purity—so he chooses her gift—the famous Mi Choice package.

A frivolously dainty package. An alluring, tasteful thing. Quiet, with an air of aristocratic reserve. Mi Choice is *the perfection of all box chocolates.*

Each filling is an intriguing surprise—a crispy nut or pure creamy filling, flavored with the true fruit. Each smooth coating proves the big difference between a cursory milling and the fourteen day Bunte process.

Give the gift of gifts and thus again prove that "*as you choose your lady*" so you have chosen her gift.

Your dealer can supply you. Or send us $1.50 and we will mail the 1 pound Mi Choice package prepaid. Also two, three and five pound sizes.

Peter's Tower

(*Continued from page 47*)

police dog, which looked up but did not move as the visitors entered and the servant withdrew. Knitting quietly in an old-fashioned rocking chair, Mrs. Renfrew faced her immense son. Upon a lounge and curled almost into a ball was Petrovna, reading a leather-bound book. The family waited for the reading of the will. The Renfrews met everything in life without show of emotion, save when their anger was aroused or, perhaps, in the madness of sport.

Smith laid the brief case upon the great center table, and withdrew somewhat into the background as the family gathered about the old lawyer at the table. He stood beside the lounge, from which Petrovna had uncurled, and noted that her book was a collection of poems by Sidney Lanier.

THERE is always suspense in the reading of a will. It is a last message, and seems like a voice from the dead. Listeners instinctively draw closer together. Petrovna moved her chair a little closer to her brother, but the latter only lighted a cigar and beckoned to the dog, which came and lay at his feet.

"I drew up your father's last will," began Andrews, looking at the brother and sister; "and I saw him sign it just half an hour before his death—in that library."

The lawyer pointed with the document toward a closed door, and the gesture emphasized his words. Mrs. Renfrew, a picture of placidity, did not look up from her knitting, but Peter stolidly blew a puff of smoke in the direction of the library. Petrovna, as though she sensed something, suddenly turned her head toward Smith, who barely had time to drop his eyes upon the book of poetry. She rose and came toward him, moving with the grace and ease of a wild animal.

"You like poetry?" she asked.

"Yes," returned Smith, regarding the smooth skin and deep brown eyes thoughtfully. "I like Lanier's poems. Are you not interested in the will?"

"I know about the will," she returned, tilting her head birdlike, so that she could look into the gray-blue eyes of the tall man. "Are you a policeman?"

"Something like that," said Smith, with no hesitation. "You have superb intuition, and you love romance for itself. My task is easier than I expected. Who told you about the will?"

"Mother," she answered and went back to the table, to which her low tones had not carried.

Andrews began to read the will, speaking very clearly and with legal lack of stress.

"To my beloved wife," he read after the usual preamble, "I leave the income from my entire estate, in trust, until her death, when it shall go to charity as in hereafter described. To my son and daughter I leave nothing."

Mrs. Renfrew scarcely glanced up from her knitting. Petrovna tilted her head toward her brother, as if she would read his thoughts. Peter the Fifth stood up, stretched his great arms outward and snapped a finger at the dog.

"Humph!" he grunted. "Dad's will. I'm satisfied."

As he spoke, the front door opened and a girl entered followed by a man. Smith looked at the new arrivals indifferently, but looked longer at the man than he did at the girl.

"Nina!" exclaimed the great Peter, advancing with forty-inch strides and picking up the girl by the elbows, so that she dangled before him like a doll. "Dad cut Petrovna and me off without a cent. Does it make any difference?"

For answer, the girl wriggled her head forward and kissed him. There was no doubt about that kiss. The giant tossed her in the air and laughed before he set her upon the floor.

"We Renfrews take what we want from the world!" he said, looking at the lawyer.

For a moment Stanley Holts had stood like a man utterly puzzled, but he threw off the embarrassment quickly and approached Petrovna, under the watchful eyes of both Mrs. Renfrew and Smith.

"Money makes no difference to us, dear," said Holts in a low voice, and Smith, unobserved, bent his head slightly to catch the exact intonation. "I have plenty for both of us."

It was at this point that Smith looked directly at the lawyer and raised a hand, indicative of some wish. Andrews immediately laid down the document which he had been reading, and spoke with new emphasis.

"Before proceeding," he said, "I must submit evidence to show that the late Mr. Peter Renfrew was murdered."

Mrs. Renfrew turned very white at the words. Petrovna deliberately rose and stared intensely at Smith. Stanley Holts and Nina looked considerably surprised. Only Peter, turning slowly from Nina toward the lawyer, exhibited no emotion; yet he spoke first: "And this evidence?"

"I have been reading a *copy* of the will," explained the lawyer. "The original was stolen during the time which elapsed before I returned to the library and found your father dead upon the floor."

SMITH'S searching eyes witnessed astonishment upon all faces except that of the visitor from Florida, where something like an expression of relief dwelt for a moment. Peter opened his mouth and dropped his cigar, in unconcealed surprise.

"Unless the stolen will is recovered," continued Andrews, "the former will becomes binding, and the estate is divided equally between Mrs. Renfrew and the two children."

Peter shook his head grimly and kicked the cigar into the fireplace.

"Stolen or not," he rumbled, "Dad's last will stands good with every Renfrew!"

"What about the murderer?" asked Andrews. "I have brought Mr. Aurelius Smith from New York to solve the mystery."

Peter Renfrew slowly turned his attention to the lanky man standing in the

WHY YOU SEE THIS in Most New Homes

Majestic Coal Window

The Mark of a Modern Home

You see the Majestic Coal Window in most new homes because it is the recognized leader of all coal windows. Builders know it protects the foundation and sidewalls when coal is delivered—saves grief and repair bills later. And they know that it is guaranteed breakproof—made of Certified Malleable Iron and Keystone Copper Steel—rust-proofed. No wonder more Majestics are in use than all other coal windows combined. When you buy or build you, too, will want the Majestic.

ANOTHER MAJESTIC PRODUCT
You'll Want in Your Home

A new convenience that costs but little—the Majestic Milk and Package Receiver. It receives deliveries from the outside—you remove them from within at your convenience. Saves steps—protects from annoyance, intrusion and theft. Outside door locks automatically when closed. Easily installed in old or new homes.

Write for catalog describing all styles of Majestic Coal Windows, Milk and Package Receivers, and many other Majestic Quality Products you will want in your home.

background. Smith was tall, but he did not appear tall beside Peter. The two men stared at each other for a moment, and there was a trace of insolence in the Renfrew stare.

"We Renfrews manage our own affairs," remarked Peter.

"Quite," said Smith.

"However," added Peter, "you can look around, and much good may it do you!"

With that he stalked out of the front door, taking Nina and the dog with him, as a man takes his belongings.

NATURALLY, Smith commenced his examination in the library. This room possessed two windows and one door—the door which had been under the observation of Petrovna. The lawyer explained that both windows had been found closed after the tragedy, but that the window next to the tower had not been locked. Smith seated himself beside the desk from which the will had vanished. So seated, he found his back close to the window, upon the other side of which, and within only two or three feet, rose the stone tower. Through the upper half of the window the lower portion of the astronomer's dome was visible.

"That window," remarked Smith, "was found to be closed but not locked. The murderer must have struck the fatal blow through it, since there was no other way."

"Then you are certain that it is a case of murder?" asked the lawyer.

"Uh-huh," said Smith. "I think there were *two* murders."

"Two!" exclaimed Andrews.

"Nothing else seems to explain the situation," said Smith with quiet conviction. "It is a very delicate case, and possesses several ramifications which need separate attention if a beneficial conclusion is to be reached. I feel that it will be necessary for me to go back a hundred years and begin at the beginning. I would like to speak to the servant who witnessed the signing of the will."

Smith was still sitting at the desk when the servant entered. He was an old man, and stood respectfully waiting to be addressed. Smith pointed to a slight tear in one of the curtains by the window.

"Who did that?" he asked.

"I am not certain, sir," replied the servant, looking for a moment at the curtain; "but it may have been Jameson, the chauffeur."

It was characteristic of Smith not to ask how Jameson might have torn the curtain. "Please get me a tape measure," he said. And when the servant returned with an old-fashioned yellow tape, he added, "Come with me, please."

The tall man, dangling the yellow measure from one hand, walked silently through the great living-room followed by the old servant. Petrovna, with her book in her hand but not reading, was again curled upon the lounge, and Mrs. Renfrew knitted as placidly as she had been doing before the reading of the will. Stanley Holts was absent. Not once did Petrovna glance at Smith as he passed through the room and out of the front door.

The ancient stone tower was built in two stories. The lower half, dark and shadowy, and lighted only by two small windows, was unfloored and unpaved. In the center of the ground, side by side and covered with one-foot, lateral flagstones, were two graves, each marked by head and foot stones, gray and crumbling with age. Heavy beams supported the high ceiling, and a wooden stairway, pinned to the wall, gave access to the upper portion of the tower.

It was to this crude mausoleum that Smith came, dangling his tape measure and followed by the old servant. Without hesitation he entered, and immediately proceeded to do something which caused his companion to raise a hand and hold it suspended in surprise. He was *measuring* one of the graves, the grave of Peter the First, who had been buried for more than a hundred years.

"Six feet," commented Smith, looking from the tape to the servant, "and yet I am told that the first Mr. Renfrew was *seven* feet tall."

"I know, sir," said the servant hesitatingly. "My—my late master discovered that when he was quite a young boy."

"Well," said Smith, rising from beside the grave, "what did he do about it?"

It was evident that the old man did not want to answer.

"I am working in the interest of the Renfrew family," continued Smith, coming over to the doorway and looking into the old servant's eyes very earnestly. "You and I know that the Renfrews need be ashamed of nothing. It would help me if I knew what your late master did when he discovered that his seven-foot ancestor was buried in a six-foot grave!"

"It's true about the Renfrews, sir," replied the servant. "They have nothing to be ashamed of—a bit wild, perhaps, but grand people, and you can serve them without losing any self-respect. Some people, sir, you can't hand a match to without feeling that you've done something dirty. The Renfrews respect a servant, sir, in their wild way; but God help the servant who doesn't return the respect—like Jameson."

"And what happened to Jameson?"

"He was a new chauffeur, sir," replied the old man. "He really wasn't a servant at all. He just thought he was. He came into the library to get his money, came in smoking a cigarette, sir."

"Yes? And what happened?" asked Smith.

"WELL, sir," answered the servant, "I wasn't in the room and I didn't see anything, but there was considerable noise, and I heard Master tell Jameson to eat the cigarette and then to swallow the money he had given him!"

"Was Jameson bruised or smashed up when he came out into the hall?"

"He didn't come out that way, sir," returned the old man, and there was a trace of family pride in his voice. "I never saw Jameson again; but I believe he went out through the window. That's how the curtain may have been torn, sir."

"And when did this happen?" asked Smith.

"The day before my master died."

Smith turned back to the grave.

"I suppose, sir," said the servant, "you will be asking me again what my master did when he found that the grave was too short for a seven-foot man?"

"No," answered Smith, "not if you do not wish to tell me. Please bring me a spade."

Exterior Beauty is only *paint deep*!

WHEN you "Save the Surface" with *Lucas* Tinted Gloss Paint, you not only "Save All," but you beautify.

The only cure for a haggard, weather-beaten, down-at-the-heels look about your home, is a coat of good paint.

The goodness that is in *Lucas* Tinted Gloss Paint is its ability to penetrate and anchor itself firmly in the "pores" of the wood; then to hang on, to protect and beautify for an exceptionally long time.

Changes in temperature that compel a coat of paint to contract or expand with the necessary degree of elasticity, finds *Lucas* Tinted Gloss Paint with plenty of elasticity to stand the strain.

Paint, not so accurately formulated —and as thoroughly mixed—will crack and break under the strain. Cracks let in the moisture, the cause of decay, and decay is the mortal enemy of both beauty and preservation.

If you will consider these five standards in your selection of a house paint, you will be sure to select *Lucas* Tinted Gloss Paint, because—

It Covers—more square feet per gallon.
It Beautifies—with its high gloss and clear shades.
It Lasts—because made of best materials.
It Protects—because it expands or contracts with temperature changes.
It Is Economical—through greater coverage and durability.

Write today for a copy of our helpful painting guide, "Mixed Paints—Uses and Application." This is one of the popular *Lucas* "Do and Don't" series of books that simplifies all home painting problems. Write our Dept. A-3, at Philadelphia, or your nearest branch.

The "Do and Don't" of Home Decoration

For those little painting jobs around the house that every home owner loves to do himself, there is a handy little *Lucas* book—each a helpful guide—that simplifies the work and improves the results. Any of these books will be sent free. Address our Dept. A-3, Phila., or your nearest branch.

The art of smiling charmingly is the art of caring properly for one's teeth. That is why Pepsodent, urged by dental authorities, is also universally placed by experts, these days, near the top of the list of modern beauty aids.

Film—Enemy of Your Teeth and Your Smile

To which many serious tooth and gum disorders are charged

Send Coupon for 10-Day Tube

IN a film that forms on teeth, science has discovered what is believed to be a chief enemy both of sound teeth and of healthy gums—a viscous, stubborn film that ordinary brushing has failed to effectively combat.

Many of the common tooth and gum troubles, including pyorrhea, are largely charged to this film. To combat it, a new dental care is now being widely advised as embodied in the special film-removing dentifrice called Pepsodent.

Now an effective film combatant

By running your tongue across your teeth, you will feel a film; a slippery sort of coating. Ordinary brushing does not remove it.

Film absorbs discolorations from food, smoking, etc. That is why, according to leading dental opinion, teeth look dingy and "off color."

Film clings to teeth, gets into crevices and stays. It invites and breeds the germs of decay. And that is why it is judged so grave a danger to the teeth by authorities.

Film is the basis of tartar. And tartar, with germs, is the chief cause of pyorrhea. That is why regular film removal is urged as probably first in correct gum protection.

Most dental authorities urgently advise thorough film removal at least twice each day. That is every morning and every night.

For that purpose, obtain Pepsodent, the special film-removing dentifrice which leading dental authorities favor. Different from any other tooth paste.

Pepsodent curdles the film, then removes it; then polishes the teeth in gentle safety to enamel. It combats the acids of decay and scientifically firms the gums. It multiplies the alkalinity of the saliva. And meets, thus, in all ways, the exactments of modern dental science.

On dental advice, people are adopting this new way of tooth cleansing. Obtain Pepsodent, the quality dentifrice, at drug stores. Two months' supply at a moderate price—or send coupon for 10-day tube. Use twice every day. See your dentist twice each year. Make both a habit.

FREE—10-DAY TUBE

PEPSODENT

The Quality Dentifrice—Removes Film from Teeth

The servant in the doorway started violently.

"That was it!" he exclaimed. "He dug him up!"

"Tell me what he found," said Smith, looking down at the grave, "or—or bring the spade."

"The original Mr. Peter Renfrew, sir," said the servant, speaking very gravely, after a considerable pause, "was buried standing up!"

Smith gazed silently down at the grave, and there was another pause before the old man continued:

"You never can tell what a Renfrew will do, sir, aside from treating a servant right. I don't know why the first of them was buried standing up; but the arms were circled, as if clutching something, and there was a deposit of English sovereigns in the earth near his chest."

"The bag of gold," commented Smith. "The bag had rotted away. Well, what did your master do?"

"It was Hallowe'en," said the servant, "and, after he had put back the English gold, he filled a pumpkin with his pocket money, jackknives, and boyish treasures, and buried them with the skeleton. Sort of made a gift to the old fellow in the ground, sir."

"I understand that your master made a ritual of the pumpkin ceremony," said Smith. "In later years what did he bury when he brought the pumpkin to the grave?"

"He did it several times a year," explained the servant. "Once a Renfrew does anything he never stops, sir. Only two weeks ago he brought the pumpkin here; but, after the Renfrews grow up, they don't talk, and nobody knows what he buried after the first time—unless it is Mr.—"

"Well?" asked Smith.

"Mr. Holts was up-stairs in the tower, sir, the last time my master came with the pumpkin. I don't know how much he saw, but he is the kind of man who sees everything."

"Please ask Mr. Andrews to come here," said Smith abruptly.

Scarcely had the servant turned his back when Smith knelt by the grave and tested the lateral flagstones which covered it. One seemed fairly loose and he lifted it away, exposing brown earth, which he probed with a pencil. After several probings the pencil struck something hard, and he scooped up a modern ten-dollar gold coin.

"More gifts to his old ancestor," he mused, pressing the coin back and replacing the stone slab.

SMITH had ascended the stairs and was standing in the high, cupola-covered room when the servant returned with Andrews. In the center of the circular room was a large, old-fashioned telescope mounted upon a pedestal. At one side was an iron crank, which revolved the dome upon a circular rail. From floor to apex, one section of the roof was formed by a series of sliding windows, one above the other, for the purpose of viewing the sky through the telescope. Everything in the place was dusty.

"That top window," said Smith, pointing upward. "How is it opened?"

"With a long pole, sir," said the servant. "It used to rest on those pegs, but I

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

saw it behind the house yesterday near the old logging trail that runs over the hills to Break Neck Mountain."

"And did it have a spike on the end?" asked Smith. "A spike something like the steel paper knife that is supposed to have killed your master?"

"Yes!" exclaimed the old servant, and began to tremble, so that the lawyer caught his arm to steady him.

But Smith was interested in something else, and turned the iron crank so that the huge dome moved a little with a low, grinding sound.

"The sound which woke the dog," he explained to the lawyer, "and made him give the short bark."

He turned the crank again and caused the cupola to revolve for several feet.

"The dog saw the roof revolving," he continued. "Perhaps the dog had the sensation that the dome was standing still, and that he, himself, was flying through the air. Consequently, the dog was terrified and howled."

"And what drove the dog out of the tower in a panic?" asked Andrews.

Smith's eyes, sweeping the room, steadied upon a small object on the floor. It was an electric torch, and he picked it up carefully for examination.

"I do not think that the answer to your question will ever be known with absolute certainty," he replied; "but notice this flashlight. There is very little dust on it, showing that it has been dropped recently. When the murderer was in this room it was very dark. In his place, I should have put the end of the flashlight in my mouth and turned on the light. Such a trick gives the appearance of a luminous face suspended in air without any body—enough to scare any dog."

Dropping the topic of the dog in his abrupt and characteristic manner, Smith walked to the lowest window. He threw it open and was joined by the lawyer. It was evident that he had turned the crank so that the window in the dome had reached a point directly above the library window below, and through the latter could be seen the chair in which the late Mr. Renfrew had sat just before he died.

"THROUGH the upper half of that library window," said Smith, "I could thrust downward with a twenty-foot pole, tipped with a spike, and stab to death any person seated at that table. The window, if not locked, could be opened or closed with the spike on the end of the pole. My diagnosis is complete, and it only remains for me to administer the medicine."

"But who is the murderer?" asked Andrews.

"The murderer has ceased to be of any consequence, Mr. Andrews," returned Smith; "but the case has complications which require attention. If you will remain at the top of these stairs I shall try to put everything right in your hearing." He turned to the servant: "Let us do some work for the Renfrew family. Please send me, one at a time, Miss Renfrew, Mr. Stanley Holts, and your new master, Peter the Fifth. I shall wait for them down-stairs."

Aurelius Smith, tall and lanky, but with no appearance of indolence, was standing between the two graves when Petrovna appeared in the doorway. She seemed like some elfin creature of sunlight as she

Dandruff: the bald facts

How to stop it

ANY gentleman, of course, wishes to be rid of dandruff. Doubly so, when doctors tell him that dandruff today may lead to baldness tomorrow!

If you have dandruff, your scalp needs special care. A special soap is advisable—a soap, like Packer's Tar Soap, made especially for the hair and scalp.

The value of pine tar

Packer's contains *pine tar*. Practically all well-known authorities on hair and scalp ills have endorsed pine tar. They have endorsed it especially in the treatment of dandruff.

For over half a century leading physicians have been constantly prescribing Packer's Tar Soap in the care of hair, scalp and skin.

The dandruff treatment below lets your scalp enjoy all the soothing, healing properties of the Packer *pine tar* lather. It clears the gland openings; helps them to perform all their normal duties. It helps start the scalp back toward renewed health.

Packer Treatment for Dandruff:

When you wash your hair do this: Wet the hair with warm water, apply Packer's Tar Soap and pile up the rich, piney lather. With the finger tips, massage this lather well into your scalp for at least three minutes. Rinse. Lather again, repeat the massage, then rinse thoroughly.

In severe cases of dandruff, repeat this treatment every other day for one or two weeks. In milder cases, every third or fourth day may be sufficient. Gradually decrease the frequency of the treatments as your scalp clears. Then *keep up* the treatments regularly once a week to prevent dandruff from coming back.

Usually this simple treatment will soon rid your scalp of dandruff and help keep your hair healthy, vigorous, alive. Occasionally, however, this commonsense method alone does not suffice. If so in your case, do not experiment with treatments which promise seemingly miraculous results. See your family physician—perhaps some underlying trouble needs his care.

FREE *book on "The Care of the Hair"*

28 pages of practical, commonsense information on the treatment of dandruff, falling hair and other common hair and scalp complaints. Write for it to: The Packer Mfg. Co., Inc., Dept. 6-C, Box 85, G. P. O., New York, N. Y.

You demand a specialist for your eyes

DANDRUFF
also demands a
special treatment

WILDROOT is a specialist in *fighting dandruff*. For years a steadily growing number of people have used Wildroot in cases of dandruff — simply because Wildroot does this one job, and does it well.

Much of the dandruff so prevalent today is caused by pernicious germs. Germs that thrive on under-nourished scalps—germs that are easy to pick up, but hard to destroy. Wildroot is *specially* adapted to fight these germs . . . to remove dandruff.

A Common Error

Wildroot is *not* a hair-grower. *Only a healthy scalp can grow hair.* Wildroot removes unhealthy, dangerous dandruff, and thus *prevents the loss of hair* that is sure to follow dandruff.

Send 10c for TRIAL

A letter and dime to Dept. 4-3-1 Wildroot Co. Inc., Buffalo, N.Y. will bring you a generous trial bottle. Make a faithful test. You will get sufficient results—even from the first few applications—to convince you that Wildroot *does* end dandruff.

Your druggist has Wildroot in large bottles . . . . and your barber specializes in Wildroot treatments. Be sure you get this *special* dandruff treatment.

WILDROOT
HAIR TONIC

came into the shadows and stood facing him.

"This is a solemn place," said Smith, "and fit for earnest words."

"'Death, thou'rt a cordial old and rare,'" quoted Petrovna seriously, yet with a smile that played about her face.

"A beautiful line," returned Smith. "Only the poet and the philosopher know the beauty of death—but there is something far more beautiful."

"What is that?" asked Petrovna, lifting her head with birdlike quickness.

"Love," said Smith.

The smile vanished from the girl's face.

"I see that you do not love him," said Smith. "Let me help you."

"You can do nothing," answered the girl, looking down. "I thought I loved him. I know now that it was only the moonlight and the poetry of life. But I promised, and a Renfrew promise is never broken. I don't know why I am talking like this, unless it is because you seem to understand things the way I do."

"It was evident to me," said Smith, "that you and your mother knew the nature of the new will, which undoubtedly was designed to shake off any unworthy person who wished to marry into the Renfrew family. That will has disappeared, but I should like to carry out your father's wishes. Will you let me?"

"You seem to know so much," murmured Petrovna, with a faint attempt at smiling. "I must keep my Renfrew promise, if I am held to it, but—I will trust you!"

A FEW minutes later Stanley Holts stood where Petrovna had faced the lanky Smith. It was the same Smith, except that he seemed consumed by supreme indolence and indifference.

"Holts," he drawled, "it was possible for the will to have been stolen by only one of two persons. You and Miss Renfrew were the first persons to enter the room after the tragedy. Which one of you took the will?"

"You are insulting!" exclaimed Holts, with crimson face.

Smith laughed.

"You are not man enough to exonerate your fiancée at your own expense," gibed Smith.

"You will pay dearly for this," retorted Holts angrily.

"At all events, I shall not pay for it with gold stolen from a grave," taunted Smith. "Did you try to buy too much Florida real estate? You seem pretty rotten, financially and otherwise."

At the mention of the gold Holt's face had gone white.

"What will Peter say when I tell him that you have been passing earth-stained gold pieces in the village?" continued Smith. "What will he do when I show him where you stole that gold?"

"He—he would kill me," stammered Holts.

"Exactly," said Smith. "And he will be here in a few minutes. In payment for my silence, will you inform Mr. Andrews that you are a mongrel pup and ask him to withdraw your recent offer of marriage?"

"I—I will," said Holts falteringly.

"You have!" snapped Smith. "And you will tell me what you did with the will which you stole."

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

"I destroyed it," answered Holts.

"Well," replied Smith, "that is the only good thing which you appear to have done. I have no further use for you. Get off these premises, bag and baggage, within half an hour, if you want me to keep my part of the bargain."

Peter the Fifth came next, and loomed in the doorway smoking a very large cigar.

"You were the only one who showed no surprise when Mr. Andrews announced that your father had been murdered," said Smith. "You *knew* it. You are not the kind of a man who could know that and remain calm unless— What did you do with Jameson, the chauffeur?"

The huge Peter came forward and sat down upon the grave of his great-great-great-grandfather. He leaned back against the headstone and puffed his cigar before speaking.

"Didn't think you would solve it," he replied finally. "What would *you* do with your father's murderer?"

"You did it in fair fight, I suppose?" countered Smith.

"Had a bit of bad luck," returned Peter, grinning amiably. "Came up from the river after my swim and saw the fellow making off from the tower. Looked in through the library window and saw what had happened. Chased my man over the logging-trail to Break Neck Mountain, where he slipped and fell over—same place old Peter the Second died."

"Uh-huh," said Smith. "I'm going back to New York!"

The Little Hero of Meriden

(*Continued from page 33*)

together if I could manage it—and I thought I could. Whether that would have been possible without help I don't know; for the help was offered me and I accepted it."

This help, to which Joe referred, came in an unusual form. That particular form was an evidence not merely of generosity but also of sound common sense on the part of those who planned it:

Twenty of the leading business men of Meriden took counsel together in regard to this little flock of orphans. They were impressed—as who would not be?—by the courage and sturdy independence of the fifteen-year-old cripple who wanted "to keep his family together." And, with a wisdom not often equaled, they decided, as citizens of Meriden, to *invest* something in that boy and his family.

These twenty far-seeing men agreed that each year for the next three years, they would furnish fifty dollars apiece to help Joe Swedock to make himself, and his brother and sisters, an asset instead of a liability to the town! If it had not been for Joe, I doubt if they would have done this. But he already had shown the ability and courage "to stand on his own feet," and in the face of still greater responsibilities, he still showed himself unafraid.

A boy with that spirit would be a real head of a family: the kind of family which the community would be glad to have. Why not give him a chance to show the stuff that was in him?

He just couldn't sell

· · perhaps it's *comedones**

HE couldn't figure it out. He knew his sales talk was good, for he knew his subject from A to Z. Yet buyers wouldn't let him get started. They put him off as soon as they saw him. There was a reason—though he little suspected it was *comedones.*

It is a misfortune to suffer from comedones — the scientific name for blackheads. What's more, you may not even be conscious of them, though others notice them. Comedones often interfere with business success, for you can't be clean cut and attractive when they are present. Do *you* wonder why you don't get ahead? Perhaps it's *comedones.*

Pompeian Massage Cream helps you overcome *comedones.* It gets in where comedones form, rolls out all the dirt and oily secretions. It stimulates a healthy circulation, keeps the pores open, and gives you a clean, ruddy complexion.

Try this treatment

After you shave, spread Pompeian Massage Cream generously over your face — and *rub.* Continue to rub until the cream rolls out. Note how dark the cream looks. That's the dirt that was in your pores.

Don't let comedones form. Use Pompeian Massage Cream every day—especially when social or business engagements demand that you look your best. It means a healthy, wholesome skin. It means more joy in living.

Use at Home after Shaving

To get full pleasure and benefit, use Pompeian Massage Cream regularly at home after shaving. Your face will feel and look like a million dollars. 60c jars at all drug stores.

***WHAT ARE COMEDONES?**
(pronounced com'e-dōnes)
Dictionary definition: A small plug or mass occluding the excretory duct of a sebaceous gland, occurring frequently upon the face, especially the nose. It is often called blackhead.

· SEND FOR 10-DAY TRIAL TUBE

COMMONWEALTH SHOE & LEATHER COMPANY
WHITMAN, MASSACHUSETTS

Joe Swedock, who has plenty of pride but no *false* pride, accepted the chance. Back in his mind was a belief which he could not put into words then, and which he could only vaguely express to me; a feeling that he and his "family" were being offered a choice between a higher destiny and a lower one. With help, they could achieve real independence. Without help, they might fail of this.

For the same reason, he was glad to accept eight hundred dollars, which the people of Meriden raised by giving a benefit entertainment. Thomas J. Moroney, circulation manager of the Meriden "Journal," was appointed guardian of the children. The eight hundred dollars was deposited in the bank, where it has remained intact. The six young Swedocks have lived on the annual thousand dollars contributed by the twenty business men, with the addition of Joe's earnings as a newsboy.

The annual payment of a thousand dollars ceased early last summer. Since then, the Swedocks have taken care of themselves.

I ARRIVED in Meriden late on a Saturday afternoon; and when I had eaten my dinner I walked up to Joe's home, at 104 Veteran Street. A Meriden man—one of the twenty who had "invested" fifty dollars a year in the boy—had written me about him, and my visit was a result of that letter. I had not given any notice that I was coming, for I confess that I wanted to take the household off guard.

I succeeded only too well, for no one was at home on the third floor, where the six young folks live. However, a pretty seventeen-year-old girl, who proved to be Helen, quickly appeared and ushered me into the big combination kitchen, dining-room and living-room. Even my covertly critical inspection could find no fault with it. The place was immaculately neat. On the big table was an attractive cover and a shaded lamp.

For almost five years, this young girl was the little mother of the family of which Joe was the head. When their real mother died, the children moved across the street, to the top story of this house. On the ground floor lived, and still lives, a Mrs. Stakowska, who had known the Swedocks a long time. She was one of the kindest of the neighbors who had so often shown their interest.

"Mrs. Stakowska," Joe explained to me, "taught Helen to cook, to keep house, and to take care of the baby. The others went to school; but they had to help her with the work.

"Teddy had to carry the wood and coal up-stairs. He didn't mind that; but he didn't like to wipe the dishes, which he sometimes had to do. As a rule, I didn't interfere with the housekeeping. That was Helen's job, and she managed it all right. But if there was any trouble about discipline I took a hand in enforcing it.

"There has to be a head in every family," he said seriously; "and of course I was the head in ours. They all understood that; and so we got along all right.

"My mother never went out much. She stayed at home. And that's the way we did. I didn't want my sisters and Teddy to be careless about making friends. I wanted them to wait until they were

Original from UNIVERSITY OF CALIFORNIA

older and better able to choose I never have taken a boy home and introduced him to my sisters."

"How did you all spend your evenings?" I asked this wise and efficient young *pater familias*.

"Anna and I sat at the table studying our lessons," he said; "that is, we did it during the school season. Teddy and Bridget," he laughed, "were usually lying on the floor, studying their lessons too. And Stephanie was in bed."

"Where was Helen?" I asked.

"Two nights a week, for several years, she went to business school," he explained. "That was another way in which we were helped. The lady who is the head of the school offered to let her take the course without charge.

"Since Anna, my second sister, finished grammar school last spring, she has kept house for us. Helen, because of her business course, now has a good position in an office. Anna will do the work at home and, I hope, go to business school at night. In the meantime, Bridget will finish the eighth grade, and be ready to take her turn as housekeeper."

"You seem to have planned everything," I said. "What is your own program?"

"Oh," he replied, his face lighting with pleasure, "I am beginning a two-year business course soon! And," he added with satisfaction, "I expect to pay my own way.

"You see, Helen is earning twenty dollars a week now; and she has been promised more later on. With that, and with what I earn from my business, I think we can get along nicely."

"Your business?" I echoed.

"Yes, my paper business," he explained. "I have everything organized and arranged so that I can go right on, and have an income of about twelve dollars a week from it."

"How will you manage?" I asked.

"I have trained Teddy and Bridget so that they can help me. I have another lad trained too. They will relieve me sometimes. I sha'n't have a great many hours for study, but I can mix study and work. I'm used to that. I did it at high school."

"Did you make a good record there?" I asked.

"Not a brilliant one," he said frankly. "I think I could have done better if I hadn't had to run my business at the same time. It didn't leave me enough leisure for study. But," he added, "I finished the four-year course in three years and a half; and there were only twelve of us who did that. But I didn't have as high marks as I should have liked to get."

LATER, when I had a talk with Mr. Moroney, I told him how Joe's story had impressed me.

"But," I said, "I'm only an outsider. Perhaps the inside of the story looks very different. You can give me a 'close-up' of Joe; and I want you to do it."

"Well," he said, "as the boy's guardian, I probably know him better than anybody else does. And as custodian of the funds provided for the children, I have felt responsible not only to Joe and his family but also to the people who gave this money. So I have watched the boy very closely.

"You probably know that many crip-

Resinol Soap wins the praise of business women

In its Resinol properties they find the elements which every skin needs

ALERT, clear-skinned, dainty, with the ever present necessity for appearing well groomed—who could be a keener judge of toilet requisites than the feminine business executive? And these women—thousands of them—are endorsing Resinol Soap. Why? Because they have discovered what its Resinol ingredients mean to the skin.

They write enthusiastically about their use of this distinctive soap, and in the hundreds of letters received are such expressions as:

"My skin feels so fresh after using"
"Soothing as well as excellent cleanser"
"First soap I've found that leaves my skin feeling soft"
"Like its healing properties and it does not waste like other soaps"
"Leaves my face clean, and the skin pliable"

The experience of these women can be yours. Get a cake of Resinol Soap from your druggist or toilet goods dealer and give it a week's trial. You will find its fragrance refreshing and the particular Resinol ingredients in its rich lather will keep your skin soft, velvety and clear. You need not be afraid to use soap and water on your face—when the soap you use is Resinol.

If you are now annoyed by blotches, or similar disorders, apply a touch of Resinol—that soothing ointment which doctors have prescribed for years in treating itching, burning skin troubles. Excellent for rashes, chapping, chafing, and as a healing home remedy.

For free trial mail this coupon to us

Dept. 6-B, Resinol, Baltimore, Md.

Quick as a flash
this smooth, firm Pen!

CLEAN! Fast! Loads of endurance! Because it's FRESH, of course. And, even more, because it's an ESTERBROOK!

Not just "any old pen" can whisk your thoughts along, and set them down straight and clear. But this Radio pen *does*. It is a true Esterbrook — made of finest steel — with the special Radio finish for smooth action and long wear. You'll *like* it.

A *fresh* pen—that's economy! And it's even greater economy to have the *best* pen—always an Esterbrook!

There's an Esterbrook to suit *your* hand! The coupon will help you find it.

You'll see Esterbrooks in bright red or maroon boxes at any good stationery or drug store.

What you SAVE
by always using a fresh pen:

1—Recopying
2—Illegibility
3—Spoiled Letters
4—Mistakes in figuring
5—Misunderstanding
6—Bad Impressions
7—Defaced Documents
8—Lost Letters

TRUE ECONOMY, ALWAYS A FRESH ESTERBROOK

ples are inclined to be beggars. And you might think that Joe, with the help that was offered him, would have come to *expect* help, and to want all he could get of it.

"He could have had it, too. Everybody was sorry for him, and it would have been easy for him to act as if the world owed him a living. But the best thing about him is that he does *not* act that way. He has worked hard, and has brought up his family with the idea of making them self-supporting.

"I admit frankly that I don't see how they have managed so well. You have seen the children; every one of them neat, well-dressed, and well-mannered. They are *always* like that. Joe has trained them to be that way. If Teddy, when he comes down-town to help with the papers, has on a soiled waist, or hasn't brushed his hair, Joe sends him home to make himself neat and presentable. There aren't any children in Meriden who are better appearing, or better trained, than Joe's are.

"In money matters, too, he has managed better than half the grown people I know. He hasn't touched the eight hundred dollars that was raised for them in 1921; and he has actually saved some of the money he has earned himself.

"A few years ago, when workmen were tearing down a building back of the 'Journal' office, I happened to look out into the alleyway and saw Joe down there collecting wood from the débris."

TO INTERRUPT Mr. Moroney's story for a minute, let me explain that Joe does not wear artificial legs now. He walks on his own abbreviated ones, with the aid of a short, stout stick as a cane. This stick he uses also when he rides in his little cart; he propels it by pushing the stick against the pavement.

"The doctors," he told me, "think I can have a real pair of artificial limbs in a year or two. Then I can walk. . . . At least," he added, "I *hope* I can!"

When Mr. Moroney looked out of his window into the alleyway Joe was busily stumping about, loading the wood into his cart, and several other boys were helping him.

"It's funny about Joe," said Mr. Moroney to me. "I don't think he ever asks anybody to help him. But, just because he is so cheerful and self-reliant, people jump at the chance to do him some little service. If he needs more papers, for instance, I've often seen grown men come hurrying into our office to get the extra copies for him. I know he never asked those boys to help with the wood. They did it of their own accord.

"Well, when I called down and wanted to know what he was doing, he told me he was going to take the pieces home for fuel.

"'They said I could have it!' he explained.

"'How much are you going to take?' I asked.

"'All of it!' he said.

"It was going to be a big job for him, even with the other boys helping. I knew I could persuade some truck owner to take it in one loading, so I told him I'd have it carted home for him.

"'Oh, that's all right!' he said. 'I can do it myself.' . . . And he did do it.

"That was a small thing; but there have been a great many other little incidents of the same sort, and they have proved to me that Joe is not a grafter! He has energy and ambition and self-respect.

"Mr. Whitney, of the 'Journal' organization, happened to be near Joe's stand one day and to overhear a conversation which amused and pleased him. Joe didn't know he was there, so he certainly wasn't talking for effect.

"A man who was a cripple—although not to the extent that Joe is—came up and began talking to the boy.

"'You don't need to do this!' he said. 'Don't you know that you could get four or five times as much money as you earn here? You don't have to do a thing but ask for it, and people will hand it right out to you. Look at me! I ain't as bad a cripple as you are. But do you think I'm goin' to *work* for a livin', when I can travel all over the country and have a good time on what people *give* me?'

"'That's all right,' Joe said. 'I'm doing what I want to do!'

"'But, you poor nut!' the panhandler protested. 'You can get a lot more just for the askin'!'

"Joe said that didn't appeal to him. But the panhandler kept on with his talk until finally Joe got angry.

"'I've heard enough from you!' he said. 'You can just clear out of here!'

"The fellow did clear out; and Mr. Whitney came over to the office, chuckling over what he had heard.

"Another thing I like about Joe is that he is quick to understand the—well, call them the finer shades of feeling. After his mother's death he was eager to do all he could to help support the family. So he occasionally got up an amateur boxing match, sold tickets for it, and made quite a little profit.

"I respected him for wanting to earn something and I told him so. But I could see certain possibilities which I thought would be unfortunate.

"'If you keep this up,' I said to him, 'people may feel as if you are imposing on them. You don't want them to think that every time they see you, you are going to try to *sell* them something! They have already been generous to you, and they may not like it.'

"INSTEAD of resenting what I said, Joe saw it right away. He wanted to give up the benefit matches entirely. But I told him that a good many men would be glad to pay fifty cents to see a boxing match once during the winter. Not as a charity to him; but because they really wanted the match. So, after that, he got up only one a year.

"He sold soda and peanuts at ball games, too. It seemed hardly worth while, I thought; for after he had worked like a Trojan, getting his stuff over there and peddling it all afternoon, his profit was only a few dollars. But I let him do it, because it showed his energy and his effort to be independent. From my point of view, the chance to exercise that spirit was more important than the few dollars he earned.

"He's plucky, all right enough!" declared Mr. Moroney. "For instance, he didn't come to the office one Saturday for his papers. So on Monday, when he showed up as usual, but looking rather pale, I asked him what was the matter. He said he'd been having an abscess on

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the end of one leg. That meant he had been *walking*, whenever he was forced to walk, on this abscess!

"'How long has it been hurting you?' I asked.

"'Well,' he said, 'it hurt all last week, but it wasn't *very* bad until Thursday. I came down-town, though; and Friday, too, I got down for a while in the morning. Then I went to the doctor, and he said I must go to bed and not walk at all for a while. So I didn't come down on Saturday.'

"Imagine it!" exclaimed Mr. Moroney. "I'm willing to admit that I can't see *myself* doing a thing like that."

AFTER our long talk over the breakfast table, Joe went off to see how Teddy and Bridget were getting along with his stock of Sunday papers. On my way to the station I saw the busy trio: Teddy standing at a strategic point, across the street from Joe, to capture any stray purchasers on that side; Bridget running out to hand a paper to the driver of a car which drew up at the curb.

As I waited for my train, I thought of the contrast between this happy, orderly, efficient little family, trained and managed by a mere boy, and the many other families whose grown-up parents complain loudly and perpetually that they "can't do anything" with their children.

I was still thinking of this when I looked up—no! one doesn't look *up* at Joe Swedock. Not in that way! But, at any rate, I saw him as he came into the waiting-room.

"I knew you were going on this train," he said; "so I came over to say good-by to you and to thank you for coming."

Just then we heard the engine whistle and I stooped to pick up my suit case, there being no porters at the Meriden station. At least, I did not see any. Joe made a quick little movement toward the suit case—then looked up at me in silent apology. He had measured its height, compared with his own, and he knew he couldn't carry it for me. Our eyes met; and, as we shook hands, we exchanged understanding smiles. From the car window, I waved to the odd little figure on the platform. There was still something fine and free in the poise of his head and shoulders. And he was still smiling.

THEY are "just folks;" just plain people. To look at them, you would never guess the greatness that is within. The father of this family has never earned more than fifty dollars a month, and for seven years, when his three sons and five daughters were still children, he earned but fifteen dollars a month. Yet this family has made a unique record. Seven of the eight children have been graduated from college, and the eighth would have been graduated but for extraordinary circumstances. Next month, Mary B. Mullett, in another of her "Just Folks" series, tells you the inspiring story of this Pennsylvania family. It is the kind of story that will hold your interest all the way. More than that, it will renew your courage to meet any obstacles that life may place in your way—to meet them with a laugh. For this family has had a grand time while making its great record.

Lysol Disinfectant

REG. U.S. PAT. OFF.

Do you tell your daughter *everything?*

"EVERYTHING" may be worse than *nothing* if your own information is incorrect.

Feminine hygiene, plus sane living habits, is so vital to health and happiness—and so capable of harm if improperly practised—that every wife and mother owes it to herself and to others to know the facts.

MAKE NO MISTAKE. Only poison can kill germs. That is why "Lysol" Disinfectant has for 30 years been standard for personal disinfection in hospitals, doctors' offices and homes. That is why it still is without substitute in medical opinion and tests.

MAKE NO MISTAKE. The proper practice of feminine hygiene involves more than the choice of the right disinfectant. And in the booklet shown below the makers of "Lysol" Disinfectant offer you the professional guidance you should have.

The booklet was written by a woman physician. It is frank and explicit. It is reliable. It has helped thousands of other women. It will help you, too, and contribute to your peace of mind. It will reach you in a plain envelope. It is free.

In the meantime, use "Lysol" Disinfectant for all antiseptic purposes. It is both safe and sure. Its quality never varies. Every drop is potent. It cleans as it kills germs. Get a bottle at once and send for the booklet today.

Made by Lysol, Incorporated, a division of Lehn & Fink Products Company. *Sole distributors* Lehn & Fink, Inc., *Bloomfield, N. J.*

"Lysol" Disinfectant is sold *only* in the *brown* bottle packed in the *yellow* carton.

THE ANTISEPTIC LINIMENT

The Sloane Temper

(*Continued from page 13*)

from town. "There's going to be a concert, and a dance afterward at the Community Club, a week from next Saturday. Can't we go, Art?"

"If you want to."

"I'd love it, if the weather's good." She had become farm woman enough to know that in the country pleasure and profit alike wait on the weather. "What fun it'll be to dance again, and to put on an evening dress. Art, sometime this winter let's give a big party ourselves. We could dance in the parlor."

"Go as far as you like. I sometimes think to myself that I was pretty mean and selfish to take you away from all the fun you were used to, and bring you off to this lonesome place."

"Don't be foolish. I'm crazy about this place. Little did I think last fall that I'd have a husband and a farm and a garden and a lot of chickens—and everything—in another year."

"I'm glad to hear you put your husband first, even if he is thrown in with a farm and a garden and the chickens," he teased.

"Oh, but, Arthur—a farm and chickens are real property; but a husband's only a—a—"

"Only a what? Let me hear the worst."

"A husband— Well, a husband might be an asset and he might be a liability."

"Which am I?"

"I'll make a memo to tell you on our fiftieth wedding anniversary!"

"See here, that reminds me, you've got a birthday approaching. What am I going to give you?"

"Arthur Sloane, I am not going to be one of those wives who have to tell their husbands what to give them for presents. If you haven't sufficient observation and imagination and every other sort of ation and instinct that will let you know the one, the one, one thing I want—then I don't want anything!"

"Don't get on too high a horse, miss. I might buy you a lollipop, and let it go at that!"

They burst out laughing together. Such delicious foolishness. She was so secure in his fondness, his understanding. What price bogy now?

"Did you always get lollipops on your birthdays, Arthur?"

"Did I!" His face darkened. "When I was seven I begged my father for a sled—and I got a bundle of willow switches instead."

THE bogy suddenly rose and eyed her again. His father must have been fast in the clutch of the Sloane temper to do a thing like that to a little, trustful, expectant child. She jumped up and ran around the table and kissed him. "I love you, dear Arthur," she said, and held him tight. It was the only way she could show him how sorry she was, how much she wanted to make up to him for that long-ago hurt.

He understood. "You sweet thing," he said, and put his face against her soft hair. The bogy had disappeared in this burst of pity and affection.

Indeed it seemed as if the bogy was exorcised from that moment. Rhoda ceased to think of him; he did not peep at her from unexpected corners of her mind in her solitary hours. She forgot about him, she had so many jolly things to think of.

That dance! Small parties, club meetings, friendly, informal Sunday suppers and picnics the neighborhood enjoyed in abundance, but big affairs came only once or twice a year. She got out her best evening dress, tried it on, and speculated anxiously as to whether it would seem old-fashioned. She shortened the skirt a trifle, lowered the girdle another trifle, pressed it carefully and hung it away with the highest anticipation.

She pressed Arthur's suit too, and chose his collar and tie with such anxious solicitude that he laughed at her. "Who do you think I am—Romeo or Beau Brummel, or somebody?" he asked her.

"Somebody very nice," she assured him firmly.

EVERYONE was going. Rhoda's telephone rang steadily, and she discovered that it was now her turn to give advice. Her new friends asked her opinion as to dress and behavior with a frankness and freedom that showed how truly they liked her and had made her one of them. And with it all went the last belated getting-ready-for-winter of the farm.

And then she was fired with the desire to make fruit cake and put it away for the Holidays. It was the day before the dance when this ambition seized her, and she neglected everything to seed raisins, chop citron, weigh and measure the currants and spices, the sugar, the flour. It was absorbing work; but it went slowly because she was so eager to have it right that she verified everything twice, and consulted the cook book every two minutes. She was still beating and mixing and measuring when Arthur came running in. "Is dinner ready?" he demanded. "I want to get to town to meet Steele about that hunting dog by half past twelve."

"Oh, Arthur," she said, "I'm so sorry. I've been so busy making this darned old cake I forgot all about having dinner early. You did say something about it at breakfast, didn't you! Never mind. I'll fly round and have you something in half a jiff!"

It was as slight a cause as that. She hadn't even had time to push back the mixing bowl when the thing happened.

"Can't I ever have a meal at the time I want it?" he demanded, and his voice was lightning-flash and thunder-peal in one. "Of all the careless, rotten housekeepers I ever saw in my life, you beat the world. You've never been much good; but to go clear off your head over making some sort of filthy cake nobody'll be able to eat, is the last straw! If dinner was ever ready when I was I'd drop dead of surprise. And when I come in, expecting it, you give me a silly grin and tell me you'll have something ready in half a jiffy! A dozen of your jiffies would make an average man's lifetime!"

Original from UNIVERSITY OF CALIFORNIA

It had come, the Sloane temper. His words struck like stones; he pelted her with accurate malice. "Why are you standing there staring at me like a nitwit? Oh, don't trouble yourself about any dinner for me. I can go without it till I get to town. I wouldn't presume to take up your precious time getting me anything to eat. Keep right on with your messing and puttering."

His black brows were drawn together, his mouth twitched and pulled like a maniac's, he towered over her, threatening, bullying. For one cold moment, she was sure he was going to strike her. She stood still, stunned into speechlessness by his manner, his voice, his foolish, passionate accusation. Somewhere, deep within herself she heard Mrs. Bristol's warning: "The most unlikely little thing will set them off—something you'd never dream of."

HE STARED at her with such fury in his face that she could scarcely command herself to move. At last she managed to come forward. She would build up the fire, start dinner. He would see— But as she moved, so did he, and with a mad gesture of senseless rage he flung the mixing bowl crashing off the table. It broke, and a mess of fruity batter and shattered crockery splashed over half the floor. He stamped out, slamming the door.

Mechanically Rhoda went for a pan, a mop, and knelt to clear up the débris, but she did it with no clear consciousness of her action. She was shaken and confused and helpless. As she worked, fumblingly, stupidly, she was seized by a queer trembling, so that she must steady herself for a moment against the nearest support. Her head felt strangely light, her mouth was dry, and she continually made choking swallows of some obstruction in her throat. Yet she did not cry—she did not even want to. The scene she had just been through was so shocking, so unprovoked, so sudden, that she hardly realized it as an actual experience.

"I wonder if he is crazy," she said to herself. "I wonder if I've gone crazy myself."

When at last the floor was clean it was past the noon hour; but she knew he would not come in, and to eat would have choked her. She did not know what to do. To stay in the house became suddenly impossible, so she flung on her sweater and scarf and ran out into the autumn afternoon, chill, yet golden with sunlight, blue with unclouded sky. She went down the farm lane, past the bare fields, climbed the fence and started through the woods.

Usually, she adored walking there. The wind in the pines was the song of the sea, far away; the bare branches of oak and sweet gum were patterns of delight; there was a little silver stream that ran down to the creek with a chattering, companionable murmur. To-day, all had lost its charm. It was drear, desolate, lonely beyond words.

She stood it as long as she could, and then hurried back to the house in a panic. Perhaps Arthur had come in to find her and tell her he was sorry and ashamed; perhaps . . . perhaps. . . .

But he had not been in. She began to excuse him to herself as she rebuilt the fire and planned her supper. It was her fault—she shouldn't have been so ab-

"The Nujol method is better than laxatives"—*say the Medical Men*

EVERY person who suffers from constipation—either occasionally or all the time—will be vitally interested in the following brief summary of a recent investigation among physicians:

The investigators were impartial—sent out only to find out the truth. They interviewed representative doctors all over the United States—hundreds of them.

Suppose you could have gone with us when we consulted hundreds of reputable physicians about the best treatment for constipation—Suppose you could have listened with us while 8 out of 10 of these advised the Nujol type of treatment—Wouldn't you feel you had advice it would pay you to act on at once?

They questioned them about the best relief for constipation. Of the Nujol type of treatment one doctor said: "It is the most natural aid to normal activity of the bowels." Another said: "In chronic constipation the Nujol type of treatment is especially successful." "Laxatives bring on the laxative habit," said the vast majority of doctors. "A lubricant is better than a laxative in both chronic and temporary cases."

Seven doctors out of ten condemned the continued use of laxatives and cathartics as injurious, habit-forming, irritating, and inflaming to the intestinal tract, weakening its natural functions.

Eight doctors out of ten advised the Nujol type of treatment. Why? Because:

1. Nujol is not habit-forming.
2. It's a more natural method.
3. A lubricant is better than a laxative.
4. Nujol does not cause distress.
5. It is non-irritating.
6. Nujol gives lasting relief.

Laxatives and cathartics act by irritating the intestinal tract. Nujol acts entirely differently. It contains no drugs, no medicine. Its action is mechanical.

It merely softens and lubricates the waste matter in the intestines so that elimination is regular, natural and thorough.

Nujol appeals to the medical man because it is a simple, scientific and safe relief for constipation, no matter how severe the case may be. It is gentle in its action and pleasant to take. Children love it.

Get a bottle of Nujol from your druggist today. Doctors advise it for constipation whether chronic or temporary.

Healthy hair is strong, abundant

Thin, lifeless hair will soon go

DULL, lifeless hair—gradually getting thinner and thinner—is starving at the roots. Or the scalp, lacking vitality to fight infection, has fallen prey to dandruff.

In either case baldness threatens. Yet the hair can be restored to health with a few moments daily care:

EVERY MORNING moisten hair and scalp with Ed. Pinaud's Eau de Quinine. Then with firm fingers move the scalp vigorously in every direction, to work the tonic down to the very hair roots. Brush the hair while still moist. It will lie smoothly just the way you want it.

This Pinaud treatment destroys dandruff and invigorates scalp circulation, nourishing the hair to new growth and vigor.

Get Pinaud's Eau de Quinine at any drug or department store *today*. (Signature of Ed. Pinaud on each bottle.) Pinaud Incorporated, 90 Fifth Avenue, New York — sole distributors for Parfumerie Ed. Pinaud, Paris.

Eau de Quinine

sorbed in making the fruit cake. She should have remembered that he wanted dinner early. It was terribly provoking for him. She would cook a wonderful supper to atone, a really wonderful supper.

When at last the wonderful supper was ready, he did not come, and she sat down at the table and waited. At last she heard him; he came banging in just as he had banged out, flung himself down in his chair and began to eat, without a word to her. So—this was the next step—he had gone into one of the silent spells that always followed the outburst. Mrs. Bristol had warned her of this too. His face was sullen, hard, ugly. It was a stranger who sat there across from her in the soft lamplight, not the Arthur Sloane she loved. She was afraid of him.

He ate only a little, pushed away his chair and stamped out again into the cold night. Presently she heard the sound of the flivver chuffing furiously. He had gone off somewhere, heaven knew where. With a great effort, she set the house in order for the night, and leaving the light turned low crept up-stairs to bed. She was tired to death, and sore as if he had beaten her. Her head, her whole body ached intolerably. She felt bruised and helpless. As long as she could she lay awake and listened for him, but he had not come back when exhausted sleep claimed her for its own.

When she woke in the gray morning it was to hear his footsteps echoing down the stairs. He had risen before she woke. She sprang up and dressed, hurried apprehensively down-stairs, started breakfast. The sleep she had not courted, the homely morning routine, restored something of her confidence. Surely, surely his anger would have spent itself. It was all so senseless, so stupid. It was hard to believe that it had actually happened, save that the big yellow mixing bowl was gone from its place on the lowest shelf. She went on laying the table, stirring her battercakes, with ever-growing calmness. It was a new day.

But all notions of peace were dispelled when Arthur appeared for his breakfast. In he came, his heavy tread shaking the very dishes on the table. He did not speak to her, or notice her in any way. The morning sun, casting a pale level beam through the kitchen windows into his face, made his eyes peculiarly light and hard. They seemed no longer gray, but green, like a vicious beast's. His whole demeanor was brutal, sinister. His face a mask of fury.

HE HAD hardly left the breakfast table when there was a knock at the kitchen door. It was the youngest Bristol, bearing a parcel.

"Mother says she wants you to try her squash pies. She sent you over a couple 'cause she didn't s'pose you'd have time for much baking to-day. She sent you something for your supper, too."

Rhoda asked him in, offered him a fresh battercake with sirup. "What made your mother think I wouldn't have much time for baking to-day?" she asked him, hardly knowing what she was saying.

He looked up in surprise. "Because t'night's the concert and dance and everything. She thought you'd be getting ready."

Rhoda gasped. She had forgotten, absolutely forgotten the concert and the dance in the abstraction of her trouble. "Oh, yes—yes. That was awfully kind of your mother," she said at last. "Thank her for the pies for me, and—and the other present. And tell her I'll be over to see her soon."

"Well, you'll see her t'night too, I guess," said the boy cheerfully. "So long, Mis' Sloane. That battercake was a peach."

After he had gone, she went on again with her morning's work. She wondered what Arthur was doing. Of course there were always chores around the barn; he could tinker there all day if he wished.

And about the dance. She must know about that. To go with him in his present mood would be no pleasure, surely; but it never entered her head that he wouldn't go after all their weeks of planning and anticipation. It occurred to her that if he did go, he would be forced to behave normally among all his friends and acquaintances. It would bring him back to himself. It must. Her courage revived.

After all, she and Arthur were grown up. They weren't children to keep on playing this silly game—for it was as silly for her to be afraid of him as for him to glower and gloom and grouch. She told herself this, over and over again, and nearly convinced herself of it; at least so well that when he came in at dinner time—with no perceptible change in his manner—she spoke to him.

"What time shall we start into town to-night?" she asked, making her voice as casual as she could.

She waited. He did not answer. Did not even seem to hear her. The blood rushed up to her face.

"What time shall we start to the dance to-night?" she asked again loudly, as if he were deaf.

He stared at her with all the insolence of deliberate nonattention. But he did not say one word. Instead, he got up, leaving his dinner half eaten, put on his heaviest coat and walked out of the house. In a few minutes she saw him drive off in the car.

ALL her life long Rhoda Sloane will remember that afternoon. She was so angry at first that she could do nothing but walk up and down, making plans for immediate and dire revenge. The best plan seemed to be to leave him and go back to her sister and stay there. She wished vainly and childishly that she had picked up something, something hard and knobby by preference, and hit him with it—hard—as he went out of the door. She wanted to beat him, to hurt him physically, as much as he had hurt her pride and love.

At last she went up-stairs and began to pack a small bag. She would walk into town and catch the evening train. She would write him a note—no, she wouldn't. Since he had ignored her, she would ignore him. When he came home and found a cold, empty house, no supper, no Rhoda patiently waiting to endure his idiotic behavior, then, then he might come to his senses and comprehend at last what a fool and a brute he was.

She looked about her at the solid old house, its solid old furnishings that had served earlier generations of Sloane men and women—she looked at its order and

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

cleanliness, and the touches of grace and beauty that were peculiarly hers; her own, because it was she who had planned them, had set them there. She had made this house into a home.

And she realized that it was not only the house of her husband; it was also her home; that she too was a Sloane, by grace of her marriage vows. She had rooted herself here, she had grown fast here even in these few short months. And as she thought of these things all her latent womanhood stirred within her, held her to the integrity of her character.

A marriage like this, a marriage where man and wife are truly joined in affection, in mutual interests, cannot be lightly put aside, even for a just revenge. She was a wife, not a fair-weather companion, a giddy fly-up-the-creek, to run away at the first sign of storm in the matrimonial sky. No; there was something greater and finer in marriage than that. And there was something greater and finer in herself.

She had married Arthur because she loved him; and she loved him now. She would always love him. She could no more live without him than she could without air to breathe, or the sky, or the sun. She was part of him, and he of her. To leave him would be to shatter herself, as much as, perhaps more than, him.

All the same—the wound of his behavior was deep and sore. All he had done was so peculiarly painful, because of its needlessness, its foolish triviality. "I will not stand it," she said aloud. "I will not stand it."

She thought of the dance, the way they had anticipated it; but that didn't matter. It was not just one disappointment over an evening's fun, this thing she was facing. It was the color and texture of her whole life that would be ruined by it.

WHAT sort of existence would hers be, with a dread like this perpetually in the background? What dignity or sweetness or serenity could life hold if she never knew when her bogy was going to leap at her, if she must be always waiting, fearful! Her bogy! And she had hardly believed in him! He was real enough now.

Suppose her dear hope of children should be realized. They, too, must come under the curse of the Sloane temper. By inheritance. By example. She divined shrewdly that it was almost as much by example as by inheritance that Arthur had let himself drift into the weakness of these furious spasms. A child with such a father would be handicapped forever.

But it would be no use to quarrel with Arthur, to meet his violence with violence, to scold and scream and make a virago of herself. That would only add fuel to his flame, blow up the fires of his senseless rage into a wilder conflagration. Besides, she would be ashamed to have no more self-control, and—she added after further thought—no more resourcefulness.

What about a talk, then, an amiable, reasonable setting forth of how it all seemed to her, this outburst of his, his hours of hateful silence. No telling how long he would be silent. She shivered at the thought of more days like to-day. No; he was far beyond reason—she knew that. He would close his mind to it, no matter what sound argument, how much sense and tolerance she might offer.

If he could only have a mirror held up

Girls!

The stage door is open to you when you learn to play a Buescher. Good pay on a year-round vacation of travel with always a chance of Stardom.

That's the life!

You Can Play a Buescher

There is something about the tender, melodious voice of the Saxophone that just suits a girl. No other instrument lends so much charm to feminine youth and beauty.

Girls learn *quickly,* too. Saxophoning comes *naturally and easy* to them. It is not uncommon for beginners to master scales *in an hour* and play tunes the *first week.* And many have, *within ninety days,* taken their places with the charming girl-bands so popular in vaudeville.

True Tone Assures Success

No special gift of talent is required to play a Buescher. If you can hum a tune; if you can dance, or keep time to music *you can quickly* learn to play. But *only* with the easy fingering, perfectly tuned Buescher instrument is *rapid progress assured.* You don't have to master difficult "lipping." Just press the key and blow normally. It's almost as easy as a "one finger" solo at the piano. *But Oh! How Beautiful.*

Easy to Play, Easy to Pay

You can quickly learn to play *any* Buescher Instrument. To prove to you *how easy it is* we will gladly send your choice of Saxophone, Trumpet, Trombone, [or any other] for six days' trial *in your own home.* If you like the instrument send a small deposit and pay a little each month on the balance. *Send coupon* below for catalog of your favorite instrument. No obligation. *Do this Today.*

Safeguard *all* your teeth *with the* Pro-phy-lac-tic

Three unique features distinguish this brush from any brush you have ever used. First, the curved bristle surface. Second, the large end tuft. Third, the curved handle. The result is thorough cleansing of every tooth surface every time you use the Pro-phy-lac-tic.

© 1927, P. B. Co.

to him, see himself stalking silently about in the grand manner, banging and slamming and stamping! It was funny—it really was. If she could only make him smile, break through the wall of his possessed and beleaguered spirit, and find his comic sense! No one can stay balefully aloof and angry when he laughs—the thing's impossible. Laughter could banish the bogy as could no other force.

She sat wondering, planning, devising, rejecting, her mind a maze of projects which seemed in some way or other impracticable, futile. At last she became aware that the shadows were lengthening, that she must get supper, that last meal of the housekeeper's inevitable, everyday trio of duties.

Dully she went about the kitchen. All the sparkle and shine and coziness of it had left it. Drearily, she took a hand lamp and went out to the entry, where the great food safe held her supplies. There, on the top shelf, was the package sent by Mrs. Bristol—she had not cared to trouble to open it. Well, might as well do it now. She opened the package, set out the two pies carefully, and then unwrapped the other gift—the Bristol boy hadn't said what it was.

AS THE last waxed paper unfolded she saw something at which, for a moment, she glanced indifferently; then—slowly—No, it wouldn't do—and yet—it did suggest— Oh, it might be foolish, trivial, ridiculous, but if she—

Her imagination went forward, groping for a way to utilize this odd weapon of comedy put so unexpectedly into her hands. She wavered—trying to convince herself that it was worth a trial; but doubtful, questioning. Arthur would be angrier than ever if she did it; but no, he could be no worse. And it might, it just *might*, hit him under the fifth rib of risibility and break his morose and deadening mood. Oh, it might! And if it did—

"I'll try it!" she cried aloud. "I'll try it. It's just silly and crazy enough—it's *got* to be silly and crazy enough. Now!"

She rushed back to the kitchen with her prize, and flew at the preparations for supper in a whirlwind of desperate haste. Everything leaped to order and readiness under her swift, deft fingers. There was not a second to lose, for all must be done before Arthur returned—provided he did return. The kitchen took on some of its lost cheer as she scurried back and forth in breathless hopefulness, shot through with panicky tremors. This was a mad thing—absolutely mad—but she was going to try it.

When the supper table was ready she set a great covered dish before Arthur's place, and on it she tied with a splashing bow of scarlet ribbon a big, square card on which she had printed in letters that fairly leaped into the eye:

LOST SOMETHING?
MAYBE YOU CAN USE THIS ONE!

Her hands trembled over the ribbon and her lips were trembling too. It seemed now such a forlorn hope, such a wild, last-chance shot, so flat, so stupid. She almost snatched it away in a panic when she saw him coming; but then she stiffened and left it where it was. When he came in, still grim, forbidding, she was very busy at the stove. He flung himself down into his chair and the message stared him in the face.

He glanced at Rhoda suspiciously, frowning; but she affected not to see. Would he lift the lid—oh, would he? As he hesitated, she could have screamed for sheer nerves.

AT LAST he reached out slowly, put his hand on the cover, set it aside.

There on the plate lay a gigantic beef tongue, boiled and neatly trimmed, garlanded with a rakish wreath of parsley and rosebuds cut from beets. It lolled before him, enormous, pink, provocative.

Arthur looked at it—at the placard—at the tongue again. Rhoda was watching him out of the corners of her eyes. For another heart-wrenching moment he tried to preserve his severe aloofness. But it was no use. His mouth quirked at the corners in spite of himself. His scowling, bristling brows smoothed and straightened and rose. He was smiling—he could not help it—he was almost laughing—almost!

Rhoda precipitated the coffee pot to the stove and flung her arm around his neck. He couldn't go back on that smile, she wasn't going to let him! With that silly great tongue rosily smirking at them through its absurd decoration, the two of them burst into a gale of laughter, half-hysterical, to be sure, but enough of a gale to blow away his dark and ugly mood and the worst of her pain and fear.

"L-lucky for me you've got a sense of humor," she stammered, between the shaking gusts of mirth that were so very near to tears.

He held her tight, drew her closer. "Lucky for me I've got *you*," he said hoarsely. And then, in words torn from the deeps of him, "Oh, Rhoda, I'm so sorry! Forgive me, if you can. I couldn't—I couldn't help it. It's a black thing in my soul, and sometimes it—it pounces—and gets me. I'm so ashamed—I'm so ashamed—dear girl—"

He laid his face on her shoulder like a little boy. She patted him, smoothed his hair. "There, there," she said, a bit shakily, but trying to be calm. "Don't let's have any more emotions! I've felt enough in this last twenty-four hours to last me forever! Eat your supper—you know we've got to dress and get off to that dance."

She began to set the table in order, to bring the food. She was both elated and depressed. She had won, this time. That little sigh outside in the night might be the wind, but she knew it wasn't; it was the bogy, vanquished for the moment, but still very much alive. He would come again and again. Always she would have to fight him. But would she—could she always win? She looked at Arthur, his head on his hands, his face clear of its darkness, at peace. And he looked up at her, and dimly felt her vision, her question.

"I'm not worth it, Rhoda," he said with humility.

She came back to him, put her arms around him again. "Our love and home are worth it," she said. "Our life together is worth it. Help me and love me, and I will love and help you—always."

And in the clasp of his hands she knew his faithful promise.

Cultivate this good habit

Each day more and more men and women are learning that good health and happiness, beauty and youthfulness are dependent upon the condition of teeth and gums. They practice simple preventive measures. And they never forget to go to their dentist at least twice a year. . . . It is a good habit that always pays rich dividends.

4 *Out of* 5 *Pay Pyorrhea's Price*

ISN'T it foolhardy to risk your health with the odds so great against you? Doesn't it make you wonder when you hear of such a great misfortune coming to a friend or an acquaintance?

Unless a vigilant guard is kept against it, Pyorrhea, the foe of beauty and health, steals into the mouth and starts its deadly work. Its poison creeps through the system. In its wake may follow rheumatism, anemia, stomach troubles and embarrassing facial disfigurement.

This enemy takes as its victims 4 persons out of 5 past 40 and thousands younger.

You need not fear these uneven odds. With a little care you can protect yourself against Pyorrhea. Go to your dentist for a thorough examination, once every six months. And start using Forhan's for the Gums regularly, morning and night.

It is the one dentifrice specifically designed to combat Pyorrhea. It is the formula of R. J. Forhan, D. D. S., who for years specialized in the treatment of this disease.

Don't wait for warning signs, for your gums to bleed. Start using Forhan's for the Gums, tonight. It contains Forhan's Pyorrhea Liquid, used by dentists everywhere. It prevents Pyorrhea or checks its course.

It firms gum tissue and keeps it sound. It protects teeth against acids which cause decay and keeps them snowy white.

As health insurance and protection against Pyorrhea, use Forhan's. Teach your children this good habit. Get your first tube, today. At all druggists—35c and 60c.

Formula of R. J. Forhan, D. D. S.
Forhan Company, New York

Forhan's
FOR THE GUMS
MORE THAN A TOOTH-PASTE
. IT CHECKS PYORRHEA

We Make This Promise

Everybody wants a sweet, fresh breath. If you try this new, odorless, refreshing Forhan's Antiseptic Refreshant once, you'll never go back to ordinary mouthwashes that only hide bad breath with their tell-tale odors. Forhan's Antiseptic Refreshant is a success. Try it.

In contrast with the Broadmoor Hotel at Colorado Springs (below) the storied Belfry of Ghent (at left) was 156 years in building, 1183-1339. The Broadmoor is of reinforced concrete, finished in stucco made with Atlas White. Warren & Wetmore, New York, were the architects; James Stewart & Co., Inc., New York, were the general contractors

The standard by which all other makes are measured

CONCRETE makes safe construction possible on a gigantic scale, while its economy spares money for adornment. In perfecting the manufacture of this great building material to meet the needs and visions of an expanding age, the *Atlas Portland Cement Company* has pioneered:

First, by the development in 1895 of the rotary kiln, which produced cement of uniform quality, multiplied output more than a hundredfold and still keeps cement lower in price than it was thirty years ago.

Second, by so increasing mill and storage capacities that 8,250,000 barrels of *Atlas* used in the Panama Canal were shipped without disturbing regular deliveries.

Third, by creating in *Atlas White* a true Portland cement, pure white, with all the strength of *Atlas* gray. *Atlas White* gives architects and builders a medium through which an endless range of interesting colors and textures can be secured.

Thus *Atlas* service is rounded out and architectural and structural requirements are both fulfilled by *Atlas* products. Huge masses or delicate details can be shaped with equal ease in *Atlas Portland Cement.*

These advantages appear in the contrast pictured above. The historic old Belfry at Ghent, 156 years in building, would cost heavily in time, labor and money, if erected today by ancient methods. In the famous Broadmoor Hotel at Colorado Springs, speed and economy were secured with modern materials; beauty was added with stucco made with *Atlas White.*

Thus *Atlas*, the most adaptable of building materials, strikes a practical balance between beauty and economic value.

The Atlas plan of distribution is worked out to bring Atlas to consumers in the most economical manner—through the building material dealer, the sole distributor between Atlas plants and users. He adds economy in distribution, acts as purchasing agent for your community's needs, and deserves your recognition and support. Write to the Atlas Portland Cement Company, 25 Broadway, New York, for information on any type of concrete work.

Write us for information about Lumnite, the cement which gives full 28-day strength in 24 hours

"Think It'll Rain?"

(*Continued from page 15*)

of different air currents which are responsible for the dancing of the stars. Consequently, there is an element of scientific truth in the proverb, "When stars flicker in a dark background, rain or snow follows soon."

Another proverb which has not been officially ruled out is, "A red sun has water in his eye."

It is a curious fact that, in order to have rain, we must have dust. Rain drops are formed by water vapor in the air condensing on minute particles of dust. When the air contains a large supply of dust and of moisture, the conditions are favorable to rain. This combination of dust and humidity also affects rays of light. It permits the red rays to pass most freely, so that we see the sun as a red disk. Put two and two together, and you can understand why a red sun has water in his eye and is likely soon to shed tears of rain.

FOG is a weather sign that seems to contradict itself. Sometimes it turns to rain, but sometimes it clears away—"burns off" as they say on the New England coast—and the day turns bright and sunny. Here is a proverb which will help you to know which it is going to do:

When fog goes up, the rain is o'er.
When fog comes down, 'twill rain some more.

How many times a year do you repeat the old saying, "Rain before seven, fine before eleven"? Many and many a morning, like a boy whistling to keep his courage up, I have pronounced that cheerful prognostication; but I did not know, until recently, that anything except my wish was father to the thought.

Most rains last only a few hours. You may be inclined to doubt this; but it happens to be true. And since it *is* true, the chances are that if a rain starts before seven it is likely to stop before eleven.

This is especially probable if the rain began in the late hours of the night. Those are the coolest hours; and this night cooling may condense the moisture in the air, forming clouds and rain. But under these circumstances the warmth of the morning sunlight will evaporate the clouds and stop the rain. The chief exceptions are in actually stormy conditions, with northeast winds or boisterous southerly ones.

There are many weather proverbs dealing with clouds; and they are, on the whole, pretty reliable ones. As, for example:

Mackerel scales and mare's tails
Make lofty ships carry low sails.

Trace in the sky the painter's brush,
The winds around you soon will rush.

The clouds referred to in these proverbs are of the cirrus variety. They are very high and are the forerunners of a storm. Then there is another type, the beautiful "woolpack," or cumulus clouds. A very large one is often called a "thunderhead," and rightly too, for it frequently develops into a thunderstorm. But the smaller ones, looking like balls of cotton or wool, indicate fair weather. Notice their height above the earth; for in regard to all cumulus clouds it is a true saying that "the higher the clouds, the finer the weather."

If clouds have been gathering for a day or two, slowly spreading and becoming thicker, the rain that follows will last longer than if the clouds came up quickly. This is embodied in the proverb:

Rain long foretold, long last;
Short notice, soon past.

According to one writer, "Soft and delicate clouds indicate fine weather with moderate or light breezes; hard-edged, oily-looking clouds indicate wind. A dark, gloomy sky is windy; a light, bright, blue sky promises fair weather. Small inky clouds portend rain. High upper clouds, moving in a different direction to that of lower clouds, or to that of the wind at the surface, indicate a change of wind."

According to Bacon, "Every wind has its weather;" and we might add that every wind has its weather proverb. Perhaps the most familiar sayings of the kind are the four couplets by Izaak Walton:

When the wind is in the north,
The skillful fisher goes not forth.
When the wind is in the east,
'Tis good for neither man nor beast.
When the wind is in the south,
It blows the flies in the fish's mouth.
When the wind is in the west,
There it is the very best.

One of my pet notions about the weather is in regard to "the sun drawing water." I like to cling to the old tradition that when we see those shafts of sunlight falling, fan-shaped, through openings between the clouds, we are going to get rain.

The scientists admit that there is some truth in this popular idea. For there must be clouds and considerable moisture in the atmosphere; otherwise, we would not have those shafts of light. And this condition is one that is likely to result in rain.

SCIENCE reserves its deepest scorn for what I might call long-range weather proverbs; those which undertake to predict the weather for weeks, and even months, in advance.

For instance, prepare to be scientifically sat upon if you indulge in the old wheeze about the ground hog. It declares that if the sun shines on February second, so that the ground hog can see his shadow, he returns to his hole for another six weeks. If he can't see his shadow, he knows spring is coming early, so he stays out to be ready for it.

This, say all the Wise Men of the Weather, is pure nonsense! The conditions on one day do not and cannot indicate what they will be for weeks to come. Even our official observers, with a mass of information about the weather of the whole world, do not attempt these long-range prophecies.

The tradition about St. Swithin's Day is another which ought to go into the discard. According to it, if rain falls on that day (July 15th), it will fall on each of the

A new light will dawn on your shaving problem when you strop a NEW blade

Most men think that a new blade right out of the wrapper will give the finest safety razor shave possible. It doesn't.

To give the best results, a safety razor blade, like the blade of an old-fashioned razor needs stropping before you first use it—and regularly thereafter.

Here's what Mr. Megrund says:

"When I used the Twinplex stropped blade you sent me, I at once noticed it had a keener edge than any new blade I had used and decided to get a Twinplex although I was skeptical as to whether I, myself, could put such an edge on a blade. But now that I have tried it and find that I can strop my own blades and really improve a new one, I'll say I would not sell it for any price if I could not get another, as it is the best aid to smooth shaving I ever had."

(Signed)
H. C. Megrund, Shelly, Minn.

Why not send for a blade as Mr. Megrund did and see for yourself?

Stropped NEW Blade Free

Name your razor and we'll send you, free, a NEW blade stropped on a Twinplex. We would like to show you what real shaving is.

All dealers are authorized to sell you a Twinplex on 30 days trial. If after four weeks of marvelous shaving you are willing to forego the comfort and economy you have enjoyed, give up your Twinplex and get back your money. If you can't find the model you want, write us.

Two New Booklets to Help You

INVEST SUCCESSFULLY

FOR more than half a century The F. H. Smith Company has been helping men and women to invest successfully; to protect the money they have accumulated, and to make their invested savings produce a continuous and substantial income. The uniform success of these investors is evidenced by our record.

No Loss to Any Investor in 54 Years

Our booklet, "Fifty-Four Years of Proven Safety," explains the time-tested first mortgage safeguards that have resulted in this record, and that have created world-wide confidence in Smith Bonds. Men and women in the 48 States of the United States and in 51 countries and territories abroad have bought Smith Bonds by mail.

6½% whether you invest much or little

Smith Bonds, in $1,000, $500 and $100 denominations, are sold outright for cash, or under an Investment Savings Plan that pays the full rate of bond interest—6½%—on regular monthly payments of $10, $20, $30, $40, $50 or more.

Our booklet, "How to Build an Independent Income," enables you to look forward 5, 10, 20 years or more, and see the amount you can accumulate by investing your monthly savings at 6½%.

For copies of our booklets mail the form below

forty following days. The chances are that this never has happened; but that makes no difference to the Swithinites.

This particular tradition is a thousand years old. At the time of his death, St. Swithin was Bishop of Winchester; and he was buried close to the walls of the church, because he had expressed a wish to lie where the water from the eaves would fall on his grave. When he was canonized, a hundred years later, it seemed more fitting that the bones of a saint should repose within the church. Preparations were made to remove them, but the transfer was delayed by a rain which lasted forty days. This was popularly believed to be St. Swithin's protest against being moved; and out of this legend has grown the prediction that rain on July 15th will be followed by forty days of rain.

The ground hog is by no means the only animal that is credited with knowing, far in advance, what the weather will be. In a book published more than twenty years ago, Professor Edward B. Garriott collected scores of these popularly accepted traditions which have no scientific value.

A good sample of these sayings is this one about the beaver: "If the winter is to be a long one, the beaver cuts his supply of wood and prepares his house one month earlier than in late, mild winters."

Among the dozens of others, which continue to be repeated with childlike faith, are these:

When bears lay up food in the fall, it is going to be a cold winter.

If bear tracks are seen after the first fall of snow, the winter will be mild.

When birds of passage fly south early, severe weather will come soon.

The swan builds its nest high before heavy rains, but low when the season will be dry.

If the November goose bone be thick,
So will the winter weather be;
If the November goose bone be thin,
So will the winter weather be.

There are scores of similar sayings, based on the actions of birds and animals, their fatness or leanness, and so on.

But, as Professor Garriott explains, their physical condition—fat or lean, thick fur or thin—depends on what the weather *has* been, and how it has affected their food supply and their general health. They are not omniscient as to the future, but are often caught unprepared.

IT IS conceded that birds, animals, and insects do sometimes show a keener faculty than human beings possess for "sensing" an approaching change of weather; but this applies only to short periods, rarely exceeding a few hours in length.

It is an old saying, for instance, that a bee is never caught in a shower. This may be true, for insects seem conscious of atmospheric conditions which precede rain.

"Ants are busy," says one old proverb, "gnats bite, crickets are lively, spiders come out of their nests, and flies gather in houses, just before rain."

It is said that if sea birds fly out early, and go far, moderate wind and fine weather may be expected. If they hang around near shore, or fly inland, a storm is close at hand. If swallows stay at home and fly up and down, or very low, expect rain or wind. Pigeons return early to their cotes when it is going to rain. Guinea fowls and peacocks "squall;" chickens oil their feathers or roll in the dust; robins perch on high branches and "whistle for rain."

Cats are supposed to be especially weather-wise. It is commonly believed that if a cat washes herself in the usual fashion, the weather is going to be fair; but it will be the reverse if she licks her fur the wrong way, or washes above her ears, or sits with her tail to the fire.

More worthy of belief is the assertion that sheep are unusually frisky before a storm. All animals, in fact, seem to be restless when a storm is approaching. Horses stretch out their necks and sniff the air. Pigs run up and down; and, so country people declare, pick up straw in their mouths and carry it into their sties. Cows huddle together at the end of a field and stand with their tails to windward.

THESE, and other actions of animals, birds, and insects, may be accepted as weather signs, indicating some change that is close at hand. But we cannot depend on them when it comes to long-range predictions.

Many of us carry a pretty good weather indicator of our own. Humidity is one of the conditions that precede rain; and humidity also has an effect on hair. Moisture causes naturally curly hair to twist tighter, but it straightens the artificial curl.

Curls that kink, and cords that bind,
Signs of rain and heavy wind.

There are many other substances which, because they absorb moisture, indicate the amount of humidity in the air. Of course it doesn't always rain when the air has an unusual amount of humidity; but that is a condition which at least favors rain. So there is a sound reason for observing signs like damp salt, windows and doors that stick, moist tobacco, limp seaweed or forest moss, and ropes that are hard to untwist.

Some people claim that they can smell the coming of rain—and they probably can. That is to say, they perceive odors which are not so noticeable at other times, and which they therefore associate with rain. Humphreys gives a simple explanation of this:

Decaying matter in stagnant ponds and ditches produces foul gas that accumulates in bubbles under the mud. A storm is preceded by a decrease in atmospheric pressure. This lessens the pressure on the mud-imprisoned bubbles, allows them to expand, come to the surface and break, releasing the ill-odored gas they hold. This is one of the ways in which people do "smell" an approaching rain.

All odors are more apparent when the air is moist. Hence, the scent of flowers seems heavier just before a shower.

Many flowers close when the air is moist, and various trees and plants fold, or hang their leaves.

When leaves show their under sides,
Be very sure that rain betides.

The explanation of this changed position of leaves is that the leaf stalk absorbs moisture. Difference in temperature, humidity and light cause the opening and closing of certain flowers. There is some relation, therefore, between these things

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

and the weather, but it is not a very reliable one.

A better guide is the movement of smoke. If the air is full of moisture—a condition favorable to rain—this moisture condenses upon the fine particles of which smoke is composed. They become heavy, and the smoke trails low. But if the air is dry—as it is in fine weather—the particles remain light and soon become so scattered that they are invisible.

MANY of our weather signs are due to these changes in the pressure of the atmosphere. For instance, people who have rheumatism, dyspepsia, or "nerves," assert that they can foretell a change in weather by their aches and pains.

It is an accepted fact that some human bodies are peculiarly sensitive to changes in atmospheric pressure. The normal pressure, or weight, of the atmosphere is about one ton to every square foot of surface at sea level; and a change of one inch in the barometer, which records air pressure, causes a change of about *half a ton* in the weight of atmosphere sustained by the human body! It is not surprising that the nerves, if they are especially sensitive, register their complaint against this change.

Birds are likely to fly high in clear, sunny weather because of the presence of rising air currents, which tend to lift both the birds themselves and the insects they feed on. Fine weather also favors high flying, especially during migration, because it is attended by good "visibility."

Sound traveling far and wide
A stormy day will betide.

Probably most of us have noticed that when we hear distant sounds with unusual distinctness it is often followed by a change of weather from fair to foul. The same thing applies to vision. Distant objects appear remarkably sharp in outline and seem much nearer than usual.

It doesn't seem reasonable to expect that a storm will follow this condition; yet we know that it often does. Professor Brooks explains it in this way: A storm is usually preceded by a warm southerly wind at a moderate height; and during this wind a cloud layer is likely to shut off the sunlight from the ground. This prevents irregularities in heating. The result is that this lower atmosphere, being even in density and temperature, does not break up the waves of sound and of light passing through it. In that case, they reach, literally, "in better shape" than when the air is irregular in temperature—as it is on bright sunshiny days.

There is a particularly large grist of proverbs about holidays and saints' days; as for example: "A green Christmas makes a fat graveyard," and "If it rains on the first Sunday of the month, it will rain on every Sunday of that month." All these sayings are dismissed as worthless by men of science. Weather is no respecter of persons or of days. It comes as a result of the interplay of enormously complex conditions; and it is only by accurately observing these conditions that the weather in any locality can be predicted, even twenty-four hours in advance. The proverbs described as fairly accurate in this article are based on this careful observation.

Edward F. Peters
sole member of the firm of Burch and Peters, Cincinnati, Ohio, finds that The Dictaphone enables him to keep work moving smoothly through his large law office.

He is organized— in the modern way

Read why this lawyer threw shorthand out of court—then turn to our coupon offer

"Every lawyer, and every clerk, in our offices," says Mr. Peters, of Burch & Peters, "now uses The Dictaphone."

A PIONEER in the modern means of delegating responsibility without surrendering it! That describes Edward F. Peters, sole member of Burch & Peters, Cincinnati's largest law firm.

What is that modern means? In the words of Mr. Peters himself:

"We were pioneers here in Cincinnati in the use of The Dictaphone. Today my own work is altogether executive; and I cannot conceive how I could get along without The Dictaphone at my elbow."

That's it—always at his elbow! Always ready to transmit facts and assignments to his associates. And always at their elbow—for them to report back by the same route. Delays and misunderstandings avoided. A written record of every transaction. The modern means of delegating responsibility—The Dictaphone!

When a new case comes into the office, Mr. Peters turns to The Dictaphone on his desk and assigns that case to one of his lawyers *in writing*. Shortly afterward, back comes the lawyer's preliminary report. Often as many as a dozen reports sift through in a single day. From first to last, every step is put down on paper—via The Dictaphone. Each case has its complete history on file. No forgetting or misunderstanding. No time-wasting conferences.

Mrs. Jeanne Hadley
private secretary to Mr. Peters, feels that she could not keep up with her many important duties if constantly interrupted to take down shorthand notes.

That's how Mr. Peters gets things done. His office is a modern organization. *He works through others.* He delegates. And the result he achieves would be impossible without The Dictaphone.

And Mrs. Jeanne Hadley, private secretary to Mr. Peters, owes as much to The Dictaphone as does her employer. Independent of interruptions, she now utilizes her time to such advantage that she is of greater value to her employer, assisting him in the intricate work of the Corporation Department.

What The Dictaphone has done in Mr. Peters' office it will do just as well in yours. There's the coupon—waiting for your action.

DICTATE TO THE DICTAPHONE

REG. U.S. PAT. OFF.

and double your ability to get things done

What's Wrong With Shorthand?

Executives say:
"I'm forced to cut dictation short."
"Felt just like dictating but she's gone."
"She can't help me with other things."
"If I could only dictate while it's fresh in my mind."
"If she could only take it as fast as I think."

That's enough! I'll send in this coupon on general principles

Somewhere There's Always Someone Listening In

(*Continued from page 34*)

'jazz' or classical; but it must be instrumental. The time for much song singing, unless it is incidental to an instrumental number, has gone by. After midnight, 'jazz' has the boards to itself.

"In a general way, then, I would say there are, among others not so easily classified, five main radio audiences. The local time element enters in here; for instance, we get many Eastern sporting event stories by one P. M. But the five great radio audiences can be divided roughly as follows:

"First, the 'bright and early' group: This audience gets up early in the morning. There are many hobbyists in it. They will listen to physical culture talks, reducing instructions, morning devotional services, talks on gardening, dietetics, housekeeping, or domestic science.

"Second is the noon crowd. Any program addressed to this group must have considerable 'snap' and speed to it. They like music with their meals, but they also want to hear the latest news flashes. A good time *not* to try to put over a lecture is between twelve and one o'clock, midday.

"Third, the sports audience, principally men and boys interested in great sporting events. (On this coast, because of the difference in time here and the East, we get our main sports audiences in the early afternoon.) The sports audience is one of the most thoroughly defined groups in radio-land. They are steady fans. When the time comes to announce results of sporting events, they want nothing but sports.

"Fourth in our list is the greatest group of all. Unless some national news event or some local happening of more than usual interest has the attention of the public earlier in the day, by far the greatest number of listeners-in take to the air in the evening after six o'clock. From that time on, for several hours, they tune in by the thousands.

"BY eight-thirty o'clock—the hour we naturally think of as the meeting time for evening audiences—'attendance' is at its peak in radio-land. You have out before you and all around you, on ships at sea, in mountain cabins, in valley farmhouses and city mansions, rich and poor, old and young, *the* great American radio audience. For two hours, all special interests and hobbies are submerged; only the things common to the interest and pleasure of all will hold this vast crowd.

"They want songs, old and new. They want to hear jokes. They want to hear a verse or two from the Scriptures. They want to hear a little boy or a little girl speak a piece. They want to hear the studio canaries chiming in while somebody sings a solo. During the fall, this biggest of all radio audiences will stand for a few brief reports on the day's football or baseball games. Or they will listen with the greatest of interest to a talk by someone in the public eye, or someone noted as an au-

thority on a subject, say, an explorer, a physician, an Indian chief singing the songs of his tribe, a missionary from India, a famous motion picture star, or a writer.

"Nine tenths of the radio fans of the country are members of this great group. We know this because the majority of our telephone calls and letters and notes relate to programs given at the hours this audience is tuned in. About nine-thirty, they start dropping out, and by eleven-thirty there is left the next great group of major radio audiences that have distinct preferences.

"This fifth division is made up chiefly of dancing radio fans, mostly young men and women. They want instrumental music—orchestras and bands; and usually the call is for something 'snappy.' If a news event of tremendous importance breaks, you can cut in on the dance music to make an announcement about it, but, once having had your say—on with the dance!

"BUT, as I've said, the real audience, the one that shapes up the program policies of the broadcasting stations of the country, is the one that tunes in around eight-thirty in the evening. That's the audience the broadcasters try hardest to capture, for if you please this group your station is really effective.

"In the public's choice of songs, we have noticed some significant things: The songs that have the greatest grip on the hearts of the people are those that express some common human experience, usually associated with love for mother, home, wife, or sweetheart. I believe the most enduring of all songs is 'Silver Threads Among the Gold.'

"To most people it is something of a shock to discover that time is really fleeting, and that it's taking us right along with it. This discovery, once made, lodges deep in the consciousness. It is something to think about, to wonder about. And how naturally and wholesomely are the emotions it brings forth described in the song:

> "*But*, my darling, you *will* be
> Always young and fair to me!

"I have no doubt that when those words go out over the radio they strike responsive chords in many, many hearts.

"In almost the same class is another lasting favorite, 'Believe Me, If All Those Endearing Young Charms.' And, among songs that touch on personal experience, we must surely include 'The Rosary.' Add to these three Mrs. Carrie Jacobs-Bond's 'End of a Perfect Day,' and you have four songs that are consistently high in public favor. And they will probably continue to be so, because their themes are based on experiences common to us all.

"People like the same qualities in their poetry that they like in songs, only here more latitude in theme is permissible. Our audiences have shown a definite preference for two poets—Edgar A. Guest and J. W. Foley. Mr. Foley lives in Pasadena, and has a large local following.

"The particular quality of both of these writers that seems to appeal to the public is their ability to express in simple, forceful language the things we know in our inner hearts, but which we can't say very clearly for ourselves.

"By far the favorite Scripture reading is the Twenty-third Psalm. One thing

radio is doing is to get a lot of people better acquainted with the Bible. Not long ago, a man asked us to have someone read the Twenty-third Psalm. 'Heard a lot about it,' he wrote; 'but have never actually heard or read the Psalm itself.'

"That evening we had the Psalm read, and almost before the reader had concluded, the fan who had made the request called in. 'I'm the guy that asked to have the Twenty-third Psalm read,' he said. 'Say, I wonder if it'd be asking too much to ask you to have it read again? I think it's the prettiest thing I ever heard in my life!'

"There is much sneering and joking about old jokes; but we find that the good old stories that have been told time and again, like the good old songs, are the most popular! Of course a brand-new joke that sparkles with good wit will always get over; but nothing falls flatter than the brand-new supposed joke that doesn't sparkle.

"You realize you've accomplished something when you put over a laugh through the microphone—one that brings in notes of comment and appreciation. Jokes that are 'sure fire' in vaudeville, where ninety per cent of the effect is often due to the costume or the antics of the teller, will often land on the ether with something almost akin to a dull thud.

"Perhaps, then, the reason old jokes that have stood the test of time are still so popular in radio-land is that the listeners have *seen* the joke told somewhere, at a banquet, or from the stage, or around a camp fire. And when they hear it over the air, they give it a mental setting similar to the one in which they first heard it.

"THE voices and laughter of children always make a hit with the early evening audiences. Children have naturally the three traits necessary to getting the interest and confidence of the public: genuineness, naturalness, and sincerity. Left to themselves, and not coached to say things they don't understand, you can usually depend upon children to get across.

"At six-thirty, we have our Children's Hour, in which small children take part with me and studio characters known as 'Uncle Remus,' the 'Sandman,' the 'Court Musician,' and so forth. These programs often border on fantasy; but the children enter into them with such enthusiasm and such sincerity that they seem almost real.

"We have found that these children's programs are popular not only with the children but with very old people as well. Fully half of our Children's Hour audience is made up of grandpas and grandmas! Perhaps they hear again, in fancy and in dreams, as they listen, the voices of their own little ones, now grown and gone into the world.

"We never coach the little ones on what to do or say; they sing the songs they like and speak the pieces they have memorized —but it is the little asides, the spontaneous, unexpected remarks they make that give their programs charm.

"During our Children's Hour one evening, a little girl and I were carrying on an informal conversation in our usual style. 'And what did my little girl do to-day?' I asked her.

"'Went to the beach, Uncle John,' she

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

said. 'And'—brightening up—'what do you suppose I found there, Uncle John? Guess.'

"Of course I couldn't guess.

"'A set of false teeth!' she said triumphantly.

"Inside of three minutes, the grandmother who had lost the teeth called in, and we had them taken to her by a messenger boy.

"NEXT to children, the early evening audiences like to hear the voices, squeaks, barks, calls and sounds of birds, animals, and insects.

"Animal sounds are best over radio when they give atmosphere to a program. One of our best stunts of this type was a county fair program, during which we had in the studio a calf, some pigs, a crate of chickens, and a crate of ducks.

"Our studio canaries, Kindness, Happiness, and Joy—an acrostic, you can see, on our station initials—are wonderfully popular. They are continually being showered with gifts—birdseed, handmade cages, and the like. I always bring them out to 'accompany' vocalists who sing light numbers, or love songs; and they've been brought to the center of the room so often they seem actually to know what's expected of them.

"Very often, and usually every night, when a few minutes of talking follows several vocal numbers, Radio Joy will interrupt the program with his loud singing. I always let him have his little nightly solo. The fans expect it. Sometimes he sings early, and sometimes later, and his eccentricities and temperamental inspirations have made him a well-known character.

"One night he nearly went wild when a woman who imitates birds came to the studio. He interrupted her whistling numbers, chimed in on the main notes, and then rudely ran scales that threw the whole thing into discord. In short, he tried in every way to outsing her. She began to whistle some very intricate notes. He followed right after her, and finished each time with some curlicues of his own.

"Finally, it became a real whistling duel, with the woman leading. He clung to the side of his cage, with his feathers all ruffled. After a bit, he took the lead. He'd whistle a few measures, then listen for her echo. Each time he made his notes more complicated. When he saw that she followed him almost perfectly, he burst into a perfect rage of notes; he sang high and low, up and down, trilled—did everything he knew how to do, then listened. When the mocking-bird woman's memory failed on one of the phrasings, Radio Joy cut in with a series of notes that were positively jeering!

"He sang his own measures over, and, as if to josh the mocking-bird woman, broke down where she had and began to sing a series of twitters that were absolutely silly.

"The judgment of the radio fans was that it was a tie. Hundreds of them wrote in to say they couldn't tell which was the bird singing, and which was the woman whistling.

"Ordinarily, however, the ears of the people of radio-land are very sharp. A radio audience offers one of the best tests known for a singer or a musician. Radio fans are quick to appreciate, and quick to help with suggestions. 'Tell that man who

Chew DENTYNE *.. and smile!*

'DON'T be afraid to smile. Smiles make friends the world over. Teeth play a big part. They should be snowy white when red lips part in a smile. Dentyne is a delicious gum that is more than a confection. It keeps breath sweet, teeth clean and white as pearls.

just sang the baritone solo that he breathes at the wrong places,' some telephone critic will say; or, 'A minute ago, when that soprano sang "The Star-Spangled Banner" she said "through the perilous fight—" That's wrong; it's "*perilous night*".'

"There are many singers and musicians who sound to the untrained ear as good as many other singers and musicians who are famous for their talent and ability. The radio, however, shows up the real difference between the unfinished performer and the artist. It's largely a matter of pitch—I mean when all other qualities are equal.

"Not long ago, for instance, a sharp-eared critic called up while an orchestra was playing, and said, 'For goodness' sake, tell that first fiddler to give the peg of his D-string about a 64th of a turn. He's drivin' me crazy!'

"The violinist gave the peg a little twist, and the 'fiddle' did sound better. In the deadened interior of the studio, no one had noticed that the string had slipped a trifle. We were hearing the music unamplified, and the variation from absolute pitch wasn't noticeable.

"You see, a sound sent out over the radio is amplified, or, as so many erroneously say, magnified. If the sound is perfect to begin with, it remains perfect when broadcast, for perfection, like zero, remains the same, no matter how many times it is multiplied. But if the sound is 'off' a trifle, the very 'offness' of it when it is shot into the ether amplified many times is accentuated.

"Several musicians and singers who have been here at KHJ have been able to correct pitch defects in their executions after reading suggestions sent in by critics in our audiences. Incidentally, there are many very sweet and beautiful voices that are rarely heard, because they lack volume. Radio is going to make it possible to save many of these voices to our enjoyment; for if the other desirable qualities are there, radio can very easily supply the necessary volume.

"BUT, speaking of accuracy, the public's love of it doesn't stop at the pitch of an instrument or a voice; it extends to everything. Mispronounce a word or misquote something, and you are in for it.

"I get up to read a news item describing, say, a happening in Terre Haute, Indiana. If I forget and call it Terre *Haught*—to rhyme with naught—within a few seconds nearly everyone within the range of my voice who has ever been in Indiana will be calling up to tell me that It's not Haught, but Hote—rhyming with note.

"Probably the kind of inaccuracy most often resented by radio fans is misquotation of the Bible. Unless a radio speaker knows he is absolutely right, when he quotes from the Bible he'd better explain that he is quoting from memory. Whenever I hear a speaker, quoting from Genesis, say, 'earn your bread by the sweat of your brow,' for instance, I get ready to greet him, when he sits down, with a lot of notes explaining that the passage reads, 'In the sweat of thy *face* shalt thou *eat* bread.'

"And who, having mentioned Jonah over the radio, hasn't learned that the creature that swallowed him was not a whale, but that for Jonah's reception when he was thrown overboard 'the Lord prepared a great *fish*'?

"The particular slip that all loyal Californians listen for and land on is that of the speaker, usually an Easterner, who says, 'As you sit by your *firesides* this evening.' You know, in California—Our Climate— But I guess that doesn't go in this story, though.

"MANY people do not realize the vastness of the radio audience; some of the requests that we get prove this. Almost every week we are asked to play some certain piece—sometimes a wedding march—at a certain moment, to help the person asking it put over some effect that's especially desired. Sometimes we can grant such a request.

"Usually a request for a song or a musical number can be granted, because there's a probability that the number will be appreciated by all our audience; but we have to turn down many requests for special stunts and announcements because they are not appropriate for an audience of mixed ages and preferences.

"A difficult situation for us is when some broken-hearted mother asks us to broadcast information that may bring home a son or daughter who has run away. We used to make announcements of this kind; but now we do it only on request of the police department, for so many of one sort or another came in that they threatened to crowd everything else off the programs. Of course, if a little child has wandered away and got lost, we try to help find it.

"One of the most dramatic cases of finding a lost person happened several years ago when it was still our practice to broadcast descriptions. A mother came to the studio and begged me to help her find her boy.

"'He's a great radio fan,' she pleaded, 'and he likes you, and I'm sure that if you'll just say something to-night he will hear you, and come home.'

"That evening, after explaining the situation to my listeners, I described the boy, told how his mother had asked me to help find him, and closed with the words, 'John Anderson' (that wasn't his name, of course), 'come home to that poor, broken-hearted mother of yours!'

"Those words were all the boy heard; but they were enough. He and another boy had just driven up to a filling station in a small car. They were about a hundred miles from home. In the door of the station was a loud speaker. Imagine the boy's surprise when he drove up, shut off his engine and, out of the clear night air, booming right at him, heard the words, 'John Anderson, come home to that poor, broken-hearted mother of yours!' . . . He was home for breakfast!

"Because so very, very many people will hear a radio program, we never know just what new and surprising result is going to follow an evening of broadcasting. About three years ago, we had an interesting case of what can happen when one 'breathes a song into the air.'

"A young woman who had been in France as a war nurse took part in an evening program. She sang several songs—rather wistful bits, they were.

"While she was singing, a battleship was on its way to the Pacific Coast, via the Panama Canal. On board were sev-

eral of the last of the soldiers to come home after the war. They were listening to a radio. One of the soldiers became very nervous when he heard the girl's voice.

"He kept asking the others to be quiet. When I announced the name of the singer, the soldier shouted, 'That's her! That's her!' And it was.

"We sent him her address—he had got in touch with us immediately—and ten days later when he arrived at the port of Los Angeles, he was met at the dock by the girl he had loved—and lost—in France. In the general confusion following demobilization they had lost track of each other. They are happily married to-day.

"Nearly every day we hear of queer reactions to radio sounds. Dogs jump out from under library tables and attack the family radio when, for instance, a 'bear' growls during one of our Children's Hour programs; house cats search in vain for the canaries whose voices are so plain, but whose bodies seem not to exist. We get many accounts of such happenings.

"BUT perhaps the most dramatic outcome of a chance overhearing of something on the radio was that of an incident that took place within a few months after KHJ was established.

"We got a frantic long-distance call one night from a man out in the Nevada desert. He had ridden from a desert camp to the nearest ranch where there was a telephone, to ask us if we wouldn't try to find a doctor for him. A friend of his had been bitten by a rattlesnake. They had been able to hold off the spread of the poison by means of a tourniquet; but there wasn't much chance that they could hold it in check much longer. Moving the man would have increased his circulation, making the danger even greater. So he was left alone in camp while his friend went after help.

"The friend gave us an exact description of the place where their camp was, and how to get there. We immediately sent out a distress call; but with little hope that anyone could reach the man in time. It was miles to a town of any size, and even if we were heard in the nearest town there was little chance that a doctor could reach the camp in time.

"The man who had telephoned us went on back to camp to wait with his friend. When he rode up on his horse, he saw that someone had preceded him.

"'Was it you that telephoned "The Times" this afternoon?' the stranger asked, coming out of the tent.

"'Yes,' said the man on horseback.

"'Well,' said the other man, 'I'm an old desert rat. I'm camped over here about a mile an' a half from you. I heard about the fix you was in, an' come right over. I've got a anti-snake-bite outfit, an' I brought that too. Your pardner is all fixed up, an' is goin' to be all right. Them radios is a great thing, ain't they?'"

"WHAT People Want to Know About Etiquette" is an interview with the author of a famous book on manners. Countless thousands of inquiring letters have come to her from all walks of life. In this interview, next month, she gives you seven rules that will help you in any social situation.

94% of FOOT PAINS

Start Here

Now amazing device stops them in 10 minutes.

—By Dr. L. J. Delson, D.S.C.—

Burning, aching feet and legs — cramps in toes, foot calluses, pains in the toes, instep, ball or heel — dull ache in the ankle, calf or knee—shooting pains, flattening and spreading of the feet, sagging arches — all can now be quickly ended.

SCIENCE says 94% of all foot pains result from a vital group of weakened muscles. Now a way is discovered to support and strengthen muscles instantly and permanently. Pain stops in 10 minutes. An amazing band is used, designed and tensioned with scientific precision and called the Jung Arch Brace. You slip it on, that is all.

Immediately you dance, run, stand with ease —wear stylish shoes in comfort. Stage dancers, athletes, housewives by the thousands wear it. No stiff props that weaken. This band is amazingly thin and light, yet highly elastic and strong. Results are permanent. Soon band may be discarded—feet are well. Specialists urge it widely.

Test it 10 days, if not amazed and delighted your money returned. Go to druggist, shoe store or chiropodist. If they can't supply you use coupon below and pay postman. **Send for free book on foot and leg troubles.**

"Don't Worry—Thompson Will Handle the Job!"

(*Continued from page 16*)

Erie Railroad shops at Meadville. This proud old town is an odd combination of atmospheres. The shops comprise one of its great interests; another is Allegheny College, founded in 1815. It was an atmosphere, in boyhood, that was to mold Thompson. His mother, with foresight, saw to it that it did.

She glorified mental attainment, held up to him old Noah Webster, his scholarly ancestor, who for thirty-six years had labored to produce that masterpiece, the dictionary which bears his name. Every week, sacrificing to do so, she put aside in the bank a little sum of money against the day when Arthur should enter Allegheny College.

An anecdote will give you, at a glance, the kind of boy he was. The class was studying zoölogy. It was early spring, when the frost had not yet left the ground. The teacher was on the subject of frogs.

"If I had some live frogs," she said, "I could demonstrate for you just what I mean. But it's too early for frogs now. We'll have to wait until the frost goes."

Next morning, however, to the teacher's amazement, young Thompson toted into school a pailful of frogs. He knew of a spot near a spring where the ground didn't freeze, and that frogs were to be had there by digging. Not another boy in the class possessed that secret.

ABOUT two miles from the Thompson home was a lumber mill. The lure of moving machines and of men at work drew the boy to it, like steel to a magnet. He watched the logs come in from the woods, rough trimmed and armored with bark. The huge saws ripped them into boards, which were placed into piles for seasoning.

"What do you do with this pile?" he asked the boss, pointing to the slabs of bark cast aside as waste.

"Oh, that stuff's no good," said the boss. "If you want any of it, take it."

A day or two later Thompson was back with a wagon. He sorted the best slabs into equal-sized heaps, tied the heaps into bundles, loaded his wagon and started back to town.

"What are you going to do with 'em?" asked the boss.

"Sell 'em for firewood," said Thompson. "I'll get five cents a bundle. Lots of folks will buy."

They did. Thompson developed a regular business of supplying firewood to Meadville patrons.

There was an old surveyor in town who had the title of borough engineer. He laid out the new streets, planned grade improvements, sewers, and the like. He began to notice that wherever he went in the course of his work, even in the bitterest winter weather, a silent and wide-eyed boy dogged his steps.

"What do you want?" he demanded.

"Nothin'," said the boy. "Just want to watch."

His teeth chattered. His nose was blue with the cold. Yet he stuck on, hour after hour, a lone spectator.

"Sonny," said the old surveyor at last, "you ought to be home where it's warm; but since you will hang around, you might as well do some work. You carry the chain."

The boy was Thompson; and that moment, he told me, was one of the proudest of his life. He got no pay for carrying the surveyor's chain. He did it for the pure love of it.

I'VE never talked with a man more thoroughly, joyously in love with life than he is. With most of us the enthusiasm and fervor of youth wear off with experience and age. They haven't with Thompson. Sit opposite him five minutes, even in the prosaic atmosphere of a business office, and you literally feel his vitality. His laughter makes you feel that life is good, boundlessly good, and worth living. Yet he has had to fight.

He was seventeen when the bank into which his mother for years had been placing her savings closed its doors. The savings account, amounting to sixteen hundred dollars, was wiped out; but this money loss was the smaller one—with it went a mother's dream.

"There is nothing in this world," she told her son, "I wanted so much as to be able to send you to college."

"Don't you worry, Mother," he said. "I *am* going to college."

He knew of a little steamboat which could be bought for one hundred and sixty dollars. It wasn't much of a boat, a fact to which the price bore witness. The length of it was only twenty-four feet; the old four-horse-power engine wheezed and choked like an asthmatic. But young Thompson had a big idea.

Five or six miles from Meadville was Bemistown, a popular resort for city folks in summer, for fishermen in spring, and hunters in the autumn. The road to Bemistown was rough and tortuous. To get out there by wagon, the only way, was almost a half-day trip. However, there was a stream, a feeder of the Erie Canal, connecting the two localities. Thompson purposed to buy the old steamboat and utilize that stream!

He owned sixty dollars, earned from his firewood business and other odd jobs he had done. His father agreed to endorse his note for the balance of the boat price. Thompson bought the boat, renovated it with paint and scrub brush, took the wheeze out of its engines, and inaugurated a Meadville-Bemistown all-water transportation service. The boat could make the trip in an hour, in comfort, against a half-day by the wagon road in discomfort. It was an immediate success.

During his four years at Allegheny College Thompson ran his steamboat. The old surveyor gave him work, now that money was a need, and paid him for it. Also, Thompson obtained work in the railroad shops, as an apprentice, at nine and one-fourth cents an hour. But, actually, none of these tasks was as work to him! Had the bank not failed, he prob-

ably would have done all of them for nothing, *anyway!* You've got to understand this phase of him to grasp the man.

"I've always liked work," Mr. Thompson told me in all earnestness. "To me, man's greatest blessing, his greatest source of happiness, has always been in the fact that he is endowed with the brain and skill to do, to build, to accomplish.

"If you possess a wonderful race horse, you thrill to see it run and win. If you own a wonderful motor, you thrill at its purr as it climbs the steepest hill. Yet your brain, which is a part and parcel of *you*, is a far more wonderful creation han the finest horse, or motor, or any material thing you can own or desire. Why, then, should not your biggest thrill be in watching your brain work? And if it doesn't work to your satisfaction, why hesitate to spend some money and some time on it, in order to *make* it work? You would do as much for your horse; you would do as much for your motor."

Thompson wanted the thrill of seeing his brain climb "on high." He wanted it in shape to win races, ready to go at the crack of the starter's gun. Therefore his college days became days of intense preparation. He was a student of books; a student of men, of machines, of methods. In off hours, when other boys played on the vacant lot, Thompson played in the machine shop, in the drafting-room, or out on some construction job.

Tractors were coming into use about that time. They were big, heavy machines that the operators moved from farm to farm, and the old wooden bridges of the county were too flimsy to support them. In consequence, all bridges had to be strengthened or rebuilt with steel. Much of the work was of an emergency nature.

Thompson, the student, went out with the engineers and the bridge gangs. He made surveys and drawings. He used a pick and shovel. He met men, and gained first-hand knowledge of practical engineering in the field. Sometimes he was paid, and sometimes he wasn't; but that, after all, was not what mattered.

IN THE summer following his second college year he found work with the engineering corps that was laying out the Pittsburgh, Bessemer and Lake Erie Railroad. After work each night, the other youngsters of the corps loafed about town; but not Thompson. At the risk of being considered a nuisance, he hung around headquarters and listened to the talk of the chiefs. One night a drawing was needed in a hurry to accompany a report. The regular draftsman had gone.

"I'll make it," Thompson volunteered eagerly.

"All right, kid," said the chief. "Get busy. It's a rush job." Aside he shrugged at his associates. It was time this bothersome youngster was taught a lesson.

Thompson made the drawing. He made it in a hurry. And he made it so well that thereafter he was invited to stay around the office as a draftsman. When the corps was disbanded, he was the only one of the younger men to be retained. He remained with the company until he was forced to resign in order to be graduated with his class.

On the very day of his graduation Thompson left Meadville for Pittsburgh. He had worked for this day, and he was

NEW IMPROVED MODEL

Campbell's Automatic

Electric Fireless Cooker

Range

Let Me Quote You My Factory Price

Wm. Campbell
The Original Fireless Cooker Man

Get my special introductory price on this wonder of wonders new electric fireless cooker range. Better yet, let me send you this range upon 30 days approval test so that you can cook and bake and find out just how wonderful it really is. Read my offer below.

Costs Little to Use

The same wires that light your home will do all your cooking. You will be surprised at how little it costs. Electricity in the oven turns on and off automatically.

Better Baking—Better Cooked Foods

Flaky pie crusts—cakes that just melt in your mouth—Roasts done to a juicy tenderness. Large Pyrex window in the oven door. Oven door clamps tightly—no heat wasted. Uses electricity only about ⅓ of the time.

The automatic control insuring steady, even heat uniformly distributed to all sides, top and bottom of the oven takes all the uncertainty out of baking. Once you use this range you'll wonder how you ever got along without it. Easy payments.

Current is used only about one-third of the time. Set the oven control for the heat desired and the automatic regulator keeps the heat at the same temperature. Never too hot—never too cool—always just right for best baking and roasting results. Oven door, large cooking top and splasher back made entirely of aluminum. Range beautifully finished with French Gray enamel. Large electric fireless cooker in the bottom slides in and out like the drawer in a desk. Takes up no extra room in your kitchen—also *automatically* controlled. Put in your cooking—turn on the electricity, when the right cooking heat is reached the electricity automatically shuts off and the cooking continues. Money saving—time saving—cooks foods better.

Write Today and Get My Special Offer

My new low price will amaze you. No dealers. I sell direct from factory. Cash or easy payments. Big illustrated catalog and health book sent free. Send me your name today for special introductory offer.

Hole Insurance!

WHAT FINER insurance could you possibly have against having to darn, than these boy-proof stockings super-fortified against holes!

Not just a good-looking fine-ribbed stocking that boys and girls all like, but such an unbelievably *powerful* stocking that it will wear—and wear—and wear! Iron Clads! Iron Clad knees—Iron Clad soles—Iron Clad heels and Iron Clad toes. Strong everywhere, but double strength at heel and toe, and triple strength at the knee! Even an Iron Clad *guarantee* of satisfactory service or a brand new pair of stockings!

Everything is unusual about these Iron Clads—appearance, fit, fadeless color, and wear—*everything* unusual, except price. And *that* is no more than you'd pay for ordinary every-day stockings.

If your dealer can't supply you, mail us your remittance, and we'll supply you *direct*. State color desired (black, brown, Russian tan, or beige) and size (6 to 11½, 50¢). We'll pay the postage.

ready for it. The starting pistol had cracked!

I spent two hours with Thompson one morning, and during our whole talk, which was one of the jolliest kind, he let slip some valuable bits of advice.

"When you've spent years preparing for a job," he said, "know the work and know that you can do it, there is only one thing that can stop you—the lack of a chance. But you're bound to find the chance if you go where chances are to be found!

"That may seem obvious. Yet it's a fact that for every one man who sees it, there are nine who don't. The nine fiddle away the time given them for preparation, and then expect the job itself to prepare them for doing it; or they expect the job to grow legs and walk to them."

Those first few years out of college Thompson burned up no roads. Pittsburgh offices weren't overly eager to hire him. He was glad enough to become a draftsman with an engineering firm for forty dollars a month. Then he went to one of the smaller railroads as an instrument man on construction work. Finally, at twenty-four, he succeeded in placing himself with the Baltimore and Ohio as chief of a party on surveys. The B. & O. was coming into a period of reconstruction. It was on the eve of a one-hundred-million-dollar expansion program.

A YEAR passed. Quite uneventfully, Thompson was given his first promotion, to the position of assistant to the division engineer at Pittsburgh. A year later he was moved in a similar capacity to Cumberland, Maryland. So far he had not distinguished himself. He was known in a limited railroad circle simply as "a promising young chap." And, by the way, he was still studying. He was still spending his evenings at the office.

Then, without warning, the division engineer was taken ill. There was a gap in the line, a flurry at headquarters.

"Can Thompson handle the work?" was the question.

One of the chiefs hurried out to Cumberland to see. He found Thompson already at the task. The work was going ahead. There was even a new zip and push behind it.

Before the year was out Thompson was made division engineer—the youngest man in that post on the road. He was gaining a reputation for knowing his business. He was getting things done just a little faster than they had been done. The men out on the line were working for him.

Suddenly another emergency arose. To handle growing freight traffic, a stretch of new track, five miles long, had to be constructed at Martinsburg, West Virginia, to connect the B. & O. lines with the Cumberland Valley. It was Thompson's job, and he wasn't yet twenty-seven years old. The folks at headquarters grew a little worried. They got Martinsburg on the long-distance 'phone.

"How's that new work coming along?" they demanded.

"It's done," said Thompson. "The last tie went down this morning."

Headquarters gasped, and gave Thompson a bigger job—division engineer at Pittsburgh!

That was in 1901. Between then and 1912 he received seven promotions. He

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

was taken from the engineering force and made a superintendent. Two shifts as superintendent, and he was chief engineer of maintenance of way. In April of 1910, he became chief engineer of the railroad, and in December of the same year its general manager.

Prosaic enough that rise appears on paper; but a world's record or two was broken in the making of it. In 1904, at Glen Easton, there was a twenty-eight-foot single-span bridge which had to be replaced as a matter of safety. The B. & O. line at the point was a single track only. The problem was to dismantle the old bridge and replace it with a new one without delay to traffic.

Leaving the old bridge unmolested, Thompson constructed the new bridge alongside of it, on trestles. Then each man was assigned to a specific task. Over and over Thompson had that task rehearsed until his force moved like clockwork.

A SIGNAL was given. As if by magic, the old bridge came down, men swarming at their tasks like ants, machinery groaning. At a second signal, the new bridge was moved into place, the tracks connected, the securing bolts driven. Thompson, holding his watch, noted the time for the completed job—twelve minutes! Not a train had suffered delay!

That stood as a record, I believe, for four years. Then Thompson was sent to the Philadelphia Division to replace another bridge, a one-hundred-and-fifty-foot-long span over Chester Creek. The new bridge, of steel, weighed three hundred tons. It was double-tracked. Trains were scheduled to pass spaced only by minutes.

Months in advance, Thompson and his men made ready. It was this old school-day mania of his for preparation over again. There dared not be even the slightest slip in the execution of the plan. Nor was there. This time, Thompson had his new bridge in place in three and a half minutes!

That same year, late in September, the great bridge over the mouth of the Susquehanna River, a link in the main line of the B. &. O. Railroad connecting Washington and New York, was dynamited by a half-crazed man. Twelve cars of the freight train which was passing were plunged into the river. Fortunately, the crew escaped death. But the main line was severed.

Arrangements were at once made to detour B. &. O. trains between Wilmington, Delaware, and Swan Creek, Maryland, over the tracks of the Pennsylvania Railroad, a distance of thirty-six miles. But the Pennsylvania tracks were already heavy with freight. The arrangement could not be more than temporary.

A worried officer of the Pennsylvania got the B. &. O. president on the long-distance telephone.

"Is the bridge hopelessly gone?" he demanded.

"Hopelessly," was the answer. "It will take at least a year to rebuild it."

"What have you done?"

"Sent for Arthur Thompson to build a detour."

"Who's Thompson?" the director insisted.

"You'll know in good time," replied the president coolly. "Don't worry. Thompson will handle the job."

The Meeting Place

An Advertisement of the American Telephone and Telegraph Company

IT IS not so long ago since people met in town hall, store or at the village post-office, to talk over matters of importance to the community. Then came the telephone to enable men to discuss matters with one another without leaving their homes.

With the growing use of the telephone, new difficulties arose and improvements had to be sought. Many of the improvements concerned the physical telephone plant. Many of them had to do with the means of using the apparatus to speed the connection and enable people to talk more easily.

This need for improvement is continuous and, more than ever, is a problem today. Speed and accuracy in completing seventy million calls daily depends upon the efficiency of Bell System employees and equipment as well as upon the co-operation of persons calling and those called and numerous private operators.

It is not enough that the average connection is made in a fraction of a minute or that the number of errors has been reduced to a very small percentage.

The American Telephone and Telegraph Company and its associated Bell Telephone Laboratories have practically for their sole task the making of the telephone more serviceable and more satisfactory—as a means of conversing with anyone, anywhere, any time.

Making Money is Fun

THIS NEW EASY WAY

Wouldn't you love to decorate these and hundreds of other objects of art? Beautify your own home? Earn the admiration of friends? And make lots of money? It's more fun than work and it's so easy anyone can do it. Society women do it for amusement. Others become independent.

The bridge had been wrecked at six-thirty A.M. By nightfall that day Thompson had not only completed preliminary surveys and bought right-of-way for the detour, to give relief to the Pennsylvania's already overcrowded lines, but he had established a camp, with beds and kitchens and food supplies, and had assembled tools and materials. Before noon of the next day he had six hundred men at work.

The location was difficult. It was covered with trees and thick underbrush, and a heavy stratum of rock that could be dynamited only with difficulty. Moreover, for forty-eight hours it rained in torrents until the ground was a quagmire, and for two days men could not strike a pick nor tamp a tie. On the third day, Thompson, in hip boots and rubber coat, flung them at the job, day and night. But the men, divided into shifts, had a chance to sleep. Thompson hadn't. He ate his meals on the run. He was everywhere, urging, encouraging.

At four o'clock on the afternoon of the sixth day the detour was finished and trains were in regular operation again.

Came 1910. Daniel Willard recently had been made president of the Baltimore and Ohio, and he was facing a serious problem: Out in West Virginia, in the great Clarksburg-Fairmont coal field, the coal tonnage had been increasing at such a pace that every railroad facility was already overtaxed. This coal represented the winter fuel supply of the rapidly growing Northwest. It had to be moved northward to the Great Lakes for trans-shipment in boats, and this movement had to be complete to the last carload before December 1st, when winter closes the Great Lakes' upper ports.

Checking his railroad facilities, President Willard discovered that the Northwest was demanding more coal than he could haul, unless new trackage was built. And without new trackage the Northwest would be short of coal the next winter!

Willard sent for his chief engineer. He also summoned Thompson, who was being invited to such consultations now, though, officially, he was charged simply with maintenance of way.

"We need a double-track line," Willard said; "but double-tracking through mountainous country costs money and takes time. This problem is one that must be solved this summer. What can we do?"

THE men got their heads together over the railroad map. They saw two separate single track lines running between the coal fields and the Ohio River, almost parallel and not many miles apart. On the map, it made a pretty picture.

"There's the solution;" said Mr. Willard; "but it has a vital flaw." His finger touched a spot on the map. "We've no cross-over here at Lumberport, unless we bridge the West Fork River. Can it be done?"

"Yes, it could be bridged," said the chief engineer thoughtfully. "It would be a big job, though, and take time."

"When could you start building the bridge?"

Thompson, leaning over the chief engineer's shoulder, whispered into his ear, "Tell the Old Man we can start in the morning!"

"It would take three months to take soundings," the chief engineer replied, "another three months to gain the consent of the Federal authorities, for the river is listed as navigable. It would be absolutely impossible to have the bridge ready in time for next winter's movement of coal."

Impatiently, Willard broke up the conference. He didn't want a bridge a year hence. He needed it at once! The emergency was only three or four months off.

SEVERAL days later President Willard again summoned Thompson. He retold the urgency of the situation.

"Young man," he added, "*you* are now the chief engineer of this railroad. I may be the 'Old Man,' but I've still got good ears. Start to work on that bridge in the morning!"

The next morning Thompson was at Lumberport. For three months he stayed there, night and day. He saw the side tracks go down, the soundings begun, the draftsmen on the spot making the drawings of the bridge. Simultaneously he opened negotiations with Washington; and as soundings gave way to pier foundations, Washington gave its consent.

The backbone of the 1909-1910 winter broke earlier than usual. The river began to rise. The foundations rose ahead of it. For a few brief, heartrending days it was an exciting and dangerous race between man's dexterity and courage and the rising sway of the icy waters. The concrete had to be kept ahead of the advancing water line, far enough ahead to permit it to harden. And all the time Thompson stayed on the job, patting his men on the back, urging them on to swifter exertion. In thigh boots and an old slicker, as wet as they were, he stood by them, and did not leave until the waters distinctly began to recede, and the bridge piers were high and dry above them. He had dreamed of such work as a boy.

Then, from out along the lines of the system, he began to bring in unused bridge spans, noted in past days for just such an emergency. He obtained spare steel from Pittsburgh. Much of it had never been intended for bridge work. Some of it originally had been destined for a skyscraper in New York; but it was steel, good steel. And the bridge began to rise, a capable, almost a handsome structure.

By the night of June 13th, the bridge of five spans, some four hundred and sixty feet in length all told, and high above the water, was nearly done. Thompson took train for Deer Park, not far distant from Lumberport, where Mr. Willard was to meet next day with his engineering force. Early next morning he fairly danced up the steps of the hotel where Willard was staying.

"I'm sure glad to see you here, Thompson," Willard said, grinning. "Your presence means the bridge is done."

"Not yet," said Thompson; "but it will be this morning."

The first session of the conference was set at nine-thirty. When the men filed into the meeting hall, Thompson uneasily took a seat near the door. He wondered why no word had come from Lumberport. Had anything gone wrong at the last moment? When he had left there still had been some track work to be done.

For thirty minutes he sat by that door, a sinking feeling at the pit of his stomach, his eyes on the door through which the

Mellin's Food A Milk Modifier

In anticipating the measure of success that may be expected from the use of Mellin's Food in adjusting nourishment for the artificially fed baby, a matter worthy of notice is simplicity in preparing the daily diet, for Mellin's Food is a finished product, requires no cooking, dissolves readily and is applied as a modifier in an easily understood manner.

Another point to be considered is that Mellin's Food never varies in composition and can always be relied upon as containing definite amounts of food elements, thus assuring accuracy and uniformity of all food mixtures.

Write today for a Free Trial Bottle of Mellin's Food and a copy of our book, "The Care and Feeding of Infants"

expected messenger would come. Finally, the suspense became too great. He ran to the telegraph office to prepare a message of inquiry.

"Telegram for you, Mr. Thompson," informed the operator.

Thompson's hand shook as he read it, and then he let out a joyous whoop. "Bridge finished this morning," read the message. "First regular train passed over at 9:23 A.M."

That bridge and the additional trackage in Ohio doubled the Baltimore and Ohio tonnage capacity out of the West Virginia coal fields. It solved the problem. Six months later, Thompson was made general manager of the railroad. Two years later he became a vice president, and by 1918 he was first vice president.

There was a year or two, represented by the war, when Arthur Thompson was the regional director, at Pittsburgh, of a group of railroads which included the B. & O. At the conclusion of this work, he was admittedly one of the country's outstanding transportation men. He was being mentioned for the presidency of one of the nation's greatest roads.

THEN deliberately he turned his back on a certain future in railroading, to tackle a most uncertain and unpromising future in the public utility field in Pittsburgh. He consented to assume the presidency of the Philadelphia Company, which, despite its name, is a wholly Pittsburgh corporation that owns the city's gas, electric, and traction facilities. This company's affairs were in a terrible snarl, the worst knot of which was the street railway situation.

One of Thompson's first moves—typical of a hundred such moves that he made in Pittsburgh—was characteristic. He discovered that the officers and executives of the traction system, like those of most other large street railway systems, did not ride in the street cars, but in company-owned automobiles. He called a meeting of them.

"Gentlemen," he began, "we'll never know what's wrong with this car system unless we ride on it ourselves. Therefore, the use of company automobiles will be limited in the future to emergencies. We will use trolley-cars whenever and wherever possible, which should be most of the time."

"But we can't cover our work," it was objected. "The automobiles save time."

"Then we'll provide assistants to help you cover the work," Thompson returned. "We want you to ride in the cars."

Thompson in the meantime had been in conference with the bankers. He convinced them that he knew what he was about. The overstrained credit of the company was reestablished. He went to the city authorities, had taxes reduced, excessive paving charges pared down, and new automobile parking regulations that would help him speed up the car service made effective.

Gradually new cars began to appear on Pittsburgh's streets. Obsolete car routings were revised, fares reduced in many instances by shorter hauls. The system began to tick on time. It began to pay its way, and then to earn a profit.

Again, Thompson had handled the job!

Multiply Your Beauty

By Edna Wallace Hopper

I multiplied my beauty, as a girl, by ways I found in France. The helps she gave me made me famous, gave me a glorious career.

I have gone to France yearly—made 35 trips—to learn of her latest discoveries. And I come back—always—to offer them to you.

The greatest help I have ever found is a clay. Not the crude and muddy clays so many have employed. I found in France a new-type clay, the final result of 20 years of research. It is white, refined and dainty. It combines many helps in one. I cannot conceive of any girl or woman going without it.

All toilet counters now supply this clay as Edna Wallace Hopper's White Youth Clay. It sells for 50c and $1.

Within 30 minutes it changes all that pertains to youth and beauty. The girl or woman who employs it will scarcely know herself. It will bring multiplied beauty to any girl, and most older women seem to drop ten years.

My White Youth Clay purges the skin of all that clogs or mars it. It draws out the causes of blackheads and blemishes. It combats all lines and wrinkles. It draws the blood to the skin to nourish and revive it, so there comes to users a rosy complexion which amazes and delights.

Please let me show you these results. The coupon will bring you a trial treatment. Also my Beauty Book. Let me send them to you.

For Trial Tube A67AM

of Youth Clay, mail this today to Edna Wallace Hopper, 536 Lake Shore Drive, Chicago, Illinois.

Saved baby's life

THE same disaster may face you to-morrow.

"I heard my neighbor, mother of a young baby, screaming 'Fire! Fire!'

"Flames from an upset frying pan were spreading up her kitchen walls to baby's room above. The mother had rushed upstairs, picked up her baby, and was screaming hysterically from the window.

"I at once rushed across the yard with my Pyrene Fire Extinguisher and pumped the liquid on the flames. Instantly the fire was out. Mother and baby were saved."

"Fortify for Fire Fighting" to-day by having Improved Pyrene Fire Extinguishers in your home.

IMPROVED Pyrene TRADE MARK FIRE EXTINGUISHER

KILLS FIRE—SAVES LIFE

"These safe Bonds yield me 6½%"

"I will never have to worry about the income from my investments as long as they measure up to the safety features covered by Adair Guaranteed-Insurable Bonds."

6½% Adair Bonds are backed by:

[1] Sixty-one years' experience in the real estate and first mortgage investment field.

[2] An unblemished record for prompt, due-date payment of interest and maturing principal to first mortgage investors throughout these years.

[3] Accurate judgment, based on this time-tried knowledge, in passing on basic loans, insuring ample security and unquestioned soundness.

Fundamental safety assured by the factors above make these added safeguards possible:

[4] Unconditional guarantee of principal and interest by Adair Realty & Trust Company.

[5] Privilege of insurance against loss of principal and interest in one of the nation's leading surety companies, with resources of $30,000,000.

This cumulative safety, beginning in the all-important days before the bonds are issued, together with the attractive yield of 6% to 6½%, is responsible for the fact that thousands of investors the country over are turning more and more to Adair Bonds.

INSURABLE AGAINST LOSS OF PRINCIPAL *and* INTEREST

Making One Hour Do the Work of Two

(*Continued from page 43*)

writing a letter of inquiry, looking up a word in the dictionary. But do it. Get started.

"In our own household these two rules had quite an important result too. We found that at mealtimes the questions asked by the children, or subjects that we raised, usually resulted in the need for more information. To save time we moved the household information bureau right into the dining-room.

"We started with the rule that every question which became a subject of argument should be looked up at once. Another rule was that any book needed for reference in connection with our table conversations should go into this general household information bureau. In the end, among other things, it came to include the English dictionary, dictionary of synonyms, the atlas, encyclopedia, a book of quotations, children's book of knowledge, anthologies, Who's Who, Lieber's cable code, foreign dictionaries and all the children's own reference books.

"'When in doubt about facts,' Frank used to say to the children, 'look them up at once. That's the way to *save* time. Arguing about them is the way to *waste* it.'

"There's one question which people interested in this subject ask more frequently than any other. It has to do with concentration. They want to know how they can hit their stride and get into the swing of their jobs as soon as possible.

"Of course there's a great difference among people as to the things that interfere with their concentration. Some are disturbed most by what they see, others by what they hear. In cases of this kind it is often a simple matter, on finding out the thing that interferes with one's best work, to remove it. Changing the position of one's desk may be all that is necessary.

THERE'S one simple rule that we have known to be very effective as an aid in the knack of concentration. Time yourself, to find out how long your various jobs actually take. The next occasion on which you do that job, set a limit on yourself. Give yourself a fair chance. Take time enough, especially at the start. Gradually shorten the time limit, and always aim to complete the job within that limit. Eventually, you may find yourself speeding up, just for the fun of it.

"As you know, it was Frank's idea that some of the most important principles we had worked out for saving time in industry could be applied by each of us in everyday life. 'The time will come,' he would say, 'when we're all going to look at life as a glorious adventure in getting things done.' He meant that by engineering our time we can all get done not only the things we *have* to do, but many of the things which, above all else, we would *like* to do—the things which so often we don't do, because, as we say, we haven't the time.

"Let me illustrate this in the way that Frank might have done. I know of a man who operates a small fishery in Connecticut. In his gasolene-propelled scow he goes out on the lake, catches his breeders, raises and ships the young—small-mouthed black bass—all the way from Maine to West Virginia. This little industry he has put on just as efficient a basis as he can; he manages to get along with very little help, and the enterprise is a complete success.

"Yet this man does not consider himself primarily a breeder of fish. There is something else he wants to do, and he has planned his business, scheduled his time, arranged everything to this end.

"The thing he wants to do above all else is to make fiddles. This is the calling which he feels brings out the best that is in him. His fiddles are good ones. He sells some. Though he can't make a business of fiddles as he would like to do, he makes it an avocation, a hobby.

"Now, this man is what Frank and I would call a time-user, a time-creator. Where another man might have dreamed of making fiddles, and let the dream go because of other exactions on his time, the fish breeder made a plan which includes both what he must do and what he wants to do. A definite plan of that kind means happiness as well as efficiency.

"PERHAPS I can show you by an experience of my own the importance of charting one's time by a definite schedule. This happened in the days when Frank had just begun my business training. I had spent a year in travel and study, getting together the material for my first book, 'The Psychology of Management.' During this time my duties in the home had greatly increased. There were four children. It seemed that I could never find an opportunity to write. Several months went by, and I had done nothing on the manuscript.

"One day Frank said, 'Why don't you go ahead and write your book?' And I answered that I was awfully busy, and had too many other things to do. 'But just think a minute,' was his response, 'and give me the three or four main reasons why you don't go ahead. What's the first one?'

"'It'll take forever to write it out,' I answered. 'It's a big job.'

"Frank reflected a minute, and said, 'Maybe there's something in that; but we'll get around it. I'll get you a dictating machine and you can talk into it.'

"'I haven't any way of getting the records transcribed,' I said.

"'Reason number two,' he laughed. 'I'll take the records into town and have them transcribed for you.'

"I couldn't think of any more reasons, except the one I had given first about being too busy. Frank asked me how much time during the past month I might have been able to spend at the dictating machine, and I figured that an hour a day would have been the limit.

"'We'll make it two hours,' he said; and together we drew up a schedule of my duties and the time required for them. By this plan I had to get up half an hour earlier in the morning, and I was relieved

Did you ever *drink* a grapefruit?

Down here in Florida we "drink" almost as many grapefruit as we eat.

And if you have never tried Seald-Sweet grapefruit juice you have no idea how good it is.

Many people prefer it to orange juice.

Try it iced for breakfast tomorrow morning. Order it on the railway diners; at the restaurants and hotels.

To the breakfast tables of the north Seald-Sweet grapefruit brings the precious minerals and vitamins that are otherwise lacking in the winter menus.

Enjoy this luscious fruit more often.

At breakfast—as a luncheon dessert in salads and in all kinds of beverages.

People who are troubled with acidosis (too much acid) will find grapefruit helpful in correcting this condition.

For citrus juice turns alkaline in the body, building up the reserve that tends to prevent colds and other winter sickness.

The world's finest grapefruit comes from Florida and Seald-Sweet is the pick of the Florida crop—all hand-picked, tree-ripened fruit that is plump with sparkling, healthful juice.

Always ask for Seald-Sweet and enjoy grapefruit at its prime.

Get in the habit of eating it regularly for your health.

Seald·Sweet-*Grapefruit for Health*

CHECK AND MAIL THIS COUPON TO

Camels add to the joy of living

SMOKING is one of the keen pleasures of life.

The choice of a cigarette deserves your most careful judgment because it determines the degree of enjoyment you will have.

Camels welcome comparison on every count. Compare their goodness in every way. Each successive Camel brings a fresh pleasure no matter how constantly you smoke.

Such mellow mildness can come only from the world's choicest tobaccos, supremely blended, with the sole purpose of giving you, the smoker, a cigarette which you can enjoy to the fullest.

The verdict of the experienced smoker is —

"Have a Camel!"

of some household tasks, Frank himself and the help taking them over. After the schedule was made out, he wanted to see the outline of the book. I hadn't got that far. All I had was some rough notes.

"'Let's do it now,' said Frank, and before we went to bed the outline was complete.

"A week or two later I was surprised at the amount I had been able to get done in two hours a day. In three months I had the book finished in practically the form in which it was published.

"THAT was a great lesson for me. It was the first time that I fully realized what he meant when he said that a written plan was necessary for doing any kind of work efficiently, whether the work is in factory, store, household, or office. The lack of a definite schedule is, in fact, the one greatest cause of time-wasting in our everyday life. Of course, when we get up in the morning we all *think* we have a pretty good idea about how we are going to spend the day. But the fact is that most of us plan the day as we go along. The *time-saving* method is to plan everything as far as possible in advance.

"Let me take as an illustration the most complicated business of all—the business of running a household. Remember, I am illustrating the *method* of saving time by the use of a definite schedule. The same method applies to your business as to your home affairs.

"The first step toward organizing a household is to write down the way that things are done now. Make a list of the duties of each member of the family, all the things that each is accustomed to do in the morning, and include all the things that *should* be done in the morning: getting up, bathing, the care of the teeth, and all the other duties that may be classed as household chores.

"In assigning duties to individuals, this point should be kept in mind: the busy, salary-earning person should be relieved of everything possible. Make a note of the time at which the head of the family has to leave for work and the hour at which the children go to school. This, together with the duties each has to perform, will determine the rising hour.

"Each member of the family should have a chart that shows what his duties are and when they are to be performed. In our own family these charts were made on graph paper. The list of duties is written down at the left. In the squares at the right each keeps a record as to whether the plan is carried out. If the thing specified is done on time and when specified, the square opposite that item is filled in with blue crayon. If it is done, but *not* on time and when specified, the square is filled with yellow. If it was omitted altogether, the square is filled with red. At the end of a month, looking over such a chart, you can see by the color scheme how near you have come to adhering to your schedule.

"Remember that a plan, to amount to anything, *must be written down*. In actual practice, we have found that a plan not recorded never amounts to much. Hence, one of the most important items on your chart will be the time provided for going over the schedule and indicating just how far you have kept to the plan, and wherein you failed.

"Take the chart of one of the girls in our family. That will show you what the scheme looks like on paper. At the left of her schedule, one item to a line, appear these duties, in the sequence in which each is to be performed:

"Open bed; dress as far as wash; wash or bath; brush teeth; clean nails; complete dressing; hang up night clothes; practice (in this case the violin); take wraps down-stairs; breakfast; take school money; school; hang up wraps (on returning from school); recreation; practice; wash; supper; typewriter practice; cash account; recreation; languages; study; check up on chart for the current date; undress; wash or bath; brush teeth; lay out clothing for morning; prayers; bed.

"Anyone who is going to try planning his day in this way should bear in mind one point in particular: Everything possible to get ready for the following day should be done *the night before*. If a journey is to be taken, the traveling bag should be packed. The things you will want to take to the office should be got ready and be in their proper place. This rule of doing everything possible the night before saves time, fatigue, and haste at the *start* of the working day, when the saving is most important.

"Someone once criticized our family schedules by saying that it was impossible to decide the night before what one was going to wear the following day. Let me tell you about that. At the start we relied on the weather prediction in the newspapers, and for a while the children were very severe critics of the weather man. The sun would be shining in the morning, and they would say, 'What if the newspaper did say it was going to rain today? The sun's out. Why should I take a rain coat?' So, for a while, we tried dressing according to what the weather looked like in the morning. Then we found that if the weather prediction was for rain the sun might shine early in the day, but later the rain would come. In the end, we found that the weather forecast was right about eighty-five times out of a hundred, and it was definitely settled that we should all plan to dress in accord with what the weather man said.

"WHAT I have said so far has to do with arranging your day *as a whole*. It is the first big step in learning to make the most of your time. But your schedule, of course, will provide for the time which you give to your regular job. There's a great deal to be said about saving time on the job.

"To start with, I want you to get the idea that anything you do is a job by itself, whether it's something you do around the house, or whether it's your recreation, or has to do with earning your living. The next thing to bear in mind is that every job has these three elements: 1. Get ready; 2. Do it; 3. Clean up.

"*Getting ready* means that you should have the best possible tools arranged in the best possible way. And by tools I mean anything you use, whether it's a pencil, pen, penknife, comb, automobile jack, saw, or hammer. Having these convenient gives you a chance to make a prompt start.

"*Cleaning up* after you've done a job shortens the time it will take when you come to get ready to do that job again, or to use those tools for another job. Clean-

There's nothing like a NOGAR Suit

for work that's hard on clothes

NOGAR Utility Clothes are made to stand up under the hardest usage and resist wind and water. They are so well cut and in such attractive patterns that thousands wear them for street and business. But first and foremost they are good, honest work suits, for men who want the most for their money.

Men's Suits and Topcoats $12.50 and $13.50. Boys' Suits, $9.85 and $10.85

There is only one NOGAR Cloth and we make it. Only garments shipped direct to you from our factory at Reading, Pa., are made of genuine NOGAR Cloth—the strongest fabric used in clothing.

NOGAR Clothes are sold only by our Authorized Representatives—and by *nobody else*.

Now earn *real* money!

There are several million men in this country right now who will buy NOGAR Suits or Topcoats as soon as they see them. If you really want a good income you can make it selling NOGAR Clothes, full time or part time. No experience is necessary.

Only once in 50 years
comes a book bargain like this!

1. SHAKESPEARE

—everything he ever wrote, complete in one wonderful volume.

Here is the book that has taken America by storm—all of Shakespeare, complete in one beautiful *useful* volume. We want you to examine it in your own home at our risk—and return it at our expense if it doesn't exceed your expectations. Everybody reads Shakespeare. Everybody needs Shakespeare. Everybody can find a new thought every day in his pages. Along with the Bible, Shakespeare is the foundation upon which *all* modern English literature rests. And now, for a tiny fraction of the cost of an old-fashioned set of Shakespeare, you can have his complete works in one splendid book, easy to use and delightful to own.

2. OMAR—*free*

Pocket edition of the Famous Rubaiyat of Omar Khayyam, best of all books to dip into for an alluring thought or a haunting line of joyous Oriental poetry. Large, clear type, stamped in gold. While the edition lasts, a copy of Omar—without extra charge—comes to you with each Shakespeare.

SHAKESPEARE *and* OMAR

TWO BOOKS at less than the price of ONE!

We want you to take plenty of time to examine this Collier's Lakeside Shakespeare. Show it to your friends. Read it for a week. Compare it with any edition you can find. If for any reason it doesn't far exceed your expectations, return it without obligation.

Two books at LESS than the price of one

ALL of SHAKESPEARE in ONE VOLUME

1,312 pages —clear readable type— weighs only 16 ozs.

FREE
Omar Khayyam

To celebrate the Golden Jubilee of P. F. Collier & Son—our 50th year of selling the best books at popular prices—we determined to offer an AMERICAN Shakespeare.

Dependent in the past on Oxford and Glasgow, we have sold thousands of these imported books at $6.50. Now with the aid of the Lakeside Press, rid of ocean freights and customs charges, Collier's presents a volume that rivals the most famous foreign edition at prices for every American home.

37 plays, 2 long poems, 154 sonnets—ALL. Introduction by President W. A. Neilson of Smith College, authoritative Life of Shakespeare, full-page portrait, Index to Characters, Glossary of Unfamiliar Words. Convenient thumb-index to find instantly the play you want. 1,312 pages, clear readable type—a book so finely made you can roll it up and carry in your pocket. EXAMINE IT IN YOUR OWN HOME AT OUR RISK.

SPECIAL CASH PRICE $5.00 (With your complimentary copy of Omar's Rubaiyat)

SEND NO MONEY

Shakespeare—in one fine volume—treasured companion of statesmen, bishops, authors, engineers, society women, students, ready for YOU to use and enjoy. Printed on finest India paper, bound in soft ooze brown suede leather. Along with Omar Khayyam, for FREE examination, in your own home.
But be prompt. To insure immediate delivery, before you turn the page or mislay this offer, use the coupon now.

P. F. COLLIER & SON COMPANY, Inc.
250 Park Avenue, New York City

Send me, for free examination, your American De Luxe Shakespeare, complete in one volume. Send also, without charge, until edition is exhausted, the pocket Omar Khayyam.

☐ When the books are delivered, I will deposit with the postman $1.00, plus a few cents postage, and send you $1.00 each month until the price of $6.00 has been paid. (OR)

☐ I will deposit with the postman $5.00, plus a few cents postage, which will be credited as payment in full, and promptly returned if I decide not to retain the books.

(Mark X in square to indicate plan of payment you prefer. Your deposit will be refunded at once if the Shakespeare does not exceed your expectations.)

WAISTLINE Too Big?

A new belt called Director gets at the *cause* of excess fat and quickly corrects the condition. With every movement of the body, during every working hour, Director acts as a massage on the abdomen and actually dissolves excess fat away. F. P. Cowan of Pinehurst, N. C. says, "Director is the finest thing I ever wore. I want another, but not so large, as I am 5 inches smaller around the waist now." Doctors endorse Director as the *natural* way to accomplish a permanent reduction.

Sent on Trial

Let us prove our claims. We'll send a Director to you for free trial. If you don't get results you owe us nothing. You don't risk a penny. Write now for free trial offer, doctors' endorsements and letters from users. No obligation. Mail coupon.

ing up thoroughly, rearranging your tools, papers, chairs, or what not, is really a part of the job already done, *not* of to-morrow's job.

"Of course the important thing is No. 2—the job itself and the way you do it. Now, as engineers, when we say 'do it' we mean a certain thing—not getting through the task in any old way, but in the quickest possible time and with the least waste of energy. That is what Frank meant by 'the one best way.' More than anything else, he preached this one thing: 'Practice! Experiment! Find out what is for you the one best way of doing all your various jobs. School yourself in the habit of doing them that way. Eventually, whether or not you've found the very best way, you may become a champion doing it the way you've become accustomed to.'

"I once heard Frank talk on this very point to a large group of engineers, managers, salesmen, and professional men. This is what he said:

"'WHY is a champion? The answer is *habit!* The golf champion is a man who has done the same thing in the same way for so long that he is really a creature of super-habit. His swing and drive are automatic, with even acceleration and no jerks. We can prove that in the laboratory, for we've made motion picture studies of some of the greatest golfers.

"'What is true of golfers is true of champions of any kind—dancers, jugglers, typists, cranberry pickers and the fast-trotting horse. You might think that the horse bred for trotting knows more about how to trot than anybody can teach him. But that isn't so. He has to be *trained* and practiced, in order to get the most out of himself. It's the same with all of us—the champion lawyer, banker, doctor, or merchant. It's an essential thing in all we do to look after the skill of the performance. And we'll increase our skill by keeping an eye on our comfort and convenience and our output.

"'Some years ago a company manufacturing typewriters consulted me about the possibility of producing a champion typist. They hadn't had one in some time, and felt the need of showing that their machines were as good as those on which records had recently been made.

"'The first thing we did was to make a study of all the speed experts this company had practicing on their machine. One of these was very far in advance of the others; but there were indications that she had reached her limit. We made motion pictures of her at work. These slowed-down pictures showed that in order to strike the keys at the top and then at the bottom of the keyboard, or vice versa, she *moved her elbows*. A very slight motion! Yet it kept her elbows going continually from back to front. The unnecessary motion caused fatigue. That was what had slowed her up. She had reached her limit.

"'We put in training another operator who was just beginning to develop speed. She had not yet developed any bad habits of this kind. At one time she practiced with her elbows fastened, so she couldn't move them. We taught her to hold her hands in one position over the keyboard, using her fingers alone, her elbows not at all. In the course of time she got the habit. And that year she *won!*

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"'In a certain organization, a girl was employed putting caps on typewriter keys. She used a little hammer weighing several ounces, and tapped on thousands of caps every day. We constructed a little platform on her table, and after she had tapped a key with the hammer we had her lay the hammer on this platform instead of on the table. The result? In the course of the day she lifted that hammer *one mile less!* The job was more comfortable and her capacity was increased immensely.

"'One day I was talking with a skilled mechanic, who showed me a tool that was about worn out. The tool had a wooden handle, and it was worn down into grooves that just fitted his thumb and fingers. We figured out that he had used this tool in connection with a riveting operation 22,000,000 times. It made him sad to think of parting with that tool and of breaking in a new one.

"'The grooves in that hammer handle were grooves of habit. The new tool would have to be worn down in the same way. Of course it was a simple matter to have the handle of his new tool carved into *exactly the same shape as the worn handle*. We made him a handle that had all the grooves of his old, time-worn habits. He was a happy man. Some day tools will be made in that way. The grooves of habit worn into tool handles by the best and most experienced men, champions of their kind, will be taken as models. Apprentices will be given these new tools with old habits already formed, and they'll learn a great deal about their trades simply from these grooves.'"

FOR a moment, as we sat there on the porch of the engineer's home, there was silence. It seemed that she had finished.

"I remember Mr. Gilbreth's telling me once," I said, "that we were all like tools. I've often wondered what he meant by that."

"Yes," was the answer, "that was Frank's way of putting it. 'We're all like tools,' he would say. 'Not only *like* tools, we *are* tools, tools of Time. We're worn into grooves by Time—by our habits. In the end, these grooves are going to show whether we've been second-rate or champions, each in his way, in dispatching the affairs of every day. By choosing our habits, we determine the grooves into which Time will wear us; and there are grooves that enrich our lives and make for ease of mind, peace, happiness—achievement. 'Spend and be spent,' Frank would say, 'we're in a race with Time!' But that doesn't mean hurry. It means forethought and plan; slow, steady patience in practicing this difficult business of living day by day. 'In the great *speed* contest with Time,' Frank would say, 'we're all going to come out second; but much that we want to do we may get done by *skill!*'

"'But just what do you want to save all this time *for?*' a man once asked Frank, and Frank's answer was: 'For work, if you love that best; for beauty, art, culture, education, or mumblety-peg, if you love that. We save time, so as to be able to add to the number of happiness minutes that we get out of this life. It's by work that we increase the number of these minutes, and we make the work itself interesting by skill!'"

Around the World Alone Sailed This Iowa Farmer

(*Continued from page 19*)

told me about his life. Yet, I give you my word, if he had been telling of his experiences as a corn farmer, he could not have been more quiet, more matter-of-fact. Before our conversation ended I decided that, in temperament, he is a farmer—an Iowa corn farmer.

I decided too, that Harry Pidgeon is the kind of man you meet in every town. He has no fear, none of the particular kind of foresight that causes most of us to cross bridges before we come to them, or even before they are built, and none of the foolish self-consciousness that holds us back, lest we make ourselves ridiculous by failure. We all have dreams, wild dreams at times. But most of us take it out in dreaming. Harry Pidgeon didn't know any better than to go ahead and do what he wanted to do!

You have seen the kind of man I am speaking of. When a circus comes to town, and the ring master offers five dollars to anyone in the audience who can ride the trick mule, this man comes forth, a smile on his face. If he rides the mule, he accepts the five dollars as you might accept a trophy in golf, or bridge, or some other game. It is a sporting proposition with him, not a money-making effort. And if he doesn't ride the mule, he falls off, and comes out of the ring laughing, not one bit abashed. In either event, the crowd likes him.

I do not know whether Harry Pidgeon ever rode a trick mule in a circus, but I am sure he would have been game to try. That's the motive power in his life—he's game to try!

But if a psychologist should look into his early life he would probably find no direct experience to foreshadow such an adventurous career. Nobody ever showed Harry Pidgeon a sailboat when he was a boy!

But it happens that Iowa has some cold winters, and on bitter nights young Pidgeon liked to read. There was nothing else for him to do. The books he read were of many kinds. Perhaps because his own life seemed so closely tied to the soil, he liked the travel books best. They kindled in him the small flame that later was to flare into a grand adventure; they gave him his cue, so to speak, for becoming world-renowned.

"WHEN I was eighteen," he related, "I left Iowa and went to California, where for nine years I worked on a fruit ranch. Then I got to reading about Alaska, and so, at the age of twenty-seven, I decided to pull up stakes and see that country. I went up there and made pictures, which were easily sold. I hunted some for museums. Once I built a small boat and floated the length of the Yukon in it. I did a little exploring, just for my own pleasure, and not with any idea of writing or telling about what I saw. I have always got along well when by myself.

"I went back and forth to Alaska several times, and back and forth from California to my old home in Iowa. For years I made my living, off and on, as a photographer in the Big Tree section of California, and in the Sierras. I made some money too. But I wasn't making the money for its own sake. I never do. When you see me working, you may know there's something I want to do with the money I am making. I wasn't sure just what I was going to do next; but finally I decided on the trip down the Mississippi.

"When I got down below New Orleans to the place where the river pilots have their headquarters, I pulled up for some months, and came near to getting married. Down there on the Delta at that time there were mighty few single men, and a whole lot of single women. No place for a wanderer who, by then, had decided to keep on wandering! Yes, sir, my ideal of life had a narrow escape, for if I'd married one of the girls, I'd probably be a Delta farmer to-day.

"Later on, my ideal had another narrow escape. I bought a farm in California. All that was needed was the wife. But before I found her I sold the farm! Now I haven't got anything except this yawl. But it's enough. People who don't know anything about sailing ask me, just as you did, what on earth do I find to occupy my time. People who do know about sailing ask me how in the world I manage to do all the things necessary on a sailboat."

"But tell me about the sail around the world," I urged. "How did you happen to make such a trip?"

"THE truth is," Pidgeon answered, "I never intended to do it! I had read about Captain Slocum and the trip he made around by himself; but I didn't have any definite plan for doing the same thing. I just wanted to see some of the islands in the South Pacific. So one year I stopped off in Los Angeles with my brother, and decided to build a boat by myself. I got some plans, ordered the lumber, and set up a camp on the beach, where I did my work. It cost me one thousand dollars in money, and eighteen months in labor to build the 'Islander' just as you see her now. She's a good boat."

The "Islander" is thirty-four feet long, ten feet nine inches wide, and she draws five feet of water. She has two masts, and is so constructed that when the companionway is closed, she is a tight shell. Her keel is sufficiently heavy to prevent her turning bottom up, even in the heaviest seas. She has no auxiliary power.

Inside the cabin are two bunks, one on each side. There is a small cook stove, and space for water casks, provisions, and firewood for the stove. A chest of drawers with a small mirror, and a great many charts, maps, and instruments make up the rest of the equipment, except for spare sails, a sea anchor, ropes, and all sorts of material that might be necessary in making repairs.

"After I had launched the 'Islander'," Pidgeon went on, "I decided to try her out—and to try myself out, for I had never done any long-distance sailing. So

I put off for Hawaii. I ran into bad weather on that trip, but landed at Honolulu after twenty-six days. I think that trip was the roughest one I ever made; but maybe that is because I hadn't been to sea before. On the return trip to Los Angeles, I brought a young man who wanted to get back to the States. He is the only companion I ever had on one of my long trips."

"Did you get scared on that first voyage?" I asked.

"No. There wasn't anything to be scared of," Pidgeon answered. "Any man would sail ten miles out in a stout yawl like this. There isn't much more water in the second ten miles than in the first. And the third ten miles is as easy as the second. You just start, and keep on going. That's all there is to it. Of course you've got to have plenty of food and water; but that's a matter of common sense. Naturally, I never set out until I had enough provisions on board to last me a lot longer than it would take me to reach the next land."

"WHAT do you take along for food? And how much water?" I asked.

"Oh, I don't eat much. Hardly any canned food at all. I stock up with dried fruit, potatoes, onions, and other stuff that won't spoil. I carry wheat and corn in the grain, and make my own flour and meal with a hand mill. I don't drink tea, coffee, or milk. Water is all I need, and half a gallon of that each day is enough. I generally carry a hundred gallons. Even if my supply of water 'went bad,' I could catch rain water. But water that has gone bad will come back pure again, if you leave it long enough. Here," he said, "try this. I've had it on board for more than a year."

He looked under his bunk and brought out a quart bottle of water. "I always hide a few of these around, in case all the rest goes," he explained.

I took a drink of this water, and it was good, though I confess to some qualms about it.

"If I put that bottle of water out in the sun," my host explained, "it would grow up with green stuff. But then, if I put it back in the dark and kept it long enough, it would become pure again."

"What about bathing?" I asked.

"Baths are not one of the main problems of a man sailing alone," Pidgeon replied; "but, anyway, I managed to get plenty of them. Sometimes I'd catch rain water, and bathe in that. Or take off my clothes and go on deck in a hard rain. A natural shower bath is just as good as an artificial one! And when there wasn't any rain, I could jump overboard and swim around. But you bet I didn't do that except in a calm. If I'd tried it when a breeze was up, my boat would have sailed right away and left me to swim a thousand or more miles to shore! When I wanted to take a real dip, I'd wait until the wind died down, then tie the tiller hard over, so the boat would sail, if she sailed at all, in a circle. I could then swim around inside her course until I was ready to climb aboard. The ocean—any ocean except maybe the Arctic or Antarctic—makes a pretty good bathtub if you are careful.

"Once when I was taking a swim I had a curious experience: a sort of premonition that something was about to go wrong. I swam back to my boat in a hurry and climbed aboard. Looking back into the

A Sure Way To End Dandruff

There is one sure way that never fails to remove dandruff completely, and that is to dissolve it. Then you destroy it entirely. To do this, just apply a little Liquid Arvon at night before retiring; use enough to moisten the scalp and rub it in gently with the finger tips.

By morning, most, if not all, of your dandruff will be gone, and two or three more applications will completely dissolve and entirely destroy every single sign and trace of it, no matter how much dandruff you may have.

You will find, too, that all itching of the scalp will stop instantly and your hair will be lustrous, glossy, silky and soft, and look and feel a hundred times better.

You can get Liquid Arvon at any drug store, and a four ounce bottle is all you will need. This simple remedy has never been known to fail.

This Shampoo Won My Prize

By Edna Wallace Hopper

About three years ago I announced my desire for an exceptional shampoo. I had never found, in Paris or elsewhere, a shampoo that satisfied me.

I published the fact that if anyone brought me the ideal shampoo I would buy carloads of it. I would place it on every toilet counter, and tell millions of women about it.

Well, it came to me from one of the oldest soap chemists in America. They said, "We have made shampoos for 60 years and over. We have made up and tested some 250 formulas. This is our final result. It is not only the supreme shampoo, but it gives the hair a marvelous glint."

It amazed and delighted me. Then I had my office submit it to some hundreds of women. From everywhere there came demands for more.

So this shampoo has won the prize I offered. Now it is sold on all toilet counters as Edna Wallace Hopper's Fruity Shampoo. And countless women, all the country over, are thanking me for that shampoo.

You can find it anywhere. The price is 60c per bottle. If it does not please you, your druggist will return the price. But I know you will be as delighted as I was to find a shampoo like this. Please try it. The name is Edna Wallace Hopper's Fruity Shampoo.

In a free book "The Art of Story Writing," you are shown the fundamentals on which every good story is based. This book shows how many famous authors learned to frame stories, create new ideas, and the way to have them published. Get this free book now. Write Hoosier Institute, Dept. 1063, Fort Wayne, Ind.

water, I saw some sharks. One big fellow kept bumping into the side of the boat until I jabbed him with a hook. I don't know whether sharks would be very dangerous if a man kept moving about in lively fashion; but they would kill him in a hurry if he just floated lazily on the surface. These sharks that got after me seemed to be hungry. I have never figured out what made me feel that I'd better get back on the boat.

"Do you know the most dangerous thing a man sailing alone has to face?" Pidgeon asked, as if he had suddenly thought of something extraordinary. And he had, as I soon found out.

"Storms and rocks is my guess."

"You're wrong," he went on. "I keep out of storms."

"How?" I asked.

"By studying my charts," he answered. "The storms that have taken place are noted, and their paths charted. The time they came, the time they lasted, and the courses they followed are generally known. Well, before I'd leave one place I would study all the storm reports, and see whether I was likely to run into one in that section. If it happened to be the season for storms where I was, I'd wait until a time when they were rare, and then set out. I never had any schedule to follow, so could stay in a place any length of time. In my trip around the world I kept within twenty degrees of the equator, and there are not many storms, anyway, in that belt. The trade winds blew me on a good part of the time.

"No," he went on; "it isn't storms that I was afraid of. It was clear, calm weather when a good breeze was blowing."

He saw my amazement, and explained: "In bad weather, when a man goes on deck he holds fast to something, for he knows he might fall overboard. But in fair weather, he might become careless and walk around the deck without thinking. Then a little roll of the boat could throw him over the side; and there he would be in the water, and his boat sailing away from him a lot faster than he could swim. That's the greatest danger in sailing alone—your boat may run off and leave you."

"Now tell me about your long sail," I suggested, and Harry Pidgeon told me about it in three or four minutes!

"I SET out from Los Angeles," he related, "and went to the Marquesas Islands in the South Sea, where I stopped for several months, making repairs, stocking up, and seeing how people lived down there. I had always wanted to see those islands. But Samoa was my goal when I set out. I went on from the Marquesas to the Tuamotu Islands. Then to the Society Islands; to Samoa, the New Hebrides, and New Guinea. I thought to myself that I might as well keep on, as it was as easy to return one way as the other after I got half way 'round. I went to Thursday Island, just north of Australia, and stayed there a month.

"It was while at Thursday Island that I decided definitely to keep on 'round. The winds favored my keeping on rather than turning back. Then to Timor in the Indian Ocean, and on to Christmas Island, Keeling, Rodriguez, Mauritius, past Madagascar to Durban, South Africa, to Cape Town around the Cape of Good Hope. I was eighteen days making eight hundred

Do your New Shoes

If you dread wearing new shoes because they make your feet sore and tender, apply Dr. Scholl's Zino-pads wherever they give you discomfort. You will get instant relief. New shoes will feel as comfortable as old ones. Dr. Scholl's Zino-pads remove the friction and pressure which cause all the woe of "breaking in" new shoes, and positively prevent corns, callouses, bunions and blisters. Zino-pads are thin, medicated, antiseptic, protective, healing. Cost but a trifle. Sold everywhere.

1. For Tender Toes and Corns
For toes that are inflamed and sore (the first sign of corns), apply Dr. Scholl's Zino-pads (Corn size). Pain stops instantly and corns positively are prevented.

2. Burning Soles—Callouses
For Callouses here or burning sensation or soreness—apply Dr. Scholl's Zino-pads (Callous size). They stop the cause, and end the pain at once.

3. For Sore, Tender Heels
Blisters and tender spots on the heels prevented and all soreness removed, by applying Dr. Scholl's Zino-pads (Callous or Bunion size).

4. Preventing Bunions
Apply Dr. Scholl's Zino-pads (Bunion size). They stop the pressure of the shoe, and prevent and relieve bunions.

5. For Tortured Instep
For painful ridges on the instep, caused by tight shoes, use Dr. Scholl's Zino-pads (Callous or Bunion size). They prevent blisters and quickly heal.

Dr Scholl's Zino-pads

Put one on—the pain is gone!

miles around the Cape, because of head winds. Next I came to St. Helena, and then to Ascension Island, where I put in for thirty-five days. Then to Trinidad in the West Indies, by Cristobal, and through the Panama Canal to Los Angeles.

"My actual sailing time was a little less than one year, but I was gone from November 18th, 1921, to October 31st, 1925, three years eleven months and thirteen days."

This he related to me as if he had been talking about plowing a field of corn in the morning, going to the county seat in the afternoon, attending a picture show, getting supper in a restaurant, and driving back by a neighbor's home! Again I give you my word that Harry Pidgeon doesn't seem the least bit thrilled over anything he has done. He has the temperament of a steady, hard-working farmer, the disposition of a super-tramp, and the nerve of an adventurer. The most unusual person I had met in a month of Sundays. Every time I think of him, I have an impression of a man who is, aside from the ordinary run of mortals, superior to the ordinary fears of life, indifferent to the ordinary desires and motives that send us pleddingly about our daily tasks. But he denies this.

"You get up in the morning," he said, "and go about whatever you have to do. The same with me. When I am out on the ocean, I get up at daylight and look out to see how the weather is. If it's good, I set a little more sail, then go down in the cabin to cook breakfast. That never takes long, for I eat nothing for breakfast except some heated-up dried fruit, or fresh fruit, if I'm lately from land. After breakfast, I go out on deck and set more sail, take the tiller and sail as fast as the wind will take me for a while. At noon, I take my sextant out and get my position by the sun. I study my charts to see if I'm on the course I want, and if not I proceed to get on it.

"Then comes dinner time, and I do a little more cooking. After dinner, there is always a lot to attend to, what with holding the tiller, mending sails, putting in new ropes, tightening bolts, cleaning up, painting, and all that. Something is always chafing about a boat, and if I didn't keep a good lookout, a rope would part some day and leave me in a mess. If I ever do find any leisure, I can use it by taking a nap, for on all of my trip around the world, I ran about two days behind in sleep."

"HOW did you manage to sleep?" I asked.

"In good weather," he replied, "I'd set a little sail, tie the tiller, and go to bed. In bad weather, I'd shorten sail, or use none, depending on whether I wanted to run before the wind, or whether there was a head wind. But, good or bad weather, I'd get up every few hours and look out to see if everything was all right. I carried lights most of the time, especially if I was in a steamship lane.

"One night off the coast of Africa, the wind changed while I was asleep, and blew the 'Islander' on a sand beach. The people from the nearest town helped me to make repairs and set off again.

"Oh, I had plenty to keep me interested," he insisted. "Work! Always there was work to do. But it was routine

RARE COIN BOOK, 50c. Worth $5.00. Fully illustrated. Guttag Bros., 16 Exchange Pl., N. Y.

EXTRA MONEY
Always Useful and Easy To Obtain!

Mr. W. H. Guscott, an Ohio business man, has found a profitable market for his spare time, evenings and Saturday afternoons. In the past year, he sold his spare time to us for over $1,000.00 in cash. YOUR odd hours may be worth that, too.

No matter what your regular occupation may be, or where you live, there's a profitable spare-time position waiting for you as one of the special subscription representatives of COLLIER'S, THE AMERICAN MAGAZINE, WOMAN'S HOME COMPANION and THE MENTOR.

If you want to begin at once to pick up $1.50 to $2.00 an hour in your spare time, WRITE TODAY for free outfit and samples.

Chief of Subscription Staff, Desk 45A,
The Crowell Publishing Company,
250 Park Avenue, New York, N. Y.
Please send me, without cost or obligation, free outfit to enable me to obtain some of the EXTRA MONEY you offer.

Travel Without Expense
As A Guest of
THE AMERICAN MAGAZINE

You are invited to be the guest of THE AMERICAN MAGAZINE on a Prize Tour of your own selection.
You may even choose any friend or relative as a traveling companion to accompany you on this trip.

All Expenses, including railroad or steamship fares, side trips to interesting points, first-class hotel accommodations and meals for both your traveling companion and yourself will be paid for by this nationally popular magazine.

The fascination of care-free and expense-free travel such as you will enjoy as a guest of this well-known monthly will repay you a hundred-fold for the pleasant, spare-time effort necessary to introduce THE AMERICAN MAGAZINE to your friends and neighbors, looking after its subscription interests in your community.

THIS IS NOT A PRIZE CONTEST

There is no element of competition involved in this offer. You make no financial outlay to be eligible to participate in this new, unique service offered by your favorite magazine.

No matter what your regular occupation may be, no matter where you live, there's an American Prize Tour for you to the enchanting scenic spots or the interesting historic landmarks of America, including places like Yellowstone National Park, Hawaiian Islands, Grand Canyon of Colorado, Niagara Falls, Great Lakes, Washington, New York, Atlantic City and numerous other spots you have longed to visit.

FREE 50 MILE TRAVEL COUPON

together with a complete outfit to enable you to begin at once to plan for your expense-free trip this summer as a guest of THE AMERICAN MAGAZINE will be promptly sent, without cost or obligation, if you return this coupon AT ONCE.

Martin Quick, Mgr., Travel Bureau,
THE AMERICAN MAGAZINE,
250 Park Avenue, New York, N. Y.

Please send me FREE 50 MILE TRAVEL COUPON, also complete equipment and instructions regarding expense-free tours which you offer to readers of THE AMERICAN MAGAZINE.

sort of work. Like yours. Like anybody's. Nothing more to it than a land job. For recreation, I got to studying the colors in the water, and the skies. I'd sit at the tiller and say to myself, 'Along about two hours from now, there ought to be a cloud off yonder on the horizon,' and generally the cloud would come. I studied the charts of all the seas I was sailing in; learned where the typhoons came in the Indian Ocean, and when. I dodged them, as I've told you. And I maneuvered to get through or around the doldrums, too. These are great spaces in the oceans where there isn't any consistent wind. Once I got too far inside the Great Doldrum in the Pacific, and it gave me the longest time out I ever had. For eighty-five days I didn't touch land.

"That was when I came through the Canal and up to Los Angeles. I tried to cut off some of the distance by sticking a little too close to the shore, and the lack of winds delayed me. This doldrum is in a sort of wedge shape, wide close to shore and getting narrower out to sea. But I didn't worry. I had plenty of water and I fished over the side for albacore. I speared a dolphin, and ate some of that. But it wasn't necessary to do this; I just wanted something fresh. On that trip, I cooked my last potato the day before I landed. There was still plenty of grain, dried fruit and onions on board, and I could have caught a boatful of fish. My supply of water wasn't even half gone.

"I HAD a mighty fine time on that cruise around the world. Everywhere, the people were good to me. I didn't carry any ship's papers, but just sailed into a harbor and told them I was there. When they found out I was in a thirty-four-foot boat, and going around the world, everybody would want to do something for me. When I was in a harbor I always had plenty of invitations out to meals. If I needed money, I gave lectures in the towns. I expect I had more social life on that voyage than most people have. People seemed interested in what I was doing.

"My expenses were not much, maybe not more than two thousand dollars for the whole trip. I didn't keep any account, so I'm just guessing.

"I had an interesting experience in the New Hebrides. There were some tribes there said to be cannibals; they were blacker than any other people I had ever seen. But the islands were beautiful, so I often went inland looking around, comparing their birds with the birds of other places, and their customs with ours. I always do that. People, animals, birds, rocks, trees, and customs interest me.

"Well, one day I was walking along the shore, and out of the woods there came a tremendous black man. Almost naked, he was, except for some ornaments. He was a lot bigger than I am; but I wasn't scared much, though I did wonder if he were a cannibal. He came up to me and said something that I couldn't understand. I shook my head. He began to make signs, and finally I understood that he wanted me to go back into the forest with him. It struck me that I might find something interesting back there, for I knew the people farmed inland. So I decided to go with him, and find out whether he was after a square meal or not. I knew I wouldn't make very good eat-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ing, for I'm thin and tough! Anyway, I went.

"But when we got a good piece into the woods, we came to a stream. I had my clothes on, and decided this was a good excuse for me to turn back. I made signs accordingly. My black host wouldn't agree to any such move on my part. He understood why I wouldn't go farther, so he came and picked me up, had me sit on his shoulders, and blamed if he didn't tote me across that stream! He was smiling and making peace signs all the time, so I kept on going.

"Then we came out into one of the prettiest clearings I ever saw. It was his farm. He called to his wives and children, and they got busy in a hurry, bringing out some bags, and then going to the fields. There they filled a big sack with yams and gave them to me!

"That's why that fellow had taken me back there. He had heard of me, as I had been on his island for some time, and he wanted to show his hospitality. I was glad to get the potatoes.

"THE liveliest five minutes I had in the entire trip came off the coast of South America. I was a hundred miles or so from land, but in a steamship lane. I carried lights at night, so no vessel would run me down. Then there came on a storm, one of the few I ever got into. The waves were running high when darkness came, so I set my lights, closed all the hatches and went below for some sleep. I had been asleep an hour or more—the rolling of the boat didn't bother me, so long as she stayed right side up—when all of a sudden I was jolted out of my bunk by the biggest bump I ever felt. I thought I had hit a rock.

"My mind wasn't clear when I jumped to my feet and scrambled out on deck. But once in the open, with the wind and rain on me, my senses returned in a hurry. Then I saw what the trouble was. Right alongside was a tank steamer, her side towering and rocking over me.

"Somebody on board threw me a line, and the officer on the bridge called down, 'Here's a line for you!'

"'Pull off!' I shouted. 'I don't want any line!'

"'Don't you want to be rescued?' asked the officer.

"'Blankety blank, no!' I answered. 'You woke me up. Get out of here!'

"I heard some more talk on the bridge, and then the steamer started to move off. But before she got away, a big wave came and picked up the 'Islander,' raising her even with the tanker's rail. She hit the rail, and for a second or two I thought she would fall onto its deck. But she rode back with the wave, and we were clear. I went over the deck to see what damage had been done. My bowsprit was broken, and the side of the yawl scarred, but that was all.

"Later on, I met the crew of that tanker in a harbor, and they told me about the 'rescue.' The lookout had sighted my light, and mistook me for a ship's boat. Naturally, the officer on the bridge thought I wanted to be rescued, so he came down to windward, and let my boat bump into his side."

Upon his return to Los Angeles, Harry Pidgeon was invited by the Cruising Club of America to come to New York. They

The few who think ahead

One who travels much cannot fail to be struck by the inconsistency of many of the towns he visits—the very latest thing in electric lights, perhaps, and a water supply that would have been considered primitive in ancient Chaldea.

One sees the finest of automobiles rolling along concrete highways—and their owners carrying water from wells.

Even in some of those towns that have waterworks of a sort, the mains—most vital part of any system—may have been allowed to fall into disrepair, or are so small that any sudden need, like a large fire, would spell disaster.

It is easy to interest people in the matter of water supply. Fortunately, there are in every community people who think ahead toward it.

For them, The Cast Iron Pipe Publicity Bureau was established—to show how even the smallest place can have a water supply as good as New York or Chicago enjoys.

We will be glad to send full information on request.

THE CAST IRON PIPE PUBLICITY BUREAU
Room 566—122 S. Michigan Ave., Chicago.

CAST IRON PIPE

These posters, 8½" x 11", have proven an effective aid in many campaigns for waterworks — we will gladly send a supply of them for any community.

Youngsters 10-14 revel in the outdoor life of the Woodcraft Camp. Culver has celebrated equipment and the supervision of exceptional men. Radio Station WCMA (258.5). Separate catalogs. Address The Dean's Office, Culver, Indiana.

loaded the "Islander" on board a steamship, and with Pidgeon as a passenger came around through the Panama Canal and up to New York, where he was presented with a medal.

I asked Pidgeon where he would go next, or what he would do.

"I'm to lecture some," he said, "and after that I'll sail back to Los Angeles."

"You'll find the lecture platform very different from a boat's deck," I suggested.

"Yes," he answered. "I don't mind the lecturing part; but it'll be mighty hard traveling around on trains and living in hotels. The trouble with these land jobs is that they tie a fellow to a schedule, and I like to feel free."

The Thing I'd Like Best of All to Do

Prize Contest Announcement

HARRY PIDGEON used to dream of sailing away in a little boat to the islands in the South Seas. Perhaps you have had similar dreams; certainly, you have had dreams of some sort. There are many things you have wanted to do; many things you still want to do. And among these dreams of yours is one that is stronger than any of the others. This is the thing that you want most of all to do.

When Harry Pidgeon became a mature man, he did sail away in a little boat. Harry Pidgeon didn't know any better than to do what he had always wanted to do! But he did not have a family; he was freer than most of us. It may be impossible for you to do the thing you have most wanted to do—except in imagination! In this contest, you have a chance to turn your imagination loose. You do not have to consider money, time, obligations to others. You do not have to consider anything, except your greatest or wildest dream. What is it? What do you most long to do? Do you want to travel? Do you want to live in some particular place? Do you want to write, paint, make a great medical discovery, or invent something of note? Do you want to deliver an epoch-making speech? Do you want to be a great athlete? Whatever your one biggest desire, state it. Write about it definitely. Tell when this dream first came to you, why it came, and how long it has persisted. Sit before your fire (or your radiator), and enjoy an imagination party. Then tell us about it!

For the best letter of not more than four hundred words we offer the following prizes: $30, first prize; $20, second prize; $10, third prize. Competition closes March 20th. Winning letters will appear in the June issue.

Address Contest Editor, THE AMERICAN MAGAZINE, 250 Park Avenue, New York City.

Contributions to this contest, and any enclosures, cannot be returned, so you must make a copy of your contest letter and of any enclosures, if you want to preserve them. Manuscripts and inquiries not connected with the contest must be sent under separate cover to the Editor of THE AMERICAN MAGAZINE.

The Wilds Gave Back to Marzolo the Faith He Had Lost

(*Continued from page 57*)

can't read the signs—can't make head or tail of things. Then I believe it is best for him to let himself go, resigning himself into the hands of the greater Power that directs us, convinced that inevitably things will work out as they should."

Marzolo found adventure in the wilds. He rode far into the interior, beyond the last points where the maps give the names of towns, into a region marked simply, "Indians." On his tour he came to the native city of Huanuco. Here he met an Italian who owned a grist mill, and ground grain for natives for a share of the product. Having little or no money left, Marzolo went to work in the mill. He spent a few months at it, then found himself beginning to long for home and his real work. Bidding his employer good-by, he set out for the coast with a guide and two other travelers bound in the same direction. It turned out to be a far longer journey than he anticipated.

"ONE day," he said, "we were riding a trail that led along a precipice. It was just wide enough for two animals to meet and pass. On one side the mountain wall rose straight up, on the other it dropped straight down; a winding stream at the bottom looked a mile away.

"At this point my horse began to act up.

"I must dismount. But could I? If I tried it on the precipice side, which was the right way to get off, he might push me over. If I tried it on the other side, he might crowd me against the mountain.

"I thought fast. An opportunity came, and I tried to slip out of the saddle on the mountain side. The horse did what I had feared—started to crowd me. I was awkward about dismounting, since it was the wrong side. My foot caught in the stirrup. The horse, now thoroughly frightened, began to run with me, dragging me at his side. Again and again I was struck by his hoofs, knocked against the mountain, pounded on rocks. I don't know how far we went before my foot was wrenched loose and I lay more dead than alive.

"Some natives had been following us on the trail. They knew of an Indian village located near by, and my guide sent them ahead to carry me there, paying them well for the job. At the first turn in the trail, however, seeing that I was as good as dead already, they laid me in a little niche among the rocks and took to their heels.

"The guide came along soon afterward, and by good luck found me. He chased the natives, gave them a terrible whipping, then made them come back and get me, and march in his sight to the village. Here for ten days I lay on the floor of a native hut, unable to help myself, and without medical attention.

"The guide went on his way with the other travelers, but information passed by word of mouth from native to native, and the news of my accident reached Cerro de Pasco, a mining city some seventy-five miles away. My name was carried along too, and fell on the ears of a certain man living there.

"'Marzolo!' he said; 'why, I must know that man. His family and mine are related.'

"I consider what followed one of the strangest experiences of my life. It is one of the incidents that has deeply impressed me with the belief that a divine hand guides our affairs. This stranger of Cerro de Pasco, a man of whom I had never heard, was apparently well-to-do, and immediately dispatched an expedition into the mountains to look for me. In due time they arrived at the hut where I lay—four men with a stretcher. They carried me to Cerro de Pasco.

"There, in a remote little mining city seventeen thousand five hundred feet above the sea, was a splendidly equipped hospital, with four skilled doctors. I was given over to the doctors, and they found many things wrong with me—a fractured skull, a broken arm, a broken leg, broken ribs, and internal injuries besides.

"Since I had no money, or only a little, and it was seen that my injuries would take a long, long time to heal, my Good Samaritan established a small fund sufficient to care for me, and appointed trustees to administer it. Soon after he had done so, a strange series of events began.

"My benefactor, whom I had scarcely had an opportunity to see, went away on a hunting trip. He contracted pneumonia and died. I never learned his name.

"This was event number one.

"Among other kindnesses, my benefactor had arranged with a tailor to make me a suit of clothes. The tailor delivered it to me one day, together with a handsome blue hat with a little red feather in it.

"Well, to go on: The tailor delivered my suit and hat, and on the way back to his shop ran into one of those little revolutions that occur with monotonous frequency in South American countries. He was struck on the back of the head, and died instantly.

"This was event number two.

"I was in care of the hospital a full year before I was pronounced well. During that time I struck up a great friendship with one of the doctors, a Japanese. We exchanged thoughts on many subjects, and he helped me to recover more than my physical health. When I was discharged from the hospital and bade him good by, he seemed perfectly well. I set out for Lima on my way to Callao and thence home. In Lima, two weeks later, I received word that my Japanese friend had contracted typhoid fever and died.

"This was event number three. A strange series!

"'HERE I am,' I said to myself as I meditated on these deaths, 'a poor soup bone saved from death! There must be a reason for it. There must be some work in the world for me to do.'

"Providence had done so much to aid me, it seemed only fair I should do what

Home-Study Training Increases Salaries!

"It *works!*" That's what a production engineer told Raymond C. Cooley when he asked him his opinion of LaSalle training.

Cooley enrolled for training in Industrial Management Efficiency—found his niche in the great Parker Pen organization at Janesville, Wis.—and increased his salary 150 per cent.

"It *works!*" says Helen Morrissey, Office Supervisor. "Several hundred people are under my direct superintendence in the Parker Pen Company, and in my work there are countless instances where this practical training has been of great value."

"It *works!*" says Russell C. Parker, Vice-President in charge of production. "We always have room for men and women who want to advance with us and who are willing to study to develop the *capacity* to advance. Basing my opinion on the records of the persons in our company who are taking your courses, I should say that LaSalle courses constitute a very effectual training."

Start Toward a Bigger Salary—Today

Are you looking for a lift—or—an opportunity to lift yourself?

If you have the urge and the will to get ahead, you should send at once for LaSalle's 64-page book describing the opportunities in the business field in which you most prefer to win success—also your copy of "Ten Years' Promotion in One." The coupon will bring them to you *free*.

A pencil—an envelope—a postage stamp! Get these two books now—and make your start TODAY.

I could thenceforward to help myself."

Callao of the old West Coast is a port of call for the ships of seven seas. Here Marzolo, still broke, and eager to go home, tended bar until he picked up the bare price of his passage.

"I sailed in the steerage," he said; "and I mean *steerage*—the steers were there! One old fellow in a stall next to the place where we unrolled our mattresses and slept, used to reach his head over and rub his horns against the post.

"We called at one or two ports up the coast. At the last port before Panama, native bumboatmen came out with fruit. They had apples for sale, and I bought a large sack. A *peso* was the price I paid, and very nearly my last dollar it was, too.

"When we reached Panama, I went ashore. For some reason, apples were exceedingly scarce there, and my bagful proved to be a fortune. I went about the streets hawking them off at two for a quarter.

"In Panama I contracted malarial fever. When my boat was ready to sail for the States, two or three weeks later, it was all I could do to drag myself aboard; but I managed to do it."

AFTER a brief stay at home, Marzolo went to Salt Lake City. He was still going, still vagabonding; but his purpose to make something of himself and of his art had firmly returned. At Salt Lake City he worked in a picture store for more than a year, then went to Los Angeles, in the hope of getting a place in a big picture store he knew of there.

"I discovered they had no place for me at the time," he continued; "but they told me of a merchant in Phoenix, Arizona, who had written them he needed somebody like me. Arrangements for me to take the job were completed with him by telegraph, and I spent most of my money for a ticket. When I arrived in Phoenix and called on the merchant, he calmly informed me he had hired somebody else. I was dumfounded.

"'You'll have to give me the price of my fare back to Los Angeles,' I told him.

"I had five dollars in my pocket. It was the extent of my worldly wealth. He said that he would not give me a cent.

"I was staying at the Commercial Hotel and paying a dollar a day for a room. I knew that could not continue. So I walked down the street thinking I would find a place to board, and came to a house that looked good to me. I rang the doorbell and explained my predicament frankly to the landlady.

"'Young man,' she said, 'your face looks honest.'

"'I try to *be* honest,' I assured her.

"I hope I meet that good lady again before I die. She trusted me for my room and board. Moreover, partly out of self-interest, no doubt, but also largely out of the goodness of her heart, she tried to get a job for me.

"One man I called on was a merchant with nearly everything in stock. I told him I painted, and he said:

"'Why not try painting pictures for sale? Tourists go through here and ought to buy. I have paints and brushes I'll let you have, and if you can paint at all a picture or two should pay for them.'

"This sounded fine. He let me have a complete outfit, and even directed me to a stable where I could borrow a horse. It still surprises me that, without knowing me at all, they let me have that horse.

"That day I rode across country to Mount Camelback, ten or a dozen miles away, and made a quick sketch. A merchant gave me permission to exhibit my canvas in his window. It was sold before night, with the paint still wet. I believe I got ten dollars for it.

"I did a lot more painting, and had a run of luck. I made one trip to the Superstition Mountains, and others elsewhere to interesting points near by. Mr. Dono Frio, the merchant who let me exhibit in his window, bought a number of my canvases himself, while tourists and others bought still more. I remained in Phoenix three or four months, and when I left had enough money to pay my landlady in full, settle all my other bills, and buy a ticket —first class!—to Chicago. I even had fifty cents left as the train pulled into the train shed at Chicago. The porter and I split it!"

IT WAS fifteen years ago that Leo Marzolo arrived thus in Chicago, unheralded, unknown, twenty-four years old, some strange, soul-searching experiences behind him, a lone quarter in his pocket, but in his heart the profound conviction that there was a job in the world for him to do.

"I found another pleasant boarding-house," he said, "and another kindly landlady who was willing to trust me.

"I got a job in the art department of Marshall Field and Company. They tucked me away in a cubbyhole near the eaves, and soon, finding that I had some experience and knowledge, began sending me all the miscellaneous paintings they received, to be restored. In my leisure I kept on with my own painting, and sold the canvases. I studied at art school at night.

"Soon after arriving in Chicago, I started going to the Fourth Presbyterian Church. On certain nights they had a class in salesmanship, conducted by a young man named Merril Coit. One evening our class work consisted of each student telling his occupation and explaining how he thought his product should be sold. In my turn I said I was a picture restorer. Mr. Coit was interested.

"After the class he remained and we talked further. The upshot of it was that he entrusted to me a painting by the Spanish artist, Francisco Goya. A famous expert, with whom Mr. Coit consulted before and after giving me the job, found the work good, and told me, if I wished, he could turn many assignments my way. Accordingly, I quit my job and went in for myself."

In the years between then and now, Leo Marzolo has studied and labored with a passionate earnestness born of the conviction that he is doing the work he was put in the world to do. Gradually he has added to his store of knowledge; day by day he has experimented, asked questions, gleaned facts not assembled in any school course. And, gradually, knowledge of him has spread. Work comes to him daily from people he never heard of—from Europe, Mexico, and the four corners of the United States. Paintings literally priceless have been entrusted to him. And he has shared in adventures of art as

fascinating as the adventures of his own life.

"Many things can happen to a picture," he explains, "but a successful restorer does *the least* he can to it. If there is a tear in the canvas, the hole must be patched and paint put on which exactly matches the rest, not merely in color, but also in chemical quality. If the paint is falling off in large pieces, something else may have to be done. I never put on new paint if I can help it. I do only what *must* be done to preserve the integrity of the original.

"Most oil paintings grow darker with age. The darkening is in the varnish, as a rule, and the original colors can often be restored by removing the old varnish. But it must be done with patience and skill, or the painting may be ruined.

"I KNOW of a portrait in oils worth, perhaps, ten thousand dollars, which was darkened by age, and was taken to an artist who knew little about chemistry. He applied a solvent to the varnish which was entirely too strong. Not only the varnish came off, but also the face of the subject! The artist painted a new face the best he could, and returned the picture to the owner, but its value was gone. An expert would perhaps value it now at two hundred dollars.

"Possibly the hardest job ever entrusted to me," Marzolo continued, "was a canvas six by eight feet in size, painted by one of the great old masters. In good condition, it would have been worth a large sum of money; but when it came to me it was in very bad condition. The paint was scaling off. Great pieces hung loose.

"It was impracticable in this case to do what is sometimes done; namely, put a new canvas behind the old. This had already been done three times in the past by earlier restorers. I found four canvases on the one frame, one under the other. What I decided to do, therefore, was *to take the paint off the canvas entirely* and put it on a wholly new canvas. I had done this with smaller canvases, but never with one so large and valuable.

"The process is complicated, but briefly what I did was to cover the picture carefully with several layers of tissue paper stretched tight. Then I applied chemicals to the back of the canvas. After repeated treatments, calling for plenty of patience, gradually the paint loosened to such an extent that it was possible to lift the canvas and leave the paint on the paper.

"The paint was then treated and transferred to a new canvas. When finished, the paint was as firmly attached to the new canvas as it had been when freshly applied to the original canvas. The value and beauty of the picture are preserved, and dozens, perhaps hundreds of years, are added to its life.

"Shellac is sometimes put on a picture needed in a hurry, because it dries quickly; but if put on in a draft it may whiten and become semi-opaque. I have seen a picture almost completely hidden by cloudy shellac; but with a solvent it was possible to remove it in a few minutes, making the picture as good as ever.

"Pictures go through curious adventures. New Orleans was a city of much wealth in early days, and a great center

"Which Man Shall I Promote?"

WILL your employer think of you when the next good position is open? Will he say, *"There's a man who is training himself to handle bigger work,"* or will he pass you by as just an ordinary routine worker?

Do not try to fool yourself. Your employer is watching you more closely than you may think. He's constantly checking up on your work, your abilities, your ideals, your aspirations. Stored away in the back of his mind or filed away in black and white, are his impressions of the kind of man you *are* and the kind of man you *want to be.*

He's willing and anxious to pay you more money the minute you prove that you are worth more money. But he can't take chances. When he promotes a man, he wants to be sure he will make good.

Decide now—*today*—that you are going to be ready when your chance comes. Choose the position you want in the work you like best—then train for it. You can do it in spare time in your own home through the International Correspondence Schools.

Write today for an interesting descriptive booklet which tells the full story. It won't cost you a penny, but it may be the means of changing your entire life.

for picture lovers. Many fine collections made there were scattered in later days, during and after the Civil War, when the South was poor and planters lost their wealth. Pictures from fine homes often found their way into the hands of people who knew little of their value and history, and perhaps cared less. Consequently, New Orleans has been a favorite hunting ground of late years for collectors in search of forgotten masterpieces.

"A New York collector not long ago picked up quite a number of such paintings in a New Orleans antique shop. He took them as a job lot, not knowing whether he would find anything of much value. The pictures were in bad shape, and I was called on to fix them up.

"In the lot was a portrait of a Colonial merchant. A good deal of retouching was visible around the hair, and the canvas was dirty. When it was cleaned and the retouching removed, we found an excellent portrait painted by Gilbert Stuart, the American artist who painted portraits of all the early American Presidents, including the best-known portrait we have of George Washington. Any portrait by Gilbert Stuart in good condition is worth a deal of money. This one was bought in the lot for around two hundred dollars, and if sold would certainly bring a good many thousands.

"A FRIEND of mine, who is an artist, an art expert, and a collector on his own account, had an interesting experience a number of years ago. Religious authorities were dismantling an ancient convent in Budapest, and were disposing of a large number of altar pieces and other religious paintings, many of which were hundreds of years old. Nearly all were to be shipped across the Atlantic to a new home in Quebec; but a few, considered not worth the cost of crating and sending, were offered for sale.

"Among the latter was a small-sized picture so darkened by age that it was nearly impossible to distinguish any of its details. It was painted on a wooden panel. In places the wood was worm-eaten, and gave evidence of being several centuries old. The paint was intact and without cracks; but the panel had bulged out of shape in places. Altogether, it was an unattractive, unpromising picture, which nobody, it seemed, would be likely to want.

"My friend noticed a glow of red pigment beneath the grime, and made an examination with his pocket microscope. He discovered *encaustic*, a wax process once used by painters, principally during the eleventh, twelfth, and thirteenth centuries. Knowing that he might find something very poor or very good, he decided to take a chance, and bought the picture. He gave the priests the price they asked, which was the Bohemian equivalent of about five dollars.

"He brought the relic to the United States and cleaned it up. The solvent loosened the dirt and grime of the varnish, and there was revealed a disappointing and commonplace picture of the Virgin and Child, painted in tempera, another process much used by medieval painters. Except for its age, the restored picture was of little interest or value.

"My friend was not satisfied. He thought the wood in the panel was far older than the picture painted on it. So he kept on.

"Another delicate process removed the painting in tempera. Underneath, nearly as clear and beautiful as it must have been the day it was painted, hundreds of years ago, was revealed a rare picture by an artist named Ricco de Candia, a master whose paintings have nearly all disappeared. Probably some nun or monk, disliking Ricco's portrayal of the Virgin, and not guessing that some day the picture would be priceless, had been responsible for covering it with commonplace paint.

"Collectors place a high value on Ricco's work. The little picture bought in Budapest for a five-dollar bill was completely restored, and resold to a railroad president who makes art a hobby. He paid a good many thousand dollars to add this picture to his collection.

"NOT all old pictures, however, are valuable; and sometimes rich 'finds' turn out to be not what they seem. Quite recently a Mexican came to me with an old picture in very bad shape. Somebody had told him it was a Rembrandt, whose originals are valued at whatever the richest collectors care to pay.

"It was certainly *not* a Rembrandt, and, no matter who painted it, in its dilapidated condition it was worth very little. I told the Mexican my reasons for thinking so, and pointed out why it would hardly pay to have it restored.

"The way hands are painted is often an indication of authenticity. Nearly every master treats them in his own way, and it is difficult for anybody less skilled to imitate his method and technique successfully. There are other tests. The weave of the canvas is one; anybody who knows can tell pretty nearly the date of manufacture of any piece of canvas shown him in a picture.

"A curious thing is sometimes done in Italy. Many fine old masters are owned there, and the Government does not like to have them leave. Every important picture is registered, and it is against the law to sell it out of the country without governmental permission. The Government agrees to buy such pictures, if necessary, to keep them at home. But many pictures leave the country secretly, and perhaps a majority come to the United States. But they must pass the custom authorities.

"The owner simply employs a clever artist to paint over the original, copying detail for detail with fresh paint. Anybody looking at it then, if he knows anything about painting, knows it is a copy of an old master. As such, it goes through as merchandise. Upon reaching New York, or whatever port it is bound for, somebody can be employed to remove the fresh, soft paint, and the hard original paint of the old master is undisturbed."

"What is the most valuable painting you ever worked on?" I asked.

Marzolo smiled.

"It was a painting of the Christ Child, done by Murillo, the great Spanish painter of the seventeenth century. Its owner valued it at two hundred and fifty thousand dollars. I worked on it at home, and at night slept with it in my bedroom, within reach of my hand!"

A Girl Who Didn't Know What She Wanted

(*Continued from page 54*)

eyes grew less stormy. "Oh, hello, Arthur. . . . Yes, I'd love to. . . . What? . . . To-morrow?" Sudden dismay was in her voice. "I thought you were going to stay over till next week. I'm so sorry. But. . . . Oh, of course—business is business, isn't it? Shall I drive over and meet you, or will you stop for me? . . . All right. Good-by."

"The Blakes are going down to-morrow," she told her mother stonily. "Arthur's been called back to town."

She didn't tell Arthur what had happened, although she'd meant to. She couldn't. He'd have been furious and red-blooded about the lineman's insolence, of course, and he'd have wanted to knock him down; but he'd have told her too, in his tactful, lawyer-like fashion, about the telephone company's rights. And she couldn't have stood that. Not that day.

She had other things to worry about. Some day Arthur was going to ask her to marry him. And, when he did, what was she going to say? She didn't know. He'd ask her to-day, if she wanted him to. She knew that he'd made up his mind, his nice, excellent, deliberate mind. But how about her mind—that was as stable as a bit of quicksilver? She wasn't sure; she did not know what she wanted.

He didn't, as a matter of record, ask her. She wouldn't let him.

She was sorry, within the week, that she hadn't, as she had known all the time, really, that she would be.

She was sorry, as she stood, buffeted by the first of the autumn gales, her slicker wrapped about her by the wind, the rain blinding her. The wind was stripping the trees; every gust brought a shower of leaves. Some storms, she thought, inspired one. But not this one, with its dank melancholy.

Arthur Blake's wife would have a steam-heated apartment in New York. She would have cars that would climb any hill in high. She would have any book she wanted, the very day it was published. She would go to first nights, and concerts, and have seats at the opera.

THE last of the summer homes was closed. Storm doors and windows were in place. Dahlia bulbs had been dug up and put away in sand; mulch was where it should be in the garden. Anne's life had fallen again into its winter rut.

She read the paper every day—except when it didn't come, as sometimes happened, until the next day. Sometimes she had a letter—from Arthur, usually; though, from time to time, one came from some girl she had known in college. And those were pretty hard to read, because most of them urged her to come to New York and begin to live.

Twice a week she took charge of the library in the village. Occasionally, when a teacher was ill, she served as substitute. On Sundays she went to church with her mother.

Sleep *like a baby at* Night

Now from Switzerland—a new food-drink that brings quick, Restful Sleep . . . and All-day Energy. Let us send you a 3-day test

Yes, you can sleep like a baby at *night*. You can sink into deep, luxurious sleep almost as soon as your head touches the pillow. You can sleep soundly and peacefully the whole night through.

Modern science has found a natural way (a way without drugs) to give you sound, restful sleep that quickly restores your tired mind and body.

Morning finds you a new man. Fresh, clear-eyed, buoyant. You have the energy to carry you right through the day and into the evening. *That is the experience of most Ovaltine users.* A 3-day test will show you. We urge you to make this test. It is well worth while.

Why Ovaltine brings restoring sleep

FIRST—It digests very quickly. Even in cases of impaired digestion.

SECOND—It supplies your system with certain health-building essentials which are often missing from your daily fare. One cup of Ovaltine has actually more food value than 12 cups of beef extract.

THIRD—Ovaltine has the unusual power of digesting 4 to 5 times its own weight of other foods you eat. Hence digestion goes on speedily and efficiently. As a result frayed nerves are soothed because digestive unrest, the main cause of sleeplessness, is overcome.

This is why, when taken at night, a cup of Ovaltine brings sound restoring sleep in a *natural* way. And as you sleep the quick assimilation of nourishment is also restoring to the entire body. Thus you gather new strength and energy for the next day.

Hospitals and doctors recommend it

Ovaltine is a delightful pure food drink. In use in Switzerland for thirty years. Now in universal use in England and her colonies. During the great war it was included as a standard ration for invalid soldiers.

A few years ago Ovaltine was introduced into this country. Today hundreds of hospitals use it. More than 20,000 doctors recommend it. Not only for sleeplessness, but because of its special dietetic properties they also recommend it for malnutrition, nerve-strain, convalescence, backward children and the aged.

A 3-day test

Just make a 3-day test of Ovaltine. Note the difference, not only in your sleep, but in your next day's energy.

All druggists sell Ovaltine in 4 sizes for home use. Or they can mix it for you at the soda fountain. But to let you try it we will send a 3-day introductory package for 10 cents to cover cost of packing and mailing. Just send the coupon with 10 cents.

OVALTINE

© 1927 T. W. Co.

Builds Body, Brain and Nerves

"My nerves were very bad and prevented me from getting proper sleep. After using Ovaltine I was able to sleep well after many months of restlessness during the night."
William Johnson, Brooklyn, N.Y.

"Since taking Ovaltine I am sleeping fine and my nerves are much better. In a week's time I had very pleasing results."
William Welland, Rochester, N.Y.

THE WANDER COMPANY, DEPT. 44

Many styles of year around dwellings, summer cottages and garages to choose from. **Write nearest mill today for FREE Money-Saving Catalog No. 121.**

The ALADDIN Co., BAY CITY, MICHIGAN
Wilmington, North Carolina; Portland, Ore.; Toronto, Ont.

What else was there for her to do? Nothing, literally nothing! Not here. In New York—but she didn't want to think about New York and the opportunities it held. If only her mother had been willing to go with her! She might have been a reader for a magazine, and Agnes Lane had arranged once for the advertising agency she was with to give her a chance. But she hadn't been able to go and leave her mother—of course! Yet, if she married—but that would be different. You couldn't help getting married. It was something that happened to a girl.

There was one thing about this particular winter—the roads stayed open most of the time, so that Anne could get out in the car. And that saved her reason, she sometimes thought. Anne loved to drive; loved it, even in her old car, that, really, was wearing out, day by day. She never could be quite sure, indeed, when she set out, that she would get back. But she was pretty lucky.

One day, however, her luck deserted her. She was stranded on a lonely road, miles from anywhere, with a car that simply wouldn't move. And it was just her luck, she felt, that the first thing to come along should be the telephone truck, with Jimmy at the wheel. She'd seen him often enough, since that day he'd come to cut the branches, but she'd never acknowledged his existence. And now!

"Hello!" he said. "In trouble?"

The truck stopped and he was out and coming toward her as he spoke.

"I'm afraid I am," she said.

"It's your gas line," he said, after examining the car. "It's clogged—or broken. Let's see."

HE WENT to work with pliers and wrench, disconnecting the slender pipe that carried the fuel; gave a little tug, and whistled as it came away in his hand.

"Clean break!" he said. "That's bad! Lucky this truck's a sort of traveling machine shop. I guess I can fix it."

He did too, and Anne, who was a pretty good mechanic herself, admired his skill.

"I'm awfully grateful to you," she said, when her engine was running again.

"That's all right," he said. "Glad I happened along. Stay up here all winter, do you? I had an idea you were summer people."

She flushed bright scarlet, and hated herself.

"Yes," she said, stiffly. "We live here."

"It's great country," he said. "I'll be sorry to move on."

This simply wouldn't do! He had no business to be more self-possessed than she. After all, he was the one who had behaved outrageously, not she.

"Oh!" she said. "Then you're not going to stay?"

"Oh, I never meant to!" he said. "I'm being put through the whole organization, you see. I'll get conduits and underground wiring, city stuff, next, I guess. And some work on special office building lay-outs probably. There's a sort of training school for executive jobs, and if you're in that you do everything before you're really placed in a job of your own."

"What will that be?"

"Oh, I'll get a district, probably; might be anywhere, wherever there happens to be a vacancy."

"When you're graduated, you mean? I had no idea—it really is a school, isn't it? But the work's harder than in a regular school, I should think."

She had herself well in hand now. She could keep this up indefinitely.

"Harder?" he echoed, with a laugh. "Why, when I was at Yale—"

He stopped, as if he hadn't meant to say that. And she didn't mean to exclaim as she did, either, but her surprise betrayed her.

"Oh!" she said. "I knew I'd seen your face somewhere! It was your picture. You're the Crewe who ran ninety yards against Harvard?"

"I had a bit of luck that day," he said. "Race your engine a second—there—she's all right. I've got to get along; there's trouble, back the way you came. Good day, Miss Warren."

"Good-by!" she said, faintly, and drove on.

WINTER: December—January—February. And just the old rut for Anne to travel in. Letters from Arthur. The paper. Nice letters, Arthur's—like himself. Just chronicles of what he'd done and was going to do. Not love letters—not from Arthur! He'd never write a love letter unless they were engaged. But—he was going to have a little time, over Washington's Birthday, and he wondered if Anne and her mother would have room for him if he came up. She knew what that meant. If she let him come— Well, he'd say what he wanted to say, and this time she wouldn't be able to stop him.

It was Anne, as it chanced, who brought up the mail of the second of February, which old-fashioned folk still think of as Candlemas Day. There was another letter from Arthur, though Anne hadn't answered his last one yet; but she had it, unopened, in her sweater pocket, and read the paper as she walked up the hill. There was a story about the ground hog, of course, and speculation as to whether or not he'd be able to see his shadow.

Well, Anne thought, he could, all right! It was warm; only in places that the sun didn't reach were there still traces of the last snowstorm. Six weeks more of winter! She shuddered. Anne didn't think she could live through them.

"Six more weeks of winter!" said Mrs. Warren, looking at the sun, and the shadows that it cast. She sniffed the air. "It's going to snow."

"Mother! As if that old story meant anything!"

But it did snow. It grew colder after lunch, and the haze there had been all morning thickened; the sun became a dimly seen yellow ball; and by mid-afternoon it was snowing. Thick, wet flakes came down; they covered the ground swiftly; the whole world was white by dusk, when, for a little time it grew warmer and the snow turned to rain. But after supper, when Anne went out to call Bob, it was sleet that stung her cheeks, and the air was full of the ominous crackling of an ice storm.

Bob wouldn't come, and Anne couldn't see him, though she had a flashlight. For some reason, known perhaps to other long-haired dogs, Bob adored such weather, and it was always hard to get him in during such a storm. Anne called and called;

PORTABLE ROYAL TYPEWRITER

MOST modern of lightweight typewriters. Weighs only nine and a half pounds—has all the conveniences of the large standard typewriter.

Equipped with a handsome carrying case of fabrikoid, mounted on a baseboard that gives it firm support, the Royal Portable is at home and on the job anywhere—it solves the personal writing problem for every man of affairs, every traveler, every housewife, every student—*everybody wants one.*

The Royal Portable has an equipment of special features that make it unique. It was created by veteran craftsmen who have made the Royal Standard Typewriter in demand and preferred the world over—*it is built to last a lifetime.*

Phone the Royal Representative and have him show you a Royal Portable today—or write for interesting booklets.

Special Features

Perfect visibility of writing.
Standard four-bank keyboard.
Unusual speed and responsiveness.
Extra wide paper capacity and writing line.
Automatic ribbon reverse.
Two-color ribbon.
Accurate back spacer.
Margin stops—margin release.
Dust protection over all working points.

she could hear him, but she never saw him. She could see, though, by the way twigs and branches shone as her light fell upon them, that in the morning the sun would reveal a world turned into a fairyland. The beauty of an ice storm was almost the only compensation winter brought her here.

"Oh, let him stay out!" she said. "He'll come scratching at the door pretty soon."

BUT it wasn't his scratching paw at the kitchen door that Anne and her mother heard, half an hour later; it was, instead, a furious barking. Puzzled, Anne put on coat and goloshes, and went out. She saw the lights of a car at the top of the hill and, just as she started across, a great spotlight swung across the corner of the woods. She wasn't a bit surprised, therefore, to recognize Jimmy Crewe, standing by his truck, getting out of a mackinaw.

"For heaven's sake!" she said. "What are you doing out on a night like this?"

"Wires are down," he said shortly. "Must be about twenty lines dead—the cable goes through over there. There's not a 'phone working between here and the village. Got to get them going; there are some people sick along here."

He turned the truck and began working at his ladders.

"But—how do you know it's just here?"

"Look!" he said. And as she followed the beam of light, she saw the way the ice-coated wires were sagging. "I knew it, anyway," he said. "But you can see."

"I—I'm sorry," said Anne. "I really am."

"Are you? Well—you ought to be."

She stood perfectly still. And she wasn't angry at all. That wasn't why she bit her lip.

"I—I think you needn't have said that."

"You're quite right." He turned toward her for a moment. "I'm sorry. It was a mean thing to say. Forgive me!"

"Of—of course," she said. It was the queerest thing that had ever happened to Anne. She wasn't angry; she was just hurt and troubled.

He had his ladders free now, ice-coated though they were.

"But you can't climb ladders to-night, in this storm," she said. "It's dangerous."

"Got to," he said. "I'll be all right. Don't you worry about me. Go back inside; you'll catch cold."

He didn't know that she followed him and was standing below, watching him as he placed his ladder and went up. She had never seen, she thought, a man with such powers of concentration; such an ability to shut out from his mind everything except the imperative business of the moment.

She was in an agony of nervous apprehension as he climbed and got to work. His ladder was placed against her maple, the best loved of all her trees, because, perhaps, it had been maimed. He wasted no time; she watched him, fascinated, as he spliced the wires and cut away the branches that had broken them. Hours, it seemed to her, were passing, but they were only minutes of course. Then he was done; he let his tools fall—hatchet, pliers, all that he had used. And then, stiffly, he began to descend.

Just what happened Anne couldn't see. But the ladder must have slipped. There was a sickening crash; the next moment he was lying in a heap, almost at her feet. She screamed; then in an instant she was on her knees beside him. A dark stain appeared on the frozen snow; she touched his side and her hand came away wet and warm. Blood! He must have cut an artery. She struggled against an overwhelming faintness. Then she stood up and began to scream.

But it was not in panic that she screamed now, but to bring her mother. And in a moment she saw a light coming.

"Mother!" she cried. "Hurry—he's hurt—he's bleeding to death!"

Mrs. Warren bent low. In a moment she was at work.

"Take off your scarf!" she ordered. "Find me a stick, we've got to make a tourniquet. Here. We can't wait to get him to the house. Then—run and get the brandy. But the stick first!"

Anne lived through those next few minutes as through a nightmare. There was one ghastly moment when she saw blood spurting out in great dark jets from his thigh; then her mother's sure hands were busy, and Anne was helping, lifting, pulling, tugging at the stick, while her mother made pressure at the wound; and there was an end, at last, of that terrible spurting of blood. She fetched the brandy, and her mother forced it between his clenched teeth. But it was Anne who thought of her old sleigh, used now to carry logs to the house.

Somehow they got him laid upon it and dragged it to the house. And there Mrs. Warren still worked, while Anne telephoned, frantically—thank God the line was open!—for Doctor Grant, and had the luck to catch him not half a mile away. And just about then she fainted.

It had been touch and go for Crewe. Doctor Grant told him so, and also what Anne and her mother had done. So he had things to say to Anne when he was able to talk to her again.

"You saved my life," he said. "If you hadn't been there—"

"Oh, *don't!*" said Anne, choking. "Do you think I'm ever going to forgive myself, as it is? And if—if—oh, I can't bear to think about it, even—"

"Good lord! I'm all right! Won't even be stiff, Grant says. I'm pretty lucky, seems to me. Looked after like a baby."

"Mother—" Anne began.

"You, too," Crewe said, comfortably. He reached for her hand, and she let him have it. That had become a sort of custom, somehow. There'd been times when letting him hold her hand had been the only way to keep him quiet. Now—well, now she just let him, anyway.

HE MIGHT have been moved, after the first ten days, but Mrs. Warren wouldn't hear of it. He was her patient; he'd go when he was well, and not a day sooner. And Anne didn't want him to go, either.

For Anne knew. Knew, at last, why she'd been so slow and so stupid about Arthur. Poor Arthur! She couldn't even visualize him any more; he'd just faded out of her very memories. She'd had to write to him not to come, of course; she hoped she'd have done that, anyway, even if she hadn't come to know. Know—what? There wasn't anything to know,

What Are YOUR Mistakes in English?

They may offend others as much as these offend you

IF some one you met for the first time made the mistakes in English shown above, what would you think of him? Would he inspire your respect? Would you be inclined to make a friend of him? Would you care to introduce him to others as a close friend of yours?

These errors are easy for you to see. Perhaps, however, you make other mistakes which offend other people as much as these would offend you. How do you know that you do not mispronounce certain words; are you always sure that the things you say and write are grammatically correct? To *you* they may seem correct, but others may know they are wrong.

Unfortunately, people will not correct you when you make mistakes; all they do is to make a mental reservation about you. "He is ignorant and uncultured," they think. So you really have no way of telling when your English offends others.

FREE Book on English

Sherwin Cody, perhaps the best known teacher of practical English, has perfected and patented a remarkable device which will quickly find and correct mistakes you unconsciously make. Correct English soon becomes a HABIT.

If you are efficient in English, it will give you greater confidence; if you are deficient, you surely want to know it, so that you can correct your mistakes.

Mr. Cody's remarkable new invention, the 100% Self-Correcting Method, has already improved the English of more than 41,000 people. No useless rules, no tedious copying, no hard study. Only 15 minutes a day required. You learn by creating the HABIT of using correct English. Nothing like Mr. Cody's method has ever been used before!

A new book, "How to Speak and Write Masterly English," is ready. It explains Mr. Cody's surprisingly easy method. Get a copy free and learn how to stop making embarrassing errors. You do not want others to judge you unfairly. Merely mail the coupon or a postal card.

really, and there was everything. Jimmy hadn't said a word. But he cared; she knew he cared. She couldn't be wrong about that. And he'd tell her when it was time. That—having him tell her, in words—didn't seem to matter.

They talked a lot, of course. Mostly it was she who talked, while he listened, partly because he was still pretty weak, and partly because that was the way it was bound to be with them. He didn't seem to need to use so many words as she, to get things clear. She knew all about him, anyway: his life, his plans, his ambitions. She heard about something he called Communications; it seemed to be, for him, the biggest thing in the world, and she began to see why, and why, too, he'd been so angry that day when she had stood between him and his line.

"Communications!" he said. "In ten years there'll be a Ministry of Communications in every country that hasn't one already—tying everything up—radio, telephones, telegraphs, railways, roads. Communications! Why, they mean progress, civilization."

SHE loved to hear him. And she understood him, too. But, after all, what counted most was the picture she got of him, setting his goal for himself when he was just a little boy, and sticking to it, in spite of everything, making every sort of sacrifice. And she said, once, rather wistfully, that men of course could do that.

"Girls too!" he insisted. "Oh, sex hasn't got much to do with it, Anne! Some men are soft, too—and all women aren't. And not being soft doesn't make them unfeminine. You'd have done anything you really wanted to do."

He knew all about her ambitions, and her plans, and her frustrations. He even knew about Arthur, and how nearly she'd married him.

"But, Mother—" said Anne, defensively.

"Yes, but she's just what I mean!" he said. "She's not soft, the way you've always been. She sees things the way they are. Do you suppose it was easy for her to break away—before she was your age, even!—and make a trained nurse of herself? Girls didn't do things like that then, the way they do now. But she did. And if you'd ever really wanted to do any of the things you talked so much about doing, she wouldn't just have let you, she'd have made you!"

She didn't argue with him. He was wrong; but what was the use of telling him so?

"You'd have married," he said. "You'd have married Blake like a shot if you'd cared just a little more for him. And—"

She was flushed when he said that.

"That would have been altogether different!" she said.

"Of course it would!" And he was angry again, very much as he had been that first day. "Think about that!" he said, viciously. "See where that gets you!"

"Jimmy!" she said, recoiling a little, in her amazement.

"I'm sorry," he said, and laughed at his own vehemence. "But think about it, just the same."

She did think about it, and she saw perfectly well what he meant. But it is, after all, one thing to see something, and quite another to admit it. And she wasn't quite sure he was right, anyway. She was, indeed, sure of only one thing, about that time.

And it was that, the one thing she was sure about, that turned into action a vague impulse she had had for a long time. Spring had really come by then. Jimmy was just waiting for Doctor Grant to pronounce him officially cured and send him back to work. The grass was growing greener every day; the first crocuses were out; the maples in the woods were glowing in the flush of their budding.

That was, for Anne, the final touch—the sight of the young maple that had come so near to killing Jimmy, red with buds. She stood and looked up at it; then she went to the woodshed and got the light ax, and began, doggedly, to chop her maple down.

Perhaps he saw her; perhaps it was the sound of the ax that guided him. At any rate, he went to her from the house, taking great strides across the grass, and the first thing Anne knew, his arms were about her, and he was forcing the ax from her grip, and his lips were on hers.

She was panting as he held her, as he asked her, "Why? Why?"

"Because I hate it!" she said. "I can't bear to see it—to remember how—"

"Oh, Anne!" he said. "I love you so! Don't you know I can't ever be thankful enough to that tree and the ice—and—oh, everything?"

He laughed, ruefully, mocking himself, a little later.

"I was going to wait!" he said. "I was going to be so—oh, so darned noble! Anne darling, you understand, don't you? You know it'll be a year, longer maybe, before we can be married?"

"I know," she said. "Of course I know!"

"Yes—but it's so—oh, it's so unfair—when you hate it so here—making you wait."

"I won't be here," she said. "Don't you suppose I thought over what you said the other day? It got me, all right! I saw that I couldn't go on waiting for something to happen to me—marriage or anything else. I saw that if I was ever to amount to anything I had to do something about it. So, I got a job—at least I'm pretty sure I've got it. I've written to a girl who's always been after me to come to New York. And—and—oh, Jimmy, I don't think I'm much good now; but maybe, when you're ready—"

JIMMY was her patient still, after all, which was why, perhaps, Mrs. Warren went out after a while to find him. And she didn't seem to be either shocked or surprised when she did.

"She's going to marry me!" Jimmy cried, when he saw her.

"I told you she would," said Mrs. Warren.

"But not for—oh, ages yet, Mother!" said Anne, as she went to her and kissed her. "And, Mother, I'm going to New York; I've got to, Mother. I'm going to have a job, till he's ready."

"I told you she'd do that, too," said Mrs. Warren to Jimmy, over Anne's shoulder. "She's going to be your wife—but she's always been my daughter."

"Marse Robert"

THE personal recollections of General Robert E. Lee by his personal slave and body servant—the man who was Lee's shadow before, during and after the Civil War. Read his stirring account of the surrender at Appomattox. "I saw Marse Robert draw his sword, kind of slow, click his heels together and hand it to Grant . . ." This intensely human article will give you a new picture of the leader of the Confederate Army. Starts in March 12 issue.

CASTE

By COSMO HAMILTON

WHEN Jean, petted child of society, decided to paddle her own canoe, she remarked that "Parents were a bore..." From that point on she began a voyage of discovery that led her into a romantic tangle that shattered social barriers of years' standing. *"Caste"* begins in the issue of March 12—the novel that will be most talked of this winter.

[*Other Features*]

"Babe Ruth's Comeback" His gym teacher lets you in on how the *"Sultan of Swat"* came back and how you can too.

"The Ghost Catchers"—a revealing article on the methods used by scientists to expose fake spirit mediums—intriguing and almost unbelievable.

E. Phillips Oppenheim continues his thrilling, amusing and mysterious adventures of the English nobleman who turned detective. ELSIE SINGMASTER, DANA BURNETT, GEORGE WESTON, WILL PAYNE and a host of others will supply a treasury of short stories to make your winter evenings shorter.

The Collier's Famous Short Features "The Gentleman at the Keyhole", with his low-downs on the high-ups in Washington political life; *"Uncle Henry"* with his views on modern life and manners, JACK BINNS' slants on Radio and TOM MASSON'S darts of humor—and in addition many important articles on topics of the day.

A mark of Culture

CULTURED people are kind, thoughtful, deliberate. They think of the future.

They plan carefully, act logically, refusing to be moved by emotion or tradition.

They wish to show respect for the deceased, not merely gaudy tribute. They wish to know in the long years to come that their sorrow will not be exaggerated by regret, that their loneliness may not carry the burden of remorse.

In a word, they wish *protection* for the remains—positive, permanent protection—for the loved one.

Such protection is available in the Clark Grave Vault.

In more than a quarter of a century no Clark Grave Vault has ever been known to fail. It protects because it is built according to an immutable law of Nature.

And it is permanent because it has been so carefully planned to resist the elements. Being made of metal it is not porous. It is constructed throughout of Keystone copper steel, or Armco Iron, 12 gauge, with a plating of pure cadmium on the higher priced vaults (applied by the Udylite Process, exclusive to this vault). Science knows no greater resistance to rust than is found in this vault.

Leading funeral directors gladly recommend the Clark Grave Vault, and give with each one a 50 year guaranty.

Less than Clark complete protection is no protection at all!

THE CLARK GRAVE VAULT COMPANY
Columbus, Ohio

Western Office and Warehouse,
Kansas City, Mo.

CLARK

GRAVE VAULT

This trade-mark is on every genuine Clark Grave Vault. It is a means of identifying the vault instantly. Unless you see this mark, the vault is not a Clark.

Why I Live in a Suburb

(*Continued from page 51*)

small-town youths and maidens think, that all the worth-while people lived in big cities. Then, too, I had a rather vague idea that I would be better off if I lived where I could see an editor every few minutes.

Most of my early writing was done for the humorous weeklies and had to be topical, and, as one of the New York editors explained to me, Iowa was too remote to permit an editor to use an author who was several days distant.

And that is why great cities grow constantly greater; we all feel we can do better if we are on the spot where our sort of business is being done. The gentleman who could live in a wilderness if he made the best mouse trap might indeed make his mouse traps in the wilderness, but the path to his door would be made by the feet of his agents going from his factory to the places where the most mouse traps were sold. He would have a New York agency in the Mouse-trap Building, located in the house-furnishings district.

This is all very fine too; but the result is that some six million people are trying to live in what is, after all, only a big shop. It is not unlike the life of the little immigrant shoemaker who mends shoes in the front part of a store while his family lives in the rear. Superb apartment buildings are erected on Manhattan Island, and so are palatial hotels; but those who live in them are still living "in the shop."

On the other hand, there are some millions of us who like to be near the shop, but who would rather look out of the window and see a maple tree than a tall, skinned pole upholding ten or twelve clothes-lines. We are the suburbanites. We are the people who have discovered an ideal mode of life; we are close to the undisputed advantages of a great city, and yet we are living as sane families live in pleasant towns and villages.

MOST of us living in the suburbs are commuters. It should be remembered that we could live in the city itself if we wished; usually, we could live in the city more cheaply than in a suburb; we are none of us the weaklings who have been crowded out of the cities—as jovial fiction likes to pretend—but almost to a man we are those who like something better than being cramped up in city flats; we have won the right to light and air and space, and we go into the suburbs and get them.

"But I don't see how in the world you stand the commuting," says the city fellow.

Oh well, commuting isn't so bad. It's not exactly convenient; but wherever you live there is likely to be some drawback. We suburbanites think the advantages of living outside the centers of population outweigh the disadvantage of riding on a train twice a day. I know one man who lived in the country and worked in New York. He did everything but swim and fly to reach his office each day. First, he took a four-mile motor drive to the railway station; then a thirty-mile ride on a fast train; next, a ferry ride across the river, and, following that, a walk to the subway. Leaving the subway, he had another walk to his office, and then up in an elevator to the thirteenth floor. That man did more work in getting to work than many men do after they get there.

"But I prefer living where I do to living in the city," he said. "The commuting is rotten; but it doesn't last all day and all night, like living in a city does."

Another thing: The commuter experiences the joy of returning home once each day—returning home after a trip. His wife and his children kiss him when he comes in. They are a lot gladder to see him than they would be if he had merely been on a job near where he lives. Did you ever see the warm welcomes at a commuting station? That's something, isn't it, to take the sharp edge off the inconvenience of a railway ride?

There are more than just a few of us who feel this way about it. The records show that nearly 370,000 commuters come into New York City daily. Most of these leave several members of the family at home. So, you see, the total number of persons who live in the suburbs is big enough to command respect. When you find a million or more substantial citizens doing something, you can be sure there's a good reason for it.

MANY of us in the suburbs have children. It seems to me that one of the most convincing proofs that the suburb is the ideal home is the fact that when the first child arrives at the door-knob-reaching age Pa and Ma begin looking for a house in the suburbs. For spinsters and bachelors and childless couples, the city apartments may be well enough, but folks with children need out-of-town living. It is a child's right to be able to open the door and be in a grassy yard; opening a door, and being in an apartment hallway, is not the same thing.

I happen to have work that now would let me live almost anywhere. I could live in a shack in the Sahara Desert, and if there was a camel post once a month or so I could do business with my editors and publishers quite as well. I would have just as many manuscripts accepted, and I would not have any greater number sent back for repairs. Yet, with all this freedom of selection, I have lived in a suburb for twenty-one years; I have lived in the same house in the same suburb for eighteen years—just seventeen years longer than Adam and Eve lived in the Garden of Eden.

I don't know that this proves so much as it may seem to prove. When a man has lived in any one place for twenty-one years at a stretch, he acquires a certain inertia or dislike for moving that may have something to do with his remaining there still longer. He has gathered a lot of furniture and books and things that are hard to move around and he becomes a reluctant mover. Even when a man's children have grown up and no longer need green play spaces, the suburbanite is loath to depart; by that time he has his close friends, and he does not like to leave them.

I have found your Lucky Strike Cigarettes very agreeable. They do not hurt my throat in the least and are very soothing to my voice.

J. Caillaux

When Caillaux Speaks, the World Listens

His clear voice is inspiring, his throat ever in perfect condition

As one of the outstanding public men in France, Joseph Caillaux depends upon the power of oratory in advocating his ideas and in swaying his colleagues. To safeguard his voice is his constant aim. His favorite among cigarettes is Lucky Strikes, both for finer flavor and throat protection.

Lucky Strikes have become the favorites of men whose priceless voices thrill their audiences, as they have with the millions because, first, they afford *greater enjoyment*, and, second, they are certain not to irritate even the most sensitive throat.

The world's finest Turkish and domestic tobaccos, properly aged, perfectly blended, give them their richer flavor.

But in addition, a costly extra process—toasting for 45 minutes—develops the hidden flavors of the choicest tobaccos and at the same time removes all "bite" and harshness.

Smoke Lucky Strikes. They give added pleasure —you'll like them.

"It's toasted"

Your Throat Protection

The face is soothed, refreshed, feels velvet smooth

Quickly heal the

INVISIBLE NICKS

EVERY shave leaves the face nicked in countless unseen places. For the skin, instead of being smooth as it looks, is made up of tiny ridges and irregularities. A razor sharp enough to cut your beard is bound to nick it slightly.

For safety and comfort these nicks must be quickly healed.

A tingling dash of Pinaud's Lilac on cheeks and chin. . . . A rush of healing circulation. . . . And the face is soothed, refreshed. Feels velvet smooth!

Regular use of Pinaud's Lilac makes the face hardy, protects against chapping and prevents skin eruptions. You'll like the faint lilac odor from which it gets its name.

Get a bottle *today* at any drug or department store. Or send coupon for a free trial size bottle. Look for signature of Ed. Pinaud on each bottle. Pinaud Incorporated, 90 Fifth Avenue, New York—sole distributors for Parfumerie Ed. Pinaud, Paris.

It is equally true that men and women make close friendships in the city; everyone knows that. The thing the city dweller is likely to doubt is that such friendships are possible in the suburbs. The city dweller too often thinks of the suburb as a place where no one has time to meet anyone else; the thought seems to be that the suburbanite hops out of bed in the morning at the ringing of an alarm clock, bolts a hasty breakfast, rushes for the train, rushes home again at night, eats a dinner, yawns, and goes to bed! He does this, it is supposed, so the children may have an outdoors to play in.

Well, all the golf courses are in the suburbs. The suburban men and women in these United States who meet regularly on the golf courses week after week must run into millions. The card parties taking place in the suburbs per annum must run into the billions. I don't know how many meetings concerning hospitals, civic matters, charities and so on are held in the suburbs annually, but, judging by the number I attend, they must run into the trillions. At each meeting, friendships are being made or strengthened. The suburbanite is not likely to be idle. In every suburb there are many interesting local activities that the city dweller knows nothing of, and, in addition, all the activities in the city itself are open to the suburbanite.

THE only good thing I can see in a great city is that it does become a center for the arts, sciences, culture, and allied gentilities that help make life worth living. Theatres, museums, clubs, societies are at their best in big cities, because large population guarantees patronage sufficient to make them possible. Music is at its best; lectures are more numerous and diverse; art exhibitions are frequent; the shops carry goods that smaller places cannot buy sufficiently to make stock profitable. The city has the best schools for teaching a number of things. Its hotels and restaurants are better. Because of the vast population, the city can supply these things; but often the real patrons are the out-of-towners.

Many of us who might, if we chose, live in an Arizona desert, live in the suburbs of a great city, because we can thus enjoy the best the city can give without suffering the worst it can do to us. We are members of the city clubs that appeal to us; we go to the city theatres; we visit the museums; we attend the lectures.

More than this, we are often the officers of the clubs and the actors in the theatres; we are most of the producers and dramatists; some of us go to the city to deliver the lectures that others of us go in to hear. When we do not own the great shops we are the heads of departments. As a matter of fact, I verily believe—there is no easy way of knowing, but I judge from the men I know—that the suburbanites furnish fully half, and perhaps more, of the important heads and subheads in business, large and small, in the city. And each year more of these vitally important men and women are moving to one suburb or another. New York—I mention it because it is the city I know best—is not only a shop but also a vast university-lyceum-museum-amusement-place, and it is as convenient to us who live in the suburbs as to those who live in the city itself.

When I went to New York I went to a boarding-house, and I lived there about a year, and no one could have wanted a better boarding-house. That gave me city boarding-house experience. Presently I married, and my wife and I almost immediately left the boarding-house; a boarding-house life is no sort of life for any healthy married couple. We took an apartment. For several years then—perhaps five or six—we had apartment-life experience. We moved every year, nearly everyone in New York moves every year. In part, this constant moving is caused by the gradual improvement in circumstances of the individual, but even more it is caused by an innate feeling that life is not being lived in the best way. The apartment dweller senses that something is wrong but he does not know just what it is, so he moves to another apartment. Then he moves again. And again.

In our case, our eldest baby reached the age when she should be playing outdoors alone, and that suggested quite vividly what was wrong; apartment life is at best a makeshift substitute for real life. So we moved to a suburb. At that time, I was part owning, and editing, a publication, and I had to be in the city each work day, and a nearby suburb was the only life possible for us.

It was more or less chance that brought us to Flushing. One day, some business connected with the magazine took me to New Rochelle, which is a large-town suburb of New York and a charming one. In coming from the house of the man I had just seen, I passed the high school. It was shortly after noon, and the boys and girls were going to school. They were in groups of twos and threes, chattering, laughing, flirting a little as high school students do. There were leafy boughs of trees overhead, shrubbery on the green lawns, sunshine everywhere. It was early fall—September—and the girls were hatless, in light dresses. It was as unlike children going to school between brick walls on city streets as anything could well be. It was a beautiful picture—and it made me homesick. It was a picture of young people living as they had a right to live. So, a few days later, we rented a house in New Rochelle.

Unfortunately, it was a new house, not yet completed, and in a day or two we learned that it would not be completed for occupancy by October first. So a friend, to whom I mentioned this disappointment at my club, told me I was on the wrong track entirely; I should go to Flushing, where he lived. It was *the* only place to live, according to him. Suburbanites, I learned later, are like that, they become fanatically fond of their own suburbs. My wife and I went to Flushing the next day to look around.

SINCE that September day, twenty-one years ago, Flushing has changed considerably and it is going to change even more in the next few years. It was a village suburb then. It had, as it has now, beautiful trees. We thought, as we were driven to look at houses behind the horse of a real-estate agent, that it was the most beautiful place we had ever seen, and I think it was. It looked like a home town; it was neither a suburb of million-dollar residences nor a made-to-order suburb of five thousand houses exactly alike, with

A life of ease and luxury is not the life for healthy gums!

Under this modern regime of soft food, our gums grow weak and lose their tone. They need exercise, they need stimulation, they need IPANA TOOTH PASTE

JUST glance at the menu! From soup to soufflé modern food is soft, creamy, over-refined—entirely lacking in the roughage and fibre that once kept gums and teeth as they were meant to be—firm, healthy and sound.

"Stagnation is death—circulation, life and health."
—well-known maxim.

* * *

YOU could hardly find a better case in point for the maxim above than the difficulties so many people are having with their gums today.

For gums are seldom in perfect health. Pyorrhea, thank goodness, is quite often more of a fear than a reality—but there can be no doubt whatever that troubles of the gums are both prevalent and stubborn.

Our diet undermines the health of our gums

Lack of stimulation from the food we eat—lack of "exercise," the dentists will tell you—is the source of many of these modern gum disorders. Think for a moment how we refine, how we "denature" our food, before we eat it.

We peel our fruits, and stew them till they almost fall apart. We husk our grains, and mill all the roughage out of them. We cook our vegetables to a soft consistency and cover them with creamy sauces. We delight in tender, flaky desserts, pies and pastries. So, made up to a great extent of delectable dainties, our diet is too soft, too easy on our teeth and gums. It denies them work—with the attendant stimulation and massage that a coarser fare would give.

That is why gums soften, weaken and lose their tone. The blood within their walls does not circulate freely, new fresh blood does not refresh the depleted tissues as it should. "Pink tooth brush," the earliest sign of impairment of the health of gums, is a complaint of neglect and often a warning of troubles to come.

How Ipana and massage defeat "Pink tooth brush"

Common sense alone would dictate that the way to correct such troubles is to supply to the tissues the stimulation of which they are abnormally deprived. And your dentist, if you ask him, will confirm this reasoning.

Your dentist will explain the simple technique of this gentle frictionizing of the gums, done with the brush or with the fingers. He will tell you that the daily practice of gum stimulation is a splendid health habit to form. And very likely he will suggest that you perform both the gum massage and the regular brushing of your teeth with Ipana Tooth Paste.

For the ziratol content of Ipana gives it a peculiar efficacy in the toning and stimulation of undernourished gums. Known and used for years by dentists, ziratol is a hemostatic and antiseptic of high value, and its presence in Ipana is one great reason for the strong professional backing that originally gave Ipana its start.

Switch to Ipana for at least one month

The coupon, of course, will bring you the ten-day tube, and that is enough to acquaint you with Ipana's delicious taste and its power to keep your teeth clean, white and brilliant.

But the better plan is to buy a full-size tube at the next drug store you pass. That is enough for more than one hundred and fifty brushings—a much fairer test of all Ipana can do to keep your teeth and gums in the sound and sturdy health nature intended.

BRUSH your teeth and gums with Ipana twice a day—you can give your dentist no better aid in keeping them sound and healthy.

IPANA Tooth Paste

— made by the makers of Sal Hepatica

BRISTOL-MYERS CO.
Dept. J 37, 73 West Street,
New York, N. Y.

Kindly send me a trial tube of IPANA TOOTH PASTE. Enclosed is a two-cent stamp to cover partly the cost of packing and mailing.

brand-new trees stuck in rows. There were new houses, but there were also very old houses—some built as long ago as 1662.

Luck was with us. We found a small house that we thought was so pretty that we could not believe anyone would be foolish enough to rent it to us, and certainly not at the sum asked. We thought it was the prettiest house in the world. It was in what might be called a suburb of a suburb, a section of Flushing called Browne Park, only a short distance from a railway station.

I hardly dare mention the landlord. When we rented the house, painters were at work on the exterior; we meekly suggested that there ought to be some papering done inside, and the landlord immediately had every room repapered. We never had to ask for anything else; every now and then, he would come and inquire what we needed done, and when we could think of nothing, he would have something done anyway. Workmen were constantly appearing to make this or that improvement so that the house would be pleasanter for us. He was a wonderful landlord—but he is dead now.

WE HAD no sooner moved into the house than we had our first example of real suburbanism. It was a rainy night, and I was laying rugs when the bell rang. I went to the door and found two men standing there in the shelter of the porch. One of them had a lantern.

"We noticed you had moved in," one of them said, "and we are glad to welcome you to Browne Park. This is not a formal call—our wives will call later, when you get settled—but we wanted you to come across the street. We are having a meeting to organize an association, the Browne Park Improvement Association, to try to get sewers and street improvements and so on. Come over with us."

"I thank you," I said; "but, you see, I don't own this house. I'm only renting it."

"That doesn't matter at all," one of the men said. "Come over anyway; we'll be mighty glad to have you."

So I asked my wife what she thought about it and she said I might as well go. So I got my hat and an umbrella and went across with the two men. After I had been introduced to everyone, the meeting was called to order and got down to business. It was, as most prearranged meetings are, rather cut and dried. Someone had a resolution which he read, creating the Browne Park Improvement Association, and that was adopted. Someone had a Constitution and set of By-Laws, and they were adopted. Then the officers were elected. I think I was elected to office at that meeting, but it may have been later. At any rate, I knew all my neighbors immediately. I know most of those men still, and they are my very good friends. A few have moved away, one or two have died; but the majority still live in Flushing and they are fine fellows.

Before long, my wife and I knew most of the wives and children, and we began to be invited to play euchre, which was the auction bridge of that era; but as I was trying to be an author and editor at the same time, and was doing my writing at night, I had to say I did not play cards. Otherwise, I never would have had a free night. Within a day or two, our little daughter had playmates of her own age, and presently we had a dog, and the next spring we had a vegetable garden and a few flowers.

THAT first winter I learned quite a little about sewer systems and streets, and why some streets could be "dedicated" to the city, while others had to go through the lengthy process of being "condemned." We had maps of Flushing and of the Borough, and we had letters to and from the officials, and we had discussions, and it was all very interesting, and then, in February, we received a circular letter from the president of the Flushing Hospital Aid Association. This announced that there was to be a grand circus and carnival for the benefit of the Flushing Hospital in June, and asked the Browne Park Improvement Association to appoint a committee and take part in the affair. We were only a handful of men, but we gravely decided that the hospital was a worthy institution and appointed a committee to find out what it was all about and report back to us. I was one of the committeemen.

Our committee thereupon walked down to the main part of Flushing and attended the meetings of the Hospital Aid Association, and after due consideration our association decided that we might take charge of one of the booths in the carnival part of the affair, when June came. We chose the Information Booth, probably because it looked like the ultimate minimum of labor.

The Flushing Carnival and Circus of those days was quite an affair. It was given every two years, and lasted four or five days and nights, and everything was on such an enormous scale that preparations began in midwinter. The profits ran to many thousands of dollars, and there was a vast amount of work and fun. The backbone of the affair was a complete three-ring circus in the largest tent to be had in America, regular Barnum and Bailey size. The three rings were filled with acts; some of these were amateur or semi-amateur but many were professional. We had such a thing as a herd of real elephants, twelve performing stallions, a troupe of trained donkeys, aërial artists and equestrians. We had also half a hundred amateur clowns trained by professionals.

In addition to the circus, which gave four evening and three afternoon performances, there was a Wild West show occupying some four city blocks. There was a genuine Wild West coach. To dress up this part of the show there was a chariot race, and also a squadron of genuine cavalry in games and evolutions and sports.

Then, for a distance of some thousand feet or so, sometimes more, we had a Carnival Street with booths on either side, and tents for lesser shows—movies, black art, minstrels, vaudeville. The show thing was huge. Into this our Browne Park committee came and took one booth, the smallest in the show. Our duty was to have someone in the booth to give information—to tell where this tent or that person could be found, and to receive lost articles. We made hundreds of acquaintances in the dull hours of the afternoon, and had a tremendously good time.

So, two years later, when the next circus and carnival was being organized, our little association sent a committee to the organization meeting again, and once more I happened to be on that committee. I remember we were a little late getting there. Most of the officers had been elected and chairmen for the various booths and committees were being selected. Almost as soon as I entered someone arose.

"I nominate Butler," he said, and the nomination was seconded, and everyone seemed pleased.

"What's this I'm being nominated for?" I asked.

"Chairman of the Entertainment Committee," someone said.

"All right," I said, and I sat down.

I never knew a heartier vote than I received for the job of Chairman of the Entertainment Committee. The unanimity was almost touching, it was so complete. I was proud, too, to be elected. . . . I felt it was a fine recognition of my growing fame as a young author. I felt that I was becoming known as a genial man, and one able to greet strangers in a gracious and genteel manner. So I made a speech of about twenty words, saying I would do my best, and accepted.

Almost immediately the meeting ended, and everyone crowded around me and told me I must not worry, that they would help me out. It was then I discovered that the committee that handed out cigars to notable visitors was the Reception Committee; the Entertainment Committee's job was merely that of supplying *all* the entertainment features of the affair.

Now, I claim I might have lived in an apartment in New York all my life and no one would ever have thought of giving me that job. That is what a suburb does for a man. Of course, if he wants to keep to himself, he can do so; but if he liked to find good friends and mix in affairs that are important to the suburb, he can do it. Napoleon never felt finer while he was pulling the French Revolution out of the mud and making France an Empire than we suburbanites did while we saved that hospital and built a big addition to it, and put through one thing after another to make our suburb better.

THESE same men, always adding to their number and always on the lookout for more men, have enjoyed life in the past twenty-one years in the fullest possible way. If I am now, as nearly everyone knows, a vice president of a bank, that is because these same suburbanites took the bank when it was not feeling very well, and made a success of it. I might have remained on Manhattan forever without being more than the frightened individual at whose check the bank teller looks with a suspicious eye.

Sitting here at my desk I looked out of the window a moment ago, and saw a squirrel hurrying along a telephone cable wire from one tree to another. The cable makes a fine bridge for him. The trees make him a proper home. He has the true suburban spirit, that squirrel has; he lives where the beauty of the country and the convenience of the city meet.

The Concrete Street *is Safe*

Over 2,000 miles of concrete streets were laid last year in American cities. We have prepared a booklet telling about the experiences of these communities with concrete pavements. If you would like a copy write Portland Cement Association, Chicago.

RAIN, of course, increases the hazard of motor travel. But as a motorist you will remember that concrete is the safest highway wet or dry. Then why not insure the same feeling of security in crowded city traffic?

Concrete streets are safest. They are the engineer's answer to the challenge of rubber tires. Rigid and enduring under heaviest loads, concrete is also the most lasting of street surfaces. Economical to build and requiring little maintenance, the concrete street gives uninterrupted service.

When you pave, pave with concrete. Its attractive appearance and other exclusive advantages make it appropriate for business streets, boulevards, parkways, and residential districts alike.

CONCRETE
for permanence

There's Not Much Use to Grind Unless You Advertise Your Grist

(*Continued from page 27*)

in a fever heat to get one job done, so that he could move on to the next thing."

It was this quality that caught the eye of the vice president of the N. K. Fairbanks Company, whose advertisement for a clerical helper Adams had answered. This executive passed Adams along to the advertising agent of the firm, a brilliant young man named John Lee Mahin, who had already built a large and nation-wide advertising business of his own.

Mahin took a real interest in his new assistant, whom he started off at a salary of six dollars a week. Probably the greatest service he did Adams lay in his generous willingness to let the young man move from one department to another. In consequence, Adams soon knew most phases of the particular forms of advertising done in his company, and at the end of two years he became a department head.

His next move was to the publishing house of John G. Woolley. Here he got a new slant on the business of catching and winning people's attention—an occupation that in a different form was to occupy the major portion of his life. Thence, he shifted to a firm of investment bankers.

FINALLY, Adams landed with Swift and Company. There he made his first big killing, not financially, but in the creation of an idea that went around the world. It happened this way: With his alert manner and highly energized mind, young Adams soon impressed Arthur D. White, the advertising manager of the immense packing plant. One morning the latter sent for Adams. "Son," he said, "we've got one hundred thousand dollars to spend in Chicago to advertise our chickens. We want to cop the market for this fowl. Now, trot out and bring me back a hundred-thousand-dollar idea."

Adams grinned his famous grin, and "trotted out." He hunted up the head of the chicken department. It was characteristic that he had already made friends with the man. "Why should people prefer our chickens to those of any other packer?" he asked.

The department head thought hard. "Don't know, George. They're all about alike. Maybe you could use the fact that our birds sometimes have milk with their grain."

Instantly the right idea flashed into the quick brain of the listening young man. He rushed back to his desk. In one wild hour he turned out a rough draft of a whole campaign—one hundred thousand dollars' worth of advertising.

Thus was born the famous "Swift's Milk-Fed Chicken" idea.

But fate wasn't ready to let her man go ahead quite yet. Adams's good friend, Mahin, turned up and announced that he had scared up a wonderful job with a breakfast food company, then in a state of high prosperity. "More money, and big prospects, George," Mahin urged him. "Take it."

Adams did. He was now six years out of college. He had married and had two babies. It was high time that he settled down to something definite and something promising. With a light heart he entered into his new duties.

Then, as I have related, the crash came. The company, like many others, failed. Adams went with it. But in his abyss of despair he found himself. Had it not been for the panic of 1907, the George Matthew Adams Syndicate might never have been founded.

"FIRST, let me explain just what my new business was like," Adams said to me. "I had formed a newspaper syndicate. This does not mean that I controlled a string of papers. It simply means that I supplied a good many papers with interesting and entertaining bits of reading material, or pictures, distinct from the ordinary telegraphic copy which made up the news.

"As a sample of what I mean, take the death of a great man. The first account of his death is news which is distributed over the wires to all the papers in the country. But when someone writes that man's biography, no single paper can afford to pay the biographer enough to make the job worth while. Moreover, many people cannot afford to buy the book itself.

"This is where the newspaper syndicate comes in. For the syndicate can act as a central distributing agency, sending out portions of the biography by mail to a large number of papers at small price, until the entire story has appeared simultaneously in the national press. In this way, the syndicate makes it possible for readers to enjoy art and literature through the medium of the daily paper, at a cost of but a few cents.

"Some people think that building a business is just a long, hard grind, and nothing else," Mr. Adams said in reply to my question about the next ten years of his life. "Well, I can tell you that you've got to do something more than grind; you've got to gain the attention of other people—especially the people who make up your market.

"As I have already said, I had early developed my system of teaching people how to write want-ads, and had sold it to scattered papers. I had one or two other small features, such as a series of short talks to women by a woman writer. But I had no standing in my line of business.

"I went home late one night after a hard day of nearly sixteen hours in my office. I knew I was making progress; but at the rate my office was growing, I figured I'd be about seventy before I did anything really big. It was long after midnight when I began despondently looking over some of my college mementos, and wondering whether the struggle was worth while, after all.

"Suddenly I recalled a Kansan I had met in Ottawa who had made a great impression on me. His name, I remembered, was White—William Allen White. Then an inspiration flashed over me. This was 1908. Why not get White to cover, from a human interest point of view, the coming national conventions in Chicago and in Denver? I knew there was a mass of human stuff to be had. Tired as I was, I was too excited to sleep. I stayed up another hour and drafted a wire to Mr. White.

"Next day came the answer accepting my suggestion; but stipulating a charge of twenty-five cents a word, or sixteen hundred dollars for each convention. This was a staggering sum for such a job at that time. However, though I hadn't a dollar I could call my own, Mr. White's reply thrilled me immeasurably, and I promptly wired, closing the bargain. But to be on the safe side, Mr. White sent a friend up to see me.

"Before the friend could arrive, however, I hurried over and sold the series to Mr. Frank B. Noyes, publisher of the Chicago 'Record Herald,' now president of the Associated Press. The idea looked so good to him that he signed up for two hundred and fifty dollars. With this order in my pocket, I raced back across town to a broker whom I knew and persuaded him to lend me the money necessary to send White West. So, by the time White's scout found me, I was all set with the money. The whole thing finally went through in grand style."

MENTION of William Allen White, who still edits the Emporia "Gazette," naturally turned the conversation to another dramatic episode in the life of George Matthew Adams.

"Wasn't Walt Mason from Emporia?" I asked.

"Yes; I was going to tell you about that. Chauncey Williams was Mr. White's first publisher. In a way, he was responsible for my discovering Walt Mason. I had been clipping some little squibs from 'Life' for months. I happened to show a few of these to Chauncey Williams.

"'Sure, I've seen them,' he said. 'Uncle Walt writes them. Ask White to send you a bundle of 'Gazettes,' and look over his stuff.'

"I asked Mr. White to do this. A week later, a batch of 'Gazettes' reached me. I began to read Mason's little paragraphs and verses, which were then unsigned. The first thing I knew, I was dancing up and down in glee. I realized that I had found a genius!

"On the way back from the Denver Convention, I made a dicker with William Allen White for the services of his talented writer.

"'We call him Uncle Walt,' said Mr. White. 'He is past forty years of age. I think he would be glad to turn out a poem a day for you.'

"That was close to twenty years ago. Walt Mason's prose poems are now famous all over the United States and a good part of the world. Out on his California estate,

As the hurricane-proof house would look in wood siding.

Build to Withstand Hurricane Winds

The Miami house is stuccoed to conform to the style there.

TWO rules only need you observe to make your home proof against the sustained fury of a hurricane. Frame your house of Southern Pine—the supreme structural wood of the world. Follow the long recognized Fifteen Points of good construction. Then let winds blow!

These Fifteen Points are incorporated in a house now being erected by the Southern Pine Association in Miami, Florida, with the co-operation of the Miami Lumbermen's Credit Bureau, the Associated General Contractors and The Architectural League of Greater Miami.

Several of the all important Fifteen Points are shown in this engineer's drawing of one corner of the frame of the Miami house. Notice (1) how the sill is anchored, bolted, to the foundation. The sub-floors (2) run diagonally and at right angles to each other. There is corner bracing (3) and the braces are cut into the studs. The rafters (4) are anchored to the main frame. Consult your architect. He will endorse this common sense construction which characterizes structures that have stood the storms of many decades.

* These letters at the right of "SPA" identify the grade. The designation here is one of 18 grade-marks appearing on lumber from Southern Pine Association mills.

Any home, whether in storm swept areas or not, deserves good construction of this character. You can finish your home as you wish—wood siding, stucco or brick veneer—but do not slight its frame. In one laboratory alone—the Forest Products Laboratory under government direction at Madison, Wisconsin—130,000 tests prove the structural strength of Southern Pine.

At any lumber yard east of the Rocky Mountains you can buy Southern Pine and you can buy today with greater confidence than ever before. *You can tell it by its trade-mark. You can judge it by its grade-mark—the grades being in accord with American Lumber Standards.

The Fifteen Points of Hurricane-proof Construction are in book form. The book is free. Write for it today. If you plan, build or intend to own a home, get this booklet—Fifteen Points—now.

As the hurricane-proof house would look in brick veneer.

Arrangements have been made to furnish plans and specifications of the hurricane-proof house for the nominal sum of Ten Dollars.

where he now rides around in his limousine, Uncle Walt devotes most of his time to writing."

The same sort of thing happened when Adams decided on another stunt to boost the reputation of his syndicate. Let one of his newspaper friends tell the story:

"Folks say that Adams is a genius at picking winners. But why talk abstractions like 'genius.' To me, he's a good example of a man who uses his brain—something most of us don't use enough."

When plans for the Jeffries-Johnson fight at Reno, Nevada, were announced, Adams figured out that the event would be one of the most dramatic athletic struggles ever staged: an old warrior heeding the call of racial pride to uphold the white's physical supremacy over the black.

"Like all newspaper men, Adams knew the immense value of spot news on the fight. But he reasoned that the average journalist was not proficient enough to get the full dramatic essence of the story. So he looked around, not for a reporter, but for a super-reporter, a man who knew how to put terrific emotion into plain language. He picked a young novelist named Rex Beach, and put him on the job. A few weeks later, people read the succinct news dispatches to find out who had won. But they devoured Rex Beach's superb and thrilling narrative splashed out in full-page big-type form to find out *how* and *why* Jack Johnson had done the winning."

Once more George Matthew Adams had rung the bell.

BUT prominence has its penalties. By 1910, Adams had over one hundred and fifty newspapers depending on him for feature material. It got noised about that he could sell the work of any writer. In fact, certain journalists declared that it wasn't Adams's features that succeeded, but the hypnotic influence of Adams himself over unsuspecting editors.

As a result of this theory, writers began bombarding him with manuscripts. The little two-desk firm was swamped. One thing Adams prided himself on was his fairness to beginners; but he found it increasingly hard to give his personal consideration to the hundreds of manuscripts that came in almost daily.

Most embarrassing were the moments when he had sold an editor a feature service, only to have the editor lower his voice after the deal and say confidentially, "Now, Adams, I want you to do something for me. A friend of mine writes the most beautiful poems you ever read. People here in town are mad about her work."

Whereupon, a sheaf of manuscript would be thrust upon the unhappy young syndicate man, and promises exacted that he would go through every bit of it, and write exactly what he thought about the work.

"On one trip," said Adams, "I remember meeting my old friend, Arthur Vandenberg, of the Grand Rapids 'Herald.' He was a good customer of mine too.

"'Just read this stuff over, George,' he pleaded. 'This guy is a regular poet; only no one realizes it yet.'

"How many times I had heard those words before! However, in this case it happened that I had been casually following the poet's work for some time. Occasional glimpses of it had whetted my appetite. But somehow or other, I had never got enough of his verses together at one time really to study them.

"I stuffed the samples Vandenberg gave me into my bag, which was already bulging with manuscripts from novelists, artists, and poets.

"On the train I got to work. I began to read the poems Vandenberg had given me. I liked them. Suddenly I laughed aloud in the train. The fellow had a sense of humor. Then, just as suddenly, I found my eyes filled with tears. This was interesting. I read more. For an hour I was thrilled, touched, entertained, inspired. Once more, as when I read Uncle Walt's stuff, I knew I had found a genius.

"At Louisville, I hopped off the train and rushed to the telegraph office. I asked the poet for an appointment. As quickly as I could, I hurried back to New York. I reached there just in time. Three other syndicates had 'discovered' my genius. But I approached him on the basis of really understanding his work. I won out. I closed a long-time contract at an opening salary of thirty dollars a week for a daily poem.

"That's how I happened to get Eddie Guest, 'the People's Poet,' as he is called now. Since that time over 1,000,000 copies of his books of poems have been sold. Close to 250 American papers run his poems every day. On a recent birthday, over 10,000 letters and telegrams of congratulations reached him from people he had never seen. And he is still the same simple, lovable Eddie Guest that he was in the beginning."

George Matthew Adams has helped start in their careers many of the greatest feature producers in the country. Among this number are: Dr. Frank Crane, Gene Byrnes, Thornton Burgess, Elsie Robinson, Lee Pape, Robert Ripley, H. T. Webster, Kin Hubbard, Edgar Guest, Ed Wheelan, and Walt Mason.

His idea in starting the Frank Crane daily talks was that every newspaper should have a distinct inspirational note somewhere on its pages. When Doctor Crane went over to another organization, Adams began writing little daily essays himself. Now the George Matthew Adams "To-day's Talk" is familiar all over the country.

ADAMS has had more than twenty years' experience in finding out what people want to read in their newspapers. He has learned what will most quickly "crack a laugh," or cause a "heart-throb."

"One of the greatest things that I have found out," he told me, "is this: there is far less of what is called *class distinction* among general readers than is ordinarily supposed. I mean that true humor makes practically everyone laugh. Conversely, true pathos, put across with proper simplicity, rarely fails to arouse real sympathy, even among the would-be hard-boiled. Take that little poem of Eddie Guest's about Mothers that begins:

Never a sigh for the cares that she bore for me,
Never a thought of the joys that flew by;
Her one regret that she couldn't do more for me,
Thoughtless and selfish, her Master was I.

Oh, the long nights that she came at my call to me!
Oh, the soft touch of her hands on my brow!
Oh, the long years that she gave up her all to me!
Oh, how I yearn for her gentleness now!"

This went into book form as well as into the papers. The response was instantaneous.

Among other features, the Adams Service supplies newspapers with daily articles teaching health, beauty, cooking, sewing, and so forth. And in addition to the daily lesson, or lecture on some allied topic, readers are offered a mail response to queries sent in to the author of the feature.

"THIS constitutes one of our most difficult problems," said Adams. "Take our health service, now appearing daily all over the country. I suppose nothing we send out is followed so closely as this series of articles on how to stay well. Self-preservation is one of the strongest human instincts. Keeping well is better than having a doctor make you well. Therefore, I feel a great good is done by propaganda urging health. The trouble is to strike a safe medium between urging a proper régime of self-care, and exciting people to the point of damaging themselves by over-zeal.

"I remember one earnest woman reader who must have weighed over three hundred pounds. She was tremendously struck by the logic of our reducing course, which goes to newspapers as a part of our health service. She worked so hard over her diet and exercises in her efforts to reduce that she took off something like one hundred pounds. As a result, she made herself ill, and her friends blamed the newspaper articles she had been reading.

"The same sort of difficulty, only in another form, goes hand in hand with presentation of news in graphic form; that is to say, in cartoons. Not long ago, prohibition hearings were held in Washington. In an effort to depict the close division in people's views, one of my artists drew a cartoon in which public opinion was balancing on a tight rope. apparently about to fall in one direction or the other.

"We got some red-hot responses on that cartoon. People with wet leanings felt sure we had put out dry propaganda; and some of the Drys accused us of being in league with bootleggers. Of course our cartoon service must be absolutely non-partisan, to survive. But it is a hard job not to tread on someone's toes once in a while."

To bring my main point into focus, I asked Mr. Adams what sort of printed matter he thought would win the widest and most enthusiastic number of followers over a long period. His reply surprised me by its promptness:

"Leaving out straight news, which I do not handle, I think pictures come first, inspirational matter second, humor third. You will note that more and more are the active newspapers beginning to use pictures in connection with their news and their features. Good humor will always have a strong grip on readers. But it is the tonic effect of brief, forceful editorials that in the long run catches and holds the average American hurrying through his favorite daily newspaper."

The Business of Investment

MEN succeed in business by following simple rules—rules which have proven themselves through the ages—rules which are as valid today as they were a thousand years ago.

Men succeed in the business of investing money by following almost equally simple rules—of investing steadily and systematically in safe securities bearing safe rates of interest, and reinvesting that interest promptly, keeping the money at work every day in the year.

We, who have been in the business of providing safe investments for 45 years, would like to discuss the matter with you. Call at our nearest office and consult one of our officers, or merely drop us a letter or postcard and ask for

THE FAMILY'S PROBLEMS

It's Not "Can We Afford It?" But, "Will We Get Our Money's Worth?"

FORTUNATELY—as I *now* see it—I was brought up in a home where every dollar had to be spread over about one hundred and ten cents' worth of territory. My folks would not go in debt, and there wasn't much money; so we just didn't spend much.

As luck would have it, my jobs were never cinches, so I early learned that considerable sweat goes into the minting of every cart wheel. To-day, when dimes and dollars come a little easier, I find it difficult to forget the experiences of my boyhood and young manhood.

Now, being tied to a budget is my idea of slavery. I know, for I have tried it. And I can tell you that in all my life I never did anything more irksome than setting down each night the money I had spent that day. Not that the figuring made me ashamed of my expenditures; the chore itself simply took all the joy out of life for me. This is why I worked out another scheme.

In our family there are seven persons, four of them being children. By experiment, my wife has learned that she can feed this mob, pay her laundry bill, and buy supplies that come from the dairyman for about twenty-one dollars a week. So, every Saturday night, I hand her twenty-one dollars. I have found that an average of fourteen dollars a week will buy my lunches, gasolene for the flivver, shoe-shines, and an occasional movie ticket. Therefore, I count out fourteen dollars to go into my own pocket. The rest of my weekly pay goes into the bank.

If my wife runs short on her share of the family's funds, we eat old-fashioned porridge for breakfast for a few mornings. If I run short, we find the porch cooler than the car for a few evenings.

WHEN a proposed expenditure comes up, we seldom ask ourselves, "Can we afford it?" Instead, we ask, "Is it worth it?" I do not smoke, or go to every ball game within flivver distance, for the simple reason that I do not derive the maximum of pleasure for my money out of these pursuits. And my wife does not select her hats by the size of the price tag, because she does not get any kick out of knowing that an article worth five dollars cost her twenty-five.

In short, when we pay out a dollar, we insist upon getting a return of one hundred cents in some form. That rule practically eliminates the spending of money foolishly, and it enables us to save quite a bit without being tied to any budget.

Here is the rest of our system:

For the past ten years, on each New Year's Day, I have made a careful balance sheet of our assets. I make it a rule never to have any liabilities. I divide our possessions into two lists: Productive, such as bonds and other interest-earning securities; and non-productive, such as the house, car, and the like. I then carefully figure out what we have gained during the year. Next, I balance the result against our income from all sources. Thus, I find out whether or not a gentle application of the brakes is desirable. If such is the case, I tot up the checks, and see how much went for clothing, how much for this and that, and presently I strike the leak, and we govern our expenditures for the coming year accordingly.

Finally, I figure out what my estate would liquidate in cash in case of my death, take seven per cent of that, and compare it with what we spent during the past year. If there isn't pretty close harmony between the two sets of figures, I take out more life insurance. W. E. M.

Our Youngsters Help Us Handle the Family Purse

I'VE always felt that ignorance about money matters has been the cause of more endless quarrels, misunderstandings, and general unhappiness in families than any other one thing. In an effort to save our children future trouble, we evolved a plan that has worked most successfully in our family.

As each of our three youngsters reached the age of sixteen, we turned over the family money to him, or her; and for one year that child had to keep the budget, pay all bills, and make all adjustments where there were overcharges, or errors in the accounts. At the beginning of each month, I would go over the books and the check stubs with whoever was in charge, to see that everything was going right. If all was satisfactory, the child received three dollars for the month's work. If there were any errors, neglected bills, or other unsatisfactory matters pertaining to the family money, he forfeited twenty-five cents per error or "neglect."

Every cent that was spent by the family had to be O. K.'d by the boy or girl in charge. If we wanted to go to the theatre, we consulted him, and he looked up how much we had spent for pleasure during that month, and decided whether we could afford a show and, if so, what price seats we could have, and so forth.

AFTER the children had graduated from this year of training, they knew exactly what our running expenses were, per capita, and where the money went, and how much clothing and incidentals cost. So, following their training in handling the family purse, each was given a check every six months for clothing and individual needs, barbers, car fare, and so forth. This allowance was spent as they chose; but if they overstepped in one line they had to skimp in another. Of course, doctors' bills or unavoidable incidentals were carried by the family.

Now our children are all married, and they are making successful men and women, unhampered by ignorance of money matters. J. S.

The oil must flow *instantly!*

Cold, thickened oil, slow to reach the bearings, can never save the first cutting, gripping wear of unlubricated metal on metal. Many a worn bearing and scored cylinder wall may be traced to a start on a winter's day—the costly effects of the first few minutes of cold idling. The right oil—zero flowing oil—is vital to your engine in winter.

No matter how cold the engine may be—Texaco Motor Oil never hesitates.

Texaco circulates instantly to every bearing. It splashes freely to every cylinder wall. The moment the engine turns — from that moment Texaco is vitally active in the protection of every moving surface.

The clear, golden color is proof enough. Texaco carries no paraffin wax, tars or other residues that congeal at low temperatures.

Such an oil adds miles to the life of your engine—miles of smoothness, quiet and power. Insist upon it. Look for the nearest Texaco sign.

THESE CHOCOLATES INTERPRET ABOVE ALL THINGS

THE CORRECT THING IN CANDY

The famous Reception Lounge of the Ritz-Carlton Hotel, where, it is said, during any twenty-four hours, every really smart person in New York may be seen.

YET you can obtain them, to meet the most unexpected of demands, almost instantly, at a store no more than a square or two away, no matter where you may be!

The new Choice Box typifies—probably better than any other—the socially accepted candy gift throughout fashionable America today. Twenty-two different kinds in one box to prove Variety IS the Spice of Life.

ALL things have their *modes.* In candy giving, it is Johnston's . . . among the leaders of things social in smartest gathering places of smartest America.

Thus in choosing this noted make of candy, one is sure of doing that which is admittedly the *correct thing,* either for one's own home or for a gift of thoughtful graciousness—

Conveniently available at the better stores throughout America, you can obtain Johnston's Chocolates at a moment's notice—any time—anywhere. The *new* Choice Box—containing twenty-two different kinds—is suggested as an ever welcome gift.

You will find a wide variety of Johnston's Chocolates at one of the better class stores in your neighbourhood.

The cheerful blue and tan pattern on the kitchen floor is the "BRITTANY" — *Rug No. 306*

Make yours a livable kitchen

~*there's color and sunshine in a Congoleum Rug!*

A kitchen that is more than a "workshop." Alive and happy with color! What woman wouldn't be proud of this Congoleum kitchen?

And how the working hours fly in such pleasant surroundings. So easy, too, to clean up: Porcelain sink, enameled top table, and—the Congoleum Rug. The smooth, sanitary surface of this modern floor-covering is made spotless with a quick, easy mopping.

In addition to trim tiles for the kitchen and pantry there are deep-toned Oriental designs for living and dining rooms and a host of distinctive, floral effects for bedrooms —all expressing the newest trends in artistic rug design.

Gold Seal Rugs lie flat without any fastening. Sizes range from small mats to 9 x 15 foot rugs.

They are the one outstanding value among smooth surfaced floor-coverings. Inferior rugs, similar in appearance, can be purchased at lower prices but such rugs cannot provide the quality, the beauty and the years of guaranteed service which have made *Gold Seal* Rugs famous.

"SAN TOY" *Rug No. 587*

"NORMANDY" *Rug No. 300*

FOR your own protection insist that this Gold Seal appear on the face of the rugs you buy. No floor-covering is genuine Congoleum unless it bears this Gold Seal.

"It gives a new and delightful definition to the bass, so desirable for dancing."
—PAUL WHITEMAN.

Invite Paul Whiteman to play for your party

THINK of having America's greatest dance-organizations at your beck and call! Orchestras that would cost a small fortune to engage for a single evening! Through the new Orthophonic Victrola and the amazing new Orthophonic Victor Records, you can bring these self-same orchestras right into your home. Exactly as you would hear them at the smart supper-clubs and hotels!

Listen to that crooning saxophone carrying the melody . . . the plinkety-plank of the banjos underneath beating a rhythmic accompaniment. Now the clarinet with its toe-teasing cadences. Now the guttural "bong" of the bass sax or the mellow 'oomp" of the big brass tuba. Who can resist dance music like this?

The Orthophonic Victrola furnishes the finest music for the home. Model Four-three (above) is $95, list price.

The music you want, whenever you want it

Not only dance music but *all* kinds of music are yours whenever you wish through the Orthophonic Victrola . . . reproduced with a clearness and fidelity to the original that is simply unbelievable. Voice has all the inflections, the mannerisms, the personality of the singer.

The new Orthophonic Victor Records are an achievement comparable to that of the Orthophonic Victrola itself. They have a new fulness, a new depth and power.

Until you hear the new Orthophonic Victrola play the new Orthophonic Victor Records, you cannot have the remotest conception of the thrill this amazing combination will bring you, day after day, year after year. See the nearest Victor dealer today. There are many beautiful models of the Orthophonic Victrola, from $95 to $300, list price. Silent electric motor ($35 extra) does away with winding. You play . . . and dance!

PRESTIGE

A long and honorable record of real achievement is one of the Mimeograph's proudest possessions. In unnumbered thousands of industrial and educational institutions throughout the world it is an indispensable "servant in the house," performing substantial improvements and economies. Its ability to turn out hourly several thousand exact duplicates of letters, or forms, or blanks, or diagrams, or outline drawings, or kindred matter, in record time and at small cost, has given it its outstanding prestige. The work is done privately. No annoying delays in making ready. No type to set. No expensive skill necessary. For more than thirty years the Mimeograph has led its field. What that leadership today may mean to you is set forth in our new booklet which will be sent by A. B. Dick Company, Chicago, for the asking.

MARK TWAIN

wanted to be your friend

Let Mark Twain be your companion as he wanted to be. The coupon below, without expense or obligation, will bring his entertaining, lovable personality to brighten your leisure hours.

Here are the books he planned for you

Everybody has read *some* of Mark Twain. The whole world has chuckled with him over the antics of Tom Sawyer, and Huck Finn, and Pudd'n-head Wilson. But do you realize that these are only a tiny *sample* of the delightful world he opens up to you? How much of Mark Twain do you really know—have you read all the witty short stories, the brilliant fighting essays, the side-splitting comments on men and events, the great novels, the attacks on fraud?

Why not let Mark Twain be your friend as he wished to be? To his publishers he said, "Let's make an inexpensive edition of my books so that everybody can have them." This wish is now fulfilled by the publication of the splendid

Author's National Edition
MARK TWAIN
in 25 Volumes

Among the multitude of shoddily bound and carelessly edited sets of books now flooding the market, this superb edition of Mark Twain comes as a blessed relief. The gift book tells all about it. Simply mail the coupon. There's not the slightest obligation. Don't deny yourself the friendship of Mark Twain any longer.

When you clip and mail the coupon at the bottom of this page, two things will happen:

1 You will receive, *free*, a desirable booklet called "Your Friend, Mark Twain." This booklet describes Mark Twain's matchless writings, and contains a little collection of his wittiest sayings. It is a gift to you.

2 At the same time there will come into your life something much bigger and more valuable than this—something you cannot see but will cherish for the rest of your days—*the priceless friendship of Mark Twain.*

MAIL THIS COUPON NOW

P. F. COLLIER & SON COMPANY
250 Park Avenue, New York City

Send me, free, a copy of "Your Friend, Mark Twain," containing full information about the Author's National Edition, and how I may procure it by small monthly payments.

OVER THE HEAD OF THE MAN *who had hired him!*

INVITED as they are into all sorts of business offices, our representatives come across some very dramatic incidents. For example:

One of them called recently on the purchasing agent of a large export house. Said he: "Your president has asked me to meet the department heads and tell them about the work of the Institute. He is an old subscriber to our Modern Business Course, enrolled about ten years ago, and he feels that our service has been of real help to him."

The purchasing agent looked out of the window a minute before replying. Then he said: "I remember the day the President enrolled with you. He was one of my assistants. I am the man who hired him."

* * * * * * *

Promoted over the head of the man who had hired him! There is an element of triumph in that story, and an element of tragedy. To one man it meant the attainment of his goal; to the other, failure.

But why did it happen? Because one man was a subscriber to the Institute Course while the other wasn't.

Certainly not. We don't take credit for the success of our graduates any more than Yale, or Dartmouth, or the University of Pennsylvania take credit for the success of theirs. A man can become prosperous (thousands do) without the Course. But this is a fact—*no man can attain large success without what is in the Course.* He may get the thing that is in it from other sources, *but get it he must.*

What is in the Course? *Experience.* The experience of the most successful men in business—the methods, plans and constructive ideas they found to be profitable, arranged for your use by the leaders of business education.

Two types of men enroll with the Institute:

1. Younger executives, men between the ages of 21 and 35, who know that more responsibility and larger income follow increased knowledge as surely as day follows night. Such men usually read the entire Course, solve every Problem, use every Lecture.

2. Men already at the top (more than 38,000 presidents have enrolled, for example). Such men have no thought of following the Course in detail, but they realize that one single paragraph in any chapter may have just the idea that will solve an immediate problem or increase immediate profits. Such men keep the Course at their elbows and, by so doing, have in their own offices a staff of $100,000 advisors, each a leading success in his own particular field.

If you are in one of these two groups—we want to send you a tremendously interesting little book. It tells just how the Course is arranged for practical use and gives, in brief summary, the experiences of 300,000 men who would no more think of being without this modern aid than they would be without the typewriter or the telephone. You can read this little book in half an hour; you owe it to yourself to know its story.

General BODY & FISHER Motors

FISHER BODIES

Probably no other symbol has ever come to mean so much to the American buying public as the emblem, "Body by Fisher." This small metal plate, which you will find forward on the lower right exterior of every Fisher body, signifies not only more lasting and beautiful coachwork. It is also the unmistakable sign that the car which bears it is the leader of its price class in both sales and value

The Confidence - - - that inspires a million buyers

The loyalty of Buick owners to Buick is one of the finest traditions of the motor car industry.

Years of superior performance—a reliability known and spoken of wherever there are motor cars—both have stimulated this growth of faith.

The confidence of Buick owners has been won, as well, by high achievement—by the constant attainment of the new and better thing in motor car design.

Outstanding value is another strong factor in Buick popularity. The savings of great volume—the dividends declared by leadership—have been devoted unsparingly to the enrichment of Buick quality.

Reason follows reason why so many Buick owners come back to Buick, whenever they need new cars.

Intimate acquaintance shows the Buick owner no reason to change.

Let the confidence of more than a million understanding owners guide you to Buick—to greater motor car satisfaction.

To fathers who bathe 3-year-old sons

IF you haven't bathed that young heir of yours yet, you will. You may think it will be easy. All fathers do—*once!*

But that slip of a body stays in one place like a drop of water on a red-hot stove. You think you have firm hold of an arm; but by the time you've picked a heel out of your left ear, the arm's gone. You grasp one leg—the other shoots a gallon of water into your trousers pocket.

In desperation you cry, "For Pete's sake, keep quiet!" And in reply you get the most devastatingly angelic smile that ever denatured a temper, immediately followed by a swimming exhibition —"See, daddy? Look how I c'n swim! Lookee!"

Then, when only one grubby knee is left to be scrubbed, and you find that the sinker-soap has once more scuttled into some uncharted cove of the tub-bottom *and* paternal patience is pushed to the last thin boundary of endurance—a stabbing voice from below-stairs brings salt to your wounds:

"Henry! I will not have my child spoken to that way! That darling! To hear such language——"

Well, sir, the joke is on you—you should have *known* about that sinker-soap.

Now, Ivory Soap *floats*. Three-year-olds love it. They sail it like a boat. They stop giving swimming exhibitions. They sit *quiet*. They play fair. And when you want it for that last knee, Ivory is there—you can see it, pick it up. Have you ever thought what it means to your own baths that Ivory *floats*?

Marriage

By Booth Tarkington

NOT long ago an old bachelor friend of mine paused in a motor journey to spend a few days with me on the New England coast, and somewhat puzzled me by his unusual demeanor. Ordinarily, he was cheerfully talkative; but now he had nothing to say, and most of the time appeared to be lost in an inward ironic contemplation—at least, that seemed to be indicated by the mirthless chuckle he sometimes emitted during silences between us. In fact, he was so unlike himself that finally I said, "What in the world is the matter with you?"

"Matter?" He shook his head and laughed ruefully. "I suppose I do seem queer. The truth is that just before dropping in here to see you I had what you might call a considerable shock. Something upset me quite a little."

"Something you don't care to talk about?"

"No; I'd like to," he said. "I don't suppose any human experience whatever is unique, precisely, and being disillusioned about a lifelong ideal must be one of the commonest; but as it never happened to me before it's been rather disturbing. I told you I'd been motoring through the White Mountains, and I have; but what took me in that direction was a wish to go back once more to an old town in New Hampshire where I lived for a few years, long ago."

"Long ago?" I asked. "It seems to me I remember you were to go into a New Hampshire mill of your uncle's just after you were graduated from 'Prep' school."

"Yes," he said. "That was the place, and it was that long ago. My uncle's partner had a house there, and his family were very kind to me, especially his daughter, Emily. I've been to see Emily again for the first time in twenty-six years, and that's what upset me."

"Finding her a middle-aged woman, you mean?"

"Not at all," he said. "She was much more youthful looking than I expected. Her looks never had much to do with my feeling for her, not even when I was eighteen. You see, I was eighteen when I went there, and Emily was eighteen, too; but I thought she was infinitely more than just a pretty girl. Everything she said seemed to me to be of an exquisite nobleness. I saw her as a golden young saint straight out of heaven, and at the same time she seemed to me a woman of the world of great experience and illimitable wisdom. She knew from the first what was the matter with me, and while it probably flattered her to have so humbly worshipful an adorer, she never for a moment thought of marrying me.

"It lasted four years, and then, one summer night, when I'd become a little hopeful, she told me she was to be married to a second cousin of hers in September. Strangely enough I didn't feel 'crushed' at all, though it's true I knew I couldn't stay there and look on without being pretty unhappy, and I got my uncle to put me on a job out in Minnesota. But I bore it well enough, because I found a kind of happiness in thinking that, although I could never 'call her mine' I could at least call myself hers. I was that romantic, you see. This perfect thing had come into my life, and at least I could always be true to it; I could keep the blessing of it still with me if I lived up to it. I could never have the same feeling about anybody else, since of course there was only one Emily; but I could find 'life worth living,' because I knew that her ineffable perfection was in the world. I suppose you don't understand?"

"I'm not sure," I said. "I take it that you're telling me why you've never married."

"Yes. I suppose I might say that spiritually I *was* married. My 'inner life' has been spent with my ideal of Emily; I found that enough at least to prevent me from thinking of marrying anybody else, and, besides, I've always been a pretty busy man. Then, after so many years, I went back there last week, and saw Emily herself."

"What did you find?"

HE LAUGHED, and waved a languid hand to express his despair of making me comprehend what he had found. "Why, she's nothing! I mean she's nothing to *me*—except a warning. My golden saint of an Emily is only a commonplace little woman with a streak of meanness in her, and no mind at all. She doesn't know anything—except what goes on in her little town—and she doesn't think anything. She's wholly without charm; she isn't fine; she isn't anything!"

"You mentioned a 'streak of meanness'?"

"Yes," he said. "What came near sickening me, she showed a disposition to be sentimental over my return. Her husband's a good, dry, pathetic old soul; he's half an invalid, but works like a horse to keep her comfortable and their two boys in college; for he hasn't been very successful in business.

"When I was alone with her, Emily looked conscious, almost flirtatious; and she began to talk of the night when I told her good-by. She put her head on one side, and cast her eyes down. 'If I could

A Cynic's Idea of Marriage

IN THIS extremely interesting article, Booth Tarkington quotes the opinion of marriage held by a soured old bachelor friend of his:

"To be in love is to be the victim of glamour. Glamour isn't only a false glow; it's an intoxication. And there you have a typical condition out of which a youthful marriage is made: two dazed, immature and little more than childish minds, really unacquainted with each other, almost completely misunderstanding each other, and blinded by a temporary intoxication, enter into a contract of a kind to which neither the dullest nor the most crazily reckless business man would dream of binding himself. And the bride's own parents, instead of calling in an alienist, set up bowers of white roses and lilies for the two poor hypnotized ninnies to swear away their liberty in, while all their relatives and best friends stand around beaming, and expecting only the good and beautiful to come of an act of temporary insanity!"

only have seen into the future;' she said, 'I might have been happier now.' What she really meant was she might have been 'better off'—'better off,' if she'd taken me! At all events, she certainly intended me to understand that she wished she had. I didn't tell her she made me glad I'd never married her—or anybody else! You see, until I saw her again, I'd so idealized not only Emily but, on her account, the institution of marriage itself, that I couldn't marry. Now, when I've seen her as she actually is, I can never marry because seeing her has given me a *horror* of marriage."

"Why? I don't understand."

"Don't you? Suppose she'd liked me instead of her cousin, and I'd married her. I've told you how she appeared to me in our youth—a 'golden saint.' *That* Emily was all in my own head; I wouldn't have been marrying the actual person, Emily; I'd have been marrying a glamour, a false glow I put about her; for to be in love is to be the victim of glamour. Glamour isn't only a false glow; it's an intoxication.

"If Emily 'd been in love with me, she'd have been beglamoured, too; and there you have a typical condition out of which a youthful marriage is made; two dazed, immature and little more than childish minds, really unacquainted with each other, almost completely misunderstanding each other and blinded by a temporary intoxication, enter into a contract of a kind to which neither the dullest nor the most crazily reckless business man would dream of binding himself. And the bride's own parents, instead of calling in an alienist, set up bowers of white roses and lilies for the two poor hypnotized ninnies to swear away their liberty in, while all their relatives and best friends stand around beaming, and expecting only the good and the beautiful to come of an act of temporary insanity! That would have been my marriage to Emily, and as most marriages are made between people who are youthful and in love, I believe it would have been fairly typical of marriage in general. And yet you ask me why I have a horror of it!"

NOW, I thought that he had a horror of marriage not only for the reasons he had been setting forth, but for another that he didn't quite realize: middle-aged single gentlemen, out of habit, are liable to that general fear most of us have of changing our condition—a fear that worse may befall us—and they have a deeper fear for what they think of as their liberty. And so I felt that we should not expect an exact justice for the institution of marriage from the conclusions of any old bachelor. Nevertheless, when this one had gone on upon his lonely and disillusioned way, I began to mull over what he had said, and to discover some excuses for his pessimism.

Nowadays, we appear to found all our human institutions upon what we believe will be future "collective good." We build for "the improvement of the race;" we live for the greater happiness and enlightenment of posterity. Thus far, "monogamous marriage" has seemed to be the best institution for producing, nourishing, and cherishing posterity; it is the institution that has survived the other institutions for this purpose; and if we accept the theory of "survival of the fittest" our institution of marriage is proven the fittest.

Others were tried in earlier stages of our development, and were discarded, though traces of them do still exist among Oriental peoples, and among certain barbaric groups and savage tribes. Also, other institutions to take the place of marriage are sometimes proposed by theorists; but so far none has been successfully put into general practice, and the efforts to practice, like the theories, are nebulous and sporadic.

We live for the good of posterity; we perceive no better available means than the institution of marriage to produce that good, and thus it is evident that so far as these present generations are concerned, marriage is permanent.

In other words, marriage is going to be fundamental with us so long as we believe it is best for the children, no matter what it may do to the parents. And if there is some warrant for my bachelor friend's pessimism, and the benefit to the wedded is a matter of doubt, our energy might be directed more profitably to their alleviation than to assailing the institution itself on their behalf.

Man has not yet made anything perfect; indeed, he hasn't yet been able to make anything important that is perfectly harmless; he can do only his human best; and when his best is dangerous and hurtful to individuals as well as beneficial to the race, he must try to make it as little dangerous and hurtful as possible to the affected individuals.

If my disillusioned friend is anywhere near correct in thinking that marriage is typically a contract between dazed, immature, beglamoured, and intoxicated minds engaged in a complete misunderstanding—a contract such as not even the "dullest and most crazily reckless business man" would sign—then of course we already have some illumination upon a cause of danger and hurt to the contracting individuals. But just as we cannot expect, during these present generations, to alter the institution of marriage itself, so we can see little prospect of changing the circumstances under which marriages are usually contracted.

True, we are beginning to prescribe qualifications looking to the good of the race; but the question raised by my gloomy friend has nothing directly to do with eugenics; and, no matter how far that science may advance, it is probable that for some centuries to come young people will go on contracting with one another under influence of the glamour he deplores. Thus it appears that we must accept these processes, with marriage for their result, as established necessary dangers to the individual, much as in the past we have accepted the institution of war. However, it seems not unreasonable to hope that we may discover greater alleviations for marriage than we ever did for war.

EXACTLY to what degree my friend's "horror of marriage" is warranted, no one can say. We can obtain statistics upon divorce, and probably could compile, more or less accurately, figures estimating the number of suicides due to marriage; nevertheless, it is plain that these would little aid us in ascertaining the true proportion of "unhappy marriages."

And still more difficult would it be for us to set forth the true proportion of those unions spoken of enthusiastically as "perfect," the really happy marriages that are enduringly happy through the years. We know only that, no matter how crazy the contract, most husbands and wives do "get along with each other somehow," not always happily, but "well enough," with more or less harmony, more or less conflict, and a great deal of the deepest devotion; but what is surprising in an advanced civilization, they "get along" with only an antiquated tradition, or set of rules, to guide them. That is to say, in this most difficult of human relations they have to find their own way. "Child raising" has become almost an "exact science;" business partnerships are everywhere led by the safeguarding hand of the law; but the wedded must still grope for an individual salvation.

BY a coincidence, when the old bachelor had gone, my next visitor was a man who had just been divorced; and it was he who spoke of this groping. He and his wife had not even known *how* to grope for an individual salvation, he told me.

"At our wedding the clergyman mumbled over for us the old, old promises we were to make each other," he said. "We mumbled them over after him, not feeling that they mean very much nowadays. I was to endow her—with my salary, I suppose—and not to let my relatives have any influence with me compared to hers; she was to obey me, and we were to be 'true' to each other and nurse each other if we were sick. Of course it's a beautiful ceremony; but I don't think either of us got a great deal out of it, which isn't the ceremony's or the clergyman's fault, of course. We were in love with each other; we didn't think or care about anything else, and we thought life would be paradise because the ceremony permitted us to live with each other. Unfortunately, we got over being in love; we both got over it, almost as if it had been an hallucination or even a disease.

"She got over it before I did; but she didn't tell me until later, and I didn't realize that *I* was over it until she told me she was. So, there we were; the hallucination that had brought us together was gone, and we'd no education fitting us to turn it into a reality. There isn't anywhere to learn such things; that's the trouble, and that was *our* trouble. Well, looking back on it now, I've been trying to understand what made us stop loving each other, and I think it was marriage itself."

"That seems a little preposterous," I said.

"Maybe it does; but it also seems to be the truth, because I'm sure that if something had prevented our marrying, I'd still be in love with her, and I think she would be with me. We certainly were honestly and deeply in love until after we were married. Of course it didn't stop short with the honeymoon; it lasted about three years, but kept growing paler all the time."

"What made it begin to grow paler?"

"I don't know what made it begin," he said. "Probably not a downright quarrel, though it wasn't long until we began to have differences. She had one or two girl friends who bored me so terribly that I'd get a kind of vertigo if I had to be with

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

them for any length of time. When we were engaged, we used to joke about it; but after we were married and she asked one of them to visit us in our apartment, it wasn't a joke. When she told me that girl was coming I couldn't believe she'd been inconsiderate enough of me to ask her; and she said rather bitterly that she hadn't thought marriage meant that she was to slight her old friends. Yet she made me slight one of mine, a woman who needed my advice, but unfortunately was very pretty—wouldn't let me go near her!

"I don't claim that I was always generous-minded with my wife, however; she was emotional in her religion and erratic, I thought. She wanted to join one of these foolish sects that spring up around queer 'prophets,' and we argued about it at first, then wrangled, and I made fun of her and hurt her feelings. After that she went to the meetings surreptitiously, and I found it out and told her I absolutely wouldn't stand for it; she'd got to give it up. She said I'd better do a little giving up myself, and wanted to know when I was going to cut down my smoking and stop playing cards with some men whom I liked and she didn't.

"It was all as petty as that, you see; but our differences got to be almost continuous, and the climax wasn't dramatic; it was ridiculous. We were going to a dance one evening, and she appeared in a new dress that I thought much too skimpy. I asked her to change it, and she said she wouldn't. When I asked her why she wouldn't, she said that she was sure, herself, that the dress was all right, and therefore her reason for changing it would be because I unreasonably asked her to; but the only people she cared to please, when they asked unreasonable things, were people she loved.

"'YOU mean you don't love me any more?' I asked her.

"'Why should I?' she said, and she spoke as coolly and thoughtfully as if we were talking about the cat. 'No,' she said. 'I don't believe I do. I think I've been over all *that* for quite some time.'

"Well, we didn't go to the party. We sat down and talked about what had happened to us. 'We're not in love with each other,' she said. 'You really don't care for me any more than I do for you.' Then I realized that what she said was true, and that if the thing had been to do over I'd never have dreamed of marrying that woman sitting there with me.

"'So you'd like to have your freedom?' I asked her finally.

"'Yes,' she said. 'And so would you—if it could be arranged without attracting any attention.'

"I couldn't deny it. The truth is that when we came to the show-down of this interview, all that remained to either of us of our marriage was a slight prejudice against divorce! Yet I don't yet know how we could have avoided coming to that; I don't know how either of us could have done better than we did do. It wasn't our fault that we fell in love, it just inevitably happened to us—and since we were in love, it was certainly natural for us to get married. Well, being married, each of us found the other irksome; and then we discovered that the marriage itself was irksome. It's been a hard experience for us both; but can you tell me how we could have avoided it, or how we could have done any better?"

PHOTOGRAPH BY JESSIE TARBOX BEALS

Booth Tarkington in his summer home at Kennebunkport, Maine

I said I didn't suppose I could; and to obtain more light I asked him a few questions:

"You were both happy when you were engaged, were you?"

"Celestially!"

"What was your condition then? Were you in a condition of freedom?"

"We were free, except that, being engaged, we were obligated to marry each other. Of course we *wanted* to—then. Yes, I suppose we were free, since we did only what we wanted to."

"Well, having done it, what was it you both wanted a divorce for."

"For our freedom, of course."

"Are you both happier, now that you've got it?"

"Of course we are," he said. "I think we might even be able to like and respect each other again, so long as we don't remarry and lose our freedom again."

LATER, when I was able to think over the meaning of all he had said, it began to seem to me that his unfortunate experience had one possibly important significance, a significance fairly common in troubled marriages.

Before marriage he and the lady were happy. They were then in a condition defined as freedom. During marriage they were not happy. They were then not in a condition they thought of as freedom. Then they separated, in order to restore to themselves their previous condition of freedom, and, having restored it, they became happier.

Now, in seeking to know more about marriage, I was (*Continued on page 78*)

The Adventures Of An Amateur Musician

By Fitzhugh Green

ILLUSTRATED BY EDWINA DUMM

The cook came and gave notice. "I don't like them noises your husband makes," she told my wife

"OH, *do play!*"

A hush steals over the room. Conversation pauses. Eyes all about the room shift my way. The hostess rises and comes over to where I sit.

"Just a piece or two. Won't you?"

From here and there: "Yes, old fellow." . . . "We're all dying to hear you." . . . "Yes, *do!*"

A warm glow of gratification envelops me. It isn't conceit. It is pure, clean content in knowing I can thrill my fellow humans.

Presently I surrender to irresistible public demand. I rise and cross to the shaded yellow lamp beyond the table. My footstep on the heavy rug is the only sound, save excited whispers.

For a moment or two my fingers toy lightly with odd notes. A trilling run. A pause. Then, like a slender-jetted fountain, melody springs from the magic of my touch. My audience sits enthralled.

What do I play?"

Anything! Piano, harp, violin, cornet, xylophone, organ, clarionet, flute, saxophone, jew's-harp, guitar, ukulele, zither, piccolo, banjo, mouth-organ, or oboe.

But get me straight. I can't play any of those instruments. No, not a dog-goned one of them. But all my life I've wanted to. That scene of triumph I described above is only a pretty daydream I've had since boyhood.

I don't hanker after fame. I can get along with a minimum of adulation. I don't want to be a hired musician. No; it is a deeper yearning, a finer inspiration, than all of these.

Down inside of me is a soul. I guess you'd call it a soul. Anyway, it's a deep, gnawing pain. Any other pain I'd take a physic for, or get a doctor to hone up his tray of scalpels, and investigate. But this one is different. In fact, it's very different.

I think this pain is what some people call a "hunger for expression." It's a sort of toothache in my heart. Speaking figuratively, I want to take my soul out and lay it on the table and sob over it. I want others to sob with me. It isn't always a doleful feeling, either. Sometimes I am on the crest of the wave. I long to radiate my joy in gladsome song. And sometimes, when I'm angry, I burn to thunder my fury in raw bass chords, or what have you.

But since childhood I have been thwarted. I can't even carry a tune. I've honestly tried to learn on dozens of musical instruments. With one notable exception, I have dismally failed.

LIKE all boys, I started with a mouth organ. From time to time I go back to that melodious instrument. But the mouth organ is not for me; at least, never for any sustained period.

A mouth organ always gives me fever blisters.

Strange to say, my lips were not too tender for other forms of wind instruments. While a member of a military organization, I once learned to blow a bugle. A bugle has its fine points. It stirs everybody up —wakes everybody up, at least. One even has to stand stiffly erect properly to play it.

But a bugle has its limitations. You don't play a whole tune on a bugle. The thing to do, if you like a bugle, is to go in for a cornet. A cornet has keys that permit many variations. It permits you to do things that are much more suitable to airing out your soul.

For these reasons, I decided to get a cornet. But while I was casting about for one, a fellow came along and offered me a trombone for eleven dollars. He said he'd throw in a patent black enameled steel music stand and two folios of sheet music, if I'd buy before the following Saturday, the day he was due to be married.

This was a pretty good bargain. And it was helping a friend at the most serious time in his life. But I think what really impressed me at the time was the movable arm in the instrument. I shut my eyes and pictured myself swooping that long trom-*bone*, or whatever you call it, around in the air while I made fine roaring crescendos up and down the scale.

IT SO happened that just then I had a chance to go off camping on Lake George in a motor-boat. This clinched my resolve. I realized that I could do my early trombone practicing while far from the haunts of men and landlords.

My companions thought it very amusing to take a trombone on a camping trip. But I endured their wise cracks with good grace, and happily looked forward to getting up among the pines and islets alone with my pipe.

As luck would have it, a northerly gale blew up the first night, with rain and heavy seas. We were tied up to a dock. The boat pounded so against the piling that we decided to let the engineer and one of the party take her out and anchor. The rest of us dragged our duffel ashore, getting soaked as we did so.

A small road-house let us in. Checking over my sodden belongings, I found that in my haste I had brought the trombone, but the "bone," or long tubular loop, was missing.

If I felt dreary before, I now felt utterly bereft. There was only one plausible explanation. I must have dropped the precious part overboard.

Near noon the next day the motor-boat limped back. Grasping at a straw, I hurried aboard and searched the craft fore and aft. There was just a chance I still might find the missing part of my trombone. Finally, I asked the engineer. He scratched his head.

"A long brass tube bent double," he repeated. "H-umm."

Suddenly he gave vent to ribald laughter.

"I know where it is, buddy!"

He took my arm and piloted me aft to the engine-room. With an oily finger he pointed to the feed pump. From it led a long brass tube that had once been bent double, unmistakably my missing trombone part.

"Your horn saved the boat, buddy!" he exclaimed enthusiastically.

I am very temperamental. I could never bring myself to buy another trombone. Perhaps it was just as well.

Once I almost learned to play a zither. You know them—they look like the inside of a piano on a small scale. Mine had a lot of soprano strings on one end and groups of four strings each down the other end for chords. It had a low, pervasive tone to it.

I learned to pick out a few simple tunes. And since I had no real ear for music, the chords sounded pretty well, no matter which ones I used.

I was getting along famously until my father told me that a zither was an effeminate sort of instrument. He suggested that we try turning the instrument into a radio antenna, connecting all the wires across the pegs. The plan wasn't a success; but it wrecked the zither, which seemed to satisfy the family.

LOOKING back, I see that the fates of several other instruments I tried to play were very like that of the zither. About the time I would get started, I would find some way to turn the instrument into some other object of more or less value, depending on the soundness of my scheme.

For instance, an aunt once gave me a mandolin for Christmas. It wasn't a difficult instrument to play. I joined the glee club orchestra on the strength of it. The orchestra we had made so much noise that my errors were of small consequence.

But there was one piece we played that required the three mandolins in the soprano group to come out in solo. This was bad for me. The first time we played the solo, the leader wasn't quite sure who was out of step; but the eagerness of the other two players to prove that I was the goat gave me away.

Finally, the two mandolin players had to fight me

I won't go into the ensuing complications. Hard words passed. Finally the two other mandolin players had to fight me. I was assisted by the flute player, a big, sturdy chap quite out of keeping with the instrument he used. When we finished my mandolin and one other were done in, and the flute sounded like a sick cat.

The next day I built a fine wren house out of the body of the mandolin.

When I was fifteen I sang in the choir. The organ fascinated me. I had never seen so much machinery devoted entirely to entertainment, with the possible exception of a merry-go-round.

I made friends with the organist. He had a stock of funny stories he used to tell. By laughing at them, I gained his confidence.

THE organ was pumped by hand. I arranged with the organist to do some pumping free of charge if he would let me learn a few tunes on the organ. He gladly agreed, because the pay of the pumper had to come out of his own salary.

The first Sunday I got along pretty well. But I found I had to stand up on a chair to get full power into the stroke. The chair was right behind a screen, which kept me out of sight of the congregation.

During the sermon, while I dozed, the choir sang the offertory. I was still a little groggy from my nap. The first thing I knew, I lost my balance and knocked over the screen, falling doubled on the handle. The noise and commotion I caused were horrifying.

About two hundred solid Christian citizens suddenly looked up and saw me hanging by my stomach over the long handle beside the organ.

Temperamental as I am, I have never been able to approach an organ since that day without again feeling some of the humiliation I then felt.

What A Whale Of A Difference An Incentive Makes!

When Bill Todd was growing up, his parents had to work hard; so hard that he worried about it, and set out to put them on Easy Street—This was his first big incentive—His next was to pay for a $7,000,000 shipyard which he and his fellow laborers, without financial backing, had arranged to buy—The story of how he reached these and other goals

By Mary Derieux

I MIGHT as well confess at the outset that I did not achieve the job of interviewing "Bill" Todd: I inherited it. For seven years, Bill Todd's name has been on the magazine's list of possible stories.

I had three predecessors, strong and able-bodied men, who at one time or another set out on the well-worn trail of the Todd interview. As a matter of fact, I feel a bit guilty about finally bagging the game, for I'm certain that I succeeded only because by the time I came along Mr. Todd was just naturally tired of saying, "No."

It was on board his yacht, the "Saelmo," that Bill Todd at last settled down to tell me the story which I am going to tell you.

From the din of the boiler shops in which he started his career to the quiet remoteness of that trim craft lying in New York Harbor is a long jump. But Bill Todd has had plenty of practice in making long jumps. And he is just as much at home at one end of the leap as at the other.

We talked about everything except Bill Todd, at first—and then a chance remark of mine struck fire.

"One of the first-hand things *I've* found out from living," he said, "is that you may have to take a lot of beatings along the way; but you *never* have to take a licking!"

And those words symbolize the whole amazing drama of Bill Todd's life. From the day when he brought home one dollar and a half for his first week's work, and gave all but ten cents of it to his mother, to that other day when he bought the seven-million-dollar shipbuilding plant of which he had at one time been foreman at sixty dollars a week, Bill Todd has refused to take a licking from man or fate!

He is William H. Todd, now head of the great Todd Shipyards Corporation which, besides the famous Robins, Tebo and Clinton Plants in Brooklyn, includes plants in Hoboken, Mobile, New Orleans, and Seattle. These yards employ a small army of workmen, and are valued at many millions of dollars.

But to his friends—thousands of them, old and new—the president of the Todd company is still "Bill" Todd. And to every man in every one of his plants, from the humblest laborer to the chief executive, he is proudly and lovingly "the Boss." Especially in the Robins yard. There they turn to watch him as he goes through, a spring in his step, his hat on one side of his head, an eye that overlooks nothing, and a man-to-man word for every worker whom he encounters.

A light kindles in each face as he passes. Then the men turn back to you:

"It's only the other day," they say, "that he was going through that gate when the whistle blew, just like the rest of us!"

But there is no envy in voice or word, only a vast pride in "the Boss."

BUT to return to the yacht "Saelmo," and Bill Todd's story.

"Did you always dream about owning a big shipyard some day?" I asked him.

"Good lord, no!" he laughed. "What *started* me was wanting to make things a bit easier for my parents. Look here," he interrupted himself grimly, "did you ever see a club-footed man working in the dead of winter in his bare feet—bare because the crippled feet were so inflamed from long hours of standing on them that they couldn't bear the touch of leather?

"Well, that's the picture that will stay with me as long as I live. It's the picture of my father when I was a boy. Many's the time I've carried him a bucket of snow to stand in while he worked. And it was the sight of him, toiling day after day in the boiler shop of the old Pusey and Jones Company, down in Wilmington, Delaware, to take care of my mother and their six children, that made me leave school and go to work to help him. I was fourteen then, hadn't quite finished my first year in high school. My father didn't want me to stop; but I did it anyhow.

"I wasn't one of these 'model boys' you hear about. I had some great pals, and we got mixed up in plenty of deviltry—nothing vicious, but the kind of things all real boys get into. I guess I was about as wild as any of the crowd; in fact, it has been said that I was the worst of the lot!

"On a recent trip to Wilmington to take part in a big dedication, with most of the notables in the state present, I met an old teacher of mine. She had a picture of the class, and she insisted that I was among those present; but I couldn't recognize a single one of the young hoodlums.

"Finally she said, 'Well, just you pick out the toughest-looking boy in the whole picture!'—and I did—and it was me!

"But no amount of high spirits and boyish deviltry could overcome the influence of a mother and father like mine. There was a little church near us, the Scott Methodist Church, and the pain in my father's feet, inflamed by standing on them all week, didn't keep him away from that church when Sunday came.

"I don't know how young I was when I started going with him, but I remember clearly, when I was about eight, how he would take me by the hand and start out over the road to church. And I'll never forget his efforts to keep me from seeing him wince at the pain in his feet when we came to a rough place in the path—nor my childish efforts to help him.

"I have recently been down to Wilmington, and with my sisters and friends dedicated a community house I've given to that church, as a memorial to my father and mother. I did this, not because I think it was necessary to honor them publicly, but because I hope that there, where their lives were so richly lived, their spirit may dwell in the hearts of other parents; and because I hope that the community house may be able to do something in the way of passing that spirit on to the children who are so unfortunate as to have the wrong sort of parents.

"But let me tell you what I mean by the *right* sort.

"IN ALL those early days we didn't have any too much to eat at our house. Sometimes there was only bread and 'kettle tea' for supper. But, mind you, when the young folks had only kettle tea to drink that's what the old folks drank too. And I doubt if there were many people anywhere who were happier than we were. To begin with, my mother and father loved each other.

"They say that my mother was one of the prettiest girls that ever grew up in Delaware, and half the likely lads of the neighborhood were in love with her. But one day she looked out of the window, and saw a club-footed boy playing jigs on his fiddle—and she never saw another man as long as she lived!

"I think that was one thing that made it easy for me and my brothers and sisters to love them, and to get along among ourselves. The neighbors thought the Todd family were (*Continued on page 72*)

WILLIAM Henry Todd, much better known as Bill Todd, is head of the biggest ship repair organization in the world. As a young man he was a riveter, and while still employed as a laborer he arranged for the purchase of a $7,000,000 shipyard. He had no capital at the time, and borrowed none. But, with the coöperation of scores of his fellow workers, he bought the yard and paid for it out of its earnings. This was the first unit in his tremendous enterprise, which now has plants in Brooklyn, New Orleans, Mobile, Seattle and Tacoma. Mr. Todd was born fifty-nine years ago in Wilmington, Delaware. (Below, left to right) Charles Piez, Chairman of Board of the Link-Belt Company, "Bill" Todd and Charles M. Schwab, Chairman of the Board of the Bethlehem Steel Corporation.

L. A. Dix Company, Tacoma, Wash.

Mildred Cram and Her Husband, Captain McDowell

ALTHOUGH Mildred Cram did not begin writing until 1914, she has made herself a widely known author of fiction. Her books include "Lotus Salad," "Stranger Things," "The Tide," and "Old Seaport Towns of the South." She has written several successful moving picture scenarios, and the list of magazines in which her short stories have appeared includes most of the widely-read publications in this country. She was born in Washington, D. C., in 1889. Though educated in the United States, she spent eight years in study abroad. She is shown here with her husband, Captain C. S. McDowell, U. S. N. Their home is at the Mare Island Navy Yard, California.

I Cultivated A Sense Of Humor

By Mildred Cram

WHEN I was very young (notice the very) I was a snob.

The dictionary says: "Snob: a vulgar pretender to gentility or superior position; one who regards wealth and position rather than character."

Wealth and position meant nothing to me. Position, I felt, was mine. I was born with a pleasant conviction of equality. This is an American heritage. Wealth, the lack of it or the want of it, never entered my head. I belonged to the "poor" generation: the substantial fortunes of my grandparents, both paternal and maternal, had dwindled away; had been lost; divided; had ceased, at last, to be.

I inherited nothing save an absolute need for the good things of life. It was in my blood to love order, elegance, fineness, to be extravagant, lazy, fastidious, and a little intolerant. Whereas, I stepped into life and into shabby gentility. It was in my blood to like pretty clothes, and I couldn't have them. I was born to be generous, to give with both hands, to fling money away. I hadn't any to fling. This lack did not cause me to envy those who had wealth. On the contrary, I had no regard at all for wealth. I behaved as if I had all the money in the world. Whenever my family had anything to spend, we spent it—on extravagant, beautiful things, things we felt were necessary. When we were broke, we lived in a proud dream-world of our own. We built dream-houses, rode in dream-carriages, wore dream-clothes, and moved, in dreams, in the shining courts of the world.

But if wealth and position meant nothing to me, neither did character. I was a snob in the worst sense. When I was about fifteen years old, I came to the conclusion that humanity was disgusting. This idea persisted much longer than is usual, and it caused me great unhappiness. I simply could not accept the world of reality. The dream-world, that world of imagination, was so much more satisfactory. Books were better than facts. Fictional heroes were superior to living men. Palaces and rose-covered cottages were better than six-room flats in New York. I shut my eyes to truths, and deliberately cultivated myopia. What I did not want to see, I did not see. It was a marvelous game, but a dangerous one. For, all the time, I knew that it could not last. The day would come when I would have to open my eyes and take a good long look at facts.

Naturally, I postponed the evil hour of reckoning as long as I could. I grew up as slowly as possible, staving off maturity with as much energy as most children put into imitating their elders.

Outwardly, I imagine, I was shy and chilly. High-hat. Nose in the air and a cool stare. Who are you? And why? Inwardly, I was convinced of my mental superiority, yet desperately aware of my physical defects. I was not pretty. This was a personal tragedy, for I had great and glorious plans for romances in which, some day, I was to figure. So I fixed this by convincing myself that some day, somehow, I would be as fair as Helen, as graceful as Salome, and as popular as Ninon de Lenclos.

Because I was healthy, and never knew fatigue or admitted weakness, weakness in others aroused my contempt. People were sick, I argued, because they were foolish. They died because they didn't know any better. I would never die. Not I! I was too wise! By the time I grew up, and grew old and finally approached the remote, unimaginable hour of death, I would have thought of some way to circumvent the inevitable. In the meantime, life lay ahead like an infinite ocean. The dreams of youth were long, long dreams.

STUDY was hard for me. Is it for all youngsters? Lacking a retentive memory, and having absolutely no talent for mathematics, I bluffed my way through high school. My father was a Latin and Greek scholar; he spoke both French and German. He read Virgil to me and the letters of Pliny. Unknowing, he was all the teacher I ever had, since he put into my hands the great books of the world, stimulated my interest in them, molded my taste for them, and set me wandering down the path that has no turning, in search of beauty. This I had, but no education. Being clever—I had a mind like lightning for knowledge that was to my taste—I soaked up a lot of culture, becoming, in my teens, that awful phenomenon, a sponge full of unrelated ideas. I really believed that I knew everything. As a result, other people annoyed me; they knew so little! If, indeed, they knew anything at all!

In other words, I grew up to be intolerant, self-absorbed, and, as the dictionary puts it, with "no regard for character." I measured human beings with the wrong yardstick. If they were illiterate, if they had no manners, if they were poor or dirty or ignorant—they were not worth (*Continued on page 116*)

"Scotch Valley"

MILDRED CRAM says that she grew up "measuring people with the wrong yardstick," that life has had to teach her, through suffering, the lessons of tolerance and understanding, sympathy and humor. That she has been an apt pupil in this school of life is proved in the remarkable romance, "Scotch Valley," which will start in THE AMERICAN MAGAZINE next month.

"AND the Sons of Mary smile and are blessèd—they know the angels are on their side.
They know in them is the Grace confessèd and for them are the Mercies multiplied.
They sit at the Feet—they hear the Word—they see how truly the Promise runs;
They have cast their burden upon the Lord, and—the Lord He lays it on Martha's Sons!

THESE lines of Kipling's furnish the theme for the story. James Gladden, romantic, idealistic, sensitive, an engineer by training but an artist at heart, comes home from the war pledged to find and care for the children of the man who had lost his life in saving Gladden's. It means the sacrifice of his own immediate prospects—but James Gladden is one of "Martha's Sons," and he cannot shirk the responsibility thrust upon him. What he does with the five destitute youngsters—and what they do to him—makes a tale that is as real as life itself. Laughter and tears, drudgery and romance, sordidness and beauty—all of these threads are held together by a story of absorbing interest, told with the simplicity and feeling that makes fiction literature. You should not miss a single instalment of "Scotch Valley," by Mildred Cram.

Martin's Tree

A love story

By William Dudley Pelley

ILLUSTRATED BY GAYLE C. HOSKINS

THE man's name was Brewster—Martin Brewster. Vermont first heard of him the spring evening our smudgy country-town daily reported that Jake Bossey had been discharged as superintendent of the Vermont Hardwood Corporation's lumbering operations, up around Camp Eleven.

Martin Brewster was succeeding Bossey. Our item further announced that the newcomer had received his lumbering experience in northern Michigan; that he would make our town his headquarters; that he was young, unmarried, and—

But we did not add "handsome." We left that for the local girls when they beheld him striding about his business in brown corduroy clothes, wide-brimmed felt hat, and shiny new puttees. And smoking a pipe. Always a pipe and always a briar.

Between twenty-five and thirty years we thought him. Rather young to hold such a job, until we looked in his face. It was a Lincolnesque type of face. It held so much strength and melancholy. Capable enough he proved, but grave. Grave and introspective. He carried an air of forest silence about with him always.

"I've learned his secret," declared my editor-partner one night to a group of cronies in our office. "Back West where he comes from, he's had a love affair. Guess it took hold of his gizzard. Funny about these big, silent kind o' fellows. Always pick the wrong females." The editor laughed sadly. "This Brewster picked his, so Jack Davison told me. Claims he knew Brewster as a kid in Grand Rapids."

Anyhow, here he was in Vermont, wandering aimlessly around town between contracts, taking his men up into the timber for weeks at a time, and living in a mountain Eden strictly without an Eve.

My partner spoke more truthfully than he realized, anent Brewster's type instinctively courting the wrong kind of woman. Therein was a mystery . . . for during that subsequent year among us he found himself hopelessly in love again—with saucy, snub-nosed, flighty little Ellen Bell, "Gumdrops" to all the valley.

As incongruous a pair as ever attended a Saturday-night picture show, the town beheld them—the man big, silent, somber, preoccupied; the girl short, pert, blonded via peroxide.

Ellen was dance-crazy; Martin couldn't walk across a floor without giving a startling impression of a Percheron mare coming through a covered bridge. Ellen wanted to be on the "go" every minute; Mart was the pipe-smoking, chimney-corner kind, with a brown-eyed dog and a book in the picture. People tried to explain it that the girl's amazing vitality supplied exactly the antidote for the man's moroseness. But we of the "Telegraph" nursed our misgivings. No profit could come from such a union. Even if he married her, which most of us prayed he wouldn't, the years must only aggravate that misalliance.

"Ellen hooked him because she throwed herself at his head," Uncle Joe Fodder, town philosopher, contended. "Him boardin' to her ma's place when he's down from the timber, natcherly give Gumdrops more opportunity to snarl him all up in her dinky little sex net. Bet ten to one, Mart tried at first to dodge her!"

Be that as it may, wherever Ellen went that year, Martin Brewster was at her fluffy little shoulder. How she managed it was a mystery. She tormented him and bossed him. She humiliated him and deceived him. She made him fetch and carry. Any other type of male would early have told her to go to thunder. But Mart took it all solemnly, mechanically, with a "You know how women are" stoicism that made us want to kick him. Only the impulse had vague analogy to kicking a mountain. About as absurd. Certainly as futile.

She tired of him at length. The valley saw it weeks before the break. He had only given her a temporary thrill, letting her possess him. A window trimmer named Hoxey arrived to work in Ben Williams's clothing store, and boarded at Mrs. Bell's. Soon Ellen was traveling brazenly with him while Martin was "up on the job."

AND that's where the Tree came in—at the time of the break—the cause of it. Ellen wanted an excuse to get out of marrying, anyway. When the matter of the Tree arose, she seized upon it.

Mart's men had pushed operations on the north side of Haystack Mountain till they'd reached Blind Brook, the spot that's now the clearing around Camp Eleven. The big woodsman and Gumdrops had quarreled the previous Saturday night.

Pale-lipped, white-faced, he had suffered her to pour cheap spleen like acid on his bewildered heart. He had finally arisen, sighed raggedly, gone from the room and the house, and walked all that night to get back on the tract by Sunday noon.

He was scarcely in receptive mood, therefore, for Tom Shaster's cussedness Monday when the company's treasurer arrived in the clearing on what he called a "tour of inspection." He really had nothing to inspect. He wanted to find fault generally, as proof of his value to the corporation.

"What the thunder you leaving that big tree standing for?" he snarled, pressing a handkerchief against a beefy jowl where a blackberry cane had laced him. And he indicated a stupendous forest monarch a little way west of the sprawly log shack in which the lumberjacks were living.

"Sort o' like myself, that tree," returned Mart dully. "Big and clumsy and out o' place, Mr. Shaster—"

"Who ever heard of a tree being clumsy?"

"Well, not matching the rest of the woods around it, I mean. Standing alone in life, so to speak, wondering why it'd lasted so long or what use it was to grow so tall when the world all around it was filled with brush."

"Apple sauce, Brewster! *Cut it!*"

"No, Mr. Shaster; I'm leaving that tree stand where it is. Biggest one I've met in years—so old it seems a crime to drop it. Maybe I'm sentimental, sort of. All the same—"

"All the same, there's three hundred dollars' worth of timber in that elm, and I'm this company's treasurer. I own that tree, not you!"

"But one tree won't be missed in your profits, Mr. Shaster. You're making plenty o' money. And it's so big and—and *fine*, that when the boys reached it last Friday morning I couldn't let them sink in their axes. This business is bad enough, anyhow, going through a forest, knocking down handiwork it's taken the Almighty generations to create."

"Henessey," snapped Shaster to the nearby boss of the chopping crew, "call up your men. Start in on that elm. I want to watch it fall while I'm here. I want to hear it crash!"

Martin Brewster's gray eyes narrowed. "I'm in authority here, Mr. Shaster. You've no right to give orders directly to my men."

"I'll give orders to anybody I please. I'm not such a drooling fool as to pass up three hundred dollars of profits for a piece of poetry."

MARTIN turned and looked up at the monarch. Its symmetry was arboreal perfection. Thirty or forty feet up the trunk its boughs spread out in a titanic balloon of vivid greenness, a forest of limbs, branches and leaves in itself. So thick was its foliage that diminutive mortals on the ground quickly lost sight of that trunk completely. As Martin dropped his glance, Shaster should have taken warning from the expression on his face.

"No," said the foreman, in grim decision; "I've taken a fancy to that special tree. It's a king without a country. I

Shaster's arms were revolving like windmills as he charged the big blond giant;

don't mean a country exactly. There's plenty of that hereabouts. I mean courtiers—things like itself to keep it company. I'd like to buy it, if you'll give me the chance. You know as well as I do that there isn't twenty-five dollars' worth of timber in it, but I'll pay your three hundred dollars to the company to let it stay. And I'll buy the clearing and cabins with it, when our job up here is finished."

The treasurer disliked young Brewster personally. Besides, a group of men were listening, watching. He had his authority to maintain, ruthlessly if necessary. So doggedly he answered:

"That tree's not for sale, nor the clearing either. That elm's coming down. I want to hear the noise."

"Then, Mr. Shaster, I'm going to throw you off this tract!"

"*What's that?* Lay a finger on me, and it'll cost you your job."

"Reckon I don't want the job so much. There's other jobs that are pleasanter than murdering trees. Sort o' feel I'd like to have a place to come to . . . up in these big, quiet mountains."

"We'll see who's boss here. Henessey, you call your ax men, or I'll fire you too."

"Shaster," drawled Martin, low-voiced, deadly, "get off this tract!"

Shaster was no coward. "Make me!" he challenged.

The men reported that Brewster did. A most entertaining fracas the treasurer and foreman enjoyed up there in that mountain-locked clearing. Shaster's arms were revolving like windmills as he charged the big blond giant, but an instant later the giant's large fist had connected with the point of his jaw, and something of more consequence than a blackberry cane again and again persisted in lacing him. He arose and sat down with several more grunts. It was a badly discredited treasurer who finally reached his saddle down the mountain log road.

Martin wetted badly barked knuckles. "Guess I'll have to go to town, boys," said he. "Got to finish this business with Brainerd, the president. Meanwhile, about the elm, I ask you as a favor . . . don't touch it."

but an instant later the giant's large fist had connected with the point of his jaw

"We won't," promised Henessey. For Henessey too was a woodsman.

Martin reached town and interviewed Jethro Brainerd. He acquired clearing, tree, cabin, and solitude for six hundred and fifty dollars. Then he went to tell Ellen. Maybe she wouldn't blister him now that he had really bought it—not as when he had suggested it. So he went and found her. In a hammock on a darkened veranda. In the Hoxey fellow's arms.

A vein in Mart's forehead swelled badly. He whispered knottily, "So that's how it is," scarcely able to credit his senses. He turned on the steps and went out of the gate. He caught the eight-fifty train down the valley that evening, not even stopping to pack up his clothing. Ellen's mother expressed it to him later.

Local folk, hearing about his break with Gumdrops, and also his queer forest purchase, wondered why he hadn't gone back to the cabin to live under his elm like a hermit. But that remained for another time and experience. Brewster had gone out to the world, knowing that the clearing and the elm would wait.

And they did wait. Over Camp Eleven tract the forest gradually cleared of timber. Logs went down the river to the mills. The clearing became deserted, the cabin was boarded up. Ax wounds on stumps turned slowly to brown and as slowly to black. Undergrowth sprang up as though to hide all this cruel devastation from avenging divinity. Winter came, and spring, and another summer. Many summers.

Mists hung above the clearing in the mornings, which the sun burned off as the hours advanced. Droning day succeeded droning day. In long, dreamy afternoons, while bears wrecked ant hills or dug logs for honey, the only sounds breaking the quiet of that mountain world were the screeches of jays, tappings of woodpeckers, the fretful song of a great bluebottle winging from leaf to leaf, the bumble of gigantic bees in the cat briar or faint ripple of golden-brown trout brook over mossy stones beyond the willows.

At night the forest gave off queer noises: owls hooted, hedgehogs whimpered, foxes barked, (*Continued on page 160*)

"Greater Love Hath No Man Than This—"

By Dr. Wilmer Krusen

GO BACK twenty-six years, for the story of that hot tropical night in Quemados, though it has been told a thousand times, is worth the telling again.

Four men, medical officers of the American army, were gathered about a table. It was a grim business they were on. Their browned faces were grave and set.

The Spaniards had been routed and cleared from the land. General Leonard Wood and his troops were in possession of Cuba. But though the banners which hailed this victory of American arms still flaunted gayly in the streets of New York, and Chicago, and San Francisco, the hush of Death was over Cuba, and over that little group in the hot room at Quemados.

This Death was an invisible yellow assassin. Passing over the squalor and filth of the native slums and leaving them almost unscathed, it had descended upon the American quarters. Indeed, it had invaded the very seat of American control, and had taken a third of the Governor General's staff. Every hospital bed was filled by an American lad whose face and chest had turned to the yellow of gold, and who writhed in delirium. Yellow fever—that unsolved mystery of four centuries—had Cuba in its grip!

For a month these four medical men—Walter Reed, James Carroll, Jesse W. Lazear, and Aristides Agramonte—had been at it day and night, seeking a chink in the armor of the yellow curse.

Reed was the directing genius. He had spent fourteen years at the bedsides of the sick on the Western plains and mountains. He had doctored in New York's slums. He had studied disease at first hand and under some of the best masters that America could boast. Then came Carroll, ex-backwoodsman, who had enlisted as a private in the army, and who, while still a soldier, had studied medicine, to gain his diploma at the age of thirty-seven. He was forty-six, a man with a wife and five children, and with no means other than his pay.

Third was Jesse Lazear—carefully schooled, brilliant, a graduate of famous universities, and a student of the great Pasteur in Paris. He was thirty-four, and a wife and two babies awaited him back in the States. Agramonte, who was the fourth member of this Yellow Fever Commission, was a Cuban surgeon of distinction. He alone of the four previously had suffered yellow fever, and was therefore immune to it. Yellow Jack rarely struck at the same man twice.

Thus far, failure had stalked the commission in its efforts to determine the cause of the disease. Meanwhile, Havana had been scoured and cleaned; its houses had been disinfected, its streets washed down, and its alleys fumigated. Seemingly the more cleanly the city became, the more virulent became the scourge.

One chance only was left, a chance which the whole medical world held in ridicule. In Havana there was a Cuban physician, Doctor Carlos Finlay. For twenty years Doctor Finlay had been insisting that a certain kind of mosquito was responsible for yellow fever. Finlay had made tireless experiments to prove his theory; but every one of his experiments had failed.

But Reed, in his study, had discovered a fact that Finlay had overlooked. Following a case of yellow fever, it was invariably two weeks or longer before new cases appeared. This indicated that the mosquito—if it was the carrier—had to go days after biting a yellow-fever patient before it became dangerous to other human beings. Reed believed that Finlay in his experiments had not given the mosquitoes time.

So in Quemados, that hot night, those four medical men discussed mosquitoes. The task confronting them was to prove, as Finlay contended, that yellow fever was carried by mosquitoes only, and that, among all the eight hundred varieties of mosquitoes, the *stegomyia* mosquito alone was a carrier of the disease. And this task, as fate would have it, was augmented by a hideous circumstance: Animals do not "take" yellow fever. So far as was known, the one living creature who suffered yellow fever was man!

Reed was pale as he outlined his theory of Finlay's failure. It was Carroll, the father of five children, who spoke out.

"That means," he queried bluntly, "that, to prove this mosquito theory, somebody, a *man*, has to offer himself for experiment?"

Reed nodded. Lazear nodded, a gleam in his eyes. If healthy, non-immune men, would let themselves be bitten by *stegomyia* mosquitoes which two weeks or more before had bitten yellow-fever sufferers, the Finlay-Reed theory would be proved or disproved by the result. To make the experiment without flaw, at least a dozen men would have to be bitten!

"You can count on me for one," said Carroll.

"And on me," said Lazear.

Agramonte was immune and therefore useless. Reed was under orders to return immediately to Washington.

THE meeting broke up. In a day or two Reed left, and Carroll and Lazear began their experiments, of which all medical history contains no more heroic record.

Lazear had studied mosquitoes in Italy. He obtained eggs of the *stegomyia* and hatched them. He nurtured them under glass with sugar and water to feed upon, and then into the yellow-fever wards he went, to let the winged devils suck the blood of fever patients. Then back into their glass cages went the insects to await the grim test.

But Lazear, only thirty-four, was impatient. Those mosquitoes, he argued, must be deadly by now. Not waiting the two or three weeks Reed had stipulated, he obtained seven volunteers among the soldiers. Together with the seven, nameless in the records, he let the mosquitoes suck the blood of his arms. The days passed. Strangely enough, nothing developed. The doctor and his seven men remained in health. After all, was Reed mistaken?

"You tried too soon," Carroll argued. "Now it's my turn."

He waited until almost three weeks had gone by. By this time, if Reed was right, the yellow-fever blood in the imprisoned insects had ripened to deadly virulence. Carroll then had Lazear select the most dangerous-looking mosquito in his whole collection. This huge insect brave Carroll let alight on his wrist, on the under part where the skin was thin and the veins near the surface, and he watched without a tremor as it drank its fill of his blood.

"If there is anything in this mosquito theory," he wrote back to Reed that night, "I should get a good dose of yellow fever."

IN THREE days the fever was upon him. Lazear and Agramonte stood by. "Friends," said Carroll, and smiled, "this is the proudest moment of my life. I may prove something for humanity."

To make certain that it wasn't malaria he had, Doctor Carroll himself went to the laboratory, took a sample of his own blood, and examined it under the microscope. No malaria was there. Next morning, Lazear carried him to the yellow-fever ward and there, near to death, Carroll lay for days. Once Lazear thought his heart had stopped; but Carroll's fine constitution rallied. Eventually, he recovered, but a serious heart trouble followed as a direct result of the fever. He died of this seven years later.

Following Carroll, Private William Dean, of Grand Rapids, Michigan, let himself be bitten by four mosquitoes, including the one that had downed Carroll. Soon he, too, was tossing in delirium. But Lazear, as he fought for the lives of his charges, wasn't sure as yet. There was a possibility, he reasoned, that Carroll and Dean might have exposed themselves to infection in other ways. As he pondered over this a mosquito of the deadly species alighted on his wrist. He was about to brush off the insect, when deliberately he restrained his hand. All about him were

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

yellow-fever patients. This mosquito was living among them. Lazear let the insect drink its fill.

Four days later, toward evening, he had his first chill. A languor came over him, but he fought it back. All that night and on to dawn he sat at his desk, that he might give to the world a written record of his investigations. Steadily he noted his symptoms. The task done, at last he staggered weakly with the manuscript to Carroll, placed the paper in his hands, and took to his bed. He died at the end of the sixth day.

In all the chronicles of war, since the first war, in all the pages of literature, I believe there is no more inspiring example of sacrifice and courage than this tale of Lazear and Carroll, and of Dean, Kissenger, Moran, Cook and those others, who led the way to man's victory over yellow fever.

SCIENCE must be exact. The heroism of Lazear, Carroll, and of Dean, the soldier, was not enough. There was still a possibility of error. The earth was not yet dry over the grave of Lazear before Private John R. Kissenger and Civilian Clerk John J. Moran offered themselves to Reed for experiment.

"But surely you can't realize the danger," Reed protested. "In some epidemics, eighty-five men out of a hundred have died of this fever; in others, fifty out of a hundred; seldom less than twenty out of a hundred die!"

"We know," answered Kissenger and Moran. "We are ready."

Reed spoke of a reward for their services. General Wood already had authorized it.

"Forget that, sir," said the two. "We offer ourselves for science and humanity. Our one condition is that we will get no reward for what we do."

Reed, a major, rose to his feet, stood at attention. His hand went to the peak of his cap. "Gentlemen," he said humbly, to this private and to this civilian clerk, "I am honored to salute you!"

PHOTO CRAFTERS, PHILADELPHIA, PA.

Dr. Wilmer Krusen, head of the Department of Public Health of Philadelphia. Doctor Krusen has served on the staffs of several Philadelphia hospitals, and is widely known in medical circles. He was born in Bucks County, Pennsylvania, in 1869. His present home is in Philadelphia, where, in addition to his public health work, he is gynecologist for the Samaritan Hospital, and a leader in philanthropic work for poor children

Others came forward. Others went down on their backs in the fever wards, volunteers who knew the frightful price. The mosquito was almost convicted; but still a terrible test or two remained. For a century, men had believed the disease contagious. The clothing of the sick, the linens and blankets of their beds—these things, the doctors believed, spread yellow fever from the sick to the well.

So a little house was built, and called "House No. 1." It was only fourteen by twenty feet. The two doors were so arranged, one back of the other, that no mosquitoes possibly could get in. A stove was placed in the building to keep the temperature steadily above ninety, and tubs of water were put inside, that the atmosphere would be as soggy as that of a well. Then into this house were taken the cots and mattresses and bedding of men who had died of yellow fever. And into that foul trap, worse than any Dark Age dungeon, walked of their own free will three men—Dr. R. P. Cook, Private Levi E. Folk, and Private Warren G. Jernegan. They ate there, lived there, slept in those beds for twenty days and twenty nights!

Not one of the three developed yellow fever. More tests were made in the house; but to the astonishment of every man who professed to know medicine, no fever patients came from it. "But how do you know," the skeptics demanded of Reed, "that these men, Folk, Jernegan, and the others, are not *immune* to yellow fever?"

Silence.

REED had asked the maximum. He could ask no more. But Folk and Jernegan—what soldiers of America for whom monuments have been built have done more? They stepped forward, eyes front, heels together. "We are willing to be inoculated," they said. "Let's make the test beyond question!"

Yellow-fever blood was injected directly into Jernegan's arm, and mosquitoes deadly with the disease were permitted to bite Folk. Shortly came the dread signs, the yellowing of the face, the hiccoughs, the nausea. Reed went down on his knees and thanked God when they recovered!

The theory proved? You would think so. But, "Not yet!" cried the skeptics. They still argued that sanitation was the thing, not mosquitoes, that cleanliness would stamp out yellow fever. So, near by House No. 1 was built House No. 2. It had two rooms. Each of the rooms was as clean as Spotless Town. The sheets and coverlets of the beds were like snow. Pure air and sunlight poured in through the wide windows.

"Try me again," begged John J. Moran, who miraculously had escaped yellow fever in his first test.

So into one room of House No. 2, carefully screened against the entrance of a single mosquito, were shut two American boys. Into the other room was shut Moran, and in there with him were released a dozen mosquitoes from the hospital wards of the sick. This time, though the boys in the screened room remained in perfect health, Moran, in the adjoining room, did not escape. The spotless walls, the sunshine, the clean air did not save him. However, again Reed and his men worked wonders, and Moran's life was saved. The skeptics, hearing, said no more. The way was open to wipe yellow fever from Cuba, and from the whole of the two American continents! The building of the Panama Canal in what was a hotbed of fever was made possible!

For the yellow-fever-bearing mosquito, it was found, had a peculiar trait: it would breed only in clean, fresh water in and about the homes (*Continued on page 95*)

This Earth We Live On

The amazing story of how a scientist, working underground, is computing its weight—What the center of the earth is probably like; why you would be heavier at the North or South Pole than at the equator, and other remarkable facts about our planet

By George W. Gray

IN a concrete room thirty-five feet below the street, a man sat and looked through a small telescope. He was watching for the reflected light from the swing of a delicate pendulum. The instant it appeared, he pressed an electric switch. There was a sharp click, and a pen made a mark on a moving tape.

All day he watched, pressed the switch, waited for the next appearance, and repeated this routine over and over. Outside, the Saturday traffic of the National Capital went on as usual. A medley of noises—automobiles, street cars, a clanging fire engine. The whir of a nearby power-house sounded its weird, ceaseless monotone.

But the man at the telescope saw none of these things, heard nothing of them, felt nothing. His locked door shut the world out of his underground chamber, and the earth itself insulated him against disturbances. He was safe from interruption and alone with his job—the unique job that has claimed his attention for the past three years, and that, at the time this is written, promises to keep him busy for half a year more.

For it takes many months of observing, and even more months of computing, to weigh the earth. That is what Dr. Paul R. Heyl, of the U. S. Bureau of Standards, in Washington, has been doing these three years. He has been putting Mother Earth on the scales, as it were, and getting her avoirdupois.

"But how can he!" exclaimed a matter-of-fact neighbor, a farmer in up-state New York, to whom I mentioned this extraordinary undertaking, "'Tain't reasonable that he'll get anywheres with his weighing, is it? He's going to hang the steelyards over the horn of the new moon, I s'pose! Naw, sir, it can't be done—'cept by guesswork, maybe."

It does seem an impossible task, when you think of steelyards, spring scales, balances, and all the other familiar contraptions for weighing. For the earth *is* big, massive beyond the imagining of most of its inhabitants.

How a chasm like the Grand Canyon, or the waterfall at Niagara, or a peak like any of the granite spires of the Rockies, overawes us with its vastness!

Remember the efforts to climb Mount Everest. Each time, the mountaineers have come back defeated, leaving their dead on the massive slopes.

Everest is the highest point, the most tremendous pile, on this planet. And yet, it is hardly six miles above sea level. What are six miles on a globe which measures nearly eight thousand miles through its center, from pole to pole? A mere speck, like a grain of sand on an orange. In fact, scientists say that the wrinkles on the skin of an orange are far

PHOTOGRAPH FROM BUREAU OF STANDARDS, WASHINGTON, D. C.

(At the left) The apparatus used by Doctor Heyl in "weighing the earth." It is really a miniature system of planets. The two large cylinders which are suspended on each side of the open bell jar are of steel and weigh 140 pounds each; they are two "earths" of this miniature universe. Between the two "earths" may be seen a slender bar, from the ends of which two small balls are suspended. These balls are of platinum, and weigh 1½ ounces each. They are the "moons." The photograph shows the apparatus open. When it is being used, the top of the bell jar is lowered and sealed, and the air is pumped out. Thus the two little "moons" are suspended in a vacuum, and are free to swing in response to the gravitational attraction of the two "earths." The "earths" may be made to move around the bell jar, and the changes in time and distance of swing of the "moons," which are affected by the change in position of the "earths," indicate to the watching scientist the force of the gravitational pull. From this force, figured to an infinitesimal fraction, he is able to compute the mass of the earth on which we live

more mountainous, in proportion to the size of the orange, than any peaks or chasms of the earth.

To weigh Mount Everest would seem a task for some mythological Atlas. But what of this million-fold larger object, the earth—to weigh the earth as a whole, with its lashing seas, its spouting volcanoes, its almost daily earthquakes?

Size is not the only detail that would befuddle the farmer with his steelyards. There is also the fact that the earth is in continual motion. Like a gigantic spinning top, it is turning on its axis at a velocity, measured at the equator, of more than 1,000 miles an hour. It is also plunging along its circular path around the sun at a velocity of more than 60,000 miles an hour. In addition, it is being dragged by the sun in a northerly direction through starry space at the rate of more than 43,000 miles an hour. There are some other motions of the earth, but these three are enough to make one dizzy in the attempt to correlate them.

How can the earth be weighed when it is ceaselessly rotating, endlessly revolving around its sun, and eternally driving at incredible speed toward a far-off unknown destination in the depths of the Milky Way?

Wouldn't these questions stump you? Suppose the task that was intrusted to Doctor Heyl were given you to do. How would you go about it? Where would you start? What equipment would you require?

Perhaps, after mulling over these apparently insoluble problems, you would be inclined to wonder whether it was not a pointless task, after all. What's the good of weighing the earth? What difference does it make, one way or the other? Suppose we never know its exact mass, will mankind be any the loser, or poorer, for that bit of ignorance?

I ASKED these questions of Doctor Heyl, as a sort of approach to asking his method of weighing the earth.

"You know the story of Faraday, don't you, the inventor of the electro-magnet?" answered the scientist. "Faraday was lecturing on his new discovery, and after the lecture a hard-headed practical politician came up to him and said, 'All this is very interesting, no doubt, Professor, but what's the *good* of it?' Faraday looked at him, puzzled, and then answered, 'Maybe you can tax it some day.'

"Perhaps Faraday was only indulging in a bit of repartee. If so, he spoke more wisely than he knew. For our whole electrical power development—dynamos, motors, electric cars, telegraph, telephone, radio, and all the rest—has come from the fundamental principle of the electro-magnet. And think of all the taxes that are paid by the electrical industries!

"I can't promise that the redetermination of the mass of the earth will provide any new sources for taxation," went on Doctor Heyl, smiling, "but the information should prove very useful to such practical persons as astronomers and navigators. A knowledge of the mass of the earth is highly important to astronomers, because it is from the mass of the earth, as a starting point, that they are able to calculate the mass of the moon, the sun and the planets.

"The earth is, thus, a natural standard of reference for comparison with other celestial bodies.

"Our business at the Bureau of Standards is to determine, as accurately as it is possible to do so, the fundamental

reference qualities. Can you think of anything more fundamental, more basic as a physical standard, than the earth on which we live?

"But that is not the only reason. Knowledge of the earth's mass enables us to add to our all-too-meager knowledge of its interior. Do you realize that we know scarcely anything about the earth's insides? We have explored the poles and the jungles, but every village back yard covers an unknown slice of territory that stretches down nearly four thousand miles, right to the center of the earth. We have so-called 'deep holes' in the earth; but not one of them is skin deep, and our experimental knowledge of the earth's interior is almost nil."

ACCORDING to a recent summary of the "deep holes" of the earth, the deepest mine—that is, the one that goes farthest toward the center of our globe—is the Calumet and Hecla copper mine on the Keweenaw Peninsula of Michigan. Its bottom is 5,990 feet below the mouth of the shaft; allowing for land elevation, this means a depth of 4,600 feet below sea level. There are other mines in South Africa, Asia, and South America which have deeper excavations; but as they are all in mountainous regions, the depth below sea level is less than that of the Michigan mine.

Near Ligonier, Pennsylvania, a four-inch gas well was sunk to 7,756 feet. At that depth it had to be abandoned because the pressure of the earth squeezed the drill out of plumb, and made it impossible to drill a straight hole. Profiting by this lesson, the drillers who started a well near the village of Good Hope, in West Virginia, in 1924, began with a twenty-two-inch hole. At intervals, this was reduced, until below 5,000 feet the well was only eight inches in diameter. When 6,757 feet was reached, the drill tapped a pocket of compressed gas, which blew up the tools, snapped the wire line, and put a stop to operations. At last accounts, it was the intention of the owners to resume drilling, and to carry the well down, if necessary, to 10,000 feet.

"But these excavations are trifling, in contrast with the thickness of the earth," said Doctor Heyl. "At various times, proposals have been made to dig an experimental hole, to see what's underneath us. Only recently the eminent British engineer, Sir Charles A. Parsons, urged the project of sinking a shaft twelve miles deep. He estimates that the thing can be done in eighty-five years, at a cost of $25,000,000. But even if this ambitious plan should be carried through, we would scarcely have pricked the surface. What are twelve miles out of four thousand!

"No, it seems doubtful that we can ever actually get to the earth's core, and learn of it directly. Our knowledge is more likely to come indirectly—and one of these indirect ways is through accurate determination of the earth's mass. For when we know its mass we can compute its density; and already we know some rather interesting facts about the density of the earth.

"The figures such as we have show that the whole earth is about five and one-half times as dense as water. That is to say, it would require five and one-half globes of water, of equal size as our earth, to balance the weight of the earth.

"Now, that is highly significant, because the density of the rock, soil, minerals, and other material that we know in the crust of the earth, averages only about two and three quarters the density of water. This indicates that the inner material at the core of the earth must be very much heavier. It probably reaches a density seven or eight times that of water."

"But the interior of the earth is piping hot, isn't it?" I asked—"a huge inner ball of liquid fire?"

"That was formerly the prevalent notion, but it is not generally held to-day by those who have studied the question," answered Doctor Heyl. "I suppose it was the spouting of lava from volcanoes that gave rise to this idea. It seemed natural to think that the volcano was a vent through which the molten material from the center of the earth was overflowing. But the fact seems to be that lava does not originate very deep in the earth—only a few miles—and that it is heated by friction as it squeezes up to the crater."

VOLCANOES and earthquakes both are results of the same cause, the breaking of a strained section of the earth's crust. Very often an earthquake is accompanied by the eruption of a volcano. Sometimes volcanic action follows an earthquake, as happened in southern Japan in 1914, when there were two earthquakes, and a little later the volcanic cone of Sakura-jima erupted violently, spouting hot lava.

"We know that earthquakes are confined to the crust," continued Doctor Heyl. "Even the heavy shocks originate at depths less than twenty-five miles. The earth's rocky outer crust is estimated to be at least forty to fifty miles thick, and perhaps much thicker; so you see the fractures and slipping which cause earthquakes are mere skin diseases. The lava originates at these shallow levels, is forced up by the pressure of weight, and is heated to melting by the tremendous friction of the crowding, squeezing, slipping rock.

"This does not mean that the earth is cool inside. Far from it. You can find that out by going down into a mine and taking a thermometer with you. The temperature increases, on the average, about one degree Fahrenheit for every sixty feet of descent.

"Other evidences (*Continued on page 166*)

AMERICAN MUSEUM OF NATURAL HISTORY, N. Y.

An imaginary painting, by Howard Russell Butler, of a landscape on the moon, with our earth appearing in the sky. The diameter of the earth is nearly four times that of the moon; so, to imagine how large the earth must look to an observer in the lunar mountains, we must multiply the size of the moon by four. In addition to its larger size, the earth has its great areas of sea and its floating clouds to catch and reflect the sun's light, and so its brilliancy to the lunar observer would be many times the brilliancy of the full moon to us. To a man in Mars the earth would probably appear a marvelous white evening and morning star, brighter than Venus is to our eyes. The original of the painting above is in the American Museum of Natural History, New York City

Why I Quit Thinking About Myself

THIRTY years ago, when I was working as a clerk in a Chicago bank, I attended a dinner in honor of the president of a railroad. The way I happened to be there was that the bank, which carried a good deal of the railroad's money on deposit, and wanted to carry a good deal more, decided to prove its regard for the grand old man to the extent of two full tables. As I was one of the employees who happened to have a dress suit, I was favored with a free ticket.

The food was a welcome change from the boarding-house fare of a poor clerk. In addition, I had the pleasure of seeing the most important citizens of Chicago for the first time and, being young, I enjoyed the speeches, particularly the long and rather intimate speech of the guest of honor.

He said that it had always been his ambition to be president of the railroad, even from the days when he carried water to the section gang. It seemed a perfectly simple, almost inevitable, process as he recounted it. One had only to begin low down, work hard, study, and somehow the stars in their courses would take care of all the rest. This gave me a decided thrill.

Yet, my short time in business had been long enough to show me that progress is not steady and inevitable, but jerky, and attended by a multitude of setbacks and discouragements. When a man reaches the top, his memory of these troubles is either obscured, or his pride has wiped them out of the record. I wished that the great man's talk, which was seemingly so frank, might have been even franker.

Had there ever been a day, I wondered, when he had almost given up in despair? What about the times when it looked as if a less worthy man were to be promoted over him as a result of "pull"? Was there ever a moment when all his years of work trembled in the balance? When, in spite of well-laid plans, mediocrity seemed to be his inescapable lot?

I should like to have heard four more speeches, as follows:

FIRST. *His wife:* I could imagine her saying, "George has had a wonderful career, and I am proud of him. Of course, the path hasn't been quite so smooth and straight as his talk would lead you to believe. I remember the evening, for instance, when he decided to resign. It was when he was superintendent of his division and had worked for months on a plan to reorganize the work of the headquarters office. The general superintendent adopted the plan, and presented it to the directors without any mention of George except in the most casual way. The general superintendent got a vice presidency, and George got nothing.

"That evening he told me that he was going to throw up his job the next morning and join some friends who were planning to manufacture automobiles. I let him grumble for a solid hour until he had it all off his chest. Then I made a pot of hot coffee and filled his pipe for him, and we talked about the children and how we should use our passes to take them to California that summer. I never said anything more about the railroad business, and neither did he. But he didn't resign, which was lucky, because his friends who tried to manufacture automobiles went into bankruptcy eighteen months later."

SECOND. *His family doctor:* He perhaps might have said something like this: "Nature gave George an iron physique, which is a great blessing in one way and a great danger in another. Men who have iron physiques never find out that they have any limitations, until one day when they are brought up with a jerk. That happened to our friend here in his thirty-ninth year, when he had just been made general traffic agent. With the world in his hands at last, the power to enjoy it vanished. He could not sleep; he could not eat. Day after day, he went to his office and fussed about the desk for a few minutes, only to leave in despair.

"'You've got to do something for me,' he would say fiercely, as if I were a section hand whom he could order around at will.

"And when I told him that nobody could do anything for him, that he must give nature a chance to catch up on the overdrafts he had been making all through the years, he was furious. There was one night when he buried his face in his hands and talked wildly about jumping into the river. Well, while you have been sitting here applauding our friend's business victories, I have been thinking of the biggest victory of all—his winning fight with his own shattered nerves."

THIRD. *His dentist:* I can picture that gray-haired old veteran smiling whimsically. "Great men are no different from others," he might have said. "I read in the paper one morning about a big wreck on the railroad, and how our friend, picking himself out of the broken timbers of his private car, shattered and bleeding, took command and organized the work of rescue. And I couldn't help saying to myself, 'Can that be the same man who uncorked such a yell the day I took the nerve out of his bicuspid?'"

FOURTH. *His banker:* I don't mean the president of one of the big city banks where the railroad keeps its funds, but the president of the little bank in the suburb where our friend has his personal account, the banker who has known all his financial ins and outs from the beginning. Suppose that man had spoken. Would he have said something like this?

"Our friend is not so wealthy as is popularly supposed. This is largely because of a pretty severe jolt he got about twenty-five years ago. He was thirty-five years old at the time, and money had just begun to come to him in rather large amounts. He owned his home and he had something like thirty thousand dollars in cash. Somebody convinced him that there was a fortune to be made by speculating in the shares of a certain manufacturing company. He bought twenty-five hundred shares on margin, bought it just in time to get the full benefit of a bad reaction in the stock market. I carried him through that transaction," the banker might have said. "I loaned him enough on his home and his notes so that the brokers didn't close him out. But I'll never forget the expression on his face when he came into my office the first night, with the newspaper open at the stock quotations.

"'They've pretty nearly wiped me out,' he said bitterly. 'The savings of twenty years wiped out in about twenty minutes. What a fool I've been!'

"Men have to pay a price for this education," the banker might have gone on. "And our friend paid his price. It put something into his character that has been very valuable. It killed a recklessness that might have gained a fortune for him if he had been lucky; but it gave him the sound conservatism that has made him a wise administrator of a great public property."

Speeches like these are never made at public dinners, of course. But the railroad president's story would have been much more inspiring if we could have had such side-lights on it. And I remember saying to myself that if I should ever attain a position at all comparable to his I should tell the real inside facts.

TIME flies very fast. It seems only a few weeks ago that I made this resolution; but now I am fifty-three, and president of a bank, not in Chicago, to be sure, but in an important middle-sized city. And only last week there was a dinner at which I was the guest of honor.

I recalled my good resolution as I was preparing my remarks for the occasion, but I lost my nerve. No, I made the conventional speech which was expected, and the diners applauded, and the local newspapers printed the speech the next morning with my photograph, and everything was right and proper. But my conscience hurt me.

I have one thing to tell and only one, but it is something that ought to be helpful to other men, younger men particularly. It is this: *As long as I tried to make a big name for myself, I almost failed; it was only when I ceased to think about myself that I began to do well by myself.*

If that sounds strange to you, please withhold your judgment until I have told you my story.

I was born in a little country town, but I grew up in Chicago. My grandfather was a farmer, but (*Continued on page 137*)

Marion Scores A Knockout

A love story in which an old shoe plays a leading part

By Joseph Anthony

ILLUSTRATED BY NORMAN PRICE

MARION! By-y-y Jee-min-nee, I am so glad to see you! I thought never you come back to John's place. Now you got job—you forget all about old John—hey?"

John Caprione's face was a study in ecstasy as he leaned over the sandwich counter, his broad gray-stubbled face wrinkled in a smile of joyful welcome, his brown eyes alight with admiration. And John's sense of beauty was no inferior one. It was an altogether delicious apparition in a cool green dress that faced him from the other side of the counter, moving toward him with the impudent grace of a kitten.

Marion turned the full brilliance of her big blue eyes upon the old Italian, gravely accepting his homage, then twisted another cable around his vassal soul with a dazzling smile. "I'll have a hot dog—with a little mustard—and a glass of lemonade, John," she replied.

John's place catered especially to the trade of the Milford High School, from which Marion had been graduated two years before. Though she had not been inside it during that time, she gave every evidence of being at home now, as she sauntered to the back of the room, sat down at one of the empty tables, and swung her tam o' shanter, boy fashion, onto a hook.

It was Saturday noon, and Marion was the only customer in the place, which was ordinarily seething with hungry and clamorous youth.

John took a tray from a shelf, dusted it carefully with a napkin, and started a ceremonious march to the back of the room. "You have got a job now, hey?" he demanded as he served her lunch. "Is that why I do not see you any more?"

"Yes," said Marion. "I'm working in my father's office—but *that's* not very exciting."

"Jobs, jobs, what is jobs? I'll bet you are engaged to be married—and that is exciting!"

"No, I'm not," said Marion, and sighed. It was a utilitarian sort of sigh, for on the recoil her daintily expanded lips closed in on the protruding end of the generous hot dog. She munched a moment, and then, as incredulity and disappointment showed on John's seamed face, she added as an afterthought, "I'm in love, though."

John slapped his thigh in a gesture of Homeric triumph, as he exclaimed: "You are in love! Well, ain't that the same thing? Who is he, the lucky boy?"

Marion put the tall lemonade glass to her lips, and looked convincingly despondent as she set it down again. "No use talking about it," she replied glumly. "The poor fish isn't in love with *me*."

"Aw, gawan! I don't believe it! Such foolishness in a boy could not be. You are kidding old John, that's all."

Marion grinned, reached for her hat with one dainty hand, and extended the other one. "Good-by, John," she said. "I've got to beat it. See you again some time."

John was seized by a great idea as he beamed on her and crushed the small fingers in his powerful grip. "I tell you what," he whispered to her. "When you are marriaged to your boy, you will bring him here for lunch some day—yes?"

Marion flashed a quick smile at him. "It's a go, John," she said. "I will—if I land him."

MARION confided to nobody else the secret she had told to John Caprione, but the town of Milford soon had plenty of facts from which to make its own deductions. There was just one young man in Milford whose exploits as a devastator of the opposite sex made him worthy of mention in the same breath with Marion Gale. That young man was Jim Regent, three years out of Harvard, where he had been captain of the football team, among many other things. Jim was now a howlingly successful junior partner in a Wall Street brokerage concern; he was easily the best dancer in town; and as for being the life of the party, why, Jim Regent was accustomed to *being* the party. When Jim and Marion Gale began to be seen together on the dance floor of the Milford Arms, and, more particularly, when Marion turned up week after week at the parties given by Adela Regent, Jim's sister, and sprawled herself out prettily on the living-room couch listening to his doughty mandolin, the younger element of the town was inclined to sit back and say *that* was *that*.

But it wasn't. Jim Regent's engagement was announced early that spring, and the girl he was wedding wasn't Marion Gale at all, but her classmate, Anna Ferris, a plain, sweet, serious young lady who had long worshiped him from afar.

Mysteriously, it began to be noised about that Marion for once had met her master. Marion the invincible had developed a woeful crush on big Jim Regent, only to have him snatched away from her by the rankest outsider!

All the same, Marion continued to be annoyingly self-possessed. That week she turned down two fresh proposals, and two youths who had built hope on the foundation of her disappointment departed sadly to seek it elsewhere.

Then came the day of Jim's wedding, and Marion's complete, conclusive, abysmal disgrace.

It was agreed that at the ceremony Marion had behaved admirably, holding herself with her inimitable grace and a certain saucy kind of dignity. On the way back from the church to the bride's house, she rode in the car that followed the bridal pair, and was cuddled up close to Adela in the rear seat, chatting affectionately, and during the brief and merry party that followed she was as gay as the gayest.

Zero hour approached. Jim Regent, tall, broad-shouldered and blushing, made his way out to the hall to supervise the servants who had begun to hustle Anna's luggage into the honeymoon car. An anticipatory hush went over the gathering.

The baggage was strapped securely into place. The bride slipped deftly into the front of the car, dodging the inevitable shower of rice. A banner flaunting the words "Just Married" was furtively tacked on at the rear. Awkwardly, the bridegroom stood with one foot poised on the running board, having just discovered that he would have to go around the other way to get into the driver's seat. Then he was seen to look up suddenly toward an open window on the upper floor of the Ferris house.

The eyes of the crowd, following his, saw that Marion was standing at the window, a dark object poised in her hand. It was an old tramping shoe, and a stout and large one, stolen from the closet of the bride's father. As Jim shot into the car with a flying-tackle motion, sprawling himself into the lap of his terrified bride, the shoe, winged with mischief, and guided by the invisible finger of fate, came hurtling down.

IT WAS precisely one of those occasions for which Providence seems to have created the innocent bystander. And there couldn't possibly have been a better man for that rôle than Fred Regent, who was Jim's younger brother, and, by sufferance, his best man. It was the only occasion on that day, or on any other one, for that matter, on which Fred had been known to be the center of social interest. For Fred was a notorious "crab." He was twenty-two years old, in his last year at law school, and disgustingly ambitious. Openly contemptuous of dances, parties, and girls, he allowed Adela and Jim to do all the entertaining at their Friday-night gatherings, sitting silently in a corner of the room and leaving promptly at eleven to go back to his law books. Having learned to expect little from Fred, the lively junior set of Milford was never disappointed. Moreover, Fred was known to have an uncommonly sharp tongue in his own defense when it was needed, which added much to his immunity.

UNIVERSITY OF CALIFORNIA

"Lots of speed, but no control!" someone shouted blithely, as the shoe, missing the bridegroom by yards, flung out its heel in a spiteful kick and clipped Fred Regent neatly just in front of one ear. An expression of the utterest bewilderment crossed Fred's abstracted face, and there arose a mighty and joyous guffaw, keyed all the way from Susan Kendall's delicate soprano to Jim's full-bodied bass. For a moment, Fred seemed to be pondering matters in a judicial spirit. Then, almost with an air of deliberation he slumped and sat down limply on the walk. The laughter, frozen in full pitch, gave way to a horrified gasp. A thin red trickle, beginning at the temple, had started down Fred's face. The shoe, turning over casually in the gutter, told its own story. There was a single steel cleat in the heel, not conspicuous, but big enough to be ugly.

Big, capable Jim was of course the first to reach the stricken man. As his stout arms went about his brother's shoulders, a dozen more men crowded forward.

"Get a doctor—it may be concussion of the brain!" a girl cried.

"Look at that cleat! Why didn't she throw an iron bar while she was at it?" sounded a gruffer voice.

"Lucky she missed Jim, anyway," said a third one prayerfully.

They half dragged, half carried the dazed man up the steps and into the living-room. Mrs. Ferris, pathetically trying to look calm, telephoned for a doctor. Then she and Adela Regent, laden with wet bandages and lotions, struggled desperately to break through the ring that was doing its best to slay the victim with too much first aid, and they might never have been able to reach him at all if the forlorn bride outside hadn't created a timely diversion by fainting.

WHEN the doctor at last came, he found Adela and Mrs. Ferris, apparently the only two sane people in the place, standing guard over the still immobile Fred. He removed a wet towel that shrouded the injured man's face, then poured a restorative between the open lips. In answer there came a faint reassuring grunt. "Don't try to talk. Stay perfectly still!" he commanded, digging deeper into his black bag. A few minutes later, having taken the temperature of the unresisting Fred, bandaged, and dosed him, he turned to Mrs. Ferris somberly and said, "He may have been only stunned. Then again, this may be serious—he was hit in a bad spot. Don't let him move for another hour or two. If he isn't better by then, call me."

How Fred ever managed to do it in the face of such tremendous odds was something of a mystery, but the door had no sooner closed on the departing doctor than he threw off his mass of coverings with a single blind movement, and staggered to his feet. He lurched drunkenly, with one hand clapped to the injured temple, and confronted the awestruck crowd. "Where is she?" he demanded.

It was recalled that no one had seen so much as a hair of Marion's head since the fatal moment at the window upstairs. "She must still be in Anna's room," a girl replied.

There was a look of unearthly determination in Fred's eyes as he wobbled forward to the stairway. As intimidated as a tribe of Indians in the presence of a sacred madman, the crowd parted to let him through, then closed in behind him up the stairs.

Finding the door of Anna's room open, Fred entered with uncertain strides. Marion was lying face down on the bed. At the sound of scuffling feet she looked up with eyes that were big blue pools of terror. She seemed to be in some doubt as to whether she was beholding a live man or whether it were already an avenging spirit.

For a moment Fred managed to stand erect as he confronted her and squared off for his historic speech:

"You darn fool of a flapper," he barked, "just because Jim didn't marry *you* is no reason to go throwing things at him!"

Fred paused, steadying himself with outstretched arms. A judicial expression crossed his serious face; he seemed to be pondering the adequacy of what he had just said. Then he added, as a crushing afterthought, "You've got rotten aim, anyway."

For the first time since she had passed the age of lollipops and maternal spank-

At the sound of scuffling feet, Marion looked up with eyes that were big blue pools of terror

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ings, Marion Gale was seen to cry. Two big, splashy tears, followed by two more, came rolling down the slim oval of her face just before it was turned away and buried frantically in a down pillow.

Fred's wandering eyes searched the room again, as though he were beholding the occupants of it for the first time in his life. His shoulders slumped, and he ran one hand through his disarrayed hair. "Oh, rats, go on with the honeymoon! *I'm* all right," said Fred.

More hullabaloo. More farewells for the bride and groom, and more witticisms from the crowd, bravely offered to revive the lost spirit of the party. For the protesting Fred, more wet towels and cod-

dling. And Marion went out of the house quietly, her head held high, the ruffled little plume at the tip of her hat waving defiance to the world. For her, the episode was closed.

NOT so with Fred Regent. Early the next evening he demonstrated that he was not a cad, after all, showing up at the Gale house in State Street with nothing but a large bump and a small patch of court plaster to show for his injury, and with a magnificent speech of apology committed to memory.

Fred found Marion's trim form outlined on a long canvas chair at the edge of the porch, the yellow glow of her bobbed hair showing pleasantly against the low-hanging branches of a neighborly cherry tree. She put down the magazine she had been reading, and greeted him with an affable smile. For a person who had just been mortally insulted, she was disconcertingly at her ease. "Hello, Fred! Why, you look just as good as new again!" she called to him cheerfully.

Something told Fred at that moment that the somewhat oratorical speech of apology he had planned wouldn't do. He grinned shamefacedly as he made his way up the porch steps. "Gosh, Marion, I'm awfully sorry about yesterday," he began.

So far so good. Marion was still smiling. "And I thought I'd come to apologize. I *was* a rotten sport to say what I said, about Jim."

An invisible marker scored one mistake for Fred. Marion didn't seem to like being reminded of Jim. Her blue eyes glinted dangerously. "That's all right, Fred. You apologize for your little speech, and I'll apologize for throwing the shoe, and we'll be square," she said. "I'm afraid I *can't* apologize away that bump on your head, though," she added.

Strange, how different this interview was turning out from the one Fred had visualized! All night he had been haunted by that frightened look in Marion's eyes, the gesture of helplessness with which she had turned to bury her tearful face in the pillow. And here he had come to make honorable amend, and she was—well, she was kidding him—in a subtle way, so that you couldn't quite lay your finger on it, but kidding him, all the same!

"I can see you're still sore," he blurted out desperately. "Can't you understand that I was dazed when I said that? I swear, I didn't know *what* I was saying!"

"All the same, you must have *believed* it—or the words wouldn't have come."

THE way out was clear enough now, but the way out was perjury. Fred tried hard to bring himself to the sinful step, but twenty-two years of persistent honesty were too much for him. He could apologize as abjectly as was needful for his offensive speech, but he couldn't quite bring himself to deny its truth. "Oh, what's the use of talking about *that* forever?" he demanded at length. "I'm sorry, and I apologize, and—well, the main thing is, I want you to come to that dance at the Milford Club to-morrow night."

Marion gasped. Up to this point she might or might not have been acting a part; but there was no doubting the genuineness of her astonishment now. It could not have been greater if Fred had invited her to come for a ride with him on the tail of a comet. "Why—Freddy—Regent!" she cried. "*You* asking a *girl* to go out with you? I've heard of a blow in the head restoring people's memory, but *this* beats everything!"

"Well—the main thing is—you're going, aren't you?"

"Sure, I'm going," said Marion, her calm self again. "But I'm going with Jack Sawyer. I promised to, a week ago."

Fred was at the end of his resources now. He had offered Marion his sword, to knight him or stab him with, as she saw fit—and she had chosen to strike him across the face with the flat of it. His dignity was gone, his temper was going. He arose angrily from the porch rail. "All right! You can *be* sore, if you want to!" he exclaimed.

"Uh-huh, so I can," said Marion.

Wrathfully, Fred jammed his hat on the back of his head and started down the steps. Without any command at all from his brain, his rebellious mouth opened.

"Well, you *are* a rotten shot!" was his parting taunt.

"And you *are* a rotten sport!" was Marion's reply.

No, Fred's apology hadn't been much of a success. Mentally, he kicked himself all the way home, while sentence by sentence he recalled the calamitous interview, finding fresh mistakes in every word he had spoken, new barbs in each of Marion's. There must be something fundamentally wrong with him. Certainly he had *intended* to do the honorable thing. Was he incapable of it?

Fred felt a dull, pervasive pain, like nothing he had ever experienced before. It was like a spiritual toothache, and it hurt vilely. And there was no one he could tell about it, for they would laugh at him if he did. These literal-minded fools that surrounded him would probably say that he was in love, and Fred knew better. It was nothing on earth but a man's normal protective instinct that had led him to invite (*Continued on page 132*)

Four Heroes And A Heroine Of Whom You Have Never Heard

Two were preachers, one was a village school-teacher, one a designer of machinery and the heroine was a widow who fought hard to support her children—This is the story of a splendid career built by these five for another man

By William S. Dutton

"EACH man," declared Emerson, "is a hero to somebody."

This, then, is a story of heroes!

To be exact, it is a story of four heroes and a heroine. Not one of the five, so far as I know, was ever distinguished at war. Not one of them ever possessed a medal, nor by bold deed saved a life, nor did anything more spectacular than to live this life as he or she, in conscience and in God, believed it should be lived. Probably, nobody before has called them heroic, certainly not publicly or in print.

Yet in their humble rôles, each of these five in turn exerted an influence that helped to build a man and a life! To others about them, these men and this woman simply were neighbors. But to this man—as a boy, as a youth, as a laborer, and as a student—they were figures as thrilling as those of any heroes in history or great novel.

In the secret chambers of his mind he exalted them; and in turn they lifted and exalted him. A thin, white-faced, puny lad, they inspired him to gain strength of body beyond most men. Later, they led him upward to strength of mind and of soul. He was poverty-burdened and ignorant. By silent example, they urged him on toward a goal which they themselves were destined never to reach.

To-day, in the National Encyclopædia of Biographies, and in "Who's Who," you will find the name of Arthur Holmes, this man. That distinction in itself may not mean much; but the record enumerated does. At an age when most men are finishing college, Holmes was working in a machine shop to get funds to study for the ministry. At thirty-one, a humble and unknown preacher, his income was less than five hundred dollars a year. He was thirty-six years old before he ever taught a college class, and that was less than nineteen years ago!

Since then, Arthur Holmes has become one of the country's eminent educators, the author of recognized books, and a lecturer known from coast to coast for his eloquence and power of thought. He holds three university degrees for scholarship, including that of Doctor of Philosophy, and he won every one of them while he worked at a job. For six years he was dean of the general faculty at Pennsylvania State College. Four years he was the president of Drake University, in Des Moines. Resigning at Drake because he felt it was his real mission to teach, he went to the University of Pennsylvania, four years ago, as professor of psychology and unofficial adviser of men. That position he still holds—and he mounted there on the backs of his heroes!

His father, Doctor Holmes told me, was a consumptive. A carpenter by trade, he had come to this country from England, and settled in Ohio. For some unfathomable reason he thought that he could farm, though he didn't know a harrow from a cultivator, nor rye from wheat. Every penny he possessed was lost in the farm venture; and a few years later, at thirty-seven, broken in health and discouraged, he died. Behind him he left his widow and three little children.

"I was eight years old then, the eldest child," Doctor Holmes told me. "We were living in Cincinnati, where I had been born. We had nothing between us and starvation except my mother's two hands."

But back of those mother hands was a will, and courage. Josephine Holmes was of pioneer stock. Her maternal ancestors, the Jessups, had been among the founders of New England. Again, in 1797, they had helped in the founding of Ohio. She was of the log-cabin aristocracy that built America!

A small woman was Josephine Holmes, and yet as big in spirit as women come. Her eyes flashed when well-meaning friends suggested that it might be better that her children be parted.

"Give up my babies?" she repeated. "Appeal to charity? Never! I stand between them and that!"

SHE rented a little farm at Mt. Airy, just outside the city, far enough out for rent to be cheap—a clayey, barren, unwanted farm, considered hopeless by the man who previously had farmed it. All told there were forty acres. A neighbor agreed to take off the scanty crops on shares; and so, at a stroke, those three hungry little ones were provided with food, and shelter, and home love. The grandmother, another Jessup, was called in to care for the house. And then Josephine Holmes, in the place of her man who had died, went out like a man to earn. She became a nurse.

If Josephine Holmes shed any tears, they were dry tears. If she rebelled at fate, it was alone and unheard. What life brought, was life to her; and life was to be *lived!* Was it strange that in the mind of her son should form a glittering, resplendent image, an image of beauty that was to grow with understanding, and was never to be erased? She infused the boy with courage, and courage he was to need.

"Mother," said Doctor Holmes simply, "was my heroine."

He was far from being a husky boy. Remembering his father's fate, the country folks shook their heads when Arthur was mentioned. "He's got it too," they said.

"By the time I was twelve," Doctor Holmes smiled, "it was the unanimous verdict of the neighborhood that I was doomed."

But there was his mother. *She* didn't believe it; so what mattered it if the whole world did? And then, unobtrusively, two other heroes took their places at her side, in the Holy of Holies of the boy's mind.

THE first of these heroes was a country preacher. I don't think the boy Holmes ever saw him, or heard his voice. But that doesn't matter; his grandmother had. During the long winter evenings in the farmhouse kitchen, while Josephine Holmes kept vigil at some distant bed of pain, the old grandmother, in lace cap, lace cuffs, and rusty black, regaled the youngsters with stories. One night, to the accompaniment of the crackling wood stove, she told of this old country parson.

Not a heroic figure, either, was this parson. A trifle bent from years of poring over his Bible, thin of hair, gaunt, weather-beaten, and stern in the righteousness of the Lord. But there was a remarkable fact back of the man. He was entirely self-educated. With a zeal that could not have been short of inspired, he had made his way from a backwoods cabin, through a recognized college, and on to the pulpit. Nor were poverty and lack of opportunity his greatest obstacles. The man was within half an eye of being blind!

"Then, how did he study?" demanded Arthur at this stage in his grandmother's tale.

"By main *might!*" replied the old lady. "A parson he would be, and a parson he became. His one eye was totally gone. The other was so nearly gone that he could hardly see with that. But he got himself a great magnifying glass, which he always carried in his pocket. With that glass he was able to make out print."

"I believe," (*Continued on page 223*)

Arthur Holmes

DOCTOR HOLMES is professor of psychology and unofficial adviser of men at the University of Pennsylvania. For several years he was president of Drake University; but he preferred teaching to executive work, so he resigned and returned to the classroom. He is the author of a number of books which translate the findings of science into popular language. Among his best known works are "The Conservation of the Child," and "Backward Children." Doctor Holmes was born in Cincinnati fifty-four years ago. He was a machinist, then a preacher, and finally a teacher.

Riders Of The Gale

By Neil M. Clark

IT WAS near midnight in the North Atlantic, and the tramp freight steamer "Vaterland," bound from Egypt for Rotterdam with a cargo of onions, was proceeding toward the English Channel. Stars were hidden, and the night was pitch dark. A sailor of the starboard watch, contemplating with profound distaste the monotony of life aboard a slow ship, killed a yawn in mid-career and uttered an astonished oath. By all that wore pants, what was that up yonder?

Sharply recalling his duty, he sang out to the officer of the watch:

"Light *overhead*, sir!"

At the summons, the officer took his place by the sailor's side and they observed the phenomenon together for a few moments. What they saw was a curious twinkling up where the stars ought to be; it seemed to appear and reappear in regularly recurring flashes.

"I believe it's a signal of some sort," said the officer. "Those flashes seem to be in the code. Look! One short flash, one long, and a short—that's *r;* one short—*e*."

There was a long wait. Apparently, whoever was sending the message, if it was indeed a message, was very rusty in the use of the code. Presently, however, the flashes began again. The officer now had his notebook in hand, and what he wrote down read, when completed:

". . . re going to try to land on board."

The event following the receipt of this mysterious message from the sky constitutes one of the strangest boardings of a vessel ever made in mid-ocean. The message was sent by means of a pocket flashlight from the basket of a balloon. The sender was Ward T. Van Orman, one of the world's most famous and expert balloonists. And the landing on deck, proposed in the message, was made successfully, Van Orman and his aid stepping from their basket to the "Vaterland," and to safety, without so much as wetting the soles of their shoes!

Van Orman's story, which I am going to tell, is made up of strange and fascinating experiences like this. He is a scientist, yet has had a life of adventure. An engineer by profession and practice, he is known nationally and internationally as an exceptionally proficient winner of balloon races; although but thirty-odd, he has the record of having participated oftener, and won more frequently, than any other man in the history of balloon racing in the United States. To talk with him is to catch the thrill of his adventures, and to gain glimpses of a wonderful future for which present-day ballooning is paving the way.

It was in the 1925 international race that Van Orman landed on the deck of the "Vaterland." Let him complete that story in his own words.

"Our starting point," he said, "was Brussels. I chose an air current that took us in a southwesterly direction, over the English Channel, and off the coast of France. I had Brest as my objective first. We reached the point in due time, and hardly a mile of blue water lay between us and land; but in a balloon you go where the wind takes you. There was water under us all the time, and we kept on.

"I next thought we might be able to make the small island of Ouessant, which lies off the shore of France in that neighborhood; but we passed between it and the mainland at a distance of some ten miles. That was our last chance for *terra firma*. Thereafter, we headed directly out over the Atlantic Ocean with three thousand miles of water ahead of us, and ballast sufficient for only one thousand. This did not give us any serious concern, for we were equipped to land in the water if necessary, and could have remained afloat in the basket indefinitely. We had supplies of food and water sufficient to last two weeks; in less than that time, I was certain, somebody would sight us and pick us up.

"BUT night came on black as the ace of spades. The last time I figured out our location, I was a little disturbed to notice that, according to the maps, we were flying rapidly away from the lanes of steamship travel, toward seas perhaps as lonely as any on earth, in spite of their proximity to main-traveled waters. It had been hours since we sighted any kind of ship, and we were mighty pleased when, toward eleven o'clock, we saw the lights of the steamer that we later learned was the 'Vaterland.' I decided to try to hail her, and, if possible, land on her, or at least land close enough so her boats could pick us up easily.

"Our chances of being seen from aboard ship, however, were rather slim. We had no flares to attract attention, and anything resembling a match aboard a balloon is dangerous cargo, because of the inflammable gas in the bag. The only thing I could possibly use was my pocket flashlight. It was poor pickings. Still, I knew there are sailors on watch on every ship day and night, with nothing to do but let their eyes roam the sea and sky, and I had hopes my improvised signals might be seen.

"Once upon a time I had known the Morse code, but had forgotten it; however, in my log was a book with a copy of the code. Holding this book in one hand, and operating the pocket flash with the other, I managed to spell out the brief message:

"'We are going to try to land on board.'

"I threw the beam of the flashlight over the bag of the balloon and on the basket and ourselves, to let them see who and what we were. There are few moments in my life that have held a greater thrill than when, after an anxious wait, the lights of that vessel winked. The chief engineer must have done it by pulling out the main electric switch and throwing it in again, for we could see the vessel alternately go dark and light. For a minute or so, 'dots' and 'dashes' in the Morse code followed, and the giant sending instrument was the lighting system of the entire vessel. But what that message was I never learned; the job of reading it was beyond me!

"By pulling the valve cord of the balloon and allowing some gas to escape, I brought the bag down to within thirty feet of the surface of the water, and threw over a sea anchor, which is merely a bell-shaped canvas bag that drags in the water and greatly slows down the speed of a balloon. We drifted at three or four miles an hour.

"Meanwhile, the captain of the vessel had displayed the greatest intelligence. He slowed up the speed of the ship slightly, and the basket of the balloon struck the rail of the upper deck. Several sailors grabbed and held it fast. My aid and I stepped out. The captain then turned the nose of his vessel a little, so that the bag, blown by the wind, swung slightly over the open forward deck; I pulled the rip cord, the gas went out in ten seconds, and the big bag collapsed on the deck in a position perfectly easy to pack up.

"The captain and crew proved a rare lot. They treated us as honored guests, and when I offered to pay for our transportation and the assistance we had had, the captain seemed offended."

On this flight with its curious ending, Van Orman's balloon traveled five hundred and sixty-one miles from the starting point, the greatest distance of any balloon entered in the race. But because of his landing-place, he was declared ineligible for the winner's trophy.

VAN ORMAN is a long-faced, slender, quietly smiling, quizzical, and undemonstrative young man.

Born in Lorain, Ohio, in 1894, he was educated at the public schools, and at the Case School of Applied Science, in Cleveland. Seeking a line of work in which, as he says, he might progress without waiting for too many older men to die he hesitated between the tractor industry and aëronautics; and upon choosing the latter, became associated after his graduation in 1917 with the Goodyear Tire and Rubber Company, at (*Continued on page 144*)

A Rare Little Dog

By Henry Francis Granger

"Roddy," the Skye terrier who is the hero of this true story

THE dogs I have owned—with the exception of Roddy—sold themselves to me. I have my own way of choosing a dog, which is not the way of a bench judge. I search in the puppy's eyes for the recognition by an instinct infallibly discriminating.

If it is *my* dog, he tells me so, unmistakably.

I have selected many dogs in this way, many dogs of many kinds. But I had never owned a Skye terrier. Then, one day, I read "Greyfriars Bobby," that pathetic biography of a dog, by Mrs. Atkinson, and the desire to own a Skye terrier possessed me. It was a desire that cost much effort before it was realized in my possession of Roddy.

Long I searched before I got on the trail of a Skye. Even in some English sporting publications there was no card of a breeder of Skye terriers. I had been looking for weeks, when I dropped in to question a dealer of my acquaintance.

"Do you mean a Scottie?" he asked.

I shook my head, but the negation passed unheeded.

"Now, if it's a Cairn, they're coming on fast. I have some beauties."

"I want a Skye," I insisted.

"There ain't any." His voice grew regretful. "I used to breed 'em, twenty-five years ago. They were keen little dogs."

"Why have they disappeared so completely?"

He pondered this for a time before answering: "Too much dog for their size, I guess. They bred the curl pretty much out of their coats, got 'em looking like overgrown Yorkshires, but they could never make 'em take to coddling. They were a man's dog, and they came woman size."

I knew that fashions in dogs come and go. Within my memory the Newfoundland, the English mastiff and the pug, once numerous and popular, waned and almost disappeared. Almost, but not quite. Always they could be found, and periodically they reappeared at the shows. But now I failed to find anyone who could even remember when they last saw a Skye. These dogs seemed to have gone with puff sleeves and bustles, and I had about concluded that the Skye no longer existed, in this country, when I found one.

This was the single puppy born to an eleven-year-old mother. Through a combination of fortuitous circumstances, when but six weeks old the puppy became mine. Perhaps as compensation for the difficulty in finding him, a name came to me as soon as I saw the puppy. The former owner called him "Teddy." I renamed him "Roderick Dhu." Had I suspected a tithe of his strenuousness I fancy he would have remained Teddy. At any rate, the new name failed to take. The puppy became Roddy, and Roddy he remained.

From the first I was uncertain whether Roddy was to be my dog. Here was but one puppy, and I wanted him, because he was a Skye terrier and I was fearful that I might not find another. Greyfriars Bobby could not love a new master. All the love of his faithful heart had gone out to friendless old Jock. And I was taking Roddy without the assurance that Roddy accepted me. I fancy if there had been a litter to choose from my choice would have fallen upon some other puppy; one less completely sufficient unto himself.

THIS was the impression the six-weeks-old puppy made on me, an impression of independence that might be trained in obedience, but would yield nothing to wheedling, a self-sufficiency that might give lavishly but could never be coerced. I realized as soon as I took him up in my hands that this mite of energy would never become a lap-dog.

He was not hostile; there was a friendly wriggle to his roly-poly body, but no flicker of a wet little tongue, and his shining eyes met mine in an impersonal and fearless look. He wriggled out of my hands, and leaped boldly from my knee to thud upon the floor from a height five or six times that of his own, and immediately proceeded to chew up my shoe laces.

When I came for the puppy his mother lay curled up on a table.

"She gets there to escape him," the owner explained. "She can't get a moment's rest upon the floor."

I tucked Roddy under my coat and carried him home. Followed hectic days. The puppy seemed never to sleep, was never still. I took him out for his first lesson under the leash, expecting him to hold back, confused and frightened. He strained at the leash with convulsive energy that never abated during the journey around the block. Half the time his diminutive fore legs were in the air. Before he was two months old, he was wearing a breast-harness upon his daily walks; it would have been dangerous to subject him to such violent straining and lunging upon a collar.

AT HOME he was an epitome of destruction. Nothing escaped that he could reach; but there was never a fugitive gesture about his depredations. He went boldly upon his mission of destruction, and when punished returned promptly to his labors. "Irrepressible" but mildly characterizes him. At an age and size when such effort appeared beyond his power, he was bounding upon the chairs. Thereafter, articles upon desks and tables were in jeopardy if a chair stood near. A list of the things he damaged or destroyed would embrace most of our belongings. And all the time he evinced no particular interest in or affection for any of us. He disliked to be picked up, rebelled at petting, as he did at brushing, made none of the usual loving doggish overtures.

I had reached the regretful conclusion that he would never become my dog, and my patience was sadly frazzled, when our daughter came home. Our daughter had married in the Army, and now they were on the way from Texas to a new station in Virginia. When they went on, Roddy accompanied them. They were overjoyed at the gift, and I saw him go with relief. I had never before failed where I had tried to win a dog's affections. That I had failed with Roddy, I could not doubt; I had not yet come to the understanding of a Skye.

Roddy was nearly a year old before I saw him again. A rumpled bundle of hair, buff and grizzled and black, leaped upon me as I stepped from the car at my daughter's door. It was Roddy, grown but unmistakable; a Roddy I had never known before.

Again and again he leaped upon me, yelping staccato greeting, until I caught him up in my arms, where he wriggled wildly, quivering and whining.

The puppy that had never seen me since he was four months old appeared to remember me. Not only did he remember, he loved me. Still whining, he wriggled from my arms and disappeared, to return carrying a stone in his mouth, which he laid at my feet. He remembered, he loved me, he had told me so as plainly as a dog

UNIVERSITY OF CALIFORNIA

can talk—they talk plainly—and now he laid a gift at my feet.

Always, after a parting from those whom he loved, Roddy brought gifts. He never kissed, he never jumped upon a lap; he cried his greeting in the first burst of joy, and then, whimpering all the things he knew we might be too dumb to understand, he hurried to bring his gift—a stick or stone, a piece of broken crockery, a tin can, perhaps a cherished bone, something he could get quickly and give.

Enthusiastic were the reports I listened to of Roddy, his intelligence, his grit, his popularity. Never since coming to his new home had he destroyed anything or caused any trouble. Here were woods and fields, through which he was free to roam at will, and there he expended his surplus energy harmlessly. In the evenings he was a decorous member of the little family, never obtrusive, but always close beside the new master or mistress. At night he was a watch dog whose sharp ears no stir or sound escaped.

As he grew older, it became his custom to accompany his master to army headquarters, lying quietly beside his desk through long hours of "paper work," following on his rounds of duties, even marching close behind him on parade.

BUT it was for his prowess that Roddy, while still a puppy, had won renown. Amphibious, almost, as a seal, he was ever in the water, regardless of the weather or season, his heavy double coat impervious to chill. He would swim incredible distances in heavy seas, just for the joy of it, retrieve anything thrown or for which he was sent, and dive in water too deep to wade, and fetch up a stone. Diving for stones was his great delight. Down he would go, entirely under, and he would remain until he secured, if not the one thrown, a stone. Upon land no hole, culvert, or drain escaped his investigations.

But it was for more questionable activity that Roddy won his greatest renown. An Army Post, if the "K. O." is a human being, as most of them are, swarms with dogs. There was no ban on dogs at this post, and their number and variety was great. Roddy was not gregarious. Generally there would be one with whom he associated upon terms of intimacy, but other dogs, if they came too close, were anathema. And Roddy was not content to growl and bark his disapproval if the offensive one was within reach. With a rush in which there was no hesitation, no consideration of consequences, he would hurl himself upon the other, seizing and clinging as he struck.

I do not understand where the prompting to seize and cling came from; I do not know whether or not it is characteristic of his breed; but Roddy clung to a hold with almost the tenacity of a bulldog. Certainly, the suddenness and fury of his attack and the tenacity of his grip saved him from much. He was a disconcerting problem to most big dogs, something entirely outside their experience, and from which their first impulse was to escape.

Notwithstanding, Roddy had not gone scatheless. He bore battle scars while still a puppy. Several times he was rather horribly mauled. But there was no lesson in such chastisement for Roddy; no experience weakened his indomitable spirit.

Never once during my first visit did the little dog accompany his master to headquarters. He could not be enticed away. All day he followed me about or lingered close beside me. Once upon a ramble, I came upon a remarkable (*Continued on page 184*)

(In the oval) A typical "wild dog," except in color. Most of the Inwood pack show little white. This dog, a female, is an enormous animal, as large as a great Dane; a powerful mongrel with the size and cunning to subsist in a wild pack which lives by foraging, and ruthlessly slaughters its weaker members

(Above) Roddy and Tinker, a white bulldog, with their master and friend, Henry Francis Granger. Mr. Granger tells in the accompanying article an absorbing story of Roddy's gallantry. (At the left) The snow-clad slope where the pack turned on Roddy. This photograph was taken at Inwood, part of New York City, where a pack of dogs has run wild for years, reverting to the savage state of wolves

A New Dot and Will Story

Concerning Husbands

By Fannie Kilbourne

ILLUSTRATED BY T. K. HANNA

THERE is one thing that never gets over surprising me, and that is how much alike husbands are. There seems to be something about just getting married that gets them that way. Goodness knows, they apparently start out different enough. Take Rosie Merton's husband and Dulcie Lane's, for instance. Before they were husbands, nobody would ever have thought of their being anything alike.

Howard Merton was tall and thin and a dentist and Baptist and a Democrat, and devoted to sleight of hand. Roger Lane was short and beginning to get a bay window already. He worked in the bank and was a Universalist and Republican and couldn't even enjoy a card trick, to say nothing of doing one.

And yet, after a very few years of marriage, to hear their wives talk sometimes, you'd actually think the two girls had married the same man!

Just for instance, they seem to be exactly alike in regard to the tops of their chiffoniers. And both of them exactly like Will, who never used to seem a bit like either of them.

"I just wish you could see the top of Howard's chiffonier!" Rosie exclaimed one Monday morning when the three of us met, as we so often do at the Busy Bee, doing our daily marketing.

"I don't have to see it," I said feelingly. "I know just what it looks like. I cleared off Will's yesterday morning. I gave him a nice pair of military brushes for Christmas and, honestly, you could hardly see them for the litter. There were three neckties and a bunch of keys and some cigarette coupons and a tire tester and a seed catalogue and an old envelope and a sweater and a new wall pencil-sharpener he'd bought for the office. That's a good average day!"

"And I'll bet he didn't want you to put away a thing," said Rosie. "Howard never does."

"Of course he didn't," I said. "He was all upset because I threw away the old envelope. It seems he had some of the office income tax figures on it. 'Just leave my things alone!' he always says. But, heavens above! If I did, in a couple of weeks the pile would reach the ceiling."

"Everything Roger leaves on his chiffonier," said Dulcie strong-mindedly, "I just sweep into his top drawer, and let him rave. Then, after a while, when the drawer gets so full he can't shut it, he has to clear it out."

The way that all husbands are most alike, though, is the way they stick together. All of them, for instance, think it's just funny, the way Scott is always swapping things, till actually poor Corinne says she never goes out with him in their new Medal Light Six without expecting to come home in the side car of a motor-cycle with a lawn mower and a second-hand washing machine thrown in. And not a wife in Montrose ever did find out what the joke was about Frank Kirsted and the six quarts of ink that the men were always kidding him about.

Nobody, however, ever thought of this sticking together of the men's as anything serious till the matter of the Porter divorce came up.

EVERYBODY in town liked Mrs. Beth Porter. She used to teach the primary room in the public school. "Miss Beth," the children called her. When she married Sam Porter she kept right on teaching, and they called her Mrs. Beth. She taught school for ten years after she was married, and did her housework besides, and put all her money into Sam's business.

For a long time it was like pouring money down a pit. I never shall forget the old gray sweater she wore for three winters instead of a coat. And she was so sweet and friendly and cheery through it all. And then suddenly, it was as though the pit had got full of money at last and it began to pile up on top. Sam started making money hand over fist.

Everybody who knew Mrs. Beth was tickled for her. If ever a woman deserved success, she did. She gave up her position, though they had been going to make her principal that fall; and Mr. Porter bought a nicer house, and they got a car. The business kept paying better and better and better; it was generally understood that Sam Porter was going to be one of the richest men in town. And everybody was tickled to death to see Mrs. Beth getting her deserts.

And then!

The Porters went away for the summer, and all during the summer gossip of one sort or another began to filter back to Montrose. And when fall came, and it was time for them to come back, the truth came out. The Porters were divorced, and Mr. Sam Porter was coming back to Montrose with a new wife. A young, beautiful, Chicago girl.

All of us girls who had gone to school to Mrs. Beth and loved her were shocked to death. It was the sort of thing you read about in the papers, but never expect to see happen in your own town. A woman sticking by her husband, working and saving and helping him, and then being shucked off like an old shoe for a younger and prettier girl.

"Well, Mr. Sam Porter can make up his mind to one thing," said Rosemary; "nobody will call on his new wife or have anything to do with her!"

"Much he'll care if nobody does," said Mrs. Frank Kirsted, who comes from New York and is therefore very worldly. "If she's from Chicago, she'll want to get in with the speedy Harvester bunch, anyhow, and anybody who's got as much money as Sam Porter can get in with them. If you're rich enough, the Harvester crowd doesn't care if you've just buried the body."

"I don't agree with you at all," said Dulcie, who makes it a point always to disagree with Mrs. Kirsted, to show that she knows what's what, just as well as anybody from New York. "Mr. Sam Porter has always lived in Montrose, and he would want his wife to associate with the best old families, like the Burrises and the Scogginses. He knows the Harvester crowd isn't the real thing in Montrose."

There was considerable difference of opinion, but on one point we girls were all firm: We wouldn't have anything to do with the new Mrs. Porter. The men didn't have so much to say about it, one way or the other. Rather kidding us girls, in fact, for running such a gossip fest.

What happened makes me mad, even now, to remember.

THE first thing of all, Mr. Sam Porter came back alone, and went right to see Will. He said he was considering buying the Van Cortland place. Will nearly swooned with joy. The Van Cortland place is a perfectly beautiful house with ten acres, and Will's been trying to sell it for five years. And right now, of all times, just when Father and Mother Horton had gone out to California, and Father Horton is really beginning to pull out of the business, it meant an awful lot to Will to make a big sale like that.

Mr. Sam Porter said he was bringing his wife down to stay at the new hotel over the week-end, to see the Van Cortland place, and would Will and I have Sunday dinner with them there? He wanted us to meet his wife, he said.

Well, it really was a problem. At first, I said I positively wouldn't go. But, as Will pointed out, if I didn't, it might mean our losing the sale. Jackson Veerley had the house listed too. Mr. Porter could buy it through him just as well.

"Besides," Will said, "you don't know a thing about his new wife. She may not have had anything more to do with the divorce than you did."

"Well," I said dubiously, "of course that's true. I don't suppose there'd be any harm in just meeting her. It doesn't seem exactly charitable to turn thumbs down on her without ever having seen her."

"No," said Will; "I think we'd better be broad-minded about it."

Then we talked a lot about the need of people being broad-minded and charitable

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

and everything. And accepted Mr. Porter's invitation. Besides, as I realized, I didn't have to tell a soul I'd gone.

So we went. The Porters had a private suite in the hotel, and the instant the new Mrs. Porter came into their sitting-room, I knew she was just like what I had thought she'd be just like. She must have been twenty years younger than Sam—about my own age, I decided. But she certainly looked as though she knew her way around.

She had one of those baby faces, with big eyes all touched up, a little mouth with a lot of lipstick, and tiny white teeth like pearl beads on a string. She was just the kind of girl that men never see through. They always think she's sweet and innocent and helpless.

She had on a gray velvet dress with gray fur trimmings, and she came in with her hat on. I had on a new raccoon coat Will had given me for Christmas, and a hat that I'd thought was perfectly stunning till I saw Mrs. Sam Porter's. She made me feel about as stylish as a pot roast.

"I hope you two are going to be great chums," Sam said. "I want Mrs. Porter to see a lot of all you girls."

I said nothing, thinking that he wouldn't, if he knew how all of us girls had talked about her. Dulcie was evidently right, however. It appeared he wasn't interested in the Harvester bunch, and he knew that the people he and Mrs. Beth had known were too old for the new Mrs. Porter.

He might have all the money in the world, but what he really wanted was to have his wife in with the young married crowd of the good old Montrose families. Which, when you came right down to it, was our crowd.

I never had liked Mr. Sam Porter, and I didn't like him any the better now just because he was laying himself out to be nice to me. Still, when the next day he actually took title to the Van Cortland place, I had to admit I was glad I'd gone to dinner.

He and his wife decided to stay on at the hotel while a lot of repairs and building-over was being done to the new house. And when he began to consider buying an extra stretch of land past the factory, to add to his business, and Will and I figured up what the commission would be, we decided that, little as we liked the idea, we'd better invite them to our house for dinner.

I KEPT this absolutely dark, never telling a soul I was going to have them, and when you realize that we live right next door to Miss Waters, the town busybody, and even she never knew it, anyone can see how cautious I was. Thanks to the fact that it was pitch dark by six o'clock, even Dulcie, who lives on the other side, never saw them come. Honestly, I felt as guilty and secret about it as though I had robbed the bank and were disposing of the booty. I was simply terrified for fear Dulcie would get wind of it.

But I needn't have worried. The very next night after I'd had them, I happened to be looking out of the side window about six, watching for Will, and to my amazement whom should I see going into Dulcie's but the Sam Porters! I could scarcely believe my eyes; but there was no mistaking Mrs. Porter's fur coat. Dulcie had the curtains of her living-room and dining-room, which are on our side, down so tight that you couldn't see even a crack of light.

The next day at the Busy Bee, though, she told me about it. It seems that the Porters had told her about being at our house the night before. Dulcie felt just as guilty as I did but, as she said, Mr. Porter was transferring his buying account to the bond house that Roger had just gone in for, and what else could she do? We agreed that we wouldn't tell a living soul, though.

While we were talking, Mrs. Frank Kirsted came in. She was just beaming.

"What do you think?" she exclaimed gleefully. "Frank is at last getting out of the Harvester Company!"

The Frank Kirsteds had never gone with the Harvester crowd, and Frank had never liked his job there.

"He's going in with the Samuel Porter Company as personnel man!" she went on gleefully. "At a twenty-per-cent increase in salary. We're simply tickled pink!"

Of course Dulcie and I congratulated her, and said how Frank had certainly earned it and so on. We had already got our groceries, and as we turned to go out, Mrs. Kirsted said, very casually:

"Oh, by the way, don't make any date for a week from Friday. I'm going to give a little luncheon for Mrs. Sam Porter."

She couldn't have felt quite as casual as she sounded, though, because she got quite red.

"You know, really," she said defensively, "she's an awfully cute girl."

And there wasn't a thing Dulcie and I

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

were in a position to say, except that yes, she was.

Rosemary Merton held out the longest. Her husband being a dentist, she could afford to. But finally Sam Porter decided to have Howard do a lot of expensive bridge work for him, and Rosie gave a bridge party for Mrs. Sam Porter.

Honestly, it was awful! Not one of us wanted Mrs. Sam Porter, and yet, inside of a month, she was one of our crowd. She entertained so much that we were constantly indebted to her. They weren't in their new house yet, but she'd give bridge luncheons out at the Country Club. On the nights of the hotel dances, she and Mr. Sam would invite six couples of us for dinner there first. All the kind of expensive things that we couldn't do, ourselves. But of course, we had to ask her to everything of any kind that we did have.

She wasn't really interested in a single thing that we were. She thought babies were a bore, and that we'd been fools to have any. She boasted of never touching a needle. She joined our Thursday Musical Club, and talked all through the numbers.

We all studied the home-decorating magazines, and took lots of pride in having our houses in really good taste. But she as much as said that if you didn't have an interior decorator from Chicago, the way they were going to, your house would be sure to be all wrong, whatever you did.

She made fun of Dulcie's clothes to Mrs. Frank Kirsted, and of Mrs. Frank Kirsted's to Dulcie. She said it was vulgar of Corinne to be so pleased over getting a second-hand washing machine.

There wasn't one thing about her that another woman would like. And here she was, apparently the most popular member of our crowd, and the bosom friend of all of us. It was enough to make you sick.

BUT what really did make us all sick was the way the men acted. Each one of them, in the privacy of his own family, would admit that Sam Porter was a loud-mouthed bully, and would even practically agree that Mrs. Sam probably was a cat.

But let as many as two of those boys get together, and if they didn't sing another tune! They were all doing business with Sam, and not one of them would say a word against him. We didn't mind that much, though; after all, business is business. What made us froth at the mouth was the way they all acted about Mrs. Sam Porter.

If one of us so much as breathed a word against her, they'd begin.

"Oh come on, girls, put up your hammers!" Will would say. And the other men would laugh appreciatively.

"You make me tired," Corinne would answer. "You boys act as though a girl couldn't have an honest opinion about another one without being a cat."

The men would all laugh again as though that were a good joke.

"How the little dears do love each other!" Frank Kirsted would say.

Roger Lane would grin.

"Just let a girl be good-looking," he said, "and watch how the rest of them harpoon her!"

Dulcie Lane bristled. She's twice as pretty as Mrs. Sam Porter.

Mrs. Harriman was a peppy, red-headed little woman, and she had a scheme

"All the rest of us seem to like each other well enough," she said acidly. "I suppose that's because we're all homely mutts!"

Then the men would just about shout with glee.

"There, there"—one of them would pretend to stroke a kitten. "There, there, don't get all excited." He'd wink at another husband. "Funny how you can't even mention that little girl's name without setting off the fireworks."

A chorus of masculine guffaws.

Howard Merton would try to look devilish.

"Think I'll have to get better acquainted with little Mrs. (*Continued on page 198*)

Billy B. Van as he appears on the stage

Fate Handed Him A Lot Of Lemons—

And he opened a lemonade stand!

By Lawton Mackall

OCCASIONALLY Dame Fortune disguises herself as Old Lady Calamity, and pays us a surprise visit. Usually, it is years after her appearance before it dawns upon us who she really was.

Exactly this experience happened to Billy B. Van, the stage comedian. Audiences of to-day who laugh at his droll tomfooleries would be surprised to learn that, twenty-four years ago, Van was overtaken by what looked like Black Disaster. He was a struggling young actor, just beginning to get along—when suddenly his health broke down, and he found he had tuberculosis.

At the very outset of his career, he had every reason to feel that he was done for. Surely a tragic situation for a "funny man" to be in!

But, curiously enough, this very stroke of hard luck led to his achieving a phenomenal success in a business enterprise outside the theatre. But for his breakdown, and what he learned through it, he would never have been able to put over a company which in its first year sold a million cakes of soap.

Back in 1902, however, no "silver lining" was to be seen on any part of Billy Van's horizon. His only hope, the lung specialist told him, was to go to Arizona.

"That doctor might as well have told me to go live on a desert island," said Mr. Van, "because if I had gone out to Arizona with no more money than I had then, I'd have starved to death before my lungs had time to get me.

"So I stayed East and, as soon as I could, I went back to my acting. I felt pretty shaky, both on the stage and off, but I managed to get by for a number of weeks. However, one night while we were playing in Boston, I was so weak and feverish that I could barely drag myself through the performance. I did keep going, though, till the final curtain. An actor always *can*, because he knows he *has* to. In the forty-odd years I've been connected with the theatre, I've seen a good many performers faint in the wings after they had made their exit; but I've almost never seen anyone faint on the stage.

"Anyhow, my collapse didn't happen till the show was over. When they took me to my room at the old Quincy House I knew that, whether I ate or not, I was done with acting for that season.

"IT SO happened that the doctor who was attending me was also attending the proprietor of the hotel, Mr. Oscar Barron, who had been very ill. Through this doctor Mr. Barron heard about me and went out of his way to be kind. We became sort of companions in convalescence. You couldn't exactly say we were in the same boat, because his was a yacht and mine was—well, considerably less than a floating palace.

"Mr. Barron told me about the fine air of New Hampshire. He was very well acquainted with that state, as he owned a number of hotels there. He was sure that if I got out among the New Hampshire pines I'd soon be on my feet again.

"And he was right. Wobbly as I was when I got off the train at a little village on the shore of Lake Sunapee, I began to feel better with every breath I drew in. It didn't take me any time at all to decide that this was the place for me. By good luck, I found a little old ramshackle house which I was able to buy for next to nothing.

"Well, I lived in that shack and slept outdoors and watched Nature's Spring Revue. It certainly beat the Easter parade on Fifth Avenue! I tell you, there's nothing like waking up on a crisp morning and seeing about a million new green pine needles all dolled up with dew. I'd lie there and drink in the fragrance of those New Hampshire pines, and feel good all over. The only medicine I took was the wonderful air I breathed in. And it certainly did the trick for me!

"The scent of those trees seemed to me such a godsend that I got to wondering if there wasn't some way I could take it back to the city with me. And my next thought was that maybe other folks would enjoy that piney fragrance as much as I did. Then I had a third thought: Perhaps there was money in my idea. And if ever a man needed money I was that man.

"Of course, if I meant to put that pine scent on the market, so to speak, the only thing to do was to incorporate it in something which everybody could use. But the question was—*how?*

"I went at the problem as if I were playing the game of Twenty Questions. I asked myself: 'What is it that everybody in a household needs and uses, and that smells sweet and refreshing?' After naming over nearly every article in a house, from attic to cellar, the answer came to me: 'A cake of soap.'

"Well, I had my idea; but that was all I had. I was no more in a position to manufacture soap than I was in a position to build airplanes. I didn't have even a formula, and my ignorance of chemistry was one hundred per cent perfect. I was just a low-priced actor out of a job.

"As there seemed to be no overwhelming demand for an ambitious young soap maker who had never made any soap, and who had no prospects of ever making any, I tucked the idea under my hat and went back to earning my living in the one way I could—by making a fool of myself on the stage.

"Still, I hoped that perhaps some day I might put over a Big Thing. In a sort of day-dream I'd hear folks say, 'See that little guy in the big limousine? That's Billy B. Van. Made his money in soap. Can you beat it?' Then I'd come to with a bang and realize that I was due on the stage in ten minutes, and that unless I hustled into my baggy pants and trick shoes, and reddened up my nose there would be no thirty dollars for me on pay night.

"BUT let's go back a bit. . . . I suppose that people who see me do my daily dizzy must wonder how I got that way in the first place. Well, I'm afraid my childhood was to blame. Probably the joke virus got into my blood from having been born in Chestnut Street, Pottstown, Pennsylvania. It was the first house this side of Silver Creek. I tremble to think that a few inches more and I would have been born a fish. But I got my first taste of make-up after we had moved to Philadelphia. My mother saw a notice in the paper, advertising for children for the chorus of a juvenile production of 'Pinafore,' and she traipsed me down to the North Broad Street Theatre to see if I would do. S. J. Stewart, the manager, decided I would. Engaged me right off at a regular salary. Three dollars a week!

UNIVERSITY OF CALIFORNIA

"He asked me what my name was, and I spoke up proudly, 'William Webster Van de Grift.'

"'Not on the program!' he snorted. 'What d'ya think I'm going to hand out, a billboard?'

"So he put me down as 'Master Willie Van.'

"That was how I got my stage name. As I grew older, the 'Willie' became 'William,' and finally 'Billy,' when the managers thought that the audiences and I had got better acquainted."

"But how about your middle initial?" I asked him.

"Oh, I put that in for luck," said Billy *B.* Van. "It stands for 'Busy'. I wanted to be an actor who was seldom 'at liberty' —as we say on Broadway when we mean we're out of a job.

"But to get back to my own boyhood. 'Pinafore' had hardly started when measles broke out in the troupe. I was the only one of the original lot of children who didn't get it. But one of the first to come down was the boy who played the part of Dick Deadeye, and I was promoted to his job. That was where a deadly germ bit me—the Acting Bug.

"Father was alarmed at the symptoms, and decided to cure me while my case of footlight fever was still in its infancy. You see, he was a locomotive engineer, responsible every day for the lives of hundreds of people, so he had no use for flightiness. To squelch my nonsense, he put me in J. G. Brill Company's car shop when I was about fourteen. That ought to have made me practical; but it didn't. In the four years of my apprenticeship as a car builder, the most important work I did was singing and dancing during the noon hour to amuse my fellow employees.

"VERY often in the evenings I'd take part in amateur comedies and 'supe' in professional shows. Any time an extra person was wanted, any time an 'artist' needed a helper, I was Johnny on the spot. My specialty was taking part in benefit performances. I'd watch the papers for announcements of any that were to be given, and the moment I got wind of one I'd rush to volunteer my services. Usually the only pay was sandwiches and coffee.

"The poorest free lunch I ever drew was one I ate, for the audience's amazement, when I acted as assistant to a stage hypnotist. This delicacy was a fake tallow candle that was really a parsnip. The professor had prepared this choice morsel by parboiling the parsnip and pushing it through a tin pipe so that it had exactly the shape and appearance of the real candle which he passed around through the audience to prove that the stunt 'involved no trick or deception.' My duty was to sit planted in an orchestra seat till he said, 'Will some gentleman be so kind as to come up here on the stage and assist in a scientific experiment which I am about to undertake? . . . Thank you, young man. Don't be afraid. Come right along.' Then I'd go up and get 'mesmerized,' and eat the parsnip while in my 'trance.'

"IF I say so myself, my services were continually in demand—for nothing. Some mornings when I punched the time clock at the Brill plant, I'd be feeling pretty sleepy from my evening labors as a spear-carrier or what-not. But there's nothing like a hard-boiled egg for bracing you up—and my foreman was just that. Nevertheless, after four years in the Brill shop, I was pronounced ready to ply the trade of car builder. This was a tremendous relief to my father.

"But when I immediately went and got a job in the theatre, he gave up all hope of ever making anything out of me. I guess all comedians have been the despair of their parents.

"My job was that of property boy. I had charge of all the small articles used on the stage. If there was a tavern scene where goblets and flagons were used, it was up to me to see that those utensils were where they ought to be before the curtain rose. If the Fatal Papers were to be brought forth at the Big Moment, I had to see to it that they were stowed away in the drawer, or in the villain's pocket, or wherever they were to be produced from. Sometimes my youthful desire to be funny led me to 'forget' things—to the great annoyance of the actors, most of whom took themselves very seriously. Once, when a melodrama was being played, I 'neglected' to put any blank cartridges in the heavy-man's pistol. The gun didn't fire, but the manager almost fired me.

"Deciding that in the rôle of 'Props' my talent for comedy was unappreciated, I teamed up with a boy who had been working in the same theatre, and we went out on the road doing a blackface act.

"We played a whole season at Doyle's Pavilion in Atlantic City, close by the boat dock. It was quite a well-known place in those days. Every time the boat came in, the show would start. Needless to say, on holidays and special excursion days there were any number of shows. It got so that I dreaded to hear a whistle blow. For years after, if I heard a steamboat toot I felt I had to start in telling jokes right away.

"If my partner and I had been paid by the performance we might have got rich. Instead of that we received a flat ten dollars a week apiece, and our board. I never dreamed then that I'd some day come back to Atlantic City to play in a real theatre at a salary of a thousand dollars a week.

"Long before that could happen I had to go through grade after grade in the School of Experience. My blackface work as a whistle-hopper was followed up by a tour with the California Minstrels. For a while, I was in a circus as part of a team billed as the Flying La Mars. One of the team would hang upside down and hold me by the hands and throw me to his partner, who would catch me. But the partner who was supposed to do the catching was cross-eyed. Yes, honestly he was! And as I'd be flying through the air toward him, I'd wonder if he was going to grab me or where he was looking. Finally, I decided that being pitched at a cross-eyed man for twelve dollars a week was no bargain.

"BY THE time I was twenty, I had worked my way up through burlesque and vaudeville, and I was playing comedy parts with a stock company in Washington. I'd heard that Washington had a lot of interesting sights, but during the year and a quarter that I lived there I never saw any of them; you see, we had a performance every night, and three matinées—and we rehearsed every morning

What People Want To Know About Etiquette

By Nella Braddy

PHOTOGRAPH BY BLANK & STOLLER

Miss Lillian Eichler, author of a widely known book of etiquette, has received thousands upon thousands of letters from persons in all walks of life asking her advice about clothes, wedding ceremonies, dinner menus, greetings, and all the rest of the things that go to make up social customs. In this article she tells about these letters, and gives seven fundamental principles of good manners

IN A BIG studio room in New York, near Washington Square, a young girl in a pink smock is seated at a typewriter answering letters. She takes up a double handful—one hundred and sixty, she tells me—and adds, "This is the crop for to-day."

The day before there were ninety-eight, and the day before that a hundred and fifty-seven. The average runs to a thousand a week.

They come from India, Japan, Arabia, Chicago, New York, Cheyenne, Portland, New Orleans, and a thousand little out-of-the-way places. Many are signed with names you would recognize at once if they were set down here. They come from senators and senators' wives, from university professors, business men, college girls, débutantes, truck drivers, street sweepers, dish-washers, millionaires, and jail-birds. Some are written on thick, beautiful stationery with crests and monograms at the top, others on scraps of paper bags and edges torn from newspapers. Taken all together, they make up an extraordinarily interesting correspondence. And the young lady who answers it is Lillian Eichler, author of the "Book of Etiquette."

"These letters," I began, for I had come to find out what I could about them, "are nearly all from women, of course."

"Oh, no," Miss Eichler replied quickly. "About half are from men; but there is a difference in the questions they ask. Women want to know all sorts of things—what to wear and what to serve, and what to do when company comes. Men usually want to know how to act when they are with women. Women want to be fashionable, and do things in good form. Men, generally speaking, want to give the impression (to women, especially) that they have been everywhere and seen everything, and are thoroughly worldly-wise and just a little bit tired of it all.

"It is the men, as a rule, who get etiquette so mixed up with love that you can hardly tell them apart. I do not profess to be a counsellor for the lovelorn, but what can I do when they throw their troubles at my feet and ask me to straighten them out? You would be surprised to know how they unburden themselves in these letters. Here is one from a nineteen-year-old boy in Montana who says that he has been in love with a girl for a great many years, and will I please tell him how to ask her to marry him so that she will be sure to do it. Last week there was one from a widower in Idaho, who wanted to know how to make a girl love him. He adored her; but he was apparently the quiet, steady sort, while she was what he called 'jazzy.'

"A young man in love is a hard person to manage, and likely to do as he pleases. But whenever one of them writes to me for advice I give him the first law of good manners everywhere: 'Be natural,' which simply means, 'Be sincere.'

"MOST of the questions asked concern marriage, and this is true, whether they come from men or women. This one that I have just answered is from a woman of thirty-eight, who all her life has dreamed of being married in white satin with orange blossoms and a veil. She wonders now if she is too old. Here's another from a girl of twenty, recently divorced, who is to be married again. The first wedding was before a justice of the peace, and she wore a dark traveling suit. This time she wishes to be married in a church and have a wedding with attendants. But she does not want to do it if it will not look well. A short time ago I had a letter from a girl in a mining town in Pennsylvania who wished to know if it was permissible to wear a white wedding gown in November.

"One of the most unusual letters I ever had was from a girl who wanted to sing at her own wedding. A great number come from Protestant girls marrying Catholic men and *vice versa*. Many are from mothers who want to know about the formal features of a wedding—what food to serve and how to seat the guests. One mother wanted to know if she could wear a diamond necklace at her son's wedding, and she in mourning, and another wanted to know if she should kiss the groom."

"WHAT did you tell her?" I asked. "And what did you tell the woman who was afraid she was too old for orange blossoms, and all the others?"

Miss Eichler smiled.

"I told her to go ahead," she replied. "As for the other letters, they are always answered with the bride in mind. The wedding day belongs to her. Her father bears all the expense, and her family does all the planning. If there is a difference in religion, it is the groom's place to yield. If he will not, a compromise must be reached. If the bride wishes to sing at any time during, before, or after the ceremony, it is her privilege to do so, though such a procedure, as I told the girl who asked about it, would not be in the best of taste. If she wishes to wear a white satin gown and have a veil and orange blossoms, she may; but she must be careful, if she is over twenty-five, to have the gown cut simply, and the veil and flowers not too elaborate. White is appropriate for any month in the year; but diamond necklaces are never, under any circumstances, suitable to wear with mourning.

"I almost never get a letter from the father of a bride. But once the captain of a small river boat asked me if he could use his title on the wedding invitations, and I told him, 'Yes,' because I knew it would make him happy. However, it is not in strict accord with the best standards to use courtesy titles, except among intimate friends, and never with anything that has a formal touch. Once a man asked if he should stand the expense of his daughter's wedding breakfast if they had it at a hotel. He seemed so reluctant (and so eager to have the groom do it) that I hated to tell him he must.

"A little while ago I had a letter from a New York man whose fiancée was living in Arizona. They wanted to be married, but he did not have money enough to go out and fetch her. He asked if it would be all right if he sent for her. At first glance, you might say that a man who has not money

Digitized by Google
Original from
UNIVERSITY OF CALIFORNIA

enough to go and get his bride hasn't enough money to marry on. But *common sense* is the better part of etiquette, and I told him that if he could get her consent, he certainly had mine.

"Offhand you would say that a girl should never be married in her fiancé's home, or be given away by a friend of the fiancé's family; but let me tell you of a case where it happened: For ten years this girl had been under the guardianship of her fiancé's family, and as it was *her* home as well as her fiancé's, the family naturally wanted the wedding to take place in it. Moreover, a friend of her fiancé's father asked to have the honor of giving her away, and as her own father was not available, common sense was allowed to prevail over formal etiquette.

"As a rule, the letters I get are from people between seventeen and forty. Before seventeen they usually have not begun to think of good manners, and after forty, they either have them or have given up all hope of ever getting them. Occasionally I hear from a much older man or woman. Usually they write about some special anniversary, such as a golden wedding. One old couple, who were members of a church which disapproved of dancing and playing cards, wanted to know what they could do for entertainment on their fiftieth anniversary; whether they should have the ceremony before or after supper, and if it would be correct to march to the church and, if so, in what order they should go.

"I COULD tell from the tone of the letter that these were people who were not accustomed to great formality and would not enjoy it. I recommended a simple, friendly gathering, with the ceremony before supper, and the guests walking together informally instead of in a stiff line, with the old man and his wife at the head.

"Next in number to the letters asking about how to get married are those asking about how to overcome self-consciousness. Some of them are positively heartbreaking. Take this letter from a minister, for instance, who was forced to give up his pulpit because he was so uncomfortable in his contacts with the members of his congregation. He was an ignorant country boy, and his wife was an ignorant country girl. They worked so hard trying to fit themselves for their calling that they had no time to pick up any of the social graces that a minister and his wife must have. Now they've given up, and are raising chickens in the country.

"Here is a letter from a boy in Indiana, who wants to know how he can learn to talk to girls. He says he is completely tongue-tied when he is with a girl he likes, though at other times he gets along all right.

"In that file over there," said Miss Eichler, pointing to a huge cabinet in the corner, "are hundreds of letters requesting information about social functions—those formal affairs which are full of awkward moments for the uninitiated. They ask how to go down a receiving line, what to do with a girl when you have finished a dance with her, what to say to a man under the same circumstances; how to fill in a lull in the conversation, what to say when you introduce or when you are being introduced, and what to talk about at a reception, and what to do at a tea.

"It is easy to answer these letters because the rule in all cases of self-consciousness is the same, a rule, which, unfortunately, is easier to give than it is to follow: *Forget yourself*. The boy who found trouble in talking to the girl he liked struck the keynote. With other girls, he did not particularly care what kind of impression he made, and he was perfectly at ease. But when he was with the girl he wanted to impress he was so afraid of doing the wrong thing, he naturally multiplied his chances of doing it a hundredfold.

"ONE of the biggest mistakes you can make, if you are self-conscious, is to think you have to be saying something every minute of the time. It is possible to go down a long receiving line gracefully without saying a word if you bow and smile pleasantly. Don't loiter, but, on the other hand, don't act as if it were an unwelcome duty to get through as quickly as possible. *Take your time.*

"Another big mistake is to let yourself be panic-stricken if you find that you are left alone in the middle of the floor at a dance, a reception, or a tea. The first rule for this is, 'Don't get rattled.' Take it easy, and gently gravitate toward a convenient group of people.

"It is just as well to remind yourself now and then, that folks are not paying half as much attention to you as you think they are. It is also just as well to remember that many of the people you meet are likewise suffering from self-consciousness. If you find yourself ill at ease with a person, the chances are that he, too, is ill at ease. *Forget yourself*, and see what you can do to make him comfortable.

"A good conversationalist is seldom at a loss socially, and good conversation, contrary to the general belief, does not consist only of talking. Half of it, at least, is made up of listening, and it is better, if you have to choose, to do all of the listening instead of all of the talking.

"Topics like religion and politics (both of them dynamite) should be reserved for public debate or for intimate discussion with your friends. Personal affairs should be kept in the background; and yet you must be willing to listen, endlessly, to other people's personal affairs. Involved discussions of all sorts should be reserved for small groups; light patter is more suitable for dances and receptions. And you must learn to keep quiet without being nervous.

"SOME time ago I had a letter from a girl who wanted to know if, during an awkward lull in the conversation, it was permissible for her to go over to the piano and begin to play, without being asked. It would be more courteous in a case like this for the girl to ask someone else to play first. However, if there is no such person present, she might save the day by quietly slipping over to the piano and beginning to play softly.

"I get a number of letters from people who are going abroad or to Florida or Alaska or Atlantic City or New York for the first time. One was from a girl in Louisiana who was about to be married, and go to New York on her honeymoon. She not only had never been to New York before but she had never been in a sleeping car, and was terrified at the prospect. Another was from a woman who wrote, 'I am short and fat and nearly fifty and have blue eyes and gray hair. My husband and I are going to Chicago to a convention. If you were in my place what would you wear? I want him to be proud of me. What do we do when we get to a hotel? I have never been in one. Does everybody eat at the same table, and do they all go into the dining-room together?'

"The most appealing letter of this sort I ever had came from a girl who was on her way to an Eastern college from a ranch in the West. She had never been anywhere before except once to Denver. Her parents had been dead for many years, and she had no one to turn to but an old ranchman, who was her guardian, and the Mexican woman who looked after the house. She had never been to a dance, and she had never been in a hotel. She did not know how to do (*Continued on page 208*)

Etiquette

By Arthur Guiterman

THE wise raccoon, with forest lore imbued,
Before he dines must always wash his food;
Your household cat esteems it more refined
To clean one's whiskers after one has dined.

We shake each other's hands, and yet 'tis known
That gentlemen in China shake their own.
While Frenchmen kiss upon the public street,
New Zealanders rub noses when they meet.

Beside the right-hand curb we roll along;
In London, driving on the right is wrong.
Though forks bedeck the boards of Western inns,
Are chopsticks barred at feasts of mandarins?

In town the caller knocks or rings the bell;
The hillman halts afar and gives a yell.
The redman deftly scalped his foeman's head;
We took the helmet off of it, instead.

In every region, morning, noon, and night,
Whatever Fashion sanctifies is right.
At home let native custom give the cue,
In Rome we'll do as well-bred Romans do

"The Amateur Of Crime"

Peter Scarlet follows the trail of the silver dagger

By Stephen Vincent Benét

ILLUSTRATED BY RALPH PALLEN COLEMAN

"AND what is *your* hobby, Mr. Scarlet?" queried Mrs. Culverin kindly of her shyest guest. Her long, pendent earrings of antique crystal winked like tiny stars as she turned upon him the full battery of her celebrated smile.

"Murder," said the owlish young man in the English dinner-jacket, serenely. Mrs. Culverin gave a slight, pleased scream.

In a day of hostesses who were famous for rules, and hostesses who were notorious for breaking them, Mrs. Culverin achieved unique celebrity as a hostess who seemed to recognize no rules at all. At the moment she was opening her Long Island house for the summer, and the company gathered to celebrate the event could hardly have been more diverse had Mrs. Culverin deliberately planned it so. But Mrs. Culverin never planned anything deliberately.

This particular house party included, among others, Prince Mirko, of Ruritania, head of the Ruritanian debt commission to the United States; his extraordinarily beautiful wife; Baron Kossovar, the Ruritanian Ambassador; Daisy Delight, the cinema star; a bishop; a banker; a bandmaster; the most celebrated Charleston expert of the moment; two débutantes; the woman's Olympic diving champion; a blind pianist; a Mr. Lang, who was vaguely spoken of as a big-game hunter, and Peter Scarlet—the last, a pink-cheeked youth with surprised, mouse-colored hair, which, together with his enormous horn-rimmed spectacles, gave him much of the innocent downiness of a very young owl.

Mrs. Culverin could not remember exactly what he did, or exactly why she had asked him; but, as she was often in the same quandary about many of her guests, the fact perturbed her not at all. He neither smoked opium in his bedroom nor attempted to secrete small articles of silverware about his person—and as these were the only two social solecisms her generous heart admitted, she felt satisfied

The princess knelt beside him. Her hands were stained with his blood, her eyes were staring, and

enough with him, whoever he might be.

But when he spoke of murder, she viewed him with a new and acquisitive eye. So far, it must be admitted, her Long Island housewarming had leaned perilously toward the verge of failure. The bishop, though a liberal bishop, had lifted episcopal eyebrows at the Charleston dancer. The banker had insisted on talking statistics. The Olympic diving-champion had had too much of a cold to exhibit her skill—and the Ruritanians had been so freezingly polite to each other that a pall of gentility had descended upon the whole assemblage. Mrs. Culverin suddenly remembered, with that vagueness that characterized her memories, having heard of some tiresome, political feud between Prince Mirko and Baron Kossovar.

Now, however, young Mr. Scarlet's unexpected admission of his unusual hobby seemed to give her a heaven-sent opportunity of redeeming her dinner party. She raised her voice so that it would carry to the end of the table.

"How quaint!" she said, with relish. "Mr. Scarlet knows all about murders—or murdering—which was it, Mr. Scarlet? Do tell us lots about them, anyhow!" And she patted him approvingly on the arm.

THE young man, thus abruptly singled out as the object for the stares of the whole company, looked more owlish than ever. A faint pink flush mounted slowly toward his ears.

"Mrs. Culverin flatters me," he said, looking at his plate. "I don't know all about murders—or murderers, either. But, yes, I am—interested in them."

"You are a detective, Mr. Scarlet, yes?" queried Prince Murko, in his careful English.

"No, Your Highness. Merely an amateur of crime."

The princess laughed—a long, beautiful ripple of laughter. "An amateur of crime!" she said, giving the words a foreign twist. "Think of it, Mirko! At his age—an amateur of crime! But I thought you were—what is it?—an undergraduate at an American university, Mr. Scarlet?"

"I am, Madame. I'm going back to college Monday," muttered Scarlet, obviously abashed. "But, well—you ought to start in young at any profession, oughtn't you? And—I've had certain opportunities, in a way. At least, my father was in the diplomatic service, so we traveled around a lot when I was a kid—"

A pleased expression crossed Prince Mirko's face: "If I am right, your father was *chargé d'affaires* at our capital, Mr. Scarlet—let me see—in my father's time?"

Scarlet nodded rapidly. "Yes, Your Highness. I was only so high, then; but I remember your father." He smiled. "I used to be terrified by his beard."

"And Baron Kossovar—you remember him too?" asked the prince, with an acid smile.

"I'm afraid not, sir," said Scarlet pleasantly. "I think Baron Kossovar was away from Ruritania at the time."

"I was in exile—a very unjust exile," said the tall baron, coldly. His glance and Prince Mirko's were two rapiers clashing together. Again a constraint fell on the party.

"But, Mr. Scarlet, do tell us all about your murders!" said Mrs. Culverin brightly.

Scarlet grinned boyishly: "They aren't really my murders, Mrs. Culverin. I've just studied a bit—thing fascinated me. I mean—the queer kinds of people who are murderers, and the even queerer kinds who are murderees."

"Murderees?" breathed Mrs. Culverin. "Murderees?"

"Yes—that's what Pearson calls them, in his book." His spectacles flashed. "The people who seem just born and bound to be murdered. Who have the same irresistible attraction for a murderer that—a nice, plump goat has for a hungry tiger."

"I think it's all perfectly horrid!" said Mrs. Culverin delightedly. "Do go on!"

"Well," said Peter Scarlet, "there was the Jamison case, in London. Mrs. Jamison was an ideal murderee. She had an acquaintance, Mrs. Wheen. She knew Mrs. Wheen hated her. She often said so to her friends. She even said, several times, that she was sure Mrs. Wheen would murder her if she got a chance. And yet, for some unfathomable reason, she kept on going to tea with Mrs. Wheen, until, finally, of course, Mrs. Wheen did murder her."

"Served her right," said Mrs. Culverin, with a beaming smile. "I'm sure, if I ever got the idea that anyone would murder me, I—I'd never so much as ask them to dinner again!"

A general chuckle followed her pronouncement. But Peter Scarlet stuck to his guns. "You wouldn't—because you're not a murderee," he said. "Most people aren't—most people never contract elephantiasis, either. But there is a certain proportion of people who do both, and a very definite proportion. Of course,"—he spread out his hands—"there are the normal, casual murders, too. But I'm talking of this one peculiar tendency."

"AND you think," said the somber Mr. Lang, "that you could diagnose—a tendency to be murdered, in an otherwise normal person, as a doctor could diagnose illness in a person who looked perfectly well?"

"That's what I'd like to do," said Peter Scarlet ingenuously. "Oh, I know it sounds fantastic, especially from me. But if you could do that, and safeguard the murderee, as modern science safeguards the diabetic, why, half our present murders would never occur at all!"

Mrs. Culverin struck in. "But this is marvelous!" she said, her eyes very wide. "Just like numerology and reading your fate in tea leaves, only so much more exciting! Do tell us, dear Mr. Scarlet, because you can, of course—are any of us—murderees?"

Peter Scarlet looked very unhappy. "I couldn't, honestly," he managed to reply at last. "I mean—even if some of you did have murderee tendencies—well, you'd allow a doctor some time for a diagnosis and some rather intimate information, wouldn't you? Well—" He obviously did not wish to go on.

Mrs. Culverin, however, was insistent. "But you could just give us a hint?" she persisted. "The tiniest hint! It would be too wonderful!"

Peter Scarlet's eyes roved nervously up and down the table. "Well—" he said dolefully, and paused.

the silver dagger ornament was gone from her hair

"You need not be afraid to say it!" said Prince Mirko, abruptly, with unexpected grimness. "I know there would be rejoicing—in many quarters—if I were to die by violence."

"And there are others whose murder would please certain men in my country. Myself, for one," said Baron Kossovar instantly. Again his eyes and the prince's met, with the impact of steel upon steel. The princess's hand went nervously to her breast.

Scarlet did his best to smooth over the awkward moment. "Any statesman's life is always at the mercy of a fanatic's bullet," he said, with a little bob at both Ruritanians. "But, oddly enough, if I had to decide at first glance, upon the one person in this room who stood the likeliest chance of meeting a violent end, I should select—Mr. Lang!" he ended unexpectedly, with a nod in that gentleman's direction.

Mr. Lang gave a slight but definite start. For a moment his eyes blazed with anger. Then he gave a loud laugh—and the tension in the room relaxed.

"Not bad at all, for getting out of a hole," he said, still laughing. "I suppose you could be murdered by a lion—if you'd want to call it that—and my last trip out from Nairobi—" He plunged into a big-game reminiscence, and the talk grew general again.

"Only, I wasn't thinking about lions," murmured Peter Scarlet to his plate. But no one at the table overheard him.

SOME time later, after the ladies had left the room, Scarlet found himself near the banker.

"You nearly put your foot in it then, my boy," said the latter, in a low voice, glancing down the table at Prince Mirko and Baron Kossovar. "You know what this Ruritanian debt commission means, I suppose?"

"I know the prince and the baron are old enemies," admitted Scarlet; "and that the baron is supposed to look for a return of the monarchy—in Ruritania—while the prince is entirely committed to the new republic."

"Just so," said the banker. "And, if Mirko succeeds in his mission, he and the republic win—and Kossovar's political future isn't worth *that!* On the other hand, if he fails, the republic will undoubtedly go to pot, and Kossovar will be the power behind the return of the throne. The way things are at present, the prince seems sure to win, too," he added thoughtfully. "He's going down to Washington, Monday, to clinch it."

On their way to the lesser drawing-room where the Royal Russian Midgets, especially brought down for the occasion, were to perform their celebrated though Lilliputian feats of acrobatics before the dancing began, Peter Scarlet was accosted by the saturnine Mr. Lang.

"What the dickens did you mean by picking me out as a likely target for murder?" he queried, in a tone whose attempted lightness was not wholly successful.

Peter Scarlet looked at him steadily. "I wonder," he said. "Have you ever shot a Lipmann's gazelle, Mr. Lang?"

Mr. Lang seemed both amazed and piqued by the odd query. "Lipmann's gazelle?" he said. "Well, I have, as it happens—managed to bag a brace near Victoria Nyanza. But what the deuce has that got to do with my being murdered?"

"It might have a good deal, under certain circumstances," said Peter Scarlet cryptically, and turned away.

He watched with apparent interest the agile feats of the Russian midgets, and the little pantomime of "Beauty and the Beast" that concluded their performance. But within his mind, all the while, certain dim, half-remembered pictures were beginning to take on form and color and perspective. He shook his head, wearily—the pictures weren't very pleasant pictures; and yet he must fit them together, somehow. Only he couldn't quite recollect a few of the most important ones—yet.

AT THE end of the little entertainment, as the Blue Boy Blue Blowers began to blare out their invitation to the dance from the larger ballroom, he unobtrusively sought the princess.

She looked drawn and tired—the continual friction between her husband and the baron was obviously telling upon her. He made some compliment, to which she replied mechanically; then his glance fell upon an ornament in her hair.

"I am glad you still keep up the old Ruritanian custom, Madame," he said.

She laughed a little. "The dagger, you mean? Yes—all our girls pin their hair with a little dagger on feast-days—you must remember." She withdrew the small, needle-pointed, silver stiletto from the dark coils of her coiffure, so that he might examine it. "It is a family thing," she said, the weariness returning to her face. "You must have seen many like it in Ruritania."

Her expression changed, she lowered her voice. "Did you mean what you said

"Someone murdered Prince Mirko—if it wasn't this woman here—what woman was it?"

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

to-night—that Mr. Lang was in greater danger of his life here than my husband?" she asked with a sudden, queer intensity, as they paused on their way to the door.

Peter Scarlet looked at her with an expression of humble surprise. "I didn't say quite that," he said embarrassedly. "Do you mean that you have any reason to suspect that . . . your husband is in danger here?"

She made a nervous, pathetic little gesture with her hands. "Oh no, no, no!" she said hurriedly. "Oh no—it is impossible—impossible—and yet—"

Baron Kossovar came up to them. "May I have the honor of the first dance, Madame?" he asked, bowing profoundly as the princess replaced the dagger in her hair.

"Did you mean what you said to-night—that Mr. Lang was in greater danger of his life here than my husband?" she asked with a sudden, queer intensity

THE evening wore on, the Blue Boy Blue Blowers outdid themselves in miracles of syncopation; at last Peter Scarlet found himself ready for bed. Alone in his room, he undressed for the night. Then, with the same neat, unhurried swiftness, he dressed himself completely again. It was no use—he couldn't sleep till one question at least had been decided in his mind. He left his room, and, walking with a singular lack of noise for so ingenuous and blundering a young man, made his way toward the wing of the house where the Ruritanians were quartered.

Prince and Princess Mirko's suite was on the second floor; Baron Kossovar's, above, on the third. The house itself was a curious example of architectural misalliance between Long Island and Spain. Odd, useless balconies jutted from it at unexpected corners; there was one at the end of the corridor which Scarlet now traversed, and another, he knew, outside the princess's bedroom.

As Scarlet came down the corridor, walking more loudly now, a low voice challenged him suddenly. "Who's that?" said a fierce whisper.

Scarlet stood perfectly still. "It's Scarlet, Mr. Lang."

There was a sound of breath taken in. "How in—" said the low voice. Then it changed its tone. "I thought your room was in the other wing of the house," it said.

Scarlet smiled to himself in the dim shadows of the corridor. "I thought yours was too, Mr. Lang," he said easily. "But I felt restless, couldn't get to sleep."

"So did I," said Lang, unconvincingly. "Well—I suppose we'd both of us better get back to bed."

"I suppose so," admitted Scarlet, strolling on to the end of the corridor. He stepped out upon the balcony for a moment, and glanced up.

"H'm," he said, "that iron stair must go to the third-floor balcony. Convenient little dingus for a burglar, wouldn't you say?" (*Continued on page 177*)

How Life Looks To Me At Forty-Five

By Edgar A. Guest

NOT so long ago, I celebrated my forty-fifth birthday. I can remember, as a boy, hearing my father say that he was forty-five, and I also recall that, at the time, I wondered if I should ever be as old as that.

Now my boy, Buddy, who has just turned fourteen, looks at me and wonders if he will ever be as old as I am; for to Buddy the years are long and birthdays are slow in coming. I am almost certain that he has serious doubts that I was once a little boy. He can picture me only as he has known me from the beginning of his memory. To him, I have always been old.

My father was forty years of age when I was born. He must have been forty-five when my first lasting memory of him began. I could never picture him as a small boy. He seemed so thoughtful and so wise and so earnest. I often wondered if once he had really played with a ball and asked for pennies to spend? Had he longed to go to sea and be a pirate? Had he longed to be a locomotive engineer? Had he, in short, dreamed the countless dreams which were forever running through my mind? Bud, I know, wonders about me in the same way. And in the years to come, his son will wonder about him.

For a long time, it seemed to me that the world must have begun with my awakening in it. And I had a pretty firm conviction that all the fathers and mothers and grandfathers and grandmothers had always been old.

As a schoolboy, I used to look at the pictures in my history book and wonder if Cæsar had ever really lived. True, his picture was there; but I couldn't imagine a man wearing the sort of clothing that he wore. To me, history was a jumble of dates and incidents, to be learned, if possible; but I was never fully convinced of its truth.

Now I am forty-five, and to me Grover Cleveland and Benjamin Harrison were living personages. To Bud, they are former Presidents of the United States, connected with dates which he must learn. He looks at me in amazement when I tell him that I have seen them both.

Here, at forty-five, standing where my father once stood, I understand what a valiant effort he made to give me the benefit of his experience. If I could have caught his vision, could have appreciated fully what he was trying to tell me, I would have made fewer blunders and suffered fewer heartaches. To-day, I understand what he tried so hard to tell me. I know how just he was, when I thought him unjust; how wise, when I thought him merely fussy and old-fashioned; how kind, when I thought him severe. I know to-day that all his dreams of happiness were centered in me and in my progress. But I understand all this largely because I am now struggling to pass on to my children what he was then struggling to pass on to me.

We who have lived to be forty-five or more have learned so much that we are fairly bursting to tell. We know so many things which would be helpful to our children if only we could get our message across to them. We have seen life and lived it; we have suffered for our folly; we have rushed blindly into pain and misery and heartache; we have stumbled into pitfalls; we know the right road from the wrong road. And we are aching to tell the youngsters everything we have learned; but we don't know how. All our talking seems in vain.

THE trouble is that Age and Youth can never fully understand each other, for Youth never fully believes what Age is telling. Perhaps, in the main, this is better so. Youth has its own life to live, and no generation should be stamped indelibly with the imprint of another. This would destroy originality and brave thinking and high adventuring. When all is said and done, there are certain things which each human being must learn for himself.

Age may say over and over again to the child that too much cake is harmful; but if the child can get too much cake it will eat it, and suffer the consequences.

Age may say over and over again that fire burns little fingers; but children will play with fire and get burned before they learn the lesson.

A father can leave to his children the fortune he has earned; but he cannot leave to them the wisdom which earned it, or the ability to conserve it.

He may leave to his children the fruits of his labor; but he cannot leave to them his willingness to labor.

Most of what he has learned from life—so far as the next generation is concerned—will pass with him. His children may some day know what he knows, but they will learn it for themselves and they will pay the price which we all must pay for experience.

I know to-day what my father meant when he said to me years ago: "Son, learn everything you can. Be thorough. Never be slipshod with any task you have to do. Understand every lesson before you leave it. Make the most of your school time. If you will learn the simple rules which come first, those that follow will be easy."

I suppose every father of every child that starts to school has said practically the same thing. And of course every child has gone to school with the notion that Father was just talking. I could go back to school now and follow my father's advice. I could soak up every drop of information which falls; but it is too late.

At school I was considered fairly bright. I passed from class to class regularly. In some studies—always those which I liked—I received high marks; in others, and always they were those studies which required more effort on my part, I managed to be fair or good.

What I wish now is that I had done more work on the difficult subjects. What I see now is that I have cheated myself. I was offered full possession and title to a rounded education, which would have been most useful to me, and I took only a very small portion of t. Could I have known what I now know, things would have been different. What a pity it is that so many of us fail to appreciate the value of an education until it is too late to get it.

To a child, the schoolhouse is too often a treadmill of toil. Rare the child who looks upon his teacher as a good friend. Let a teacher bear down ever so lightly, and home goes a boy or girl with the report that "the old crank has it in for me."

There are parents, too, who do not understand that the teacher can give a child only what he will take. Of course good students are popular with their teachers. Teachers are human, and it is natural for them to be fond of those who grasp their meaning readily and are quick to understand them. The child who will not, or cannot, or does not, learn when it has the opportunity is robbing himself, not the teacher. It is easy to think a teacher cross. It is difficult to see that she is severe for the sake of being kind. It is easy to discover that she is annoyed by carelessness; it sometimes takes thirty years for us to wake up to the fact that our carelessness in school has left us at a disadvantage. Far too often we fail to get a true perspective on life until it is too late to alter the condition.

I TRIED to learn Greek under Professor Sherrard, one of the fine Greek scholars of the country. He was a severe disciplinarian and at times his tongue was bitter with sarcasm. He had little patience with indifferent effort and no patience with utter carelessness. Greek was difficult for me, and I was not fond of it. Then came the time when I was kept out of school for two weeks because of illness. I decided to drop Greek, and upon my return to school I told Professor Sherrard of my intention.

"What's the trouble?" he sneered. "Afraid of a little work? You're two weeks behind your class, and you think it too much trouble to try to catch up. Are you frightened by a few pages in a book?"

"No, sir," I replied. "I have another reason for dropping Greek now. But I'll

Digitized by Google
Original from
UNIVERSITY OF CALIFORNIA

make up my lost work if you say so."

"I do say so," he said, and back I went to my Greek class.

Before the end of the term I again went to him. This time I asked: "Have I satisfactorily made up my work?"

"Yes," he replied; "you're in good standing now."

"Then I want to drop Greek, Professor Sherrard. I am working every afternoon on the Detroit 'Free Press,' and I probably sha'n't return to school next term."

"All right," he said; "that's a much better way to quit than the other." He looked rather solemnly at me for a few seconds, and added, "Never quit anything because it seems hard to do, or because you get a little behind the procession. Don't be afraid of work. Just remember that it is always easier to quit than to keep on.

"When you quit anything, you have given up your chance at it. I did think yesterday that perhaps you might some day be a Greek scholar. Now I know that will never be. You may gain distinction in some line of work, but it will not be Greek. That is definitely settled. You have shut out of your life forever all that Greek holds for you."

Those words were said to me over thirty years ago, and I have since learned how wise Professor Sherrard was. To him, I was only one of hundreds of pupils; but he was eager to share with me all the beauties of Homer. All the charm and splendor of a classic language could have been mine, but I turned my back upon it. I can see it now, but I couldn't see it then. At the time, it seemed to me that Professor Sherrard wanted me to take Greek just to please him.

Professor Sherrard has been dead many years, but I never face an uphill journey or a difficult task to-day without recalling his words: "Remember, it is easier to quit than to keep on."

ONE of the things I feel sure of at forty-five is that death does not remove from us the influence of our loved ones, but increases and enlarges it. In a very real way I am sure that we all grow closer to the dead than to the living. I know we are kinder to them and gentler, and the counsel they once gave, which we spurned, comes back to us over and over again, and is welcomed as wisdom. Their passing has taught us to understand them. We remember how good they were, and how fond of us, and how much they held our interests at heart. Yet in life, we contradicted them, and resented their seeming interference with our whims. We little guessed then that they were trying to save us from trouble and heartache and disappointment, and even shame itself. We recall them tenderly, and speak of them only in terms of affection which they would have rejoiced to hear.

I am certain that my father's influence over me has been constantly increasing. His is still a very real presence in my life, although he was taken from us in 1897.

There are countless separations in life; there are no separations in death. As a boy, there were many times when my father was not with me. He was not with me when I went to school, or played ball, or ran in the streets. He was not with me most of the day. He could not see what I was doing, or share in my little pleasures and sorrows. He was at the office; I was on the field playing ball, and there were miles between us. I remember once making a particularly difficult stop of a batted ball, getting it in my gloved hand, after a hard run.

It was one of those plays which give boys a thrill, and which come more by chance than by design. You make a mad rush for the ball, reach for it, and the shock tells you that you have it, and the cheers of the gang tell you that you have achieved the brilliant thing. There is a thrill to it, and I remember vividly my thrill, and I remember also the thought which followed:

"I wish Dad could have seen me do that."

Now it is different. I have the feeling that he knows everything about me; all that I have done and am doing. At times, I fancy I can see him and hear him, and there is no place I go that I cannot have his presence. I have been lonely in big cities and homesick in smaller ones. I never take a trip but that the miles between me and my (*Continued on page 152*)

If You Ask Me:

Many a lazy man works hard all day

SEVERAL weeks ago a gang of men were filling my Sunnybank ice houses. Out on the lake I watched them cut the thick cakes of ice with a mechanical saw that worked like magic as it sped over the hard surface. Then the huge cubes were winched up the greased runway to the motor-trucks, whence each load sped at twenty miles an hour to the waiting packers at my two ice houses. In less than a day both houses were filled and packed. In my boyhood it was a four-day job, under the best conditions, to harvest our ice crop. Men toiled pantingly with hand saws, and they grunted as they lugged cake after cake to the one horse-drawn wagon. It set me to thinking—not of the mechanical age we live in, but of the startling fact that the age's progress, and the whole world's progress, it seemed to me, was due to laziness rather than to applied industry.

Long ago armies of men rolled cumbrous logs and rocks from the forest to build their homes. Some lazy fellow hated the backbreaking job so much that he set out to devise an easier way to get it done. Probably the rolling gave him his idea. He found circular sections of logs and bored holes through their centers. In a trice, the first wheel was made, and thereby human effort was cut down fifty per cent.

Again, long before the days of the Pyramids, a lazy man loathed the task of helping to lift crushingly heavy stone and timber to a height by hand. So he thought out the pulley, and then the block-and-fall. Laziness had scored again. And so it was when the lazy load-bearer sought for someone or something to carry his burden or to drag his rude cart's cargo. He trained a horse or a donkey or an ox to do his work, and later to bear him comfortably from place to place, because it was too much bother for a lazy man to do so much walking.

Down the centuries, the onerous tasks of carding wool and weaving cloth and mowing grain and mining ore and picking seeds from cotton were solved, one by one, through a lazy wish to make work easier, until at last the world was honest enough to speak of such inventions as "labor-saving contrivances" and to offer high rewards to their makers. In brief, while hard manual labor continued to earn low wages, wealth and honor waited for the lazy man who could discount that labor.

"It is the Lazy Man who has made the world what it is to-day," I said to a wise woman, in some perplexity. "Yet from babyhood we have been taught to look on laziness as almost a crime. A mighty good moral has gone wrong, somewhere, somehow."

"The trouble is with your definition of laziness," she replied quickly. "You have fallen into the common error of thinking that to be inactive physically is to be lazy. But you're wrong. A man can be energetic with his hands or his feet or his back, and yet be too lazy mentally to do his own thinking. He is the worst loafer of us all—just as the man whose hands are idle and whose brain is hustling constructively is the busiest of us all."

And I decided that she was right!

When Poverty Spells Riches It's Fun To Be Poor

By Mary B. Mullett

EDITOR'S NOTE: This is the fourth article in the "Just Folks" series.

THERE were six of us at the dinner table. Seven, in fact, counting the little fellow. He was only three years old; yet he wasn't bored or restless, even though we sat there long enough to eat two dinners instead of one.

When people linger over a meal as we did, they have at least one of two reasons for it. We had both! We were having good food—and a good time.

Sometimes the talk was serious, and sometimes it rippled with humor. But it never flagged and it was never dull. Altogether, it was a dinner which I shall remember long and pleasantly.

Yet the room where we sat was the big kitchen-dining-room of a house on the edge of a Pennsylvania village. The dinner came, piping hot, straight from the cook stove. And I imagine that everyone present—except myself and, perhaps, the little fellow—had helped in its preparation.

I know that the tall young salesman at my left boasted that he had "whipped up" the mashed potatoes. I suspect that the big professor next to him had filled the wood-box.

Certainly the man opposite him, the quiet one who nevertheless provided much of the humor, had milked the cow which gave us those ample pitchers of pure cream.

I know that the little fellow's mother was the chief cook. I know, too, that my hostess had been the assistant cook. Yet as she sat at the head of the table, her poise was as perfect as if she were facing one of the public audiences which she sometimes addresses.

"Wait a minute!" you say. "This dinner party—with a salesman mashing the potatoes, a professor filling the wood-box, a humorist milking the cow—everybody playing a dual rôle of some sort! What's the answer?"

Well, the answer is: I was dining with the Parks! And the Parks are every bit as unusual as I have made them seem. Indeed, I rather think they are unique.

Before matrimony began to add "in-laws" and grandchildren, the Park family consisted of the father, mother, three sons, and five daughters. Its habitat was Montandon, the Pennsylvania village where I enjoyed that memorable dinner.

Our quiet humorist was John Park, the father of the family. My hospitable hostess was his wife, Mrs. Clara Moss Park. The professor and the salesman were two of the sons; and the little fellow's mother was one of the daughters.

Lucky for me that they happened to be there that day! Seeing is believing. And having seen these samples of the Park family, I could believe all that I had heard of it.

Yet some of the things I had heard were almost incredible. The Parks have accomplished what would seem to other people a hopeless undertaking; and, knowing this, I went to Montandon to ask them the question: "How in the world did you do it?"

ABOUT twenty-five years ago the Parks were living in the same house where I recently visited them. And it certainly was a full house! Father, mother, and eight children, ranging from a baby to the oldest daughter, who was still in her teens.

Mr. Park *had* to be a humorist. Besides, he was born that way! His life was a constant struggle. But he would have worked just as hard if he had had no children. The big prizes—material ones, at least—never came his way, but this never worried him. He still had his love for flowers, for glowing sunsets and for the wonderful twinkling stars. He was interested in astronomy, and he has been a teacher and a secretary in church and Sunday-school for over fifty years. He had education and character. But he had also a growing family! He must make a living for them; and in a village like Montandon there was small choice of ways to do it.

At various times he taught school, clerked in a store, was township auditor, justice of the peace, county surveyor. He took whatever job came to hand—and sometimes these jobs were miserably paid.

There was one long stretch of *seven years*, when his earnings were only fifteen dollars a month! They never have been more than fifty dollars a month.

The home place consisted of the house, barn, and four acres of land. These four acres provided fruit and vegetables, pastured a cow, and had room for a flock of chickens.

This helped a good deal. But imagine a family managing to live for seven years on fifteen dollars a month and four acres of ground! That alone would seem to most of us a hopeless undertaking.

But I didn't go to Montandon to ask the Parks how in the world they accomplished *that* feat. I had in mind a far more remarkable achievement.

With a single exception—which I will explain later—every one of the Park children was sent to college, completed the course, and was graduated!

For *any* family to turn out seven college graduates is extraordinary. That the Park family has done this under the circumstances I have described does seem almost incredible. What I wanted to know was how in the world they managed *that* achievement.

It was chiefly from Mrs. Park that I got the details of the story. No one has a better right to tell it; for without the indomitable spirit of this slender, blue-eyed little woman there never would have been any such story to tell.

However, her explanation of those seven college degrees is quite a different one.

"If people could inherit that sort of thing," she said, "I guess the Park children would have been *born* with an education. My husband studied at Dickinson Seminary and at the Academy at Lewisburg and taught school himself. His father was a school-teacher before him.

"My grandfather, Reverend John Coulter, was a Scotch Presbyterian preacher in the early days. He was graduated from the University of Edinburgh; and when he came to this country he not only preached but also taught a classical school.

"My father was at one time in business, and later a farmer. But he was also a local preacher; and in one wing of our house he carried on a school for the children of the neighborhood.

"After he bought a farm in Virginia, he started a Sunday-school; a fine-weather Sunday-school, for it was held in the open air, under the trees on his land. He made the benches with his own hands; and later he built a small church, and preached in it.

"The desire for an education was born and bred in me; and when I was sixteen I borrowed the money from my father, went to Shippensburg, Pennsylvania, and attended the high school where my brother Theodore was teaching, and the State Normal School.

"The understanding was that this money should be taken out of my share of the estate at my father's death. Altogether, I borrowed three hundred and fifty dollars from him. I had a few months in high school, a few in normal school, and one year in Dickinson Seminary. There I met Mr. Park, who was also a student at Dickinson.

"FOR five years we both taught school. Then we were married and I came to Montandon, where my husband was teaching. His salary was twenty-five dollars a month. His parents, who lived in the neighborhood, used to give us fruit and milk, fresh meat sometimes, feed for our chickens, little pigs to raise, and occasionally clothing for the children. These kindnesses were a great help.

"As our boys and girls grew old enough, and it didn't take them long, for they, too, were eager to help—they did their share of the housework and the 'chores.' The boys earned what they could by working in summer on the nearby farms.

"Just folks" these are—but such folks! On a salary that has never exceeded fifty dollars a month, Mr. and Mrs. Park, of Montandon, Pennsylvania, educated their eight children. Seven were graduated from college, and the eighth would have been but for hard circumstances over which the family had no control. Mr. John Park is at the extreme left. His wife, Mrs. Clara Moss Park, is seated in the middle. The others are some of their children, children-in-law, and grandchildren. (Right) The home of the Park family in Montandon

PHOTOGRAPHS BY J. F. WILSON

"Once, I remember, Ted and Jesse saved their pennies and bought a little express wagon. They used to fill it with vegetables day after day and pull the load across the bridge to Lewisburg, where they sold their produce.

"Other boys did the same thing; so I am not claiming any special credit for my own children in that instance. But it was only one of the many, many ways in which they all shared responsibility with their father and me.

"Of course, being their mother, I think they have been wonderful children. But, when you come right down to it, is anybody better able to judge children than their own mother? She may not always admit the truth about them—but she *knows* it! I am fortunate enough to be *proud* of the truth about my boys and girls.

"We were always a busy, happy family. Money was scarce; but we had plenty to eat and a comfortable home; somewhat crowded at times, but never too full to have room for the children's friends.

"You had dinner with us to-day; and you saw how we laughed and joked together. Imagine what it must have been when there were ten of us at the table! I don't believe there ever were gayer meals than those in our kitchen.

"But we wanted our children to have educated minds as well as happy hearts. We never allowed their work to keep them away from school. We expected them to bring home good reports—and they did it.

"On the kitchen wall, my husband hung a large map; and whenever a town or city was mentioned, it had to be pointed out on this map. In ways like this, we were always testing their knowledge, adding to it, and stimulating their interest.

"OUR real problem began when the eldest daughter, Belle, finished the grammar grades. There was no high school nearer than Lewisburg, across the river from Montandon. It was about two miles from our house, with a very long bridge to cross, exposed to the bitter cold wind in winter, and broiling hot in summer. At this end of the bridge, the railroad track provided the shortest route to the school, but this involved walking the ties; and if you've ever done that, you know that it is not easy.

"It would cost not only effort, but time and money for the children to go to high school. It meant that they must leave home early in the morning and not be back until almost supper time. The other children must take on an extra share of the home work to make up for this. Textbooks must be bought too.

"We faced this problem *eight times*, as one child after another reached the high-school age. But no one in the family ever dreamed of giving up and saying that it couldn't be done! As time went on, two or three of the children would be making these daily trips to Lewisburg at the same time. Yet we always managed somehow.

"They got up early, did their home work, packed their lunches, and started gayly off. No matter how stormy the weather, they never begged to stay at home. I think that in all their years at high school and at college, the only real record of absence against them was when one of the boys missed nine days, because Amy was having pneumonia and Olive was down with diphtheria at the same time!

"BELLE was the first one to go through high school. Then began the problem of sending them to college. In my own mind, I had determined that every one of the children should go. Fortunately Bucknell University was not far away; just on the outskirts of Lewisburg, about four miles from our house.

"Belle took her examinations and was ready to enter Bucknell—when my hopes and plans went hopelessly awry.

"In the first place, walking the railroad ties, twice a day for several years, had injured her feet. With broken arches, she could not walk to and from college—and we couldn't afford any other means of transportation.

"The question was settled, anyway, when I had an accident which kept me in bed for months. Belle was the eldest daughter. Somehow, we just couldn't get along without her that winter.

"In fact, for several years she was indispensable at home. Even after I was able to walk, I was very lame. It was not until years later that a doctor found the cause of the trouble. My hip bone had been twisted in the socket. He put it in place—and I was all right! But I had been limping around for twenty-five years, in constant pain, waiting for someone who knew his job.

"During that winter when I couldn't walk, I had my bed brought down to the living-room, so that I could be constantly with the family. Sitting up in bed, I cut out the clothes for the expected new baby, and the children made them. Even the boys helped, by sewing on the buttons.

"I, in my turn, (*Continued on page 230*)

"That Darned Literary Fellow Across The Lake"

By Allison Gray

THIS story is an echo from a thirty-year-old laugh and a somewhat older sneeze. Both the laugh and the sneeze have long since subsided; but their echoes have multiplied and have traveled in ever-widening circles. Let us begin with the laugh.

One day in the summer of 1895, the proprietor of an inn at Lake Placid, away up in the Adirondacks, was sitting in front of his hotel, looking out across the lake which lay at the foot of the hill. His shoulders were shaking with silent mirth.

"What's the joke?" demanded a guest, who had approached him unnoticed.

The landlord laughed outright.

"I was just thinking," he said, "of that darned literary fellow across the lake! He believes he can run a summer resort, with no bar, no cigar stand, no gambling, and no late hours. He'll go broke before he's a year older!"

That prophecy was made more than thirty years ago. But "that darned literary fellow," instead of going broke, has built up across the lake what is said to be the most extraordinary institution of its kind in the world.

It is called the Lake Placid Club. Not a single line of paid advertising has ever been printed about it, yet it is known all over this country, and in a score of lands across the seas.

When the above-mentioned hotel man laughed his scornful laugh, Lake Placid Club consisted of a made-over farmhouse, two small rented buildings, and five acres of land. With some crowding it held thirty guests.

To-day there are 1,500 guests in midsummer and 1,200 in winter; and the property consists of over 9,900 acres, 390 buildings, and 43 farms! There are eight clubhouses and 100 guest cottages; a 60-acre poultry farm; about 500 head of registered cattle; model creameries and certified milk plants; steam-heating and electric-light plants; fire protection equipment that cost $100,000; independent pure water supply; a theatre seating 1,200; a beautiful memorial chapel; dining-rooms seating 1,800; a general store that carries a $100,000 stock; a 10,000-volume library; a $30,000 organ; a symphony orchestra, and a separate dance sextet; lectures, plays, and motion pictures.

There are nearly forty courts for tennis, lawn bowls, croquet, and other outdoor games; five golf courses; one hundred and sixty boats; sixty saddle and sleigh horses; motor livery, garages, and repair shops.

The club is the center for winter sports in America. Only a few years ago, that section was snow-bound almost six months each winter. Now there are times when the New York Central runs special trains, in several sections, to carry incoming and outgoing crowds.

I HAVE given a very incomplete picture of this extraordinary institution; but I have said enough to prove that the man who laughed at the "darned literary fellow across the lake" was a mighty poor prophet himself.

The object of his misguided ridicule wasn't really a literary fellow, anyway. His name was Melvil Dewey; and when he first breezed into—or perhaps sneezed into—Lake Placid, he might better have been called "a library fellow."

If practice makes perfect, Mr. Dewey and his wife had mastered the art of

sneezing. He suffered with autumnal hay fever, and she was a victim of June rose cold. For sixteen years they had been searching for a place where they would be immune from these afflictions. Lake Placid best filled the bill for them.

But immunity from sneezing was not their main object in this search. They had another and very different chief purpose.

For years their work had thrown them with a certain class of people: the men and women whose lives are devoted to education, mental and moral; the teachers, preachers, and other workers for human betterment.

THEY had seen that these people were almost always poorly paid, and usually overworked. So they dreamed of finding an ideal place, where these benefactors to humanity could receive, at moderate cost, the rest and recreation they needed.

That idea was the germ out of which has grown such amazing results. Lake Placid Club has become like a giant tree whose roots are invisible.

But the roots are still there, as I shall prove later on in this story.

PHOTOS BY ARMSTRONG ROBERTS

If you could ask one hundred people who are more or less acquainted with Melvil Dewey, what they think of him, you would get just about one hundred varieties of opinion. But the whole hundred would agree on one point: his friends claim, and his enemies admit, that he is an extraordinary man.

He was seventy-five years old in December. But he is to-day what he always has been—an astonishing combination of a dreamer and a fighter. If you want a typical picture, out of the panorama of his life, take this one:

Years ago, two men stood facing each other. One of them was a governor of New York, the other was Melvil Dewey. Tall, angular, with keen eyes and outthrust chin, he had delivered what sounded like an ultimatum.

"Gosh!" exclaimed the governor; "we can't do *that!*"

"Gosh!" snapped Dewey, his jaws shutting like a steel trap; "we are *going* to do *exactly* that!" And they did.

With sundry variations, he has been saying this sort of thing for more than sixty years.

He was born in Adams Center, ten miles south of Watertown, New York. There were two principal stores. Dewey's father ran one of them. He also ran pretty nearly everything else in the place—until his son began to run *him*.

THE elder Dewey was anti-liquor and anti-tobacco; and he planted these principles in the mind of his boy. But in that mind was growing, also, a passion for logic; and when young Melvil was fourteen, this passion began to stir up trouble.

Tobacco was sold in all "general stores," and in conformity with this universal custom it was sold also in Joel Dewey's store. He thought he *had* to do it to hold business. But his son's motto, then and *ever since*, has been: "Stick to your principles; and the business—or whatever it is that you are seeking—will come to you."

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

One day he said to his father, "Bill Owens doesn't believe in liquor. He doesn't drink it himself. But he sells it in his tavern. Do you think that's right?"

"No," replied his father.

"Well, *you* don't believe in tobacco. But you sell it to other people! Now, I'm going down to the other store and tell them they can have, at cost price, all our tobacco, and that we will never sell any more of it!"

Without waiting for a reply—his father was too surprised to make one, anyway—the boy sold all the tobacco to the rival store, came back with the money; and that ended it. Moreover, his faith in consistency was justified, for the Dewey store thrived better than before.

Another significant incident had occurred the previous year. People are amazed at Mr. Dewey's energy to-day. But after being a human dynamo for seventy-five years, I doubt if he could stop if he wanted to—and he doesn't.

He began work as a youngster: earning money by driving cows to and from pasture, splitting wood, and doing other chores. His pay was so small that most of it was in pennies. These he kept in a canvas bag, for a definite purpose. He was earning and saving in order to buy the one thing he coveted above all others. He knew what it would cost; and during his fourteenth summer he reached that goal.

His bag then was full of coins, the largest being nickels. With this load under his arm, he tramped the ten miles to Watertown. He couldn't afford the thirty cents for railroad fare. Going to the bookstore, he emptied his bagful of money on the counter, and demanded—what do you think?—an unabridged dictionary! With that under his arm, he went back home, the happiest boy in the whole Empire State.

IN THE sixty-one years since that day, he has lost none of his respect for unabridged dictionaries. He gives copies to students, assuring them that the habit of looking up every doubtful word is worth more than a year in college. He has in his various rooms five of these big volumes; and he turns to them many times a day.

He has not lost his respect for dictionaries, and neither has he changed his ideas about liquor and tobacco. Lake Placid Club never has had a bar or a public cigar stand. If it is known that a guest is using liquor as a beverage, he is politely but firmly requested to leave.

Smoking-rooms are provided for men. But there is no tobacco stand in any of the clubhouses and men smoke only in the rooms set apart for them. Smoking by women is not permitted at all. Neither is any form of gambling, even when sugar-coated as "a chance" in aid of some charity.

It was because of such rules as these that the hotel man predicted his neighbor would fail inside of a year. He believed in giving people whatever *they* thought they wanted. Mr. Dewey believed in giving them what *he* thought they ought to have!

He is a born educator. By that I mean that he loves to think up ways of improving people; especially ways of making them healthier and happier. And he has a sublime confidence that he knows what will do the trick.

With this turn of mind, he naturally had a finger in every "pie," back in his old home town. As a boy, he helped to run the church, the Sunday-school, the local lodge, and other village activities.

At sixteen, he taught the country school at Toad Hollow. It was the winter term, when the big boys attended. In previous sessions, they had ruled the teacher with a high hand; and Toad Hollow predicted that the new youngster wouldn't last a week.

When he arrived, he found on the platform a battered chair. It had been broken over the head of his predecessor! On the floor were sundry dark stains. These, too, were souvenirs of combat. The teacher's nose had been punched, with the usual results.

But Dewey "lasted" the whole term; and neither chairs nor noses were broken. It was simply another case of his joyous faith that people can be induced to take what they ought to have. His interest and

enthusiasm kindled an answering interest and enthusiasm in his pupils—with the result, that, as he told me himself, everybody had a beautiful time.

After that, he went to Hungerford Institute three terms. It was four miles from Adams Center and the fare was ten cents each way. To save these dimes, he walked the ties twice a day.

Then he boarded one term at a Seventh Day Adventist school, in Alfred, New York; and from there he went to college.

He chose Amherst, because it was, at that time, the only college requiring daily gymnasium exercise. He thought he "ought to have" this physical training, so he went to Amherst. Not many people are so willing to take the medicine they prescribe for others.

AFTER the entrance examinations, the names of those who had passed were read aloud to the assembled candidates—and Dewey's was not among them! Whereupon he demanded to know the reason why.

"How's this?" he said. "I'm coming to Amherst, but my name wasn't read."

The man looked over the list.

"Oh yes!" he said; "your name is here. But you are conditioned in Latin, Greek, and Mathematics. So, of course—"

"Oh, that's all right!" was the calm reply. "I'll make those up."

On the strength of this promise, which later was carried out, he was admitted to those peaceful halls of learning, which he promptly proceeded to render *less* peaceful.

From that day to this, Dewey has been, as he described it, "the irritating cause" of more changed methods than there are feet on a centipede. For instance, when he joined the D K E fraternity at Amherst, he declared war on the old traditions. At that time, the chief aim was to make sport of the new candidates.

"See here!" said Dewey. "This is silly. You pretend that it's an honor to be admitted to this fraternity. And yet, when a fellow comes up for admission, all you do is to make a fool of him."

The grown-ups do not have all the fun at Lake Placid, and there are plenty of good times in the summer as well as in the winter

"Well," they said, "if you think you're so smart, what have you got to offer?"

The result was that Dewey planned an impressive and dignified initiation ritual. It was accepted. And this sensible change gradually spread to other colleges.

At that time, Yale was publishing the D K E triennial catalogue, a small book in paper covers. Although it was sold at a high price, there was always a big deficit. At the annual meeting Dewey protested against this state of things.

"All right!" said the Yale men. "If Amherst thinks it can do any better, Amherst had better try it!"

So Dewey, as chairman in charge, produced a book three times as big, bound in morocco, and costing almost twice as much. But it was so much better that it found many more buyers; and, instead of a deficit, it made a profit of a thousand dollars for the new Amherst chapter house.

Dewey had not been long at Amherst before he had his finger in still another "pie;" and this time the results were to continue through many years.

"Students did not have access to the shelves of the college library," he said to me. "The volumes they asked for were handed out to them. I wanted to get at the books myself; so I offered to act as assistant—without pay, of course—to Professor Montague, the librarian.

"I found that the books were classified according to a system, then in general use, which fairly bristled with defects. So I decided that there ought to be a better one; and what *ought* to be *can* be.

"I studied and studied over the problem; and finally, one day in chapel, the idea came to me in a flash. I almost shouted 'Eureka!' right in the middle of the president's sermon.

"As a result of this idea I devised the Dewey system of *decimal classification*. It is now used by fourteen thousand librarians and students in a score of countries. It has been adopted by big business also. One railroad uses it for its equipment. On every pick or shovel, for instance, is stamped the d. c. (decimal classification) number of that implement. Here is the latest volume containing d. c. instructions," he said, picking up a book of about one thousand pages.

BELIEVING that the Amherst library "ought to have" a better system, Dewey proceeded to introduce changes. After he had been doing this for some time, he was summoned to appear before a committee of the trustees. He went, expecting to be disciplined for his interference with the old methods.

But it turned out that Professor Montague had reported that his volunteer assistant was doing most of the work, and doing it more efficiently than he himself could do it. So the trustees had summoned Dewey to appoint him acting librarian! He held that post until he was graduated and for the two following years as well.

"But I didn't intend to be a librarian all my life," he told me; "and when Edward Ginn offered me (*Continued on page 128*)

What He Learned At Fourteen Helped Him "Come Back" At Forty

After twenty years of failure, the memory of a boyhood rebuke from his father spurred Dudley S. Humphrey on to take a new hold on life—Starting business with a kettle full of pop corn, he has become the head of one of the largest and most profitable amusement parks in the country

By Sherman Gwinn

A TALL, lean, roughly-clad man, whose head was already frosted with white, plodded along the narrow, mud-rutted Ohio road that led to Glenville. His steps lagged. His chin was sunk upon his chest. His big hands, hardened by years of work, hung lifelessly in his pockets. Everything about his solitary figure—from his battered felt hat to his worn shoes, from his listless stride to his unseeing gaze at the road—spelled dejection and defeat.

As this wayfarer shuffled by, a spectator might have muttered, "There goes a failure!" But the spectator, guided only by outward appearances, would have been wrong in his guess. The word failure thus used implies quitting, finality. This plodder on the road to Glenville, beaten though he was, had not quit.

He was penniless, therefore he walked. He also was jobless. Every possession of his and of his family—the old farm with its memories of year-in and year-out toil, the live stock with which they had dreamed of making a fortune, the implements, even the furniture of the homestead—had been publicly sold for debt. And more than twenty thousand dollars of that debt was still unpaid. His graying hair did not belie his age; he was forty years old, which is no longer flaming youth.

Up to this moment, he had failed in every important thing he had undertaken. As a youth, he had wanted to become a civil engineer, but had failed in his ambition. A sawmill operator next; failure had scrawled its grim line there also. Then farming had held forth promise; it had led only to the auction block of the sheriff. Followed horse training, writing for farm papers, an effort to market an invention—failures all. This bright spring morning he had walked seven miles to get work, and had failed again.

"You're forty. You've never worked for anybody but yourself. You're too old to begin working for another now," argued the man who had advertised for a hand experienced in sorting hardwood lumber.

"But I must do something at once," the applicant had pleaded. "I've a family to feed. My last nickel has been spent. I'm right up against it."

"I'd be doing you no favor," the other had retorted, "if I hired you. It is your place to work for yourself as you always have. You should *make your own job!*"

For five dreary miles down the mud-rutted road those words had been drumming in the walker's thoughts: "You should make your own job! Make your own job!"

He smiled ironically at the sheer futility of the notion. What was there left in the wreck of his life from which even the humblest job could be made?

But, slowly, a change began to come over him. He was as one emerging from the stupor of a drug. His chin lifted from his chest; his frame lost some of its looseness. Ahead he stared as if he saw something, or as if a voice had called his name. Stock-still he stood, and suddenly in thought he was a boy again, a boy of fourteen.

IT WAS winter, a stinging cold winter's day. The breath of the ox teams came from their nostrils like live steam as he and his younger brother Dave hitched the beasts to the log boats or sleds. He had to beat his hands and stamp in the deep snow to keep warm. There was ice on Dave's red muffler, the frozen moisture of his breath.

"All right, boys," their father directed. "Fetch in those beech logs from over in the woods. Haul 'em in here to the sawmill."

Now he and Dave were in the woods, nearly a mile from the sawmill, with the ox teams. They tried loading the log boat with its burden. But the logs were ice-coated, and slippery as polished glass, and nearly as round as if they had been fashioned in a turning lathe. A greased pig would have been easier to handle. For the dozenth time the big round sticks got away and, strain as they would, they couldn't load a single log. Sunset came, and they headed the oxen homeward with empty boats.

"Where are your logs?" demanded their father.

The two hung their heads. They had been unable to load the logs. Every muscle in their little bodies ached. They tried to explain their failure.

"I told you to fetch logs, not excuses," said their father sternly. "Go back into those woods and get logs! There *is* a way to load them. On your way back do some thinking. The next time you come in, show me the logs I sent you to get!"

Back in the moonlight went the lads. But this time when they returned, their log boats groaned under the weight of the big icy beech logs. They had figured out a way of loading that worked.

Their father was waiting at the mill; he remarked, "I knew you could do it."

The man in the muddy road suddenly straightened his back; his head went up, his fingers tightened as in his memory he reacted that victory from out the past. To-day, at forty, he had another load of logs to fetch. With those logs he must build a future, a new life. As yet, his log boat was empty; and once more the finger of his father, now dead, seemed to point sternly at him: "I told you to fetch logs, son, not excuses!"

The jaw of the lone walker was set; there was a swing in his stride as he resumed his way to Glenville. Despite his battered headpiece, his worn shoes and his faded coat, passers-by would not have said, "There goes a failure." A man buoyed up with fresh courage and resolution trod the mud-ruts of the Ohio road!

In Cleveland, not long ago, I met and spent a day with this man. In the thirty-four years that have passed since Dudley S. Humphrey tramped, dejected and penniless, on the Glenville road, he has "fetched his logs" and fashioned them into the substantial realization of an ideal. He is the president and principal owner of Euclid Beach Park—one of the largest, cleanest conducted, and most successful public amusement parks in this country.

How did he do it? I went to Cleveland on purpose to find an answer to that question.

WE WERE strolling, Mr. Humphrey and I, over Euclid Beach Park. Its one hundred and sixty acres of lawn and trees, right in the city of Cleveland, spread inward from the sandy shore of Lake Erie. The summer was in its evening and the snap of autumn was in the lake breeze. But in every direction that we looked were people and parked machines. The varied amusement and recreational features were running full tilt. It was a scene of light and laughter and wholesome fun.

"Folks from all over the world come to Euclid Beach," Mr. Humphrey told me. "At a guess, more than a million every

UNIVERSITY OF CALIFORNIA

season. But as there is no admission charge," he went on, "we don't know exactly how many do come. In one day, when we made a check, the street cars alone brought 40,000, and more than 15,000 automobiles were parked inside our gates. Allowing four people to a car, that would bring the day's total up to 100,000."

I want you to realize the bigness of this park, the substantial character of it and its permanency, because it grew from an idea hardly more pretentious than a pebble in the roadway. At the park's very center, Mr. Humphrey paused before a stand. A half-dozen white-coated attendants were popping corn, and selling it crisp and hot from the poppers. You will find pop-corn stands in every amusement park in the land, but probably no one that does the volume of trade of this one. Over the stand was a painted sign:

The Pop Corn That Led to Euclid Beach

"That is literally true," said Mr. Humphrey. "Failing at everything else, we began selling pop corn on the streets—pop corn as we made it on the farm. My wife, my sister, my brothers—the whole family—helped.

"This isn't a one-man concern," he added. "It's a family concern. We went down together, and we came up together. When the Humphrey Company was organized, my brothers, Harlow and Dave, my sister, Linnie, and my wife and myself were all members, equally. Each did his or her bit. Harlow, Dave, and Linnie are dead now, leaving their shares to carry on the clean recreation idea; but the Humphrey family that remains is still the Humphrey Company. My wife has been secretary and treasurer since the start; her salary is as large as mine, and she has her office, just as I have mine."

BEHIND that sign over the pop-corn stand at Euclid Beach I found the story of the Humphreys, and of Dudley S. Humphrey, leader and head of the clan.

He was born in Townsend Township, Huron County, Ohio, in 1852, the third of a family of five children. His father, Dudley S. Humphrey, Senior, had come to Ohio from Connecticut, in 1835, accompanied by his brother William. They were pioneers and made the journey by ox team; but they were not poor pioneers. In Connecticut they had done well in the lumber business, and Ohio's vast virgin forests had attracted them westward. Shortly, hundreds of acres of timber and farm lands were under their lease or ownership. They built sawmills and log roads; and their log cabin, wherein Dudley, Junior, was born, was a pretentious affair of two stories and five up-stairs rooms. At one time the senior Humphrey was worth all of one hundred thousand dollars, a sizable fortune in that day and place.

I have told you of that incident of the beech logs, which happened when Dudley, Junior, was fourteen. It will give you some idea of the father's character. He didn't pamper his children. They attended the district school. They had their stints to do, and though it took until midnight they did them.

"I never knew Father to tell a lie, or a nasty story, or refuse help to a neighbor in need," said Mr. Humphrey to me.

PHOTOGRAPH BY FRANK MOORE STUDIO, CLEVELAND, O.

Dudley S. Humphrey, president of Euclid Beach, Cleveland's one-hundred-and-sixty-acre amusement park, was born in Huron County, Ohio, of good pioneer stock. When he was half way through an engineering course, he was called home to his father's big farm because of financial complications. Here, in rapid succession, he tried sawmilling, farming, writing for farm papers, and horse training. At forty years of age, he invented for his own amusement a corn popper. This humble device led to Euclid Beach and to a sharp change in the fortunes of the Humphrey family. Mr. Humphrey is now seventy-four years old

You will find the influence of this parent to-day in Euclid Beach Park. He hated dirt, this father—moral dirt. He liked the open, the clean, the aboveboard.

At thirty-five, losing a hand in a sawmill, he quit the lumber business to devote himself exclusively to his farm, the twelve hundred acres of which straddled the Wakeman-Townsend townships line. It was an up-to-date farm, equipped with the best machinery and stock. There Dudley, Junior, grew up, a good, stout youngster capable of handling an ox team at nine, and of doing a grown man's work at sixteen. The boy was of a mechanical, inventive turn; he liked to tinker about machinery, and the shop was his playhouse. He became an expert in handling and caring for the machinery of the farm and sawmill.

"I'M GOING to be a civil engineer," he proudly informed everyone who asked. "I'm going to build railroads and big bridges."

And at nineteen, true to his bent, he went to Buchtel College, now the University of Akron, an engineer in the making. A farm boy, yet he was a rich man's son. Harlow, his elder brother, and David, his younger, decided to stick by the farm.

But in the western horizon a tiny cloud appeared, too small a cloud to be noticed for a time. Humphrey, Senior, was a generous, big-hearted man. He was never slow in going to the aid of others. Some neighbors, who owned a sawmill and oil-barrel factory, came to him for help, and he backed their mill by obligating a substantial portion of his fortune. Suddenly the cloud in the west swelled to storm size. An explosion in the factory killed several men. Expensive damage suits followed, and on the heels of them broke the great Jay Cooke panic of 1873, that was to shake every business house in the land.

Dudley, Junior, had been a year and a half at college. Necessity called him home to the side of his father. He was only twenty-one years old, but he knew something of sawmill management. He immediately took charge of the sawmill and barrel factory, now on his father's hands, with a force of seventy workmen under him, and a debt of twenty-five thousand dollars to pay off. The mill and factory were committed to fill a huge contract for oil barrels.

In normal times, the barrel contract would have been a profitable one. But it was poison to the faltering mill in those panic years. Lower sank the Humphrey fortune.

The farm was mortgaged; a four-hundred-acre slice of it had to be sold. The mill went deeper into debt, in spite of every economy and long nights of planning in the farmhouse kitchen. Ask some old-timer to tell you of that panic of '73 and its aftermath.

The senior Humphrey died in 1876, worn out with work and worry. This left the boys alone—Harlow and Dave on the farm, Dudley at the struggling mill. One night as they slept the shrill alarm of fire sounded over Wakeman. In a few minutes a neighbor came running, shouting breathlessly:

"Hey, there! Get up! Your mill's on fire!"

"I was dressed in two minutes," Mr. Humphrey told me. "The mill was only a block away, and I (*Continued on page 191*)

"Nevada"

A romance of the West

By Zane Grey

ILLUSTRATED BY STOCKTON MULFORD

A WEEK later, to the day, about the middle of the afternoon, Jim Lacy stood with Cash Burridge on the Mongollon Rim, facing south over the magnificent wilderness of southern Arizona.

Yellow dust palls hung over the steep Maricopa trail, where it jumped zigzag off the Rim and wound down into the green depths. A mighty roar of trampling hoofs, and bellowing cattle, and crashing brush, and whooping riders waved up from that hot slope. From the look of the trail, trampled and dug and widened by thousands of hoofs, it appeared that a river of live beasts had poured over the Rim.

"Lacy, it's all over but the fireworks," said Cash exultantly.

"*Quien sabe?* It might fetch some fireworks you're not figurin' on," admonished his companion.

"Not much. We're shakin' the dust of the brakes. Say, won't Ben Ide an' Tom Day bite nails? Biggest drive I ever had a hand in. An' all so easy! All like clockwork! All in a couple of days, in spite of that yellow traitor, Cedar Hatt!"

"Shore, we didn't need him," responded Lacy thoughtfully.

"Jim, I've seen some mad hombres in my time, but that Cedar Hatt beats them all," declared Burridge, aghast at the memory.

"Shore he was mad. Didn't I warn you to keep your outfit from givin' it away aboot Stillwell?"

"Yes, you did; an' I talked myself hoarse. But it couldn't be kept. They *hated* Cedar; an' the minute somebody got two drinks aboard, he up an' blows that Burt Stillwell was dead. It sure made a hydrophobia-coyote out of Cedar. But he didn't know *who* shot Burt. When he spit questions at you, like a snake with a hunch, why didn't you lie?"

"Wal, Cash, I reckon you don't savvy me."

"Why didn't you kill him, then?"

"I just aboot did," returned Lacy, reflectively. "But I saw he didn't have the nerve to draw—so I waited."

"Ahuh! Waited? I get your hunch. Cedar knows somethin' you're keen to find out. Bet it's that Pine Tree Outfit."

"Cash, you're figurin' fair. But on the daid square now—rememberin' the favors I've done you—cain't you tell me somethin' aboot that outfit?"

"No more'n we all know, Jim."

"Shore you have some suspicion aboot who leads them?"

"Honest, I haven't even an idee," returned Burridge, with truth in look and voice. "What's it to you, anyway, Jim?"

"Reckon I've got to put my brand on the boss of the Pine Tree," said Lacy.

"Oh! Is *that* all? I thought you might have some interest in him," retorted Cash, sarcastically. "Jim, on the square, if you hadn't done so much to straighten me out again, I'd have suspicions about you."

"Wal, keep them in your haid!"

Burridge laughed, and gathering up his bridle swung into the saddle.

"Come on. I don't want the outfit to get far ahead. You'll be hearin' the clink of gold before sundown."

"Not me, Cash. I'm not goin' any farther with you."

Burridge studied his companion for a long moment, his face working. Regret began to erase the incredulity.

"Well, what in thunder are you goin' to do?"

"That's my concern now. I'm through."

"Through! . . . Jim Lacy, you're too deep for me. But I'm gettin' a hunch. . . . How about your share in the divvy for this deal?"

"There won't be any. Judge Franklidge has been tipped off, and his men'll be waitin' on the other side of the Rim. You know what that means. I'm givin' you this chance to escape. Try bein' honest again. You might succeed next time. But *don't* try to warn the rest of the bunch, and don't ever come back heah!"

"Why not, Jim?"

"Because, if you do, I'll kill you!" flashed Lacy, in a voice that cut like a whip.

The ruddy heat left Burridge's face, and he began to nod his head, slowly, with increasing motion, while his eyes fixed in a startling comprehension.

"*Jim—Lacy!*" he said, huskily.

"I reckon," replied Lacy grimly, as he turned to his horse.

"Well, you been a pard to me, whatever your reasons," went on Burridge, with feeling. "I don't care a darn what they were. . . . I'll get out of this country. Here's my hand on it. . . . Goodby, an' good luck!"

"Same to you," replied Jim, as they gripped hands.

Burridge wheeled his horse so violently that it reared and plunged, and then slid to its haunches in the soft ground where the trail led back down the slope.

LACY strode into the level shady forest, leading his horse. He had prepared for this separation from the rustlers, and had tied a light pack behind his saddle. There was a spring in his step and a light on his face. The deep forest land, beginning to slope almost at once north from the Rim, seemed to receive and absorb Lacy as a transformed man.

It wanted yet an hour before sunset. Jim Lacy, with his plans well in mind, had on the whole journey across country from Elam Hatt's ranch to the head of the Maricopa trail taken careful account of the lay of the land.

It served him now. His intention was to return to Hatt's ranch, if possible, without encountering even a sheep herder. Hatt had left his daughter Rose alone. Elam, of course, with his two sons, could be expected to get back home from the cattle drive in two days from the time Jim had left them, or even less.

AS FOR Cedar Hatt, who had deserted Burridge and Elam after the revelation of Stillwell's death, no doubt he had rushed to the secret rendezvous of the Pine Tree men, wherever that was, there to betray to them news of the impending drive of the Ide stock. It was Cedar Hatt in whom Lacy had the greatest interest, at the present stage of the game; and Cedar was most likely to be found at or near home.

There was reason, too, for Lacy to have an interview with Rose Hatt, from whom he expected to force more about the man who dominated her brother, and whom she feared. Moreover, Rose was to be considered on her own behalf.

Jim Lacy did not think it wise to go near Silver Meadows, where the cattle had been collected for the great drive. Therefore, when he broke camp next morning he made a wide detour, hoping to strike the trail he and the rustler band had made coming from Hatt's ranch. But he had to go into camp the second night of his journey without having found it.

On the next morning, however, he struck the trail he was looking for, and backtracked it until it failed on high ridges, on hard ground, rocky flats, and pine-needle masses over which Elam Hatt had led the rustlers, for the express purpose of hiding their tracks.

Lacy lost no time by trying to recover them, though he believed he could eventually have done so. Sure of his direction now, he pressed on rapidly, and the next afternoon struck the deep brake east of the one in which Hatt lived.

He took the precaution to ride well back from the Rim, peeping over whenever opportunity offered from behind foliage or rock covert. He did not really expect to see anyone, but that did not influence his actions. Lacy was always cautious, watchful, alert; and in this instance he

UNIVERSITY OF CALIFORNIA

might have been on a scent, so instinctive was his progress along that Rim.

Presently, down in an open bend of the deep canyon, Lacy caught a glimpse of a rider. He was coming slowly up the trail, leaning down from his saddle, evidently with eyes on the ground.

Lacy rode back from the Rim, and urged his horse to a lope, careful to avoid rocks and brush. There were places where he had to go slowly, but in the main he covered a mile or more in short order, then again approached the Rim.

This time he dismounted and cautiously stole to a vantage point, from which he could peer unseen. As luck would have it, there was an open grassy meadow, narrow and long, just beneath his position. The canyon was five hundred feet deep at this point, green-walled, precipitous, and insurmountable.

LACY watched so long without seeing the rider that he believed he had been too late to catch him crossing this open flat. But as he had about decided to hurry on again the rider emerged from the lower end.

"*Cedar Hatt!*" whispered Lacy, his head lowering with the motion of a striking eagle. "Talk about luck! I'm shore smothered with it. . . . Jim Lacy's luck! . . . But bad for you, Cedar!"

He watched the rider with a strained, piercing gaze, as if it were possible to divine his motive.

"This might be the trail Marvie Blaine rides when he comes to meet Rose," soliloquized Jim, pondering. "Shore it is. She said the brake east of where she lived."

Cedar Hatt rode on, directly under Jim's position, and once he halted his horse, to lean far down from his saddle. How like an Indian! Then he swung up in the saddle to peer ahead, as if calculating something. He made a dark, wild figure then, suiting his ragged horse and the background of tangled brush and rugged wall. Then he rode on, more slowly.

"By heaven," burst out Lacy, "that hombre is trackin' Marvie Blaine!"

Lacy crawled back from the Rim, then rose to run for his horse. Luckily, the lower part of the brakes was miles below the locality where Rose was in the habit of meeting young Blaine. Lacy had time to get ahead and find a place where he could descend to the floor of the canyon. Riding still farther back from the Rim, he put his horse to a gallop and made a hard, fast ride for several miles.

Then he slowed down and headed for the Rim again. No break in sight where he might descend! The wall grew more precipitous and higher.

At length Lacy came upon an intersecting canyon, a narrow crack which ran off into the woods. He rode back to where it headed in one of the thickest ravines, so common to the country. He rode down as far as possible, then, dismounting, he tied his horse and hurried on. This gorge deepened into a split between toppling walls, so rough that there was not even a deer trail. But Lacy, sparing no effort, traversed it, to reach the main canyon, hot and bruised, and out of breath.

Under cover of the oak thicket that lined the slope from the wall, he rested a few moments, listening like a pursued deer.

The east side of the canyon was a gentle slope, covered with white grass, brown ferns, and low pines and oaks, affording perfect cover for anyone hiding. Lacy worked gradually down toward the level of the canyon. He did not snap twigs, or scrape brush, or make any sound. At each little opening he peered out before advancing. Often he stopped to listen.

It was through this extreme caution and the eye of a woodsman that Lacy came upon Marvie Blaine and Rose Hatt.

They were in each other's arms, lost in the enchantment of their dreams. But they had chosen a secluded nook, half way up the grassy pine-dotted slope, from which they could see, by peering under the low-spreading branches, both up and down the trail. At this moment, however, they would not have become aware of the approach of an army.

Lacy seemed struck to the heart by their rapture and the poignant pang that rent his own breast. He understood. He had lived that. He knew the sweetness and glory of love. He sank to his knees, feeling that he had no right to interrupt their sacred hour.

MARVIE bent over Rose, whose head lay upon his breast, with her face upturned to his. If they were whispering, Lacy could not hear, though he was close. But he doubted that they were whispering. Both bliss and tragedy seemed to hover over these youthful lovers.

Suddenly, Lacy heard a sound that cruelly disrupted both the pain and the joy he felt. It had been faint, therefore hard to locate. It could come from either near or far. It seemed to have been a slippery, gliding sound, as of a soft substance in contact with one rough and hard.

All at once an idea flashed to Jim—buckskin over rock! Cedar Hatt always wore buckskin. Close at hand there were corners of cliff, ledges, huge slabs of rock. The instant that thought stood clear in Lacy's mind he grew stiff, intense in the grasp of a sensation for which he could never find an adequate name. It amounted almost to a power of divination. It always brought the icy steadiness of his nerves.

THEN, from the dark shadow of pines behind Marvie, a lithe figure glided. Silently Jim Lacy drew his gun. The situation was clarified, and a dread of something he could not see or control faded away.

Marvie never looked up from the beloved face, until Cedar Hatt halted. It was clear to Jim that Cedar's sudden, violent check came from the surprise of seeing Rose in Marvie's arms.

Marvie likewise started. Rose screamed. She swayed up to her feet, and with hands out she backed until the pine tree stopped her.

"So, hyar's why you run off from me to-day?" Cedar shouted, fiercely. The muscles of his neck swelled, his lean jaw protruded.

"Don't—don't hurt me—Cedar!" cried Rose, upon her knees before him.

"I'll beat you half to death. So, hyar's why you played sick to-day, an' then run off. You lyin' hussy! Answer me!"

"Yes—yes, Cedar. I—I did," replied Rose, sagging back against the tree.

"This hyar ain't no accident?" he demanded, with a forceful gesture toward the stricken Marvie.

"No. I come—on purpose."

"Who's this hyar young buck?"

"I'll never tell!" flashed Rose.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Marvie stumbled to his feet and stepped forward, livid of face, but resolute.

"I'll tell you," he said.

"Don't—don't!" cried Rose.

"Well, who air you?" demanded Cedar.

"I'm Marvin Blaine," answered the lad. "I live with Ben Ide. We're related."

"Ben Ide! . . . O-ho! You belong to them rich Ide folks, huh, as wouldn't wipe their feet on sich as us Hatts? Wal, blast your white skin, what you doin' hyar with my sister?"

"I—I love her," answered Marvie, manfully.

Cedar knocked him down.

"I'll kick your heart out," he snarled.

Marvie rolled out of reach, leaped to his feet, and came back.

"I seen you kissin' Rose. Playin' with my sister, huh? An' you belong to them Ides!"

"Cedar, it's not—what you think," burst out Rose, with the scarlet dyeing her face.

"Git out, you lyin' little hussy! If you'll lie about one thing you'll lie about another. . . . All the time, you been meetin' this young buck, huh?"

"Yes, I have!" retorted Rose, passionately. "He loves me honest. . . . You're too low-down to understand what that means."

"Ed Richardson will kill you fer this!" hissed Cedar.

"Let him kill me then!" returned Rose, with an equal passion. "I don't belong to him. I hate him. Did he ever talk honest love to me? Bah! But Marvie Blaine did. An' he's made a woman out of me."

"Hatt, I've asked—Rose to marry—me," interposed Marvie, beside himself with emotion.

"Yes; an' his sister is goin' to give me a decent home till I'm old enough," added Rose.

"O-ho! Double-crossin' Ed an' all of us, hey? You black-eyed cat! . . . Get your hoss, an' soon as I take the hide off this kid lover of yours, we'll—"

"Cedar Hatt, you'll have to pack me dead—if you take me one single step. . . . You'll never drag me alive to your Pine Tree—"

"Shut up!" interrupted Cedar, and he struck her down.

Marvie, with furious imprecation, rushed at Hatt, only to be sent staggering against the tree.

"I'll blow your insides out," yelled Cedar, reaching for his gun.

BUT before he could draw, Marvie closed with him, and as Hatt dragged the gun out they began a swift struggle for possession of it.

Here Jim bounded out of his covert and down the slope, his gun half leveled. Neither of the contestants was aware of his presence; but Rose saw him, and she shrieked.

Jim tried to get a bead on Cedar. But he had to be sure of his aim. He did not want to risk injuring Marvie. As they whirled and wrestled, Cedar pulled his arm over his head, his hand clutching the gun. Marvie clung desperately to that arm.

Jim took a snap shot at Cedar's gun hand. Missed! He snapped another and the bullet tore Cedar's hand almost off. The gun went flying, while Cedar, backing away from Marvie, cursing hideously, suddenly froze stiff at sight of Jim.

Marvie had not yet seen his savior. No doubt he thought the shots had been fired accidentally in the struggle, wounding Cedar. Quick as a flash he snatched up Cedar's gun, and leveling it with both hands he worked the trigger.

Cedar Hatt clutched at his breast. An awful, blank surprise rendered his expression once more human. With gasps his mouth opened. Then he reeled, and fell at Marvie's feet.

Marvie began to sag, changing his crouching position. The smoking gun dropped from his limp hands. Rose, on her knees, with a red stain on her lips, rocked to and fro, mute with terror.

"Wal, Marvie, that wasn't so bad for a youngster," said Jim, stepping forward. "I was just aboot to plug him myself."

As if a giant arm were grinding him around, the lad turned.

"*Who . . . are . . . you?*"

"Reckon I'm your old pard Nevada, of Forlorn River days," replied Jim, and then he grasped Marvie as he collapsed. He embraced him and half carried him toward the tree, where Rose now clung, trying to get to her feet. "Brace up, boy. It's all over. There. . . . (*Continued on page 103*)

Jim bounded out of his covert and down the slope, his gun half leveled. Neither of the contestants was aware of his presence; but Rose saw him, and she shrieked

A Cowboy Who Roped Polar Bears In the Land of the Midnight Sun

NOT many cowboys can boast of having lassoed polar bears from the deck of a schooner picking her way among icebergs inside the Arctic Circle. Carl Dunrud, Montana cowboy and lariat expert, does *not* boast of this experience, but he *could* if he were the boasting kind.

Carl accompanied the recent expedition of the American Museum of Natural History to Greenland, in search of walrus, narwhal, polar bears, arctic birds, and deep-sea specimens of one kind and another. He captured a walrus and a couple of polar bears, which are now very much at home in the Bronx Zoo in New York City.

"Lassoing a walrus is a mighty slippery business," he told me during a stop-over in New York on his way back to Yellowstone Park, where he spends most of each year herding elk and buffalo, hunting predatory animals, and acting as guide to tourists. "The trouble is," he went on, "a walrus's head is smaller than his neck, so a rope thrown over his head slithers right off, if you don't maneuver it under a flipper, too. And of course that's hard, because a walrus feeds and plays under water. It's just now and then that he comes to the surface to tank up on air.

"Doctor Rasmussen, a great Danish explorer and authority on Greenland, joined us at Upernivik, the most northern settlement in the Western Hemisphere. He introduced us to a family of Eskimos, famous arctic hunters, who acted as our guides in the search for walrus. They took us to waters where game was plentiful. In one quiet nook, almost shut off by towering icebergs, we found a hundred walruses in a single herd.

"Out of this big herd, the Eskimos harpooned five for us, and I got one with my lariat. But I didn't enjoy my share of the sport so much, and I'll tell you why: One of the harpooned animals was a mother walrus that had been swimming with her cub. It was this cub that I got. He refused to leave his mother even after she was dead. It was because he kept on coming up to see what had happened to her that I was able to get him.

"I felt mean about the job, but I tried to comfort myself by thinking that the Eskimo children had to have walrus meat for food, and that I was along for the sole purpose of bringing back arctic specimens for the Museum.

"It was great fun getting our two polar bears, though. We found them preening themselves on a cake of ice near Pond's Inlet, the most northerly station of the Canadian Mounted Police. Getting the rope over their heads wasn't hard; but getting them to the schooner was the very dickens, for they fought like a couple of wild-cats.

Carl Dunrud, a Montana cowboy, having a little fun with "Baffin Belle," one of the polar bears he lassoed during a recent expedition to Greenland. (Below) Carl helps a little Eskimo flapper make a snapshot of a mutual friend

"All the time that we were towing them in, tied to the stern of the dory—one at a time, of course—they were doing their darndest to climb into the boat and chew anything in sight, preferably a man. Once Cap'n Bob (I named him for Cap'n Bob Bartlett, skipper of our outfit) swiped out at me and ripped through my heavy leather glove, giving me a nasty cut on the hand.

"Yet after we hauled them on board and into the cages we made for them, they quieted down considerably. And before we got back home they were almost tame. Cap'n Bob got so he would eat out of my hand, and I believe our motion picture man got a close-up of him licking my fingers. However, I would never have tried *that* stunt on 'Baffin Belle.' She didn't respond to civilization nearly as kindly as her brother did!"

"It must have been pretty exciting," I suggested, "lassoing from the deck of a ship instead of from a pony's back."

"Well," said Carl Dunrud, "the lassoing part wasn't half as exciting as getting shipwrecked. I had never been to sea before, and I was eager to get all the experience I could; but I confess I wasn't exactly looking forward to spending five days—including my thirty-seventh birthday—marooned on the edge of an ice-bound island well up in the Arctic Circle.

"It happened like this: There was a fog, and the schooner snagged her keel on a rock while we were nosing off the coast of Northumberland Island. The tide was in when we hit, and when it went out, there we were stuck as fast as a cocklebur to a pony's tail. For twenty-four hours straight, we manned the pumps, and bailed. And then, after we had sort of got used to he picture of ourselves sticking around there until somebody came in reach of our wireless, the tide rolled in strong, and the 'Morrissey' slipped off that rock as easy as you please.

"But in the meantime, we had carried all our stores ashore in the dory and had walled up a sort of shelter with them, using a piece of canvas for a roof. Now the captain decided to leave three of us in charge of the stores, while the rest of the crew sailed off in search of a place to

Digitized by Google

UNIVERSITY OF CALIFORNIA

put in for repairs. Mr. George Palmer Putnam, the head of the expedition, and his thirteen-year-old-son, David, and I were the ones left on shore.

"It was Mr. Putnam who invited me to go on the expedition. He and I got to be friends several years ago, when he was hunting and sight-seeing in the neighborhood of Yellowstone Park. I used to take him with me now and then when I was herding elk and buffalo, and he had a fair opportunity to see me in action with a rope. That's why he thought of me when he and the others who were getting up the expedition decided that they wanted to bring back some live specimens for the Museum.

"Well, to get back in the saddle, as you might say, the first thing we did after the schooner got out of sight was to turn to and sleep 'round the clock. When we woke up, it was July 28th, and my birthday. Mr. Putnam insisted that we must have a birthday dinner, so he and David went out with their rifles and fetched in a fat ptarmigan, which I baked with all the fixings. The only thing we lacked was candles for the frosted cake that came out of a tin!

"Well, two days went by and no sign of the schooner. Cap'n Bob Bartlett had told us that he would be back as soon as he could get the boat patched up so that she was safe to go forward in. We were beginning to be worried, when a couple of Eskimos came along. We knew only one word of their language and that was the word for boat. By repeating this word a good many times, and by acting charades until we were plumb worn out, we finally got it across to them that we were waiting for our ship.

"Your Eskimo is not one to get excited, but in the middle of one of our best charades, in which David and I were bailing and Mr. Putnam was pumping, to show what had happened to our vessel, one of the Eskimos almost shifted his expression, and then *he* began to act! Pointing over a mountain that stretched across the island, he pumped his arms up and down to indicate that he knew all about it. In fact, he made it clear to us that our ship was on the other side of the ridge.

"Leaving David to hold the fort, Mr. Putnam and I set out. It took us nearly two hours to make the trip, but when we got to the other coast, sure enough, we found the schooner ready to put out. We jumped aboard and sailed back to David, who was sound asleep. The next day, we got our stores aboard and headed for Upernivik again.

"There were only two things about the whole trip that disappointed me: One was that I didn't get a chance to lasso a musk ox, and the other was that I didn't get seasick. The boys on board said that I needn't expect to get upset by a little rough weather at sea when I had been riding bucking bronchos for twenty-odd years. I reckon they were right at that. I've been riding critters of one sort or another since I was five years old."

MILDRED HARRINGTON

She Keeps House for Machine Guns and Bayonets

NOT long ago, a young soldier on encampment with some National Guard units in Columbia, South Carolina, called at the State Armory, and requested of a motherly-looking little woman whom he found there, that an order for so many rifles and cartridges be filled at once.

"Tell the armorer to have them ready for me when I call for them in an hour," he said.

"I am the armorer," answered the little woman; "and they'll be ready for you in thirty minutes."

The woman was Mrs. Ida V. Hornsby, of Columbia, South Carolina, and she is one of the few women armorers in the United States. She has entire charge of the military supplies in the State Armory. She has been doing the work for fifteen years, and in consequence she knows it thoroughly. Major F. W. Glen, United States Finance and Disbursing Officer, says he has yet to call on her from sunrise to midnight and not find her on duty.

Mrs. Hornsby's husband was the state armorer until his health failed. For three years before his death he was unable to go up and down stairs. Mrs. Hornsby began helping him with the work, little by little, taking it up when he was forced to lay it down, until at last she was doing it all—packing the boxes with guns and cartridges, and issuing ammunition to the various National Guard companies stationed about the state.

"My husband got so at the last," said Mrs. Hornsby, "that he didn't want me to be out of his sight; but I nursed him and took care of the Armory, too. The companies didn't know he wasn't doing the work, because when the orders came in they were filled just as they had always been. Then, when he died, they told me I could go on with the work alone. I've been doing it ever since.

"At first, the men thought they could impose on me," said Mrs. Hornsby, "and when they wanted something out of the Armory, they'd say, 'Just let me have that old gun; it isn't any use to you.' But they never got it. 'Get that requisition paper,' I'd tell 'em, and now they know better than to try to take even a worn-out broom without the proper papers.

SARGEANT PHOTO CO.

Mrs. Ida V. Hornsby, of Columbia, is the official armorer for the State of South Carolina. She has charge of military supplies for thirty-five units of the National Guard

"My worst trouble is when they come in here with cigarettes. With all this powder and ammunition lying around, a lighted match might cause a terrible explosion. I have to watch the men every minute to see that they don't scratch matches. Sometimes one of them forgets, and—even if he's a major general—out he goes if he's got to smoke."

Mrs. Hornsby is perfectly familiar with machine guns, saw-tooth bayonets, rifles, and 30-30 cartridges. She is known among army men as an "ordnance expert." She tells the story of how she once got the better of the adjutant general in an argument.

Some German machine guns had been shipped into the Armory for distribution among the National Guard companies of the state. The adjutant general, in looking them over, announced that certain articles—tripods, to be exact—must be sent with them, as the tripods and guns belonged together.

"I told him he was wrong. 'The guns won't stay on those tripods,' I said, and I showed the things that they belonged on. 'Those are hand grenade throwers,' he answered. 'No,' I said, 'those are machine gun carriers.' So he got out his little book and read something; then he looked at me and laughed, 'Have it your way, Mrs. Hornsby,' he said. 'You're right and I'm wrong.' So when the guns were shipped the right carriers went with them."

A number of empty boxes were lying neatly stacked in the Armory.

"I can fill fifteen of those boxes in an hour," she told me. "The machine guns and carriers must lie just so, and the bayonets go in that end. They are still being shipped, for, even so long after the war, men at the armories are still calling for war souvenirs. I have just finished filling

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

and shipping the ninety-ninth box, and I've got some more to send off. But I have to be careful not to leave a box open overnight, because someone is sure to pick up something, and either take it away or put it back in the wrong place. I haven't had any trouble with my boxes yet, and I'm not going to take any chances. Men can't help but handle pistols and guns if they see 'em lying around; they just naturally love 'em."

Mrs. Hornsby lives up-stairs over the Armory and there, in a couple of rooms, she prepares her meals and sleeps; but most of her time is spent among the army supplies, for which she seems to have developed something of an affection. The supplies include nearly everything that is used in the army, and many articles that are obsolete and unfit for use. But everything must remain in its proper place until it is inspected and permission is given to throw it on the junk pile.

LEONIE DRUELLE HARVIN

He Saved the Lobster Industry From Being Wiped Out

THE man who knows more about lobsters and how to raise them, than almost any other man in the world is Ernest W. Barnes, a biologist from Brown University, Rhode Island. He can beat Nature at this job. For if she is left to her own devices she raises only one lobster in every thousand, while Mr. Barnes has a record of saving *seventy* out of every thousand.

When Mr. Barnes went from Iowa to Brown University, twenty-five years ago, to complete a course in biology, he found enough work at the newly established lobster hatchery at Wickford, a town in Rhode Island, to pay his tuition at Brown. He did not know then that the time would come when the Governments of England, Spain, The Netherlands, Canada, New Zealand, and other countries would come to him for expert advice on the raising of lobsters.

The lobster hatchery is a part of the experimental station of the Inland Fisheries of Rhode Island. It is maintained by funds appropriated by the General Assembly of the state. The nursery of the small lobsters is a big houseboat, surrounded by compartments for hatching and rearing the young; and over a million lobsters are raised there by hand every year. It is situated at Wickford Cove, near the town, where there is ebb and flow enough of the tide to keep the hatchery supplied with the salt water required by the lobsters. Much of the specialized machinery used in the hatchery has been built by Mr. Barnes himself.

When he first went to Wickford, the Federal Government was about ready to abandon the series of experiments by which it sought to find a means of raising lobsters. The experts were convinced that unless nature could receive some assistance, the lobster would soon be as extinct as the dodo. For lobsters were being caught and eaten faster than they could breed.

Lobsters are hard to raise, even under the best of conditions. Left to themselves, the females lay their eggs at random over wide areas, and deposit thousands of eggs every year, few of which ever reach the adult lobster stage. During the first three weeks or so after hatching, the "fry," as the young lobsters are called, are at the mercy of every preying fish in the water. They molt three times during this period, each time taking on a different shape. During this time they can do little more than just float with the water currents.

At the end of the third molting period, they reach the crawling stage, and are then in the same form as in adult life. About this time, the young lobsters begin to evade their enemies by diving and seeking hiding places under the weeds at the bottom of the water; but even at this stage, thousands of them die before they reach maturity.

PHOTOGRAPH BY OUTLET STUDIO, PROVIDENCE, R. I.

Lobsters were being caught and eaten faster than they could breed, until Ernest W. Barnes came to the Inland Fisheries at Wickford, Rhode Island. Here he devised methods that have been seventy-fold as effective as those of Mother Nature in bringing lobsters safely to maturity

"It was a question of finding a way to protect them until they reached the fourth stage," said Mr. Barnes, "for they can look out safely for themselves after that. It was a pretty tough job. When we began it, twenty-five years ago, there were vexing problems at every turn. The Federal Government, with the best of facilities, and a very large appropriation, had failed to raise the little ones beyond the third stage.

"At that time, the government biologists dumped the fry into deep water at the third stage. Such young lobsters are not only helpless against water currents, but they don't even know enough to swim away from the yawning mouths of approaching enemies, such as the cod. The result was that they were devoured in large numbers by preying fish before they had been long in the water. Obviously, if we were to make any headway at all, we had to raise them to the fourth stage in the hatchery, and then decide how best to turn them loose."

To prevent their feeding on one another while they were in the rearing "cars" or floating boxes, where they are hatched and where they pass through the early moltings, was another problem. The young lobster is a cannibal—he will feed upon his own species. Added to that, the little lobsters must have water that is constantly changing. So Mr. Barnes devised floats that had wooden frames with fine-mesh copper screening to admit the water. Large rotating paddles were placed in the bottom of each car, propelled by a special design of shafting controlled in the hatchery house, and operated by a gasolene motor.

These paddles keep the water in constant circulation, and serve the double purpose of preventing the youngsters from feeding on each other, and of keeping the water fresh. The fry are fed every two hours, day and night, on ground, dried fish, run through an automatic sifter. The eggs from which the lobsters are hatched are obtained from fishermen, who are paid a bounty for each egg-bearing female they bring in.

"We developed this entire system after many failures," said Mr. Barnes. "It was a slow process. For one thing, the season for rearing is so short that if we made a mistake in one year we had to wait until the next season to try some other method. Moreover, we had to design and to build our own apparatus and machinery.

"Then we had to find some way to keep the fry from getting so close to the paddles that they would be crushed. After a great many experiments, we painted the paddles white. We found lobsters would keep away from the white paddles, for they always avoid the light."

At last came the triumphant day when Mr. Barnes had brought the little lobsters safely through to the fourth stage and had begun the final test of putting them overboard to look out for themselves.

Dimick Lets the Children Help Him Run His Movie House

(Above) The children's chorus of the Lancaster Movie Theatre, in Boston. (Below) The owner, Charles W. Dimick. When the children in his audiences got too noisy, he gave them a part in the show

A FEW years ago, Mr. Charles W. Dimick, a Boston business man, had an idea he could turn a poorly paying piece of real estate into a first-class theatre. The old building, once a schoolhouse, was located in about the last spot in the world where a theatre might be expected to prosper, for it was far from the theatre and shopping district, in a very poor section of the city.

Mr. Dimick was not a showman; but he had an idea that a good theatre was needed in that neighborhood and that it would pay. So he went ahead and built his first playhouse, the Lancaster Theatre.

Then the children of the neighborhood—children of many nationalities—began patronizing it liberally, and noisily. Mr. Dimick wondered what he was going to do about it, for they showed signs of running wild with the place. So he did an untheatrical thing: he let them help him run the show.

He noticed that the children grew restless after sitting for an hour or so during the long Saturday afternoons. So he tried an experiment: Pictures were turned off, and the theatre given over to the children for fifteen minutes. And now, every Saturday afternoon, the children stand up in their own section in the front of the balcony and sing, as a regular part of the performance.

Mr. Dimick tells how he put his idea into operation: "I love children. I saw these hundreds of boys and girls around the neighborhood, and I wanted to make them happy and at the same time help them—teach them to appreciate good music and good pictures. And, particularly, I wanted to show them only the pictures that were worth-while, stories that would help to make them better citizens. I have applied only simple business methods in this fascinating process of Americanization.

"The crippled and deaf and dumb children can come in free of charge at any time outside of school hours. Then those who sing in the Saturday afternoon chorus see the show for nothing. There are ninety boys and girls in the chorus, and one hundred more on the waiting list. There are also about two thousand children who are regular patrons of the theatre. Several times this chorus has broadcast over the radio.

"Every Saturday morning, the singers report for rehearsal, and are drilled in choral singing for an hour by a first-class teacher. We are constantly discovering some naturally sweet voice which needs only training to make it really fine. The children return to the theatre and see the show that afternoon. At about three o'clock the singing takes place, and, really, everybody in the theatre enjoys it thoroughly.

"They sing some of the better popular songs first—songs with some value as well as appeal. Then perhaps a solo or duet. They always finish with 'America, the Beautiful.' The children love that song, and how they show it in their singing!

"That there may be some incentive for good work, I award prizes every week. Seven first prizes of a brand-new dollar bill and six second prizes of new fifty-cent pieces. The house manager and the ushers walk up and down the aisles and judge the singers. The first prizes are given for excellence in singing, and the seconds for the best attention.

"I have built a studio in the rear of the theatre, where voices may be tried out and instruction given. Here, several afternoons a week, a competent teacher from the conservatory gives the children individual instruction.

"The singing has accomplished wonders for the boys and girls. It is an education; it is a natural outlet for youthful spirits, and it makes them far better audiences. No child is admitted in school hours. They must not play hooky for the movies.

"I examine every foot of film before it is shown to an audience. Titles which I don't think good for a child to read are deleted; scenes in any way undesirable are cut out. I want to educate the children in every way possible; and I believe the clean stories and the singing are bringing splendid results."

It is an inspiring thing to be in this theatre on chorus day and see over a hundred children rise to sing, to hear these youngsters, of as many as nineteen different nationalities, sing "America, the Beautiful."

While I sat in Mr. Dimick's office, his chief projectionist came in to determine the Saturday afternoon program. "How about this picture?" asked the operator, and named a famous story which was being given at the theatre.

"Take it out and substitute the special," replied Mr. Dimick. And he explained: "That picture is a classic; but I don't feel the children ought to see it." The film in question was very expensive; but rather than show a story which he didn't think suitable for the children, he paid for two, and used only one.

"The Wizard of West Street" Repairs Thousands of Valuable Clocks

DOWN on West Street, which overlooks the bustle of the docks in lower New York City, is a tiny shop whose windows are filled with quaint and curious clocks and watches. At almost any hour of the day, you can find at least half a dozen noses flattened against the panes. During the noon hour there is always a shoving, good-natured crowd eager to see what "the wizard of West Street" has added to his collection since the day before. On one Sunday, not long ago, more than ten thousand people paused between eight in the morning and eight in the evening to puzzle over what they call "the perpetual-motion clock."

And inside the dingy little slice of a shop, on six days out of seven, sits Fred Jensen, the proprietor, his gentle face beaming with pride, when it isn't screwed into a thousand wrinkles over some problem of his work table.

For twenty-two years, Fred Jensen has been established in the same spot, and for thirty-five years in the same block. Before coming to this country, he spent ten years practicing his craft in Berlin, Metz, and other Old World cities famous for their watch guilds. As a boy he served a rigid apprenticeship in Copenhagen under his father, who died recently at the age of eighty-eight.

"Watch-making runs in my family," explained Mr. Jensen proudly when I visited his shop. "For many years my father was the oldest active watchmaker in Copenhagen, and he was a good one too. As a lad, he bound himself out to a watchmaker there. After a while, he married his employer's daughter. Then I came along, and I also learned the trade. Now, my son is my partner. Already my thirteen-year-old grandson has started his apprenticeship after school hours.

"To become expert in our trade," he went on earnestly, "eyes and fingers must be trained to work together from childhood. Before I was seven, my father used to have to chase me away from his work table. But I always went back. That is why I am here to-day.

"In the old days," Jensen continued, "a man put a part of himself into his work. When I was a 'prentice in Copenhagen, people waited two or three years for a watch or clock to be finished. I have one watch that must have taken twenty years of a man's spare time. Only an artist who *loved* what he was doing would give that much of his life to a job.

"A good many people have the idea that a watch with a Swiss label is superior to any other kind; but that is no longer true. The best moderately priced watches in the world to-day are made in the United States."

"What brings the majority of watches to you to be doctored?" I wanted to know.

"A fall," answered Mr. Jensen promptly. "If you drop your watch, you had better have it looked over, no matter whether or not it shows any bad effects."

PHOTOGRAPH BY NEA SERVICE, INC., N. Y.

Fred Jensen, watchmaker, with a clock that attracted crowds to his tiny shop in lower New York City. He was apprenticed to the trade when a boy, and repairs clocks, collects rare old ones, and invents new ones of his own

Through years of restoring ancient timepieces, "the wizard of West Street" has gathered a cherished collection of rare watches made by the masters of bygone centuries, when watches were only for kings and those they favored. In cases against the walls are more than a thousand movements, showing the development of the watch from the clumsy, turnip-like affairs of three hundred years ago to the thin, graceful timekeepers of to-day.

"Where do you find your valuable old specimens?" I asked him.

"Sometimes I buy them from curio dealers; sometimes I pick them up in auction rooms or pawn shops," he replied. "Most often, I buy from people who come to me.

"Frequently, a man brings in an old, badly broken watch which he wants me to repair.

"When I tell him that I will have to charge fifty or sixty dollars, he is not willing to pay that much, and he sells me the watch. Again, a man may have a lot of what he calls 'old junk' that he wishes to get rid of. Often I buy old watches and clocks that are no good except to furnish parts for repairing other old pieces.

"During the day, I must earn a living for my family by repairing watches for men who want them back to-morrow, if possible. But when evening comes, I like best of all to take down my box of old broken watches and make them run again.

"Collectors come to my shop, pick up one of my treasures, and say, 'How much?' I shake my head. I have no money to leave my son; I give him my old clocks and watches instead. That is better. When I am gone, he can look at them, and know that a part of me is there."

He paused, took down from a shelf above his work table a small French clock of beautiful workmanship, and set it tenderly upon the counter.

He closed the door. The clamor of the streets and docks seemed far away. Another moment, and a delicate elfin tune tinkled in the dusty little shop.

"A collector brought this to me all broken up," explained Mr. Jensen. "It is more than a hundred years old. I worked with it three months. Now it runs like new."

As he spoke, the hands of the many timepieces on the walls pointed to eleven. Instantly, the doors of a dozen Swiss clocks flew open and out popped a whole flock of little wooden birds that sang, "Cuckoo! Cuckoo!"

"You see," said Mr. Jensen, "I have birds that sing to me all winter."

In addition to collecting ancient timepieces, Mr. Jensen has an absorbing hobby for making clocks of unusual design. Perhaps the most interesting of them all is the old clock man, who peddles his wares against a painted background of one of the rural provinces of seventeenth-century Germany. He wears quaint peasant clothing and a plumed hat, and he holds in one hand a small clock which tells the hour. As the clock ticks, the old man turns his head from side to side, as if he were looking for customers.

"I had to take him out of the window," said Mr. Jensen regretfully. "He drew such a crowd!"

PUREE OF SNOW-WHITE CELERY!

Blended with golden country butter and delicate seasoning. A treat

IN CHOOSING your soups from day to day, Campbell's Celery Soup is certain to appeal to you as an ideal family dish. . . . It is the rich, smooth puree of selected celery—crisp, snow-white and inviting. Like all that goes to the making of the famous Campbell's Soups, this celery must meet the most rigid standards for finest quality.

Such celery as you would be proud to pass about your own table. With it are blended golden, fresh country butter and the most delicate and appetizing of seasoning, "touched in" by the deft hands of Campbell's French chefs. The result is such a soup as you like to linger over—so perfect is its flavor, so satisfying is its generous vegetable nourishment.

And if this Celery Soup is a treat to your appetite—as it surely is—think of the extra enjoyment you get eating it as a Cream of Celery Soup! For the family this provides wholesome food in even greater store. And when you entertain, it is the happiest of selections for your luncheon or dinner party. Unless you have prepared it with Campbell's, you've no idea how easily and quickly it is done, according to the simple directions on the label.

To mothers especially we wish to give this message. . . . In such a carefully made vegetable puree as Campbell's Celery Soup, the valuable mineral salts abound. They are necessary to the proper growth of your children. 12 cents a can.

Eat Soup and Keep Well

Now here's the sign of feeling fine,
Gay and spry and snappy.
With soup inside you hit your stride—
It keeps you strong and happy.

WITH THE MEAL OR AS A MEAL SOUP BELONGS IN THE DAILY DIET

What a Whale of a Difference an Incentive Makes!

(*Continued from page 16*)

foolish about each other, and they laughed at me for being tied to my mother's apron strings. But, thank God, I never got untied!

"I was eighteen years old before I had ever been separated from her for twenty-four hours. She went off one Saturday to spend two days with her brother, who lived in a village a few miles from Wilmington; and by Sunday morning I had stood it just as long as I could. It didn't make any difference how many of us were left, the house was empty without her.

"So I set out bright and early, Sunday morning, and tramped over to my uncle's house. And I'll never forget the shine in her eyes when she saw who I was!

"The proudest moment of my life was when I was able to tell my father that he need not work any more. And no happiness that has come to me since has ever quite equaled the joy I got in giving my parents every possible comfort and care during their declining years.

"Notice that I said *care*. All the comforts that money can buy will not do much toward easing the ache in a lonely old heart. But I'm not sentimental about parents, as such: my mother and father *earned* my respect and love. And that's a good tip for the parents of the rising generation.

"Why, do you know that I can still hear my mother singing 'Praise God from whom all blessings flow' as she bustled about getting supper in our old kitchen down there in Wilmington! And when there was nothing to put on the table but boiled potatoes—and sometimes mighty few of those—she sang just the same.

"I tell you, there's nothing in life that can take away from a boy the memory of that sort of spirit in his home. He will carry it in his heart until long after he is a grown man. And, no matter how many ships and dollars and other things he may accumulate along the way, he would rather pass a small part of that spirit on to his own youngsters than to leave them all the wealth in the world!

"You asked me a few minutes ago where I found the name 'Saelmo' for this boat. I made it from my mother's name, Sarah Elizabeth Moody. To me, that will always be the most beautiful name in the world.

"THE first job I got when I left school was in the boiler shop at the Pusey and Jones shipyard in Wilmington at a dollar and a half a week. From this I went to rivet boy at three dollars, and so on along the line until, within a year's time, I got to be rated as a helper.

"About this time I thought I saw more money in the job of news butcher. So I quit the boiler shop and went to selling newspapers on the old Philadelphia, Wilmington and Baltimore Railroad. But I soon found that I had invaded the territory of another kid of about my own age, weight, and disposition. There was a fight. When it was all over, the other boy and I had a talk.

"'You're pretty good,' I said. 'What's your name?' And he answered, 'William Todd! What's yours?' 'The same as yours,' I answered. After that, there didn't seem to be anything to do but to join forces, so we started working that run as a team. I found out right there that it is a pretty good bet to hitch to the fellow who will stand up to you in a fight.

"Well, we were getting along fine. For about a year and a half, I made as high as fifty and sixty dollars a week. But I couldn't see myself as a news butcher all my life, and I couldn't see that it was a step to anything ahead.

"SO I went back to the boiler shop at six dollars a week! It was a pretty drastic step. I was starting right at the bottom of the ladder; but at least it was a *ladder*, and I figured that whether I climbed it or not was up to me.

"My first move was from the boiler shop into the shipyard, and from that time on I have been in the construction end of shipbuilding. I passed through all the stages—helper, riveter, ship-fitter, loftsman—and at twenty-one I was made assistant foreman.

"I hadn't had this place long before I was selected to take charge of a crew of men to go to Trinidad, British West Indies, to erect two boats for the company. That was the toughest job I'd had to face so far, because I'd never been away from my mother—and I didn't want to go.

"However, it worked out very much to the company's advantage, because the same thing applied to several of the other boys who went with me, and we worked so hard that we got through and got home two months ahead of schedule!

"The company gave us each a bonus of two months' pay; but not one of us took advantage of that to lay off and have a vacation. We took one day to get unpacked and see the folks, and we were right back in the shipyard, on the job! Sometimes, now, when I think of it, it doesn't seem quite possible—but it is a fact, just the same."

Bill Todd smiled his irrepressible smile, and then went on with the story.

"It was several years after that," he said, "when there appeared in the Wilmington papers an advertisement that an examination was to be held for master shipbuilders for the Government. The pay was seven dollars a day, more than I ever expected to make; and the first thought in my mind was still to get ahead, where I could do more for my father and mother. And I had a wife and baby of my own by that time, too.

"So I took the examinations, passed them, and was given a position in the Brooklyn Navy Yard.

Now, this happened to be just at the time when the Government was trying to take the navy yards out of politics, and put them under Civil Service. They were building the old battleship 'Maine' and the cruiser 'Cincinnati' in the Brooklyn yard, and had a lot of repair work. I had about nine hundred men in my department—and about ninety per cent of them were there through political influence.

"You can see just what I was up against in trying to take hold of the situation under conditions like that. I started right in by running afoul of all sorts of trouble when I tried to treat the men fairly, and see that those who were doing the work got the proper pay, and those who were *not* doing the work were reduced or removed. Of course, I gained the personal enmity of a good many workmen I had demoted or fired.

"Some of these men were 'superhuman' when it came to the fighting game, and a lot more of them thought they were. Well, they tried to prove it by me—and it took three weeks of fighting, and knocking and getting knocked, before that side of the thing was cleared up. And I don't know how it would have ended if help hadn't come from an unexpected quarter.

"There was one particularly bad gang that used to wait for me outside the gate every night, and every night I had to take a beating before I could get home. It was true I didn't have to pass their corner, but I would have had to go out of my way *not* to pass it, and that would have been a licking worse than the beating I got.

"I never go around looking for trouble, but I don't go out of my way to sidestep it, either. And I've found out that running away from an issue doesn't do a bit of good; it comes right along after you!

"Well, this particular bit of hazing went on for a week, and then one night the biggest and huskiest member of the gang served notice on the rest of them that he was on my side, and they'd have to take him on too, every time they jumped on me. That ended the gang on the corner, and most of my troubles in the plant. I stayed there for about three years longer; and it was not only a pleasure to work with the reorganized crowd, but it was about the best experience any young man could have had.

"However, with a change in administration, politics began to play its part again. Investigation of the yard was ordered. And on the simplest pretext of irregularity regarding government regulations some of the officials were detached to other ports, and most of the master-workmen were reduced for one year.

"I was an exception. I was reduced for three months. But I did not accept it meekly. I put up a fight, appealed to the Secretary of the Navy for a hearing, was exonerated—and resigned the next day.

"THAT was really the beginning of my career, because I went to work then, at a dollar a day less pay, for the Robins Dry Dock and Repair Company, which I've been more or less tied up to ever since. I was there for a year as foreman boiler maker, and was then made assistant superintendent. In two years I was general superintendent, and in three years president.

"The officials of the plant were sound, substantial business men, and the young fellows in the yard were a joy to work with. There was only one troublous period in all my years in the Robins plant—and that turned out to be the beginning of the

Twelve Years of Dependability

It was Dodge Brothers distinction, twelve years ago, to create a more dependable motor car in its price class than previously had been known.

This enviable leadership Dodge Brothers have rigidly maintained.

Wherever difficult conditions try the souls of men and the stamina of motor cars, you will find Dodge Brothers product foremost in favor.

You will find also that six, eight and even ten years of service are not exceptional for the car; that frequently it delivers mileage running well into six figures; and that almost without exception on the used car market it ranks current values.

These facts powerfully witness Dodge Brothers success in constantly bettering a product that was exceptional even at the start.

Standard Sedan $895—Special Sedan $945
De Luxe Sedan $1075

organization that has helped me accomplish everything I have done.

"It came about in this way: The plant was paying good wages, and giving the men steady employment, so there was no real cause for dissatisfaction among them.

"But there are trouble-makers in every group, and ours was not any exception. They resented my plans for building up an organization centering around the boys in the Erie Basin neighborhood, where the plant was located, and they were always starting disturbances on one pretext or another.

"Finally, I decided that it couldn't go on that way any longer, and set out to reorganize the whole works. The young people of the neighborhood stood by me to the last man, and the officials of the company backed me up. They had had a lot of troubles before I came, and they were willing to let me try my way.

"Well, I cleaned out the malcontents and their friends—and it left us pretty badly crippled right at the busiest time of a busy season. But I wasn't worried.

"I went straight down to Wilmington and looked up young fellows I had worked with as a boy. I told them I needed good men, told them I was up against it if I didn't get them—and I brought back over three hundred and twenty men, most of whom had given up their jobs to help me work out my plans.

"It was beautiful to see the way the young folks in the Erie Basin, and their parents, took these strangers into their houses and made them feel at home. And you can be sure the Wilmington boys were grateful.

"During the whole of that reorganization we went right along with our job, and we have never had any such experience since. That was my first big object lesson in loyalty—the way those Erie Basin boys appreciated what was being done for them, and the way the Wilmington boys came to my assistance. And it's a lesson I've never forgotten, though, as you'll see, I've had plenty of bigger ones since."

I didn't say anything, but I could not help thinking of the other side of that picture: of the Bill Todd who leaves his business to journey down to Wilmington for anniversaries of the Volunteer Fire Department he served with as a boy; of the Bill Todd who works harder for his friends than for himself; of the Bill Todd whose first thought is always to share the fruits of his labor with those who have helped him in the process of cultivation. But that is going ahead.

"HAD you begun, by this time, to think about owning a shipyard?" I asked. And again the answer was "No."

"I wasn't thinking about anything then," Mr. Todd went on, "except making as good a plant as I could out of the Robins yard. It was owned by William P. Clyde and his son Thomas, and they had always been mighty square with me.

"But about 1915 my first really big opportunity came along. Certain foreign interests wanting to buy a shipyard in America came to me for advice. The plant they were considering was one located in New Jersey. Now, I knew that the Pusey and Jones plant in Wilmington, where I started to work as a boy, was a better plant than the one they were about to buy. And I thought it would be for sale, since the older members of the firm had died and the business was being carried on under the guidance and with the backing of the Wilmington Trust Company.

"I went down to Wilmington, explained my mission, and succeeded in getting an option for a small amount of cash. I then began to negotiate with the foreign interests. And right here I had another experience of what is meant by loyalty.

"During the negotiations, the buyers endeavored to put the deal through independent of me. And the Trust Company immediately sent for me and told me all about it. Because they appreciated my interest in the plant I had worked in as a boy, they had refused to have any dealings except through me; and I succeeded in putting the deal over, with the result that I found myself with more money than I had ever dreamed of having.

"The first thing I did was to call together some of the Wilmington boys who had worked with me from boyhood and had gone with me to the West Indies on the job for the Pusey and Jones Company, and divide up part of the money with them. And the next thing was to share the rest of it with the superintendents of the Robins Plant, who had made it possible for me to take the necessary time away from the plant, by carrying on their own jobs and mine too.

"THE consummation of this deal took place on my birthday; and I am sure you will understand how proud and happy I was to have owned the plant I had started in as a boy, even though it was only for a few months, and on option. But the thing I was proudest of was that I had been able to bring about a sale so satisfactory to the former owners of the plant in which I, and my father before me, had worked. And the thing that made me happiest was the proof I had again that loyalty and gratitude aren't just words."

"Surely you were beginning by this time to see what might be ahead for you," I said.

"Yes," he answered; "but there didn't seem any very good chance of really owning a shipyard—and then all of a sudden it happened. It was another deal that started out like the Wilmington case, only this time it worked out on a lot bigger scale. Again it was foreign interests that wanted to buy an American yard. I happened to know the principals, as I had had charge of some work on their steamers while at the Robins yard. But this time it was our own yard they were considering. They approached me, and I took it up with our owners.

"They were favorably inclined to the sale; but somehow I just couldn't bear to see the old yard pass out of American hands, and I told Mr. Clyde so. He agreed with me all right. 'But,' he said, 'there's just one difficulty. We want to sell the plant, and there doesn't happen to be an American concern that wants to pay seven million dollars for it!'

"'Why not sell it to me?' I suggested.

"Naturally, Mr. Clyde was a bit startled, but I stuck to my guns. I explained the plan I had worked out, pointing out that since they had for some time left the entire management of the plant to me, they must at least have confidence in my ability to run the yard, and that if it was worth around seven million dollars, I must have had something to do with getting it up to that valuation.

"'And,' I said, 'there is another thing, Mr. Clyde, that mustn't be overlooked. The successful operation of this yard would have been impossible without the coöperation of the workmen around me. My plan provides for the creation of an organization within the works, which will mean coöperation to an even greater degree than has been possible in the past.

"'I'll agree to select a crowd of one hundred men, and we'll buy the works at the figure that's been offered; and we'll pay for it, too!'

"Well, Mr. Clyde was mighty fine and patient, but naturally he was puzzled as to what to do about a proposition as unusual as that. It was his son, Thomas Clyde, who swung the balance our way, and urged his father to take the chance; and, having decided, they stood by us through thick and thin.

"OF COURSE my next job was to carry through the plan I had so confidently outlined to Mr. Clyde. But there wasn't much difficulty about that. I dusted around among the boys I'd worked with longest and knew best, and I mighty soon had my hundred men; then we just naturally rolled up our sleeves, and went to it!"

Bill Todd smiled, as only Bill Todd can. "I suppose you'd like to know just how we had the thing worked out," he said. "Well, a bond and stock issue was made out along these lines: We would pay the interest on the bonds, as well as lay aside funds for amortizing them, and pay interest on the stock. The rates of pay were agreed on, and all over and above this the owner was also to participate in, and the balance was to apply toward paying off the sale price. This was carried out, and an organization formed, called the William H. Todd Corporation.

"We had been operating about two years, had paid off one third of the total price, and were going like a house afire, when a new element came into the situation. It seems that word of what we were doing had got noised around among the banking interests; and just about this time some of them came to me.

"'Why don't you really go into the shipyard game?' they asked. 'The Tebo yard is for sale, as well as several others. We know what you've been doing, and we'll back you to the limit!'

"I'll confess right here that I was a little reluctant to follow their plan, which was to merge our plant with several others, with the proviso that our organization would go along with it. It looked like a mighty big deal for a bunch of boiler-shop graduates to take over.

"But I had a friend who had never failed me, and I put the whole proposition before Mr. Clyde.

"He strongly advised me to go through with it—and the Todd Shipyards Corporation was formed, embracing the Robins Dry Dock and Repair Company, the Tebo Yard, in Brooklyn, the Tietjen and Lang Dry Dock Company, of Hoboken, and the Seattle Construction and Dry Dock Company, of Seattle.

"During the war we created a plant at Tacoma, Washington, in which we built ships and scout cruisers; but this was purely a war-time program to help furnish ships for the Government, and has since

Let us show you that the claims men make for this unique shaving cream are true

—*Accept, please, full 10-day tube to try*

GENTLEMEN—

When salesmen call on us, we give them a courteous hearing—then ask for samples.

And since it is a poor rule that doesn't work both ways, we sell Palmolive Shaving Cream on that basis. We think you are entitled to a testable sized sample before you buy it.

Will you accept one—a full 10-day tube? We'll thank you for the opportunity.

* * *

60 years of soap study stands behind this creation. It embodies the expressed desire of 1000 men whose supreme wishes in a shaving cream were asked before we started to make it.

Our whole experience as soap and skin experts, as the makers of Palmolive Soap, is embodied.

5 new advantages

1. Multiplies itself in lather 250 times.
2. Softens the beard in one minute.
3. Maintains its creamy fullness for 10 minutes on the face.
4. Strong bubbles hold the hairs erect for cutting.
5. Fine after-effects due to palm and olive oil content.

Just send coupon

Your present method may suit you well. But still there may be a better one. This test may mean much to you in comfort. Send the coupon before you forget.

THE PALMOLIVE COMPANY (Del. Corp.), CHICAGO, ILL.

To add the final touch to shaving luxury, we have created Palmolive After Shaving Talc — especially for men. Doesn't show. Leaves the skin smooth and fresh, and gives that well-groomed look. Try the sample we are sending free with the tube of Shaving Cream. There are new delights here for every man who shaves. Please let us prove them to you. Clip the coupon now.

been dismantled. We have, however, expanded since then to Mobile, Alabama, and to New Orleans, Louisiana, and we have an Oil Burner Company in London, England. All this we have done without borrowing any money."

He stopped, and looked out over the quiet water to the twinkling lights of New York in the distance. When he turned back to me there was a hint of mistiness in his eyes.

"I could never have done it without the boys," he said. "Don't forget that for a moment! I am very proud to look back at those early days, and find that the men I started with are still alongside of me, and that there's not a plant in our organization that is not built upon the same basis of confidence and coöperation that gave us our start with the Robins yard.

"Through all the years of up hill and down, the Erie Basin boys, and the Wilmington boys who came to my help in the reorganization of the Robins yard, have stood shoulder to shoulder with me. Most of them are still in our employ. From their ranks came that first hundred men who put through the Robins deal. They are the directors of the Todd Shipyards Corporation of to-day. They are presidents and vice presidents of the Robins yard, and of the other plants we have acquired since."

Bill Todd was very much in earnest now. "Out of all my experience," he said, "I am sure of this: If a man appreciates his fellow workmen as he, himself, would like to be appreciated, he won't have much trouble getting on!"

The remarkable part of all this is that, wherever you go in offices or yards, you are told the same story by everyone you meet. The bond between Bill Todd and the men who have come up with him to positions of responsibility and affluence is as strong as the steel they use in their ships. They have worked together and lived together. They have assisted in the christening of one another's children, and they have stood shoulder to shoulder beside open graves.

Every now and then half a dozen of the "boys," as they call themselves and each other, will meet for a "riveting party," just to prove that the old-time cunning is still in their hands. Practically every executive in the Todd organization once wore overalls.

SIX years ago, Mr. Todd distributed one million dollars in stock among all the employees who had been with him for more than four years. The amounts the men received varied from a minimum of $165 to as much as $16,500. As a matter of fact, seventy-five per cent of the present employees are stockholders of the Todd Shipyards Corporation.

I asked Mr. Todd if he made this distribution of stock to insure loyalty, or to prevent labor troubles. His blue eyes almost blazed at me.

"Thunder, no!" he said. "You can't *buy* loyalty. I did it because that money was coming to the boys. They had earned it. Why shouldn't they have it?"

And there you have the secret! It isn't policy with Mr. Todd—it is affection, loyalty, justice. And that is a combination not often enough found in the same heart.

I want to tell you something which happened on the day when I made my first visit to the Todd offices.

I had finally succeeded in getting an appointment for half past three. By three sharp I was seated in an inner office along with a dozen other people who were also waiting to see Mr. Todd. It was nearly four when the outer door opened, and in walked a sturdy old man of seventy, or thereabouts. From his dress and roughened hands I took him to be a day laborer. He held a whispered conference with the young man at the desk, and then, hat in gnarled old hands, he looked about for a place to sit down.

There was a vacant chair next to mine. He took it. We got to talking. There was a picture on the wall of the old Pusey and Jones yard in Wilmington. He pointed it out to me.

"I worked with his father down there," he said, "when the boss was just a kid. Then I worked under him when he was assistant foreman. And now my boy's got a fine job in the Robins yard, and takes care o' me. I don't get up here to New York often, but I've never come without droppin' in to see the boss and talk about old times!"

Well, in a few minutes Mr. Todd's secretary came out and said that he was sorry, but that Mr. Todd could see only one other person that afternoon. And that one other person was the shabby old laborer who had come without an appointment to talk over "old times"!

There's Bill Todd for you!

LAST of all I want to tell you about the Christmas celebrations they have in the Todd yards every year. They are only a small part of the plans Mr. Todd is always thinking out for the men in his plants and the neighborhoods around them. But they seem to me symbolical of the general attitude he takes toward his men and his work—and toward life.

He explained it to me in this way:

"I've never been able to feel," he said, "that just the business end of running a plant was all of my life. I can't seem to separate the business from the men who carry it on, and that means I've got to take an interest in the neighborhood around the plant in which those men spend their lives.

"It is a source of pride and happiness to me that with little more than a common-school education I've been able to reach the point where I can be head of an organization comprising thousands of men; that I have been honored as I have been in public life; that I have been considered worthy of the degree of Doctor of Laws by Manhattan College. It makes me proud —and very humble.

"All this has another side; and that side is responsibility to the organization that is back of me. For this reason, I have not only taken an interest myself in the personal lives of our men, but I have in every way encouraged the same spirit on the part of all my associates.

"I've never done it for reward—but the rewards have been beyond all calculating. I know, not by words but by *actions*, that my associates and our employees are every bit as proud of our accomplishment as I am, and that they are as loyal and true to me as I am to them!"

It is the spirit of coöperation rather than the spirit of charity that is evident in the yearly Christmas celebrations. I saw one of those at the Robins yard, and it was a sight to be remembered.

For two months before Christmas every man in the place, from the highest executive down to the man who sweeps up the waste, gives one per cent of his salary. And at the end of the two months, Mr. Todd doubles the total amount, no matter what it is. Then every youngster in the neighborhood sends in his name, age, size and preference in the way of gifts. A list is made, and each statement verified.

On Christmas Day everybody assembles in the biggest shed, which has been cleared and decorated for the occasion. Of course the youngsters are there hours ahead of time, but they don't mind that. Men from shops and offices—who have been giving of their evenings for weeks to get everything in readiness—are on hand to keep them amused and interested. The Todd Band plays, the children sing, and everybody laughs and talks and visits with everybody else.

At last it is time!

First, some amusing motion pictures are shown, to an accompaniment of excited childish laughter and applause. Then the huge American flags in front of the platform are drawn aside.

And there are the biggest Christmas trees you have ever seen. There are a dozen Santa Clauses, of whom the "Boss" is one. And there are the gifts!

On one side are the presents for the boys all tagged and numbered; on the other side, those for the girls. And if you have never seen a *mountain* of dolls, I'd like to take you to a Robins yard Christmas celebration! They aren't ordinary, everyday dolls, either, but the kind I dreamed about myself when I was eight.

There is a long-drawn breath of ecstasy from the children, then a hush falls on the crowd. The great moment has arrived.

The chief Santa Claus (the "Boss," of course) makes a speech—a very brief one —and the handing out of the gifts begins. Every boy gets a complete outfit of clothes, and in addition a sled or wagon, a football, a pair of skates—anything he has set his heart on. Each girl receives a sweater, a coat, or a scarf set, and her doll.

THE year I was there two thousand water-front youngsters were outfitted from head to foot; suit or dress, underwear, shoes, cap, everything. And the greatest care had been taken to ascertain the sizes needed by each child, so that no disappointed tears should mar the brightness of the day. In addition to the clothing there were, of course, the toys, and huge baskets of Christmas food, piled high upon the wagons or sleds the boys had received.

I stood beside the door for hours while they filed out, with rapturous greetings for the parents or older brothers and sisters who had been waiting for them.

It is a wonderful thing when a whole great organization unites in the task of bringing into two thousand child faces a light such as I saw that Christmas Day.

And as I stood there witnessing a demonstration of the spirit one man had been able to breathe into the organization he had created, I knew that the amazing story of Bill Todd was not amazing at all. It was inevitable!

A flash of CLEAN beauty

Comes to teeth when washed and polished with this dual-action dentifrice.

A GLANCE in the mirror, the admiring looks of others—both tell you that your teeth look more beautiful after using Colgate's. The sensation of tingling health, the fresh feel of your gums and teeth—these tell you that your mouth is cleaner.

Dual Cleansing Action

Today mouth hygiene demands a dentifrice with a dual cleansing action. Colgate's formula is based on this principle. As you brush, Colgate's expands into a plentiful foam. First, this foam loosens imbedded food particles and polishes all tooth surfaces. Then it thoroughly washes the entire mouth—sweeping away all impurities. Thus the dual action of Colgate's brings unequaled cleanness; thus it removes the causes of decay.

A normal, healthy mouth needs no drug-filled dentifrice. "Just keep your teeth clean," says science, "and don't fear imaginary afflictions of teeth or gums."

Colgate's contains nothing that will appeal to the dentally ignorant or the gullible. It cleans; cleans thoroughly!

Visit your dentist at least twice a year. Brush your teeth with Colgate's at least twice a day. And don't worry over mental dental ills!

Colgate & Co.

Marriage

(*Continued from page 13*)

not concerned with the question of right and wrong, or whether or not this husband and his wife had behaved well and morally in the matter; I was interested only to discover whether or not their particular affair was a clue to a general truth. So, to go on with the search, I turned over my memory of the people I have known whose marriages were regarded as "perfectly happy" ones. I was able to recall a great many such marriages; but I put aside from my consideration those in which the husbands and wives were happy because they were happy parents; it was solely with their relation to each other as principals that I was concerned now; and of course I found little difficulty in perceiving that, excluding the "sorrows of life," marriage is happy so long as the married pair continue to be in love with each other, or so long as a devotion to each other—a sublimated friendship, so to speak—takes the place of the glamour of "young love."

Thus the question became pertinent: Is there a great essential element in the happiest marriages, and, if there is, what is its nature? In other words, what, in such marriages, preserves "young love," or else substitutes for it a steady and unselfish devotion?

Then I remembered an odd, pleasant thing I had heard a man say about his wife. He is a good specimen of a natural man, a middle-aged countryman of slim education and no sophistication; and he was, as usual, expressing himself without any calculation or any reaching for the right word; but it happened that he really said something.

"THE only thing I'm sorry for is not marryin' her three years before I made up my mind to take the jump. I ought to have done it the first time I ever thought of it, and I certainly would of, if I'd had any idea a woman could treat a man the way she's always treated me."

"How does she treat you, Sam?"

"How?" he said. "Why, we been married full seventeen years now, and she still treats me just exactly the same as if I was a perfect stranger!"

Here was a tribute of enthusiastic gratitude; and, remembering it, I thought it significant. Sam's wife is a wise and lovely woman and, after seventeen years of matrimonial intimacy, is still able to show Sam as much courtesy as if she had just met him for the first time; thus she is a party to a marriage locally quite celebrated for its happiness. And this courtesy of hers is what makes Sam, in his turn, courteous to her, so that between them they have, if not a protraction of "young love," that mutual devotion or sublimated friendship necessary as a substitute in happy marriages.

Therefore, it seemed possible to conclude that courtesy might be the great essential element; but, upon reflection, I found this conclusion at fault, because I knew of tragically unhappy marriages wherein courtesy had never been lacking.

Evidently Sam's wife gives him more than politeness; and he himself explains

that she treats him as if he were a stranger. Evidently then, what produces their happiness is not ordinary courtesy, but the special kind of courtesy that is due to a *stranger*.

Thus, we arrive at the inquiry: What is our courteous treatment of a stranger? Well, the answer to that isn't difficult: we meet him with a kindly manner that means a readiness to be of assistance to him; and we show him quietly that it will be a pleasure to help him make himself comfortable.

More, we are careful not to intrude upon him with any curiosity about himself. If he asks us which road is the best, we inform him; but we do not ask him where he comes from or why he comes. If he wishes to know about taverns, we give him our best information; but we do not press him to lodge at the one we favor. If we think that he is making a mistake in his choice of a road or of an inn, we explain to him why we think so; but we don't urge; and far less do we say, "You shall," or "You shall not." All in all, we try to be useful to him, and in no way do we seek to interfere with his complete freedom of action and of thought.

That is how Sam's wife treats him, then; and as he is a reasonable person, and naturally treats her as she treats him, theirs is a "perfectly happy marriage." Moreover, it is happy in spite of the fact that they have no congeniality of tastes. Sam's wife likes to read books; the "headlines" of a weekly newspaper are enough for Sam. She likes to make their cottage pretty; all Sam cares for at home, except a bed, is an oven to put his feet in while he smokes his pipe. In the summer she loves to sit in a rocking chair all evening, in the moonlight; Sam would perish of that, and spends the time gossiping with the other men down at Thompson's Garage—sometimes he doesn't come home until after midnight; but his wife doesn't worry, and she knows that he realizes, himself, without being told, how profoundly he'll hate to get up in the morning.

Altogether, it seems impossible to resist the conclusion that the happiness of their marriage rests upon what was *implied* by Sam when he said that his wife treated him as a perfect stranger. That is really to say, they are happily devoted to each other because each realizes and respects the other's right to be an "independent human being." Their happiness is due to the single element of freedom.

THUS, then, I found three suggestive instances before me: First, there was my old bachelor friend, with his "horror of marriage" as a bondage entered upon in delusion; then there was my divorced friend, whose marriage was broken for the sake of a freedom he and his wife found impossible to obtain so long as they remained bound in wedlock; and, finally, there was this contradictory happy case of Sam and his wife, to whom marriage is not a bondage at all. The bachelor could therefore have felt no horror of such a marriage as Sam's, and my second visitor might have studied Sam with surprise and profit. Remembering that sect his wife wished to join, the divorced man would perhaps be interested to learn that if Mrs. Sam should tell her husband that she had joined the "Holy Jumpers," Sam would say, "Didja?" and probably add, "Well,

ORDINARY LATHER
This lather-picture (greatly magnified) of ordinaryshavingcream shows how large, air-filled bubbles fail to get down to the base of the beard; and how they hold air, instead of water, against the whiskers.

COLGATE LATHER
This picture of Colgate lather shows how myriads of tiny, moisture-laden bubbles hold water, not air, in direct contact with the base of the beard, thus softening every whisker right down where the razor does the work.

This "small-bubble" lather *softens every whisker*

It penetrates to the base of each hair—makes it soft and pliable, banishes pulling and dragging

THE radical difference between Colgate's and other lathers is in the bubbles. Colgate bubbles are far smaller. They contain more water—much less air, as the lather-pictures shownabove prove. And science has said that it is the water in the lather that really softens beards.

The moment Colgate lather forms on your beard, two things happen:

1. The soap in the lather breaks up the oil film that covers each hair and floats it away.

2. With the oil film gone, millions of tiny, water-saturated bubbles bring and hold an abundance of water down to the base of the beard, right where the razor does its work.

Because your beard is properly softened at its base, your razor works easily and quickly. Every hair is cut close and clean. And your face remains cool and comfortable throughout the day.

A week's better shaves—Free

Once you try this unique "small-bubble" lather, we believe you will never go back to ordinary shaving methods. Prove this for yourself—at our expense. Just clip and send the coupon. We will send a generous trial-size tube free.

SOFTENS THE BEARD AT THE BASE

some say it's a good thing. Ole Man Kinney prophesies we're goin' to have a warm spring again."

The divorced man might be critical of Sam's position here; he might say, "What! Was I to let my wife make a fool of herself?" It must be conceded that the husband's action in this instance was prompted by the desire to be helpful to the wife; he perceived that she was doing an erratic and perhaps a harmful thing. Would he have done better by her, and by their marriage, if he had let her go ahead and do it?

Here, I felt, I had come upon a question of primary importance; moreover, it is a question that at one time or another, and in one form or another, arises dangerously in most marriages, coming more or less seriously between almost every wife and her husband.

Its manifestations appear in a multitude of shapes. A wife believes that her husband smokes too much; or that he drinks too much alcohol or too much coffee, or that he is being cheated by the partner he trusts; or that he is gullible about investments; or that he is being flirted with and made to look silly by another woman; or that he has a foolish infatuation for another woman; or that he doesn't eat enough; or that he is growing lazy, or overworks, or lets his friends sponge upon him; or that he is doing harm to himself or being foolish, in one or more of a thousand other ways.

Is she to sit with folded hands while he continues his absurd or injurious progress? We interfere with children when we see them doing silly or injurious things; and our laws interfere with adults who do extravagant or unfair or hurtful things that pass beyond definite bounds. How far may wife or husband profitably interfere with the other when the other is doing a silly or injurious thing?

NOW, to interfere means to curtail freedom. We curtail the freedom of children, of criminals and of people obviously defective in mind; that is to say, we impose our will upon them for what we believe to be their own good and the good of society. Those whose freedom is curtailed do not like it; they have a powerful native instinct for liberty, which is set in revolt by the curtailment; and they have also an instinct for equality, which is outraged by the compulsion that treats them as inferior.

Much more will any sane non-criminal adult, for the same reasons, instinctively resent any curtailment of liberty or attempted interference; and between two grown-up and sane individuals the effort of one to impose his will upon the other, no matter how noble the motive, is, in its essence, an act of tyranny; and, even though the result be in the end beneficial, must tend to insult the instincts for freedom and equality in the person interfered with, though it may in some instances produce between him and the imposer the kind of harmony known between slave and master—not precisely the kind of harmony we find in what we call happy marriages.

Here let us consider a little more in detail the unhappy marriage of my friend who was divorced. To his way of thinking, his wife's affiliation with the new sect was silly and injurious; to her way of thinking, it was intelligent and helpful;

though, after they had been wrangling over it, probably it became to her simply something she was determined to do, and to him simply something he was determined she should not do. But assume that he was right, and that her affiliation was in fact both foolish and harmful. If their marriage was to be a happy one, how far could he safely go toward preventing her from becoming a member of the sect?

Let us suppose for a moment that, unable to convince her, he succeeded in imposing his will upon her against her conviction, that by worrying her, or by commanding her, or by entreating her, he made her abandon the sect, and that later the "prophet" was exposed, and the husband thus proven to have been in the right. Wouldn't that justify what he had done? I think we must say that it would justify him as a superior person protecting an inferior; but that for a wife to be made to feel inferior is not advancing the ideal conditions of a happy marriage. True, if she be meek in her inferiority, and continue meek, that harmony of master and slave, sometimes so pleasant for the master, may so be reached.

BUT what should the husband have done if he wished the episode to advance his marriage toward that condition in which it could be known to him and his wife as a happy one? Was he indeed, if she remained unconvinced by his argument, to "let her make a fool of herself"?

My friend, in his narrative, didn't tell me whether she did or did not continue her connection with the sect. Whether she did or didn't had become so unimportant to him that he forgot even to mention it; evidently he felt no concern about it at all (or in the length of her skirts), so long as she was not his wife.

She had become, so to speak, a free stranger; and to approach the answer to our question as to what he should have done, we might for a moment imagine that they now meet as actual strangers, chance acquaintances thrown together for the first time, and that she happens to speak of the objectionable sect and of her interest in it.

He is a man of kindly disposition, and, wishing to be useful to this stranger about to become involved in error, he would probably give her—tactfully and with the most careful regard for her sensitiveness—a suggestive sketch of whatever facts he knows to be undeniable concerning the false prophet. That is to say, he would avoid any appearance of bias, or of pressure, or of controversy; he would merely present her with information to aid her in coming to her *own* conclusions. And this, it seems, is all he should have done, even when they were man and wife. In fact, it seems to be all he could safely do, if their marriage was to be a happy one.

We politely tell the stranger what we know about the roads and taverns; we do not tell him we "absolutely will not stand for" his selecting this one or that one. If my divorced friend and his wife had treated each other as "perfect strangers," in the successful manner of Sam and Mrs. Sam, it seems reasonable to believe that they might have had a friendly and helpful influence upon each other, and even that they would never have wished for a divorce.

Why *changed* motoring conditions demand a new margin of safety

You know that the past few years have brought marked changes in the outside appearance of automobiles. But do you know that even more radical changes are to be found inside the engine?

These changes have come gradually. They bring changed operating conditions. Smaller bore and longer stroke designs have grown in favor. Compressions have been increased. Higher engine speeds are the rule. Operating temperatures are hotter. Oil purifying devices are frequently used. Many other changes are being made. Automobile manufacturers constantly feature the changes they are making in their designs.

As the authorities in scientific lubrication, we are being asked to define the relation of these many changes to lubrication.

Every change mentioned above puts a greater burden on the lubricating oil. Every one

First announcement in an important series

of them calls for an increased margin of safety. The need is emphasized still further by today's driving conditions.

Car owners are now more numerous than telephone subscribers. City streets are congested. The need for quick acceleration has increased. Every start, and shift of gears puts added strain on the engine.

Improved highways in the open country invite faster travel for long continuous periods. Only the automobile engineer can fully appreciate what severe strains this continued fast driving puts on both the engine and the lubricating oil. Here the need for a new margin of safety is imperative.

Always in step with the developments in automotive design, the Vacuum Oil Company has constantly improved Gargoyle Mobiloil to meet changed conditions and to assure an ample margin of safety.

The correct grade of Mobiloil provides this added margin of safety your car requires and represents our professional advice as determined by our Board of Automotive Engineers.

On this page we have only hinted at the changed conditions. In later issues of this publication we will explain more fully—"Why changed motoring conditions demand a new margin of safety."

There's more to this shave

than cutting your beard clean and close

Mennen Shaving Cream does not stop at giving you the quickest, closest and most comfortable shave you ever had. It also *soothes, tones up* and *protects* the skin after shaving.

And that's why Mennen's is *different.* You feel it in the smoother, easier glide of your razor. You see it in the clearer, healthier condition of your face.

The Mennen process—*dermutation*—so completely softens the beard that your razor cuts clean and close without the usual pulling and scraping. It flattens the tiny "mounds" around each hair so that the razor blade glides over your face without nicking the skin.

Why not enjoy the luxury of a Mennen shave tomorrow morning? A big tube of Mennen's costs only 50c—and it will last several months.

THE MENNEN COMPANY
357 Central Ave., Newark, N. J.
The Mennen Company, Limited, Montreal, Quebec

If you want to know the deep soothing joy of a *complete* Mennen shave, use Mennen Skin Balm after shaving. Gives a cool, fresh tingle to the face and is antiseptic. Large tube 50c. Use it with Mennen Talcum for Men.

Mennen Talcum for Men is soft—luxurious—and tinted so it doesn't show on the face. Great, too, for "all-over" use after a bath. 25c.

Jim Henry
(Mennen Salesman)

MENNEN

The Improved

SHAVING CREAM

That is to say, they would never have wished for their freedom.

Why wouldn't they have wished for it?

Because they would not have wished for something they possessed.

SO, FINALLY, in these cogitations, I came to the seeming paradox that marriage is a bond that must not be a bondage. "There is no freedom," yet without freedom marriage cannot be happy. And, to shed a contrary light upon this paradox, an undeniably happy young wife told me that she wished for no freedom. "I love being in bondage. My greatest happiness is doing what my adorable husband wishes me to, even if it isn't what I myself believe in doing, or what I'd prefer to do if I didn't care more to please him."

"That is, you're doing what you like best to do when you please him?"

"Indeed, I am!"

Whereupon I was content to believe that she had her freedom. Anybody who is doing what she likes best to do is in bondage but to her own preferences; she has freedom enough!

Then an elderly "family physician" who has seen a great many husbands and wives in opposition expressed the opinion, out of his long experience, that it isn't always possible for a wife to treat her husband as a perfect stranger. I had been telling him about my old bachelor friend and about my divorced friend and about Sam's wife.

"A great many wives can't do as Sam's wife does," he said. "And a great many husbands can't. Not with the best will in the world! One of my patients—his nerves are all upset—is a man on a ten-thousand-dollar salary. Last month, his wife signed up for a three-thousand-dollar automobile without consulting him. A little while before that she went downtown and charged a thousand dollars' worth of clothes and jewelry to him.

"How can he let her go ahead doing such things? Isn't he compelled to interfere with her freedom? Doesn't he have to impose his will upon hers? And I've got a case virtually the same, in one particular, as that of your divorced friend; you said his wife insisted upon having a visitor who bored him to the point of vertigo. Well, this case I'm mentioning is a woman who's been actually made sick—she's sick in bed and seriously—because her husband insists on having his mother live with them. The mother is peculiar, to say the least; but the husband is devoted to her, and believes she'd die if she couldn't be continually near him. Where's any freedom for the wife, compelled to live with an old lady she detests, and where's any for the husband, if his wife makes him put his mother out?

"Then I've got a third case where your freedom theory won't work, and I've known of a number of others more or less like it. A lovely girl married a man who seemed in every way attractive; she fell in love with him, and her father and mother approved of him. Until after he was married, he didn't show a trait that wasn't to his credit. But merely being married brought out a brutality in him, as marriage sometimes does, that had been latent until then. His form of brutality happened to be a perfectly unreasonable, ugly, bullying jealousy.

"Is she to submit to it, and let him go

Telltale Arteries

"I wonder how old she really is. I don't believe she is as young as she looks."

© 1927 M. L. I. Co.

A NOTED physician said recently, "The woman who conceals her age is a public benefactor. Through her determination to stay young—even to the point of denying the calendar—she has set up higher health standards. Age is not a matter of years but of tissue changes. While she keeps her body and spirit young, she is young."

* * * *

If you have associated with persons past 50 or 60, you may have listened to much solemn talk about arteries—well intended, but mostly untrue. For example, "old as your arteries," "old as you look," "old as you feel," being part-truths are swallowed whole or rejected entirely, depending upon casual experience or observation.

That arteries which become thick and brittle may bring an abrupt ending to life through ruptured blood vessels is generally known. But it is not generally known that either defective arteries or high blood pressure may be directly responsible for serious changes which occur in heart, kidneys and brain.

High blood pressure is not a disease. It is a definite indication that something is wrong somewhere in the body. What causes the trouble can oftentimes be immediately discovered by a competent doctor. Again, the cause can be determined only by patient, intelligent study and observation.

Here is the message to everybody, old or young, sick or well: Your doctor can find out in a few minutes whether or not your blood pressure is normal for your age—whether or not your arteries are healthy. There is no way for you to judge your condition. At the beginning of trouble there is seldom pain or warning of any kind. The fact that one's blood pressure shows fluctuation or is temporarily high is no proof that anything is radically wrong.

Thanks to sound advice of physicians, thousands and thousands of men and women have been saved from acute or chronic trouble by removing the cause. Others, who have found the cause past correction—as it sometimes is—have lived to old age with hardened arteries, high blood pressure, or both, because they learned how to live—eating, working, exercising wisely and in *moderation*.

Sometimes high blood pressure and diseased arteries are caused by focal infection in head or body; sometimes by poisons—the left-overs of previous infectious disease which were neglected and never completely eliminated; sometimes by overweight or overwork or unhappy mental conditions—worry, fear, anger, hate, anxiety.

Above all, know the truth. Have your blood pressure read once a year at least. Keep well, keep happy, keep young.

Among 16,700 Metropolitan policyholders recently examined, 2,150 were found to be more than 20 per cent overweight; 6,900 had defective teeth with suspected focal infection; 4,370 had enlarged, septic or buried tonsils; 1,190 had high blood pressure which might have been attributed to one or more of the above, or to other causes.

It was found that the number of overweight persons who showed a blood pressure above normal was more than twice that of persons of approximately average weight.

The Metropolitan Life Insurance Company will gladly mail you, without cost, its booklets "Overweight" which tells how to reduce weight safely, and "Blood Pressure" which gives interesting information regarding the simplicity and meaning of a blood pressure test. Send for them.

Speed and Comfort

IN the morning when the time is short and the minutes count, you will feel most grateful for the ease, speed and comfort of a MOLLÉ shave.

A quick application, with the finger tips, of bland, wholesome, beard-conditioning MOLLÉ over the face; a "once-over" with the favorite razor, and the hair-growth is removed —clean and close—no pulling of the blade—no smarting or burning of the face—not the least need of lotions or talcum.

And in the evening, when special occasions demand, a second shave is just as smooth and comfortable—the same delightful after-feel and the same enjoyable freedom from the slightest soreness or irritation of the face.

At all Druggists - Price 50 Cents

Women of discrimination will find MOLLÉ and a suitable safety razor superior in every way to chemical hair removers for meeting the exacting requirements of perfect grooming.

on having the freedom of pulling her around by the hair, merely because she's spoken politely to the milkman? How does your freedom work in these cases?"

"It doesn't," I said. "It can't apply to them, and I don't think you've understood what I'm trying to discover. I'm looking for the essential element in the happiest marriages, with the idea that if we found it somebody might be able to inject it into other marriages not so happy. We might, indeed, prescribe it for brides and grooms, or at least offer it for their consideration.

"BUT I didn't mean that *all* marriages *could* be happy; and there are certain of them, such as you've just been sketching, that may not be able to contain the great element. In the infinite variety of humankind there is a proportion of fools, brutes, and freaks; and the unfortunate person who in the glamour of young love enters into bondage with one of these must suffer bondage indeed, unless he is strong enough to impose his will, and make the relation into one of master and slave, or else obtain his former freedom through divorce.

"These appear to be the only courses open to your nervous husband with the crazily extravagant wife, and to the unhappy bride with the crazily jealous husband. That is, they seem to be the only courses open to them at present, though there is a remote possibility that the nervous husband, making himself master, could so discipline and educate his wife that she would become able to enjoy the freedom that makes a marriage happy. The bride tortured by an unexpected brute in her husband might do the same thing, though the chance is slim; and both victims would probably do best by realizing definitely that they have married into the freak proportion, and by making their escape.

"Of course I have no idea that freedom can be an element in all marriages, but I am inclining to the opinion that it absolutely must be an element in happy ones; and that intelligent and well-meaning people can make their marriages happy ones by introducing it."

"What about the wife who can't bear her mother-in-law's living with them, and the husband who can't bear her *not* living with them? They are intelligent and well-meaning, and they are still devoted to each other, too; but if the wife is free to turn the old lady out, then the husband isn't free to have his mother with him. How can they get any freedom?"

"I'm not sure that they can; but it's obvious that, unless they do, their marriage isn't altogether happy. I think you ought to suggest that they move the mother-in-law next door."

"She won't go," he said.

"Then the wife might move to a house in the neighborhood and allow her husband to call when he wished. Certainly that would be freedom, and they'd all be happier, wouldn't they?"

"They might," he assented. "But how about a wife whose husband is infatuated with another woman, or a husband who learns that his wife is in love with another man? Ought married people to consent to *that* freedom?"

"A wife or husband seriously in love with a third person very probably *asks* for

Wonder what a man reading a menu thinks about?

EVERYTHING but the menu, probably! . . . Waiting for the waitress and scanning the card that offers him today's choice of dishes, does the average man think once about *the kind of nourishment* he'll get from the meal he's going to eat? Not he! Nourishment is nourishment, and that's that! . . .

On second thought, however, it's not fair to say "average man" and let it go at that. "Average man below thirty-five" would be nearer the mark. After thirty-five the majority of men readjust their diet and their views on diet. Some do it because they have to . . . "Yes, my stomach's gone back on me!" . . . Others do it as a deliberate step in a certain direction —a move toward greater mental and physical efficiency, greater happiness and greater success.

A perfectly balanced diet is the best health-protection that can ever be devised. Scientists know that now. They are shouting it from the housetops. And the wiser part of the world is listening very respectfully.

There is a delicious modern food which can be of great benefit to you in arranging a well-balanced diet. Grape-Nuts —crisp, golden kernels, made from wheat and malted barley. By a special baking process, the tempting, nut-like flavor of the grains is developed to the utmost and ready digestibility is assured.

Grape-Nuts gives to the body dextrins, maltose and other carbohydrates for heat and energy; iron for the blood; phosphorus for teeth and bones; protein for muscle and body-building; and the essential vitamin-B, a builder of appetite. Eaten with whole milk or cream, Grape-Nuts is an exceptionally well-balanced ration.

The *crispness* of Grape-Nuts, too, aids health by giving to teeth and gums the vigorous exercise they require. . . . Chewing is a vital factor in perfect nutrition.

Try Grape-Nuts tomorrow morning. Your grocer sells it, of course . . . Perhaps you will wish to accept the following offer:

Two servings of Grape-Nuts and
"A Book of Better Breakfasts"—free!

HOME—*in a* GENERAL MOTORS *car*

AT LEAST three million men go home from their work in General Motors cars. Their most precious asset is their time, and the car conserves it. For those who love the country it makes possible a country home.

To the homes of 170,000 employes General Motors has a very personal relationship; it sends into them more than $256,000,000 a year in salaries and wages.

And this is only part of the story. For General Motors purchases supplies from more than 6,000 sources in all parts of the country; it is an important buyer of cotton, of lumber, of steel and of other raw materials; it is one of the largest customers of the railroads.

Thus the prosperity of any one industry helps all. And the prosperity of the automotive industry means good things directly or indirectly, for almost every American home.

FRIGIDAIRE—Electric Refrigerators

freedom—freedom, usually, to enter into another bondage, since, except in a few extraordinary cases, only selfish people ask for this freedom, and selfish people do not readily *grant* freedom to the new partner. I suppose, however, you are referring to another type. You mean, perhaps, an instance in which a wife wishes to continue married to her husband, but displays a conspicuous sentimental or romantic interest in another man?"

"Yes," he said. "What should the husband do about it? Should he permit his wife freely to continue such an nterest?"

"That will be his nearest approach to happiness, if freedom is the great element; and it seems to be. If he constrains her, she will still care as much as before for the other man; the husband has therefore gained nothing of her *heart*, and her heart is surely the important thing. By constraining her or tormenting her, he must lose whatever he already has of her heart; and by removing the essential element, freedom, he makes certain of the unhappiness of their marriage, which may have been only doubtful before."

"I see," the doctor said skeptically. "The jealous or troubled husband must either let his wife be free, or go to court and get freedom for them both."

"Yes; that seems to be the alternative."

"But suppose he does consent to her freedom, and to her remaining his wife, letting her continue her romantic interest in the other man, and suppose that, although the husband consents, he is unhappy: there you have your 'great essential element' for a happy marriage, and yet the marriage is unhappy."

I admitted this as a possible contingency, but stood my ground. "The marriage would still be less irksome, less a bondage, and the amount of happiness obtained from it altogether greater than if freedom were curtailed. Of course I don't insist that, under these circumstances, the marriage would be a happy one, though it would have a better chance of becoming one, in time, than if the wife's freedom were curtailed by threats or any other sort of compulsion. But I have not supposed that freedom of itself creates a perfect happiness for people, married or unmarried. A man with a lively toothache is not happy, no matter how much liberty he has. All marriages having freedom may not be happy; but to have freedom is to have the greatest chance of happiness in marriage; and marriage cannot be happy, lacking it, except with the pallid happiness of master and complacent serf."

I SAW that he remained somewhat skeptical; but at least I had convinced myself, and that is certainly something. For, to arrive at a definite conclusion about anything, and especially about so puzzling a subject as marriage, is surely to make progress, even if the conclusion be a mistaken one. My definite conclusion was of the simplest possible kind: that, although the prisoner with shackles on his body may be happy if his spirit be free, there cannot be happiness in a *heart* held to bondage. Therefore, freedom is indeed the great essential element in a happy marriage. For without it marriage is bondage.

A woman neighbor, shaking her head

The Money Value of Education

The Untrained Man
earns about
$45,000
between the ages of 14 and 60

The High School Graduate
earns about
$78,000
between the ages of 18 and 60

The College or Technical School Graduate
earns about
$150,000
between the ages of 22 and 60

THE figures given above represent the earnings of the average man. They are based on reports of the Massachusetts Department of Labor and Industry, and on statistics of earnings of students and graduates of the College of Business Administration of Boston University.

They coincide with the results of investigations made from time to time by the International Correspondence Schools, and they show, beyond question of doubt, the money value of education.

According to these figures a four-year high-school course is worth $33,000 and a four-year college course is worth $72,000 to the average man. Every hour you spend in spare-time study with the I. C. S. pays a proportionately large cash return.

For this is the day of the trained man. The high schools and colleges are turning out thousands of graduates every year. You cannot possibly hope to compete with these graduates unless you increase your educational equipment and your ability to handle more important work.

Today, as for thirty-five years, the International Correspondence Schools are an unfailing source of help for men who were forced to leave school too soon or who require special training to meet the changing needs of business and industry.

To thousands upon thousands of men a home-study course with the I. C. S. has meant the difference between Success and Failure—the difference between the earnings of the untrained man and the man who is equipped to take his place among the leaders in business and in industry.

ominously, said of Sam's wife, "She lets her husband go out every night!" But this was a mistake: Sam's wife and Sam do not *let* each other do anything—not any more than one lets a stranger choose which way he will follow. They consult each other; they do not ask or grant permissions; they enjoy liberty, equality and fraternity, universal and instinctive ideals actually realized in their happy marriage.

The wisest and gentlest observer of life who ever wrote of marriage said that, like life, it is "a field of battle, and not a bed of roses." And so it is a field of battle—for those who fight. Moreover, if the horrified bachelor's view is credible, the fighters first become intoxicated, embrace, and lovingly shackle themselves to each other. And if the divorced gentleman's feeling is just, the combatants, like cats so engaged, fight merely because they *are* shackled to each other. Where the shackles are heavy there will be desperation—there will be fighting.

But always there is Sam; he is married, good soul, but not shackled at all and so not fighting at all. For with freedom, marriage can no more be a field of battle than it has to be a bondage.

What Causes Unhappy Marriages?

Prize Contest Announcement

THE specter of family "smash-ups" hits home to all of us. Every so often we learn that the household of some relative, some friend, some neighbor, has foundered on the rocks of marital misunderstanding; or else we visit homes where discord and misery seem to be the order of the day. Statistics tell us that divorce is steadily increasing.

Booth Tarkington, whose article you have just finished, has come to some very definite conclusions about the factors responsible for unhappy marriages. But what are *your* conclusions? You may agree with Mr. Tarkington, or you may not; it doesn't matter which, so far as this contest is concerned. THE AMERICAN MAGAZINE invites you to give your explanation of the most prevalent cause of matrimonial misunderstandings. Tell your opinion; illustrate it, if possible, with some incident from your own experience or observation; and suggest a remedy, if you know one. Of course your name will not be signed to your contribution, if it is among the prize winners.

For the best letter of not more than four hundred words, we offer the following prizes: $30, first prize; $20, second prize; $10, third prize. Competition closes April 20th. Winning letters will appear in the July, 1927, issue.

Address Contest Editor, THE AMERICAN MAGAZINE, 250 Park Avenue, New York City.

Contributions to this contest, and any enclosures, cannot be returned, so you must make a copy of your contest letter and of any enclosures, if you want to preserve them. Manuscripts and inquiries not connected with the contest must be sent under separate cover to the editor of THE AMERICAN MAGAZINE.

"For three years I dragged along —*half sick*"

"DAILY HEADACHES—*tiredness that I could not seem to throw off. Then a breaking out all over my body. I dragged along—with cathartics—until I was many pounds underweight.*

"*I had read often of the wonderful results others had obtained with Fleischmann's Yeast, but for a long time I did not think of Yeast in connection with myself.*

"*Finally I decided to make the trial. It turned out to be very easy and simple. Today I am a strong robust man. My ailments have disappeared. I weigh 186 pounds of pure bone and muscle and feel a picture of health and happiness.*"

A. L. DIXON, Dallas, Texas

FLEISCHMANN'S YEAST—a food, not a medicine—keeps the whole digestive and intestinal tract clean. The millions of tiny active yeast plants in every cake remove the poisons of chronic constipation, and restore the muscles of elimination to their normal strength. Your skin clears, your digestion becomes normal, your old listlessness vanishes. You are really well again.

Fleischmann's Yeast is the simple, natural way to counteract intestinal poisoning. Eat it regularly. You can get it at any grocer's. Buy two or three days' supply at a time and keep in a cool dry place. Start today to eat Fleischmann's Yeast.

Write for a free copy of the latest booklet on Yeast for Health. Health Research Dept. J-39, The Fleischmann Company, 701 Washington St., New York.

MR. A. L. DIXON *taking "time off" near Dallas, Texas. Once he was not able to enjoy life like this. He tells above how easily and naturally he got rid of his ills.*

SARAH FIELD SPLINT, *Editor, Dept. of Foods and Household Management, McCall's Magazine.*

"I WAS of course familiar with the fact that fresh Yeast has nutritive and therapeutic properties. But, curiously enough, it had not occurred to me to eat it myself until a physician suggested it at a time when I was much run down. It proved so efficacious in correcting my fatigue, nervousness and loss of appetite that I have since taken it whenever work began to make especially heavy draughts on my vitality. By aiding digestion Yeast creates a healthy appetite."

SARAH FIELD SPLINT, New York City

This Easy, Natural Way to have your rightful, vigorous health

Eat three cakes of Fleischmann's Yeast regularly every day, one cake before each meal: just plain, or on crackers, in fruit juice, milk or water. For constipation physicians say to dissolve one cake in hot water (not scalding) before meals and at bedtime. (Be sure that a regular time for evacuation is made habitual.) Dangerous cathartics will gradually become unnecessary.

"GIRLS AVOIDED ME because of the unsightly pimples on my face and I was subjected to many embarrassing remarks. It was with difficulty that I could shave. I became grouchy, unhappy. I tried many suggested remedies but with no results. I was urged finally to try Fleischmann's Yeast by an old friend who had used it long before it became a national remedy. After three months I was entirely free of skin trouble just by eating two cakes of Yeast daily. My skin is smooth and easy to shave. And I have a much better disposition."

WESLEY J. PIERCE, Richmond, Va.

IDEAL *Water Tube Oil Burning Boiler*

For homes, apartment buildings, skyscrapers,—the IDEAL Water Tube Oil Burning Boiler is of such range and capacity that it will fulfill the most exacting requirements and will function with full efficiency during the life of any building. It is especially designed for rapid heating.

Best Oil Burner Results

In keeping with its larger ideals of public service and the obligations of leadership, American Radiator Company, from the first, have kept open the doors of its great laboratories for the aid of oil burner inventors and manufacturers.

This close and continuous cooperation has resulted in the practical scientific development of modern oil burners, and the perfection of IDEAL Boilers for oil burning.

Here again, with its wealth of heating experience and its vast equipment in heat-measuring, heat-recording, and heat controlling facilities, American Radiator Company has demonstrated that it is truly a WORLD INSTITUTE OF HEATING.

IDEAL Boilers, for oil burning, are offered in three types,—scientifically proportioned and equipped to guarantee the utmost in oil burner results. These IDEAL Boilers have had their complete development hand in hand with the oil burner industry and they afford, therefore, the best to be obtained in operating efficiency, economy, and dependability.

ARCO ROUND *Oil Burning Boiler*

The most widely used heater for homes,—the ARCO Round Oil Burning Boiler is designed and constructed for efficient oil burning. It delivers satisfactory results in daily service, during the life of the building.

IDEAL *Type "A" Oil Burning Heat Machine*

Distinguished for its cleanliness and attractiveness, this boiler is the "aristocrat of home heating boilers." It is scientifically designed and constructed for efficient oil burning and is suitable, single or in batteries, for the finest residences and largest buildings.

AMERICAN RADIATOR COMPANY

Showrooms and sales offices: New York, Boston, Providence, New Haven, Newark, Philadelphia, Baltimore, Washington, Richmond, Buffalo, Pittsburgh, Cleveland, Detroit, Cincinnati, Atlanta, Chicago, Milwaukee, Omaha, Indianapolis, St. Louis, St. Paul, Minneapolis, Denver, Kansas City, San Francisco, Los Angeles, Seattle, Toronto, London, Paris, Milan, Brussels, Berlin

Makers of IDEAL Boilers for coal, coke, oil and gas. AMERICAN Radiators, ARCO Hot Water Supply Heaters, VENTO (Ventilating) Heaters, Heat-Controlling Accessories and other products for drying, humidifying, cooling and refrigeration.

"Greater Love Hath No Man Than This—"

(*Continued from page 25*)

of men. It was a domestic insect, and not of the wilds and swamps. Proper screening could keep it from homes, and proper coverings over all water vessels, rain barrels, and wells could keep it from laying its eggs there. As soon as its breeding places are rendered inaccessible and homes screened against it, this mosquito vanishes from a city. To-day there is no yellow fever to speak of in the Americas!

Now go West with me. When the first white settlers went into Idaho and Montana, friendly Indians gave them a mysterious warning. "That valley bad place for man," they said. "Better stay out. You die there."

The settlers looked out over the valley indicated. They saw rich land, abundant water, remarkable advantages of climate. "Those infernal Indians are trying to trick us," they shrugged, and with their cattle and implements and children they moved in to establish homesteads. Then shortly, from out of nowhere, came disaster.

STRONG men went down on their backs with a fever which was as strange to them as the cause of it. Ugly spots appeared on their bodies, and in some instances seven out of ten thus stricken died. The physicians of the new country were helpless before this fever, and the word spread that certain valleys were accursed.

Settlers already located in them abandoned their homes and fled. Newcomers passed them by, despite their fertility and charm. As years passed, the fever cropped out in all the Rocky Mountain states. It spread north into Canada and even into Alaska, while medical men puzzled and sweated to find its cause. One mystery of the disease was that it occurred only in the spring of the year.

About this time, a young doctor, Howard T. Ricketts, was rising to fame in Chicago, where he was associate professor of pathology in the city university. He was brilliant, indefatigable, and seemed fired with an uncontrollable passion to allay in some measure the sufferings of mankind. Long hours, after his classes, he put in at the laboratory, engaged in research, driving himself mercilessly, often until dawn. At length his health broke. He was ordered to go into the outdoors and rest.

By some irony, Ricketts picked for his enforced vacation a spot in Montana. It was in the spring of 1908 that he reached there, and the mysterious fever of the mountain lands, known as Rocky Mountain spotted fever, was taking its annual toll. Forgetting all orders, Ricketts began to make inquiries, to visit sick-beds, to consult medical men who had studied this disease. What was his own health, when the health of others was at stake, when those at his very hand were suffering and dying?

"I've got to find the cause for this," said Ricketts. "We can't check the disease until we find its cause."

So he began to pry about in out-of-way

"—playful little bandits searching their willing victim."

"What Did You Bring Us, Daddy?"

Expectant ears hear Father's step at the door. Then big kisses and the resounding greeting! "What did you bring us, Daddy?"

Like playful little bandits they search their willing victim. What *did* he bring them? *That* will prove the Father's good or bad judgment.

Every growing child craves candy. Active little bodies demand sugar. But children's candy must be pure — and they should not overeat on sweets.

* * *

Life Savers, the little candy mints with the hole, (life saver shape) answer this problem in just the right way. They are china-hard and deliciously flavored.

This means that Life Savers are eaten slowly. Children suck them to make those wonderful flavors last longer. Little tummies are not upset.

They're safe and wholesome. You may conscientiously be generous with Life Savers for they are the real candy for little folks.

Six popular flavors: Pep-O-Mint, Wint-O-Green, Cinn-O-Mon, Lic-O-Rice, Cl-O-Ve, Vi-O-Let. Five cents a package everywhere.

Good for little tummies

Safe for tiny teeth

P. S.
Have you tried LIFE SAVER FRUIT DROPS? Three refreshing flavors—Orange, Lemon and Lime. 5c a package.

places, always asking questions, digging out details others had deemed too small to bother with. "Maybe an insect spreads the disease," he hazarded, and started searching for this insect. The fever victims were farmers, cattle men, lumbermen. This fact suggested to Ricketts that beasts might harbor the dangerous insect. Finally, after endless experiments and failures, he set his suspicion on a wood tick. Numerous fever patients recalled having been bitten by this tick.

Whereupon, Ricketts began to study and collect ticks. And he found that by means of ticks he was able to transfer the fever from one guinea pig to another. He bred ticks in the laboratory, and found that the infection they carried was hereditary, that only the adult females could convey the fever to man. Scouring the foothills with tireless energy, exposing himself a thousand times, while his own health waned, he captured and studied the wild animals of the country, and thus discovered that the gopher, the chipmunk, and the ground squirrel were the tick's most ready carrying agents.

Dangerous business this, that Ricketts was engaged in. One bite from a tick would certainly have been fatal to him in his weakened and worn-out condition. But for two years, he pushed on in this work.

RICKETTS solved the spotted fever mystery, and showed how the West could be freed of it, by ridding the foothills of the small-animal hosts of the tick, and by keeping live stock free of the pest. Between 1907 and 1911 he published fifteen authoritative papers on the disease. But he wasn't satisfied that he had done enough, which is a trait of these pioneers, such as Ricketts. They don't retire upon a single conquest. Search their biographies; you will find that even in death they don't retire!

Dr. W. W. Keen, the famous Philadelphia surgeon, tells of a letter he received once from a doctor—not a noted doctor I believe, but a plain old family physician whose life had been given to administering to the commoner ills.

"I am afflicted with a disease," he wrote, "which I know is mortal. My usefulness in this world is about at its end. But if it will be of any service to humanity, I want to offer myself for experiment. I am willing to submit to any operation, however painful, without any anæsthetic, if science will be helped by it."

I have already told you of how Jesse Lazear, fighting off the chills and deadly languor of yellow fever, held himself all night to his desk, that a written record of his work and of his symptoms might be left behind. Medicine is replete with such examples. They should be an inspiration to every one of us, regardless of what may be our work.

So Ricketts wanted to do more. The University of Pennsylvania had just called him to fill the chair of pathology; but he couldn't go to Philadelphia yet. Typhus fever was rampant in Mexico. It was sweeping through the jails and labor camps, through the congested districts of cities, claiming hundreds, threatening thousands. The cause of it, how it was transmitted, how to stop its ravages—nobody knew! It was another mystery!

Ricketts packed up, said good-by to

He Tried Home-Study Training to Double His Salary—

In seven years it multiplied his income seven-fold!

SEEMS too good to be true—that a man can double his income just by devoting a few spare hours each week to home-study training—

"But—maybe it *is* true," said B. J. Mertz to himself—*and within seven years home-study training had increased his income better than 700%!*

Mertz was principal of a rural high-school in Texas, at $80 a month, when the idea came to him to enroll with LaSalle for training in Higher Accountancy.

Upon completing the course, he first took a place as Assistant Bookkeeper, in Chicago—then joined a firm of Certified Public Accountants, chiefly to get experience. Then he became Office Manager and Acting Secretary of a foundry in southern Ohio. *Already—in only four years—his salary had increased 500%.*

Today, he is Comptroller of the Buckeye Union Casualty Company, Jackson, Ohio, and in addition conducts a private accounting practice which brings him back the entire cost of his training every month in the year.

Why not resolve just to *double* your salary? Get the training—grasp your opportunities—and the future will take care of itself!

Your biggest opportunity is as near you as the point of your pencil. If you are determined to make progress, clip and mail the coupon now!

Two books placed B. J. Mertz on the path to greater earning power. They are "Ten Years' Promotion in One"—and "Accountancy, the Profession that Pays." LaSalle will send them to you *free*.

You want to make more money—but are you willing to do your part?

Balance the two minutes that it takes to fill out the coupon against the rewards of a successful career—then clip and mail the coupon NOW.

THE BUCKEYE UNION CASUALTY COMPANY
JACKSON, OHIO

FREDERICK E. JONES, President
IRA L. MORRIS, Secretary and General Manager
F. A. BURGESS, Treasurer

LaSalle Extension University,
Chicago, Illinois.

Gentlemen:

One hundred and sixty dollars a month may look small to some men, but when I enrolled with your institution for training in Higher Accountancy, it looked as big as a mountain to me. I was then principal of a rural high school in Texas, at $80 a month.

I wanted to double my salary. That was the goal I set.

Now I find, at the end of seven years, that your training has increased my income more than 700 per cent. What is even more gratifying is the fact that I am now doing work I like and can see ahead of me a real future.

Your book, "Ten Years' Promotion in One," gave me the inspiration that decided my future career.

Yours very truly,

B. J. Mertz

Comptroller

IS YOUR WATCH CHAIN "IN CHARACTER"?

YOUR watch chain plays an important role in your daily appearance. Always it is out in front. How important then for it to reflect you—your personality—your style. In the language of the stage—it should always be "in character."

It is so easy to find the chain *for you* when you look over an assortment of Simmons Chains. There are conservative designs, ultra-modern designs—designs suitable for all ages—all occupations—all occasions. And every one is made by Simmons' famous patented process of drawing natural gold, green gold and white gold over a stout base metal. For the money you pay, you couldn't find a more serviceable and handsome chain anywhere.

Your jeweler has Simmons Chains in the four standard styles—Waldemar, Dickens, Vest and Belt. Let him help you choose the chain which is best suited to you and your occupation. Prices $4 to $15. R. F. Simmons Co., Attleboro, Mass.

SIMMONS
TRADE MARK
CHAINS
The swinet says it's a Simmons

the comfort and security of his home, and went to Mexico City, center of the disease. I don't believe he ever did take that vacation the doctors recommended.

Into the jails he went, into the fever-stricken camps, into the contagious wards of the hospitals. Again he was on the trail of an insect, an insect that thrived on uncleanliness, the body louse.

In April, while Mexico waxed hot, he and an associate, Wilder, announced a vital discovery for medical science. They had been able to transmit typhus fever by the bite of the body louse from man to monkey, and from monkey to monkey! This was only a beginning, of course; but Ricketts was on the way to something. He was a seer who had peeped behind the veil of the mystery—and he was only thirty-nine years old; years of labor were still ahead of him.

But one morning before that month was out, this doughty searcher after truth failed to rise from his bed. His thin face was flushed and his pulse raced. The chills of fever racked his body, worn out and weak from days and nights of unbroken, unselfish work for others; the lice to which he had traced the disease had gotten to him, in spite of his precautions. He died less than a month after announcement of his discovery, a martyr to the cause of man's well-being if ever there was one!

DURING the latter quarter of the past century there were mighty discoveries made on both sides of the Atlantic in electricity.

It was quite natural, therefore, for the scientists to search electricity for possible weapons against disease. And at Wurzburg, a Prussian professor of physics, Wilhelm Konrad Röntgen, accidentally discovered the X-rays. At first, Röntgen had no idea what those rays were, or what they would do. They were unknown quantities, and in algebra the unknown is represented by the letter *x*. So Röntgen named his discovery the X-rays, and a new door was opened to science, and a marvelous new instrument given to our hospitals.

The X-ray machine soon became a part of the equipment in every hospital of consequence, and medical men worked daily with its rays, of which little or nothing exact was known beyond the good they did. The machine was a boon to mankind, and yet it held a terrible menace to every doctor who used it—a menace which only grim experience, and pain, and death itself could disclose.

Almost every big city and big hospital can lay claim to one or more of these heroes of the X-ray. The story of Mihran Krikor Kassabian, an immigrant, is perhaps the most picturesque, but in the main it is only typical of what dozens of other medical men went through, here and abroad.

Kassabian was born in Cappadocia, Asia Minor. As a boy he experienced earthquake, was exposed to epidemics of cholera, and was surrounded by the horrors of massacre. His early education was received in the American Missionary Institute, and that turned his eyes toward the New Land of the West. He went to London—as far as his savings would take him—resolved to be a missionary himself. He had that fire which burns in some men, to help, to give, to sacrifice, that his fellow men might live more happily. In London, he studied theology and medicine; he also became interested in photography. From photography to the X-ray was but a step for a medical student.

A year in London, working his own way, gave him means to complete his journey to America. He became a student at the Medico-Chirurgical College, in Philadelphia, and for the next four years waged that battle of every poor immigrant student, in which ambition pits itself against discouragement and want. He was never idle, and dared not be. His only money was what he earned, after classes, between classes, nights, and during vacations. In 1898, even as McKinley declared war, he received his degree in medicine.

A WAR on, danger about, there was no holding Kassabian in civilian pursuits. Besides, he felt he owed something to this land of his adoption, America. So he enlisted in the medical corps of the Regular Army, was assigned to a hospital, and helped fight that enemy which took a bigger toll than Spanish bullets—disease. In 1903, a civilian again, he was appointed director of the X-ray laboratory of the Philadelphia Hospital. It was not the wealthy that he attended here: his patients were from the congested districts, the narrow back streets, and the stuffy tenements.

Now there is a mysterious thing about the X-ray of which I have already hinted. The rays, used upon a sick or injured man for the purpose of diagnosis or treatment, are harmless to him. The patient is exposed to them only for a brief time, but the X-ray specialist, exposed to those same rays in case after case, day after day, for months on end, plays with almost certain death, unless he has a means of protection.

But Kassabian and those others knew nothing of this. They did their work with bare hands. And one day Kassabian detected a small ulcer on the back of one of his hands. Other ulcers soon appeared, until both of his hands and wrists were covered with them, ugly spots from which came the most excruciating pain. The usual treatments did no good whatsoever; instead, this malady of the skin grew worse. Then Kassabian knew: The wonderful rays by which he was able to save the lives of others were literally eating him away.

I won't torture you with what Kassabian went through, with what those others of that early band went through. It would be cruel. The only remedy, and that a passing one, was the surgeon's knife, applied again and again. Not a day passed that Kassabian, this missionary self-made, did not endure untold agony. But what was agony before a vision, before that inner fire to do? Quit work? No, not Kassabian!

While his life was being eaten away, he rose to eminence. He studied, he wrote, he went back to that machine to let it do its worst on him. Famous medical societies heard of his work and honored him by offices. He became X-ray expert to the Tuberculosis Congress, represented the American Medical Association at international meetings abroad, and back in Philadelphia kept up his work in that laboratory, a doomed man, but one still with his boots

The watch that times America's famous trains

WHENEVER you see some great train like the Broadway Limited or the Century, the Olympian or the Californian, start on its thunderous trip across the country, you may know that a dozen quietly ticking watches have confidently given the time to the dispatcher, the conductor, the engineer. And other watches, accurate to the second, will check and guide it in its onward way.

The watch so used by a large proportion of the men on the railroads throughout the country is the Hamilton Watch, for it is built with such infinite precision, and regulated with such patient and exact care, that it has come to be called "the watch of railroad accuracy" by thousands of those whom it has steadfastly served. In a watch there can be no substitute for accuracy—and none is recognized by those who make the Hamilton Watch.

Hamilton Engraved Cushion-shaped Strap Watch—in green or white filled gold, $52 or in 14-carat gold, $77.

The new Hamilton Fillmore has a touch of elaboration through the gracefully chased bow. In white or green filled gold case with 17-jewel movement . . . $50

Hamilton accuracy is based upon right design. It is founded upon infinite accuracy in machining, upon skilful and delicate adjusting, upon exact timing and testing. Hamilton accuracy is built up in each watch, over months of time, until its dependability is established beyond question.

The Hamilton Watch is priced from $48 to $685 for pocket models; strap models $50 to $88; women's wrist models, $48 to $60.

We should be pleased to send you on request our two interesting booklets, "The Timekeeper" and "The Care of Your Watch." Write for them to Hamilton Watch Company, 883 Columbia Ave., Lancaster, Pa., U.S.A.

Love Sends Convert to pipe-smoking on Tobacco Hunt

Of course a young man in love will do anything to win favor in the eyes of his lady fair. And pipe-smoking seems to be one of the credentials that admit young male America into the graces of the fair sex.

But while smoking a pipe seems to solve the feminine problem, finding the right tobacco evidently is the male problem.

Probably that is what prompts such letters as this:

New York, N. Y.
June 30, 1926

Larus & Bro. Co.
Richmond, Va.
Gentlemen:

I started smoking on cigarettes, but after meeting a young lady for whom men who smoked pipes had a greater charm, I promptly switched to one.

Then my agony began. I tried one brand of tobacco after another, always working on the theory that the more you paid for tobacco, the better it would be.

Then came the day I tried Edgeworth. It was at a ball game. I had run short of the certain brand I was smoking, and a casual acquaintance offered me a pipeful.

Imagine my delight when after the first few puffs, I did not feel the old familiar bite. I puffed on, inhaling the delightful aroma, and oh, boy! it was sweet right down to the bottom.

Nothing has separated me from my pipe, or my pipe from Edgeworth since then.

Yours very truly,
(signed) David Freedman, Jr.

Let us send you free samples of Edgeworth so that you may put it to the pipe test. If you like the samples, you'll like Edgeworth wherever and whenever you buy it, for it never changes in quality.

Write your name and address to Larus & Brother Company, 3-P S. 21st Street, Richmond, Va.

We'll be grateful for the name and address of your tobacco dealer, too, if you care to add them.

Edgeworth is sold in various sizes to suit the needs and means of all purchasers. Both Edgeworth Plug Slice and Edgeworth Ready-Rubbed are packed in small, pocket-size packages, in handsome humidors holding a pound, and also in several handy in-between sizes.

To Retail Tobacco Merchants: If your jobber cannot supply you with Edgeworth, Larus & Brother Company will gladly send you prepaid by parcel post a one- or two-dozen carton of any size of Edgeworth Plug Slice or Edgeworth Ready-Rubbed for the same price you would pay the jobber.

[*On your radio—tune in on WRVA, Richmond, Va. —the Edgeworth Station. Wave length 256 meters.*]

on. Death, with which he had raced for a half-dozen years, overtook him in 1910—when he was not yet forty years of age.

Lead, the metal which the X-rays cannot penetrate, protects the roentgenologist of to-day. He isn't asked to endure what Kassabian, and more than a score of others, went through. These were the trail-blazers.

But as long as germs and microbes are studied by men in laboratories, as long as surgeons operate, as long as disease remains an ordeal of mankind, there will be dangers just as deadly for men of medicine to face, sometimes to win, sometimes to lose. The hero does not always rise to fame. He may be just "the doctor around the corner."

Dr. John H. Hartwell was one of these, of that legion to which belongs your doctor. He was first a teacher of physical culture, and was in his thirties before he won his medical degree. A kindly man, an able physician, a dynamo of energy and enthusiasm for his work, he rapidly built up an enormous practice in one of the northern residential districts of Philadelphia. His patients worshiped him, and Hartwell never said "No!" when a patient called. In his late forties, he was at his height, unsparing of himself, going night and day, regardless of season or weather. Many a night he had to do with only an hour or two of rest. It was a grilling work. Of wonderful physique, nevertheless it told on him. He was not the first of that army of family physicians to forget self and burn the candle at both ends.

ONE afternoon Hartwell was called hurriedly to the bedside of a little girl, the daughter of one of his old patients. The child was writhing in pain. His experience told him there was only a single chance to save her, and that a slender one. An abdominal operation was that hope. The child was rushed to a hospital, and Doctor Hartwell made ready his instruments. Skillfully he made his incision that would relieve the sufferer of the deadly poison pus that was taking her life. Perhaps, in the vital emergency of that moment, he was not as careful of his own safety as he might have been. Perhaps an all night and day of work without sleep had dulled his usually keen perception. Anyway, in the middle of the operation, the surgeon pricked his thumb with the knife. The cut laid open the protecting cover of his rubber glove.

Every surgeon faces this danger. Any man who operates on a case of infection exposes himself to deadly peril. And Hartwell, feeling the sting of that tiny cut, seeing the rent in his glove, knew full well that he was as near to death as a man who has swallowed poison. Unless he stopped the operation and gave attention to himself at once he knew the certain consequence—loss of his hand, loss of his arm, maybe loss of life.

But in that split second of realization, Hartwell realized also the danger to the child. He *couldn't* stop, and leave to that little girl one chance in ten thousand. The operation which he had started *had* to be done! A split second, I said, for he hesitated no longer than that. With steady, sure hands he finished the task. And on a cot in that same hospital only a day or two later he bade his wife good-by and smilingly faced the Beyond which claimed him.

Dr. J. Chalmers Da Costa, Professor of Surgery at Jefferson Hospital, Philadelphia, and one of the greatest authorities on surgery to-day, though he is so crippled by rheumatism that he no longer is able to operate, once said to me:

"In my career of forty years, I have known only one physician who shrank from his duty. He declined to dress a pus case after the surgeon had operated upon it. It is true that there were no rubber gloves in those days, but the surgeon had operated without gloves. Yet the assistant would not touch the case. One instance! And one instance only in forty years!"

"WHAT of the country doctor?" you ask.

I haven't forgotten him. Whenever the country doctor is mentioned, I think of stanch old Doctor Jones. Maybe his name wasn't Jones. It might have been Miller, or Brown, or Smith. But what does the name matter, for the world did not even know him when he lived?

Old "Doc" Jones was a village doctor in Ohio. With his old mare and rusty buggy he scoured the whole countryside about, through spring mud that slushed up to his axles, through snow, through rain, and scorching days of mid-July. Sometimes he collected a dollar for a visit. Just as often the dollar went down in the old doctor's book. He never claimed to be much of a business man, and his landlord swore that "Doc" Jones was a full year behind in his rent.

Many a broken bone old "Doc" Jones set while a gaping farm hand held the kerosene lamp for him to see by. Many a blizzard he braved with that tired, sleepy mare to bring a new baby to town. Many a shabby account book he filled with many an entry of unpaid fees, only to toss the book eventually into a cluttered drawer to let the dust of years seal it forever. And after forty-seven hard years of practice he died—at his desk, his hoary head cradled in his arms while he snatched a mite of sleep in his dingy little office on the second floor.

The whole village, and folks from the hills and valleys for twenty miles about, turned out for the funeral. A few of those who knew raised a little fund among them to pay for the cemetery plot and the plain oak coffin. The fund wasn't sufficient to buy a monument.

But after the others had all gone, and the humble grave had been filled, one mourner lingered there alone. He was the new young doctor who recently had come to the village. He stood, head bared and bowed, before that unmarked burial spot.

Presently he left to return with a weather-beaten, faded bit of oblong board on which a message in dim gold letters was still distinguishable. It was the sign which for almost a half-century had directed the ailing and sick to the office on the second floor. And that, as a monument, he placed reverently on the mound of fresh earth:

Doctor Jones
Upstairs

What finer epitaph could any man want? Who could write a nobler elegy?

The Erskine Six
Custom Sedan
$995

Custom Coupe, $995; Business Coupe, $945; Tourer, $945.

All prices f. o. b. factory, including front and rear bumpers and 4-wheel brakes

THE LITTLE ARISTOCRAT OF MOTORDOM

THERE are many small cars. There are many fine cars. But there is only one small car that is also a fine car—the Erskine Six.

Owners of the most expensive motors are driving Erskines—men and women who would not consider any other car so small and low priced.

Dietrich has given this little gem of a car beautiful, sophisticated lines, comfort and luxury which make a millionaire feel at home.

Sixty miles per hour effortlessly. 5-25 miles an hour in 8½ seconds. Climbs an 11% grade in high, fully loaded. 25 to 30 miles per gallon of gas; 1000 miles per gallon of oil. 18-foot turning radius—slips through traffic like a motorcycle.

The supreme motor car value of the decade—a luxurious fine car, economical in first-cost and upkeep—a car of inbuilt stamina and surprising performance. See it now at your Studebaker dealer.

Equipment—Erskine Six Custom Sedan: 4-wheel brakes; full size balloon tires; two-beam headlights; bumpers, front and rear; oil filter; rear traffic signal light; cowl ventilator; one-piece windshield; thief-proof coincidental lock to ignition and steering; automatic windshield cleaner; rear vision mirror; hydrostatic gasoline gauge on dash; instrument board compartments; dome light; robe rail; broadcloth upholstering with broadlace trim.

"Nevada"

(*Continued from page 65*)

An' you, Rose, buck up. Why, you're both showin' yellow after as game a fight as two kids ever made. . . . That's right. Let him lean against you. Wal, wal!"

Marvie, with eyes starting, cried out, "Oh, my heaven! . . . It's you—Nevada!"

"Shore is, boy; an' glad to meet you again."

"Mr. Lacy . . . do . . . you . . . know Marvie?" faltered Rose.

"Wal, I should smile. Me an' Marvie are old pards."

"'*Lacy*'?" cried Marvie, starting up incredulously. "But . . . you're Nevada."

"Son, the Nevada you knew was Jim Lacy."

"My heaven! What will Ben say? . . . An' Hettie!"

"Reckon they'll say a lot—when they know. But promise me you won't give me away."

"Aw, Nevada, if you only knew how Ben—"

"Marvie, I'm not askin' you to keep it secret forever," interrupted Jim hastily. "But for a little while. Promise, old pard."

"I . . . will," replied Marvie, choking.

"An' you too, Rose?"

"I can keep secrets."

"Shore. An' now, Rose, let's get this confab over. I reckon my hunch is correct. But I need to know shore."

"I'll tell you anythin'," she replied, under her breath.

"YOU know who is haid of this Pine Tree Outfit?" queried Nevada, bending down to the agitated face.

"Yes, sir," replied Rose. "Some of his men called him Campbell. But he told Cedar his real name was Ed Richardson. He's from New Mexico. He figgered in the Lincoln County War, an' was close to Billy the Kid. He fetched rustlers here with him. An' he got hold of Cedar, an' Burt Stillwell, an' Stewart, an' other Arizona riders whose names I never heard."

"Rose, how'd you happen on this?"

"Cedar fetched Clan Dillon to our ranch, an' he tried to make up to me," went on Rose. "I liked him first off. But I soon saw what he was up to. An' I had no use for him. Well, one day Cedar threw me on a horse an' rode me off to a cabin over here in Piñon Brake. Dillon was there. He tried makin' more love to me. But I bit an' kicked an' clawed him. Then the men they was expectin' rode up, an' I got thrown in the loft. Some of them were drunk. They all had money. An' they gambled an' stayed up all night. In the mornin' they had a pow-wow, an' I heard it. Then Cedar fetched me back home, an' swore he'd kill me if I squealed."

"Clan Dillon, then, is Ed Richardson—haid of this Pine Tree Outfit," said Nevada. "An' Ben Ide's foreman."

"Yes, sir," replied Rose bravely, with lips that trembled.

"Good lord!" ejaculated Marvie. "Ben swears by Dillon. He's gone against Raidy, his oldest hand. . . . I wouldn't want to be in Dillon's boots when Ben finds out!"

"Wal, Marvie, it's likely that Dillon's

THIS MATCHLESS AGE

At the Clubs

SHEDDING the mantle of the commonplace, assuming the prideful ease that is his right of membership: So enters a man his club.

The world is his, and he would banish bother from it. Seizing upon appurtenances that befit this matchless age, he waves away the old and bunglesome.

He discarded matches for a lighter—and when the Douglass appeared last winter it found his pocket first. For the Douglass is automatic. No gadgets to fumble, no wheels to thumb; it lights at the mere press of a trigger.

To possess such a simple, practical lighter had long been the hobby of Leon F. Douglass, one of the founders of the Victor Talking Machine Company. He tried out lighters of every land Then he set his own creative genius to the task—a versatile genius for which he has been granted nearly half a hundred patents.

Press the trigger there's your light

The first Douglass Lighter was for his personal use, the next for a critical crony.

Now the Douglass comes in many styles—in gold and silver and rare leathers. And each is made with a precision that insures unfailing service.

If the Douglass isn't on sale at your club, or you do not come handily upon a jeweler, tobacconist or such who can show it to you, write Hargraft & Sons, Wrigley Building, Chicago. They will direct you, and send you, too, an informative leaflet called "This Matchless Age." THE DOUGLASS CO.

DEALERS who have not yet stocked the Douglass need reminding that there is no closed season on matches for smokers, therefore none on Douglass Lighters. They should write Hargraft.

For slender fingers a Douglass cased with lizard, water snake, ostrich, or colored calfskin. More rugged leathers—pigskin, tooled morocco, for men

LOOK FOR NAME DOUGLASS ON BOTTOM OF LIGHTER.

Douglass Lighters are also offered in metal cases with a pleasing variety of finishes. The prices start at $5 and vary according to the finish selected.

WET RUBBER *slips*

Friction, and friction alone, prevents skidding. Friction between tires and road. The best brakes are helpless when friction fails. Without friction on the road, tires slide, car skids forward and sideways. *And friction fails whenever rubber tires get wet.* To illustrate how wet rubber slips:

Take a rubber pencil eraser

Hold the pencil firmly and try to slide it over a glass surface. Note how the rubber sets up a friction against the glass—how it adheres.

Now wet the glass and try it again. Note how the rubber slips and skids the instant it reaches the wet area.

(After every rain newspapers bear mute testimony to the hundreds of skids that could be prevented by WEED Chains)

WEED Chains are the most dependable preventative of forward and side skids. For wet rubber slips while the hardened steel WEED cross chains grip wet roads and give dependable traction in mud. Put them on whenever roads are wet. It takes only a few minutes.

You can identify genuine WEED Tire Chains by their red connecting hooks, gray galvanized side chains and brass plated cross chains with the name WEED stamped on every hook.

ACCO

WEED CHAINS *grip*

"There can be no compromise with safety"

boots will be stickin' out straight when Ben heahs the truth. . . .

"Marvie, get your horse, an' put Rose on hers, an' leave heah pronto for the Ide ranch. Look sharp, an' don't run into any riders. When you reach home turn Rose over to Hettie; an' both of you keep your mouths shut!"

Marvie had started to lead Rose away, when he espied Cedar Hatt's gun lying on the brown pine needles.

"Nevada—can I take it?"

"What? Oh, Cedar's gun? Shore, you take it."

The girl turned with lips parted. "Mr. Jim—Nevada—we'll see you again?"

"I reckon. Remember, I trust you to keep mum. Look sharp now, an' hurry along!"

Nevada did not linger to watch them find and mount their horses; however, as he started up the slope he heard them, and felt that now all would be well with them. Reaching his own horse, he tightened the cinches, leaped astride, and rode up to the level, where he faced north with a grim smile.

The afternoon had not far advanced. At a steady lope he covered the miles of forested ridge, down-hill and easy going until he descended into the brakes. Here his horse toiled for an hour, at last to crash out into the trail. One glance at the bare ground showed him that Marvie and Rose had not yet come so far. He preferred to reach the Ide ranch before them.

Five miles of travel, now slow, now swift, and then a hard climb took Nevada out of the brakes into the beautiful, stately forest, where the pines thinned and straggled to the desert sage.

The trail grew broad and sandy, so that his speeding horse thudded almost noiselessly on. Clumps of spruce and low branches of pines obscured the bends.

Nevada rode around an abrupt green curve almost to run down a horse coming toward him. He pulled his mount to a sliding halt. He heard a cry. The rider was a woman. Hettie Ide!

IT WAS two days before that secret drama in the forest that Ben Ide came out on the porch where Hettie was sitting. He spread his arms to the glorious beauty and color of the Arizona landscape.

"Hettie," he said, "I once thought Forlorn River in the fall was pretty close to heaven. But Cedar Springs Ranch has it beat a mile."

"It's very beautiful," replied Hettie. "If only everything were as fine as the weather, and the scenery!"

"Well, Tom Day says things must grow worse before they get better. Heigho! But I'm not lettin' disappointment sour me, anyhow."

"Disappointment? You mean—about ranching in Arizona?"

"Between you an' me, Hettie, I wasn't thinkin' of cattle at all," replied Ben sadly.

Hettie suffered a contraction of her heart. If Ben knew what she knew! She prayed that he never would.

"Hettie," Ben said, "do you still think of—of—*him?*"

"Always," she replied, quaking inwardly—if only she had the courage and the wit to keep her secret hidden!

"I'm afraid I've given up hope," went on Ben somberly. "An' it's taken the sap out of me."

Hudson Miles Are Master Miles

With the Super-Six Principle Freed to the Limit

The smoothness with which the Super-Six glides from standing start to high speed is totally different from the violent lunge with which high-powered cars usually get under way.

Acceleration even from high speed is always available. The flow of power comes in a smooth stream of energy as it does from an electric motor. This is a notable mark of smoothness that is available only to the Super-Six principle—now freed to the limit of its capacity.

When you examine either Hudson or Essex, you will realize how their chassis have been specially designed to make full use of these new limits of speed, power and safety. Economy in fuel and oil and in maintenance is assured in ways that mark the finest engineering practice.

Ride in either Hudson Super-Six or its brilliant companion, Essex Super-Six. There is nothing like it in the world.

Own a Schrader Gauge and keep your mind free from tire-worry by using it every Friday. Schrader Gauges have been standard for years.

Schrader products are sold by more than 100,000 dealers throughout the world.

A. SCHRADER'S SON, Inc., BROOKLYN
Chicago Toronto London

"Given up hope of what?" murmured Hettie.

"Of ever findin' Nevada," he replied, simply. "That's why I came to Arizona. Once, at Forlorn River, when I asked Nevada what he'd do if anythin' separated us, he said he'd go to Arizona an' take to hard ridin'. I never forgot. . . . Well, I reckon every cowboy on these ranges has hit me for a job. But sure not one of them was Nevada, nor had they ever heard of him. I reckon he's dead. Don't you ever think that, Hettie?"

"Yes. . . . Dead to us, surely," she returned, with dry lips.

"How could Nevada be dead to us if he were alive?" queried Ben, sharply. Then he lifted his head.

"I hear a horse . . . comin' lickety cut! Hello, it's Dillon! . . . Darn the luck. There's somethin' up."

HETTIE sustained a sharp quickening of her pulse. A horse and rider bobbed up over the bench. At the moment Ina came out of the house to begin some speech to Ben, which did not materialize. Ben strode off the porch to meet Dillon, who rode up like a whirlwind, scattering gravel all over the porch; and he leaped out of the saddle with the lithe grace of one to whom such action was habit.

"Mornin', Boss," he said, and tipped his sombrero to Hettie and Ina. "You're late. So I rode up."

"Bad news?" asked Ben.

"No, it ain't bad; but it's disturbin'. Cowboy just in from Tom Day's range. Name's Laskin. He rode a hoss to death gettin' here. I gave him another hoss, an' soon as he'd swallered some drink an' grub he rode off for Franklidge's ranch."

"Yes. Well, what was he ridin' so hard for?" queried Ben, as if prepared.

"Yesterday he was in camp near Silver Meadows," went on Dillon. "Another rider with him—whose name I didn't get. Some men rode down on them. Laskin said they wasn't drunk. Just keyed up over a big deal. They made no bones about the deal—at least their leader didn't. An' he was no other than Jim Lacy."

"Jim Lacy bobbed up again! Go on, Dillon."

"Lacy said he was goin' to rustle the stock at Silver Meadows, an' sent you his compliments. Pretty nervy, wasn't it?"

"Nervy? Yes; if it's true," retorted Ben. "But I don't believe it. Jim Lacy or anybody else would be a fool to tell such a plan, before pullin' it off."

"Reckon that seems so," replied the foreman, smoothly. "But sometimes these desperadoes like Lacy do queer things. It's not braggin'. Such men don't brag. It's just sort of a cool defiance of law—an' honest ranchin'. . . . Well, Lacy has twenty-four hours' start. There was a big bunch of cattle at Silver, so Laskin said. The last of your stock, an' some of Day's an' Franklidge's. We were figgerin' on a big round-up pronto. But we're too late, Boss."

"Too late! Why, man, if it *is* true, we can stop that drive before it gets down to the road," declared Ben.

"Stop nothin'. Lacy's outfit won't drive this way. They'll drive up over the Rim; and I'll gamble there's a bunch of five thousand head on the way now."

Ben sat down as if suddenly weighted.

"If it's true, I'll—I'll run down this Jim Lacy an' jail him! I don't care what it costs," declared Ben. "But I reckon we're gettin' all riled-up over cowboy guessin'!"

"Give me a couple of days off, Boss?" asked Dillon, in strange eagerness. "I'll find out."

"No. Some of the rustlers will plug you; an' then I *would* be out of luck," replied Ben, decisively.

"But I want to go," declared Dillon, with the blood rising under the tan of his handsome face.

"I appreciate the risk you'd take for me, Dillon. But, no. I'm givin' you orders to take Raidy with six cowboys an' go to Silver Meadows. Hurry back to report. Then we'll see."

Dillon had difficulty in repressing some kind of agitation that did not owe its source to respect and regard for Ben Ide. What an intent, almost derisive glance he gave Ben! Then, without another word, he mounted and rode furiously down toward the corrals.

"Girls, did you hear all he had to say?" asked Ben, appealing for sympathy.

"We couldn't very well help it," replied Ina, putting a hand on Ben's shoulder. "Dear, I—I haven't confidence in this man Dillon."

"Huh! Nor in me either," retorted Ben, shaking her hand off.

That action hurt Ina's sensitive feelings, and she drew away haughtily.

"Very well, Ben Ide," she declared. "But when the crash comes don't you look to *me* for sympathy."

With that she went back into the house. Ben gazed helplessly up at his sister.

"There! Can you beat that? My own wife gone against me!"

THEN Marvie appeared, black in the face. Alas for Hettie! Her heart sank.

"Ben Ide, I've a bone to pick with you," he burst out.

"Pick away, you young rooster," returned Ben wearily, but he was interested. Marvie had never before bearded the lion in his den.

"Did Dillon tell you a cowboy named Laskin rode in with news about a cattle drive?"

"Sure he did."

"Ha! That's what he told Raidy. He's a liar!"

"Marvie, take care. You're no longer a kid. Would you say that to Dillon's face?"

"Would I? Huh. I *did*, an' I cussed him good," rejoined Marvie hotly. "Listen. I saw that cowboy. He wasn't no rider named Laskin. He was Cedar Hatt!"

"What?"

"Cedar Hatt, I tell you. I *know* him!"

"Marvie, you're not only loco, but you're always sore at Dillon. You'll go too far. Take care."

"Care, thunder!" shouted Marvie, beside himself with rage. "It's you who's loco!"

"Marvie Blaine, you're fired," replied Ben curtly. "You can't ride for me any more. Now, get out of my house an' go over to Hettie's, till I can decide what to do with you."

"Aw—Ben!" gasped Marvie.

"Don't 'aw-Ben' me," said Ben, furiously. "Get out of here now—you round-eyed, freckle-faced four-flush of a cowboy!"

Every Trip a "Pleasure Trip"

With These Safety Tires

Shopping or marketing, social or business errands—all are more easily done, with greater comfort and safety, when the car is equipped to cope with modern traffic conditions.

Safety in driving today is, largely a matter of tire equipment. The security of family and friends demands tires that surely grip the roadway and instantly respond to the touch.

Rest assured that Firestone engineers have borne this need in mind, and designed a special safety tread for Firestone Gum-Dipped Balloon Tires, making them thoroughly trustworthy after many thousands of miles on the road.

On slippery streets and highways, up and down steep hills, wherever good judgment signals for caution, the woman who drives on Firestone Balloons is mistress of the situation. The angular, sharp-edged Firestone tread is scientifically constructed to take hold in any sort of going. She feels no hesitancy in applying brakes—no anxiety in turning corners.

Driving on Firestone Balloons makes a *big* difference. A woman's intuition should tell her that these Tires which have had the benefit of Gum-Dipping and have proved themselves so dependable in delivering extra mileage, can be trusted to carry the family safely through any contingency that arises. You can rely on the Firestone Dealer nearby for complete satisfaction—both in tires and service.

A GENERAL ELECTRIC *PRODUCT*

Marvie started as if he had been lashed.

"Ben Ide, you'll be sorry for that," he declared solemnly, and stamped away.

Ben stared at the erect, retreating figure of the lad.

"Marvie too!" he said huskily.

Hettie felt something of a sneak herself, as she stole away, back to her own cabin, and the seclusion of her room. Was she not betraying Ben, herself, by withholding facts she alone knew? Yet how impossible to crush him utterly! Jim Lacy was Nevada! She would never have the courage to tell him that.

As for herself, the last hope had fled, the last doubt, the last shred of stubborn faith. Nevada was a rustler. He had fallen so low, so base, that he could steal from the friend who had once succored him. The thing was so vile that Hettie writhed under the shame of her seemingly indestructible love for this impostor Nevada, this fugitive horseman who had won her under another guise, this Jim Lacy, killer and thief. But though everything else seemed dead—hope, faith, interest in life, will to go on fighting—she knew her love survived. It was the very pulse of her heart.

A long hour she lay there on her bed, until collapse and tears came to her relief. And when again she rose to face herself in the mirror she shrank aghast. But there was her mother to live for, and poor blind Ben, who had loved this traitor Nevada, even as she.

TWO days went by, with the Ide households under considerable strain of uncertainty.

Raidy and Dillon, with their riders, returned on the third day. Raidy found Ben in the living-room.

"Howdy, Boss," he said, in greeting, and bowed quaintly to Hettie and Ina.

"Took you long enough Where's Dillon?" replied Ben, gruffly. "Did he return with you?"

"Not exactly. He left us at daybreak this mornin', an' beat us in."

"Is he here now?"

"Sure. I told him he'd better come along with me. But he said he'd see you later. . . . Boss, Dillon is in purty bad humor. I never seen him like this. Black as thunder, an' sore as a kicked pup."

"That'd be natural for anyone who had my interests at heart, as Dillon has. But it's odd he didn't come to report. . . . Well, out with your bad news."

"I'm sorry, Ben. It couldn't be no wuss. You're rustled off the range. The last of your stock, except some stragglin' steers an' yearlin's, is gone—along with a thousand head of Tom Day's."

Ben Ide made a flashing, violent gesture, as if to strike. He paled. His eyes shot fire.

"They've cleaned me?" he demanded fiercely, as if still doubting.

"Yes, Boss. I made sure, because I wasn't trustin' Dillon to give a full report."

Hettie, standing back of Ina's chair, felt both hot and cold; and she stared at her brother fearfully, expecting him to break into an ungovernable rage. She had reckoned without her host, however, for, although Ben turned white to the lips, he suddenly became calm and cool.

"Ahuh. So your hunch has come true," he said, almost with sarcasm. "Wal, I

4 Common Traffic Troubles

—*overcome in this remarkable new-type car*

Why the Whippet Principle of Engineering gives:

1. BETTER PICK-UP
2. QUICKER STOPPING
3. EASIER PARKING
4. IMPROVED STEERING

Another definite proof of Willys-Overland's Engineering Leadership in the light car field

TODAY, with twenty million cars crowding our highways . . . . with every city congested with traffic . . . . with accident records showing an alarming increase, a new responsibility faces automobile drivers in America.

To meet these new traffic requirements the Whippet was created. A new-type of car, designed for safety . . . . for lightning pick-up when you need it . . . . for instant stopping in pedestrian-crowded city streets.

Behind the wheel of a Whippet you feel safer. You dart in and around city traffic with a new feeling of security. On country roads you drive faster and cover greater distance, because powerful 4-wheel brakes always keep the car under perfect control.

Women, often timid about driving, handle this car with complete peace-of-mind. Parking is no longer an annoying difficulty. Gear shifting has been reduced to a minimum.

Because of its new principle of design the Whippet will do 55 miles an hour in safety. It will stop in 51 feet from a speed of 40 miles an hour. It has more leg room than any car of this type ever created.

And in addition the Whippet offers you the outstanding economy of 30 miles on a gallon, which no other light car can equal.

It is available in six distinctive body styles. Four-wheel brakes and oversize tires standard equipment at no extra cost.

$625 WHIPPET COACH Touring $625; Roadster (4-pass.) $695; Coupe $625; Sedan $725; Landau $755. Prices f. o. b. factory. Prices and specifications subject to change without notice. Willys-Overland, Inc., Toledo, Ohio.

This remarkable photograph shows Whippet Braking Test. 4-wheel brakes enable this car to stop in 51 feet from a speed of 40 miles per hour. The Whippet has 192 square inches of braking surface—far more per pound of car weight than any automobile of this type.

OVERLAND Whippet

reckon you'll get a lot of satisfaction crowin' over me an' Dillon. Give me the facts, short an' sweet!"

"Wal, Tom Day an' his riders were at Silver Meadows when we arrived. A sheep herder had tipped them off to the drive. We split up an' rode all around the Meadows. Only a few cattle left. Them rustlers made a slick job of it. Day an' Franklidge lost over a thousand head, an' you lost all you had left. A matter of three thousand head. We took the trail up the canyon. An', say, it was a bowlavarde clear to the Rim. . . . I was for trailin' the rustlers to a finish fight. But Day wouldn't let any of us go down in that hole. We'd have been ambushed, an' some of us killed. Besides, he said we could never have recovered the cattle. Once turned loose in that jungle of scrub oak, manzanita an' cactus, them cattle would have vamoosed like ticks shook off a leaf. So we turned back."

"You told Tom Day, of course, that Jim Lacy made this drive?" queried Ben.

"Tom knowed all about it from the sheep herder. Seems thet Lacy sent Tom word he was goin' to make this big steal. Sent his respects to Tom an' Judge Franklidge, an' said he'd drop into Winthrop some day."

"By heaven, this Lacy is a cool one!"

"Cool? Wal, Boss, you might call Lacy thet; but I reckon he's a mixture of hell's-fire an' chain-lightnin'!"

"I'll hang him," said Ben, with deadly calm. "He's the leader of the Pine Tree Outfit."

"Wal, me an' Tom Day reckoned so. An' for once Dillon agreed with us," replied Raidy. "Tom said Lacy jest got tired of layin' low an' bein' mysterious. So he comes out in the open. I'll bet you he'll ride right into Winthrop."

"Raidy, I'm glad Lacy cleaned me out. I'm through waitin' around to see what's goin' to happen next. I've sent for Sheriff Macklin an' a posse. This mornin' I got word from Struthers, the Phoenix sheriff who's made it so hot for rustlers in southern Arizona. Struthers is in Winthrop at my request. They'll arrive here not later than to-morrow. I'll have Dillon get twenty-five of the hardest men he can gather. I'll offer ten thousand dollars reward for Jim Lacy, dead or alive. I'll spend every dollar I have to run down Lacy an' his Pine Tree gang!"

"Wal, Boss, you're talkin' high, wide, an' handsome," replied Raidy. "But it's not for me to offer opinions. This ranch—an' for that matter—this whole range ain't big enough for me an' your man Dillon. I just have to quit."

"Very well, Raidy. I'm sorry you see it that way," returned Ben, coldly, and with a wave of his hand terminated the interview.

HETTIE fled. As she ran out she heard Ina deliver a stinging rebuke to her husband. Then a door slammed. Hettie hurried home in a state of mind bordering on a breakdown.

"What's all the row over at Ben's?" her mother inquired placidly from her comfortable chair.

"Rustlers, cattle, foremen, sheriffs, and heaven only knows what," replied Hettie distractedly. "Mother, have you seen Marvie to-day?"

"Marvie went away yesterday, and hasn't come back. At least, he didn't sleep in his bed."

"Oh dear! That wild boy! Here's more to—to worry over. . . ."

Hettie went to her room, with the motive of indulging her grief. But sight of her riding boots acted powerfully upon her, and she decided to take a ride. Not for days had she been on her horse. Perhaps a long, hard ride would be good for her; and, moreover, she might meet Marvie on the trail. Could something have happened to him? It might very well have, Hettie concluded, with a tremor. He and Rose might have been discovered by that Cedar Hatt, of whom Rose had such great fear. The very air 'round the Ide ranch seemed congested, heavy, sultry, ominous with menace.

HETTIE passed the quarters of the riders at some distance, not caring to be accosted by Dillon or Raidy. She saw some saddled horses, dusty and tired, that had evidently just come in. There were a number of men bunched in a circle, conversing so earnestly that none espied her. Gaining the stables she found Pedro, and had him saddle her horse. Soon she was riding fast, with the wind in her face.

But neither a gallop nor a run sufficed to change Hettie's mood. She rode into the woods, and let her horse walk at will down the shady trail in the direction from which Marvie always returned.

And here, alone, under the impelling influence of the forest, Hettie realized that she was a most miserable and heartbroken girl, with a terrible sword hanging over her head. How hopeless her situation! What good to think? There was not a thought nor an action that could help her in her extremity.

A purple haze like smoke hung in the aisles of the forest; the only sound was the faintest of breezes murmuring in the pines; the thickets were on fire with golden and scarlet flame of autumn leaves; the westering sun caught the glint of falling leaf and pine needle.

Nature seemed so pitiless this day. It went on—calm, sweet, beautiful, inscrutable, unmindful of the poor little lives of human beings. Hettie could not derive any solace, any strength from forest or range or desert. Arizona had killed her dream, as it had ruined her brother.

Suddenly she caught the rhythmic beat of swift hoofs ahead 'round a green curve of the trail. That must be Marvie's horse. A rush of relief swept over her. The pine boughs spread. A big black horse was upon her before she could pull a rein. She cried out. But the rider hauled the black on his haunches. And that rider was Nevada!

Hettie clutched the pommel of her saddle. An awful, stunning shock suspended, for an instant, all her faculties, and every sensibility except the physical instinct of holding her equilibrium. Then emotion burst the dam.

"*You!*" Hettie felt the word leave her stiff lips; but she heard it only as a whisper.

Nevada swept off his sombrero and bowed low, to the mane of his horse. And as he rose erect he remained bareheaded.

"Wal, shore it's Hettie Ide," he drawled, in the cool, leisurely, Southern accents that cut into her heart like blades.

WARNING

SIGNALS in the Line of Vision

The warning of the road sign, telling of danger ahead, is the motorist's "signal of protection," his security against uncertain road conditions.

The Boyce Moto Meter, too, is primarily a *warning signal:* the rapid rise of its red column arrests attention and warns, *in time,* of the many dangers in an overheated motor; it is the driver's security against costly motor repairs.

Mounted on the radiator cap, its position is the *only* place on a car that is constantly and directly *in the line of driving vision.*

Today over 10,000,000 careful drivers appreciate the protection a Boyce Moto Meter affords; many believe a car looks, and *is* incomplete without this accurate motor heat indicator on the radiator cap.

• • •

A complete range of models for every type of car priced at $3.50 to $15.00 (Canada $4.00 to $16.50). Any of our dealers will gladly show you the various designs.

The Crowning Adventure *of* Burgess Radio Batteries

They flew over the North Pole with Byrd

ON May 9, 1926, history was made . . . American history . . . World history . . . undying history.

Lieut. Commander Byrd, in his fearless 1500-mile flight across the top of the world, adds another thrilling triumph to the long, proud list of American achievements.

Radio went along, for radio has become vital to the lives and success of explorers and adventurers. Burgess Batteries went along, sharing the fate—sharing the hardships and the glory of Commander Byrd, the Detroit Arctic Expedition, and Capt. Donald MacMillan.

It is eminently significant that in these glorious triumphs of American courage and American equipment where the test of men and their tools was the test of the survival of the fittest, that the standard products of the Burgess Battery Company were selected, used and "carried on" under extreme and unprecedented conditions.

Then they gazed at each other, as if sight were trying to reconcile the face of dreams with the reality. The face Hettie looked into had the same lean outline, the dark blue-black shade of beard against the clear brown tan, the intent, light hazel-flecked eyes. But it did not have the soul with which her imagination and memory had invested it.

"I . . . saw you . . . in Winthrop," began Hettie, as if to find relief from oppression. Silence was impossible.

"Shore. I reckoned you might," he replied. As he spoke, he rolled a cigarette with steady fingers. No surprise, no emotion that Hettie could read, manifested itself in look or manner. "Too bad you had to run into me heah!"

"Too bad! . . . It's terrible! But I'm glad," exclaimed Hettie, quivering, shaking all over.

"Thank you; an' I'm shore sorry I cain't return the compliment," he said, and bent his head to light the cigarette.

His cool nonchalance, that she remembered so poignantly, seemed now to inflame her.

"*Jim Lacy!*" she cried, in scornful, sad haste to acquaint him with her knowledge of his infamy.

He thrust his sombrero on, tilted back, and his penetrating, inscrutable eyes studied her face.

"Why didn't you trust me? Oh, why?" she went on, slipping further toward an emotional outbreak.

"HETTIE, there was a time, long ago, when I'd rather have been daid than let you know I was Jim Lacy."

"You were ashamed?"

"I shore was."

"Long ago, you said. . . . Then you're *not* ashamed now?"

"Wal, it cain't matter now," he rejoined, with a gleam of a smile.

"Why can't it matter now?"

He made an expressive gesture, and then gazed down through the open forest to the colorful desert. His horse rubbed noses with Hettie's, and gradually backed it across the trail.

"Ben doesn't dream his . . . his old friend Nevada is you . . . the notorious Jim Lacy."

"I reckon not. . . . Too bad he's got to find out pretty soon!"

"Must Ben . . . find out?"

Nevada dropped his head. His horse, nosing Hettie's, brought Nevada closer to her, so that she might have touched him.

"How can you be so cool, so hatefully cool?" burst out Hettie. "Ben loved you. I—I— What did he care who you were? Why didn't you always stay Nevada? Ben left no stone unturned to locate you. Failing that, he came to Arizona, because he hoped you might turn up. . . . You *have* turned up. But as Jim Lacy—as a rustler who stole from him. Stole from a friend who once saved and succored and loved him! Did you not know those cattle were Ben's?"

"Shore—I did," replied Nevada.

"Oh, it was a dastardly thing to do!" cried Hettie, covering her face with her hands. "It will cut him to the quick. . . . And it will kill *me!*"

His silence, his imperturbability, in its unnaturalness, roused her to a sudden furious passion that burned away her tears and dyed her face scarlet.

NASH

Leads the World in Motor Car Value

The New
Special Sedan
Special Six Chassis
$1485
f. o. b. Factory

A New Body Style Reigns in America

Created by Nash

Revealing an alluring French-type rear contour, this ultra-new and arrestingly original body design has now entirely changed American ideas of motor car style.

First exemplified by the new *Ambassador* and *Cavalier* models, this unique body conception was immediately hailed as the most important creative achievement in the history of American enclosed car craftsmanship.

Today this inimitably distinguished body mode is available in the new *Special* Sedans just introduced on both the Special Six and Advanced Six chassis at prices of wider popular appeal.

The *Special* Sedan on the Special Six chassis, colorfully finished in an exquisite new blue tone, is pictured above. The extreme luxury of its interior is emphasized by the gray tufted genuine Chase Velmo Mohair Velvet upholstery, real walnut steering wheel, and select hardware, in chaste pattern.

All inside window moldings and door panels are of walnut finish, as is the instrument board and the crowned panel above the instrument board.

The same fittings and appointments grace the larger Advanced Six model and both are powered with the big Nash 7-bearing motor—*the world's smoothest type.* 4-wheel brakes and 5 disc wheels are standard equipment. (4802)

"Wal, you're a mighty healthy lady after so many years of dyin'," he drawled, tossing away his half-smoked cigarette. "Hettie, you always was pretty; but you've grown into a plumb handsome woman. . . . Reckon the cowboys are sweeter'n ever on you. Dillon now. *He* was. He's shore a handsome hombre. Devil with the women, I heah. . . . Why don't you marry him?"

"I . . . may yet," replied Hettie, somberly. He baffled her. In his cool, inscrutable presence she felt like a child. And a deep, unplumbed emotion seemed to swell at the gates of her self-control.

"Hettie, if you do, you'll be changin' your mind considerable from what it was that night at the dance in Winthrop."

"What do you know about that?"

"WAL, I happened to heah you tell Dillon a few things, an' I saw him try to get you in his arms."

"*You!* You were there?"

"Shore. An' after you flounced off, I introduced myself to Dillon, an' invited him to draw. But he didn't have the nerve; so I took a punch at his handsome face."

"You struck Dillon on account of me!" murmured Hettie, softening.

"Wal, yes, partly. But I had it in for him before. . . . By the way, is he at the ranch?"

"Yes. I saw him, at the corrals as I came out."

"Good! I'm shore a lucky hombre—since I took up with Jim Lacy again."

"You were going to our ranch?" queried Hettie, quickly.

"I *am* goin', Miss Hettie Ide."

"What . . . for?"

"Wal, reckon my prime reason is to shoot out one of Dillon's handsome eyes. But I've another—"

"You'll—you'll *kill* him?"

Nevada's flashing eye and sweeping gesture were the first indications of passion he had evinced.

"Reckon if you hadn't held me up heah he'd be daid now. An' that stands for me, too."

"Ah! Then Dillon is a—a dangerous man—as you—"

"Hettie, he's a bad hombre. Come from New Mexico. Name is Ed Richardson, once with the Billy the Kid outfit. . . . I'll kill him, shore; but he might return the compliment."

"Hush!" Hettie reined her horse closer, so that her stirrup locked with Nevada's. "Do not do this terrible deed. For Ben's sake, if not mine. Give up this outlaw, rustler, gunman life. . . . Take me away with you to some far country. I have money. You can start over again. I will cleave to you—live for you!"

"In heaven's name, Hettie Ide, are you crazy?"

"Not yet. But I will be soon—if this—goes on," she panted, and slipped her gloved hand to his shoulder. "Nevada, I—I still love you. I've always loved you. I don't care who you are—what you've been. All I ask is that you save Ben this horror; that you take me away and give up this life. . . . We can plan quickly. I will meet you at some point on the railroad. . . . Say you will!"

"No," he said hoarsely.

"Nevada! . . . Don't you love me—still?" And she leaned to him, overcome,

Spotless, Lustrous, *for years without repainting*

Ordinary Flat Finish White Paint

Barreled Sunlight Gloss Finish

The microscope shows the difference

These photographs of paint surfaces were made through a powerful microscope. The astonishing contrast shows why Barreled Sunlight is so easy to keep clean. Smooth, unbroken, and non-porous, it resists dirt and washes like tile.

WITHIN a few months, embedded dirt spoils the appearance of ordinary interior white paint.

But dirt can't sink into the satin-smooth surface of Barreled Sunlight. It washes like tile, insuring years of lustrous cleanliness.

Guaranteed to remain white longest.

Handsome as the finest enamel—at a substantial saving in cost.

Quantity for quantity, Barreled Sunlight covers a larger area. Extreme ease of application with brush or spray saves many labor-hours.

In Gloss, Semi-Gloss and Flat. Cans and drums. For priming use Barreled Sunlight Undercoat.

Barreled Sunlight can readily be tinted any shade. Ask your dealer about the new, easy-mixing Barreled Sunlight Tinting Colors in handy tubes.

betraying all her woman's soul of love and hope for him, for Ben, for herself. "Say you love me—say you'll take me!"

"Yes, I love you, mad woman! But I cain't accept your sacrifice. I cain't ruin you. . . . Good lord, Hettie, you forget I'm Jim Lacy!"

"It's because you *are* Jim Lacy!"

"Hettie, don't tempt me. I cain't—I won't!"

"You lie, then. You do not love me. You have taken some—other woman. You don't love me!"

Hettie saw him loom over her. She felt herself seized in iron arms and dragged from her horse. Then she was lifted over the pommel and crushed to his breast. He kissed her mouth, her cheeks, her eyes, her brow, her hair, and then again her mouth. (*To be concluded*)

FRAUDULENT or worthless stocks, "get-rich-quick" schemes, and the like, cost the people of America millions of hard-earned dollars every year. There are always unscrupulous or visionary "promoters" who live off the savings of the gullible. Inexperienced investors fall for the glib talk of the ruthless money hunters—and experienced investors sometimes fall for it, too. But if you will read "What to Do with Your Dollars After You Get 'Em" you will be less likely to make unsound investments. This article next month is by an expert on investment, a man who for long years has been chasing fake promoters out of the field. He tells you how some of the crooks operate, and gives you many rules to follow before you put your fountain pen and your check book into action.

I Cultivated a Sense of Humor

(*Continued from page 19*)

understanding. I was encouraged in this weakness by the circumstances of our lives. My parents were handsome, talented, and original. They attracted to themselves people of distinction. Writers, painters, editors, scientists, and teachers came to our house. I listened to them talk.

Unconsciously, I established my own little Bureau of Standards. And it never occurred to me that I was privileged; that, under other circumstances, I might have been one of the illiterate, ill-mannered, ignorant, poverty-stricken people who made up the "rest of the world." Yet, strangely enough, I was surrounded by this sort of people. They lived in the crowded flats and tenements of the city. They pressed against me in street cars and elevated trains. They waited on me in shops. I could escape them in my dreams; but in my waking hours they shared my world with me; it was theirs as well as mine.

Then something happened to postpone the awakening.

I had finished high school, had been graduated, wearing a high-necked "prin-

cess" gown, had received, on the platform of the old Æolian Hall, a lovely parchment diploma. My father asked me whether I wanted to go to college or "abroad." He offered me four years in Europe or four years at Vassar. It took me less than two minutes to decide on Europe. I detested study and I had a passion for learning. Besides, I was secretly romantic.

My father was a poor man. But he gave me the chance to do what all his life he himself had longed to do: I realized his dream, and I went to Italy!

Mother, who went with me, appreciated the quality of his generosity. She wrote to him every day, long letters in which she tried to capture for him all the thrills of our journeying, so that he might share it with us as much as possible. My brother stayed in America to study painting with William M. Chase. We went first to England, then to France, then, slowly, by way of Switzerland and the Lakes, to Florence.

And then, for six years, dreams were reality and reality was a dream. It is often impossible, in Italy, to tell where one leaves off and the other begins. Blue skies and soft air, olive and cypress, palace and fountain, deathless beauty, immortal loveliness! Another tongue. Great imaginative literature. Heroism. Art. Poetry. Asphodel and crocus. Legionary, saint, and emperor. The pathos of distance. The blissful unreality of heroic men and women long vanished. Six years of this! Life just brushing my elbow, and murmuring politely, "Excuse me, please. I do not mean to intrude."

To intrude!

Long months of idleness in places like Capri, where there was nothing to do but watch the sea, and dream. People met, but not taken into my heart because of the barrier of tongue and cus·om. And, all this while, America becoming more and more remote, like a book read and half-forgotten!

UNTIL one day, strangely, unexpectedly, America summoned me. Called to me. Demanded that I return to her, that I understand her, that I accept her for better or for worse: "You are wedded to Italy. You! A Yankee! What is Italy to you? You'd better come home." I won't pretend that America cabled me to return because it wouldn't do without me. No. It was like this: I wasn't really a fool. I was ready. I knew I'd have to face the music. Work. Earn my salt. Learn to understand people. Wake up.

So I said, "Bring on life!"

I rolled up my sleeves, cabled to Father: "We are coming home," and took the first boat out of Genoa for New York.

Ahead lay the long-postponed future. I was twenty-three years old, and a snob. Oh, worse than a snob! For now I was also an expatriate.

It would have been easier to have remained in Italy, living extraordinarily well on very little money, doing nothing, until, like so many expatriates, death left me on the Hill of San Miniato, beneath a foreign cypress! I think, in that case, I should have been a mournful ghost, seeking, seeking an elm tree or an oak! A lost ghost. A homeless ghost.

No! I cabled: "We are coming home."

And there I was! Twenty-three. With a careful, cultivated accent. A loathing

Presenting NEW SMOOTHNESS NEW POWER · NEW SPEED

Now—click off the miles as you want them! Fast or slow, they will be the smoothest in your experience. Speed as you like, you cannot make this great Franklin raise its voice above a whisper. It has new power. It has new speed. And just compare it with any other in smoothness even at 50 miles or over!

Whisk up the hardest hills on high—there's no sense or sound of labor. Quiet, confident power. Shoot along the straightaway—there's no roar or vibration. Speed without punishment. No matter how fast you go, only the speedometer and the flying telegraph poles will tell you—never the engine, the body or the chassis!

Luxurious—no other word will do justice to the great 25th Anniversary Franklin. It has all the famous Franklin superiorities—plus unequaled five-passenger roominess and power-speed-smoothness of a new order. Drive it—it is the climax of the Franklin policy of always keeping ahead.

Coupé now $2490, Sedan now $2790. Other types in proportion. Fully equipped, F.O.B. Syracuse, N. Y. Inquire about the 25th Anniversary Easy Ownership Plan.

The 25th Anniversary Franklin

CHAMBERLIN
IN-DOR-SEALS

~ stop those Under-door draughts

that you can feel at bedroom doors when bedroom windows are open and which so often chill off your entire house. With In-Dor-Seals you no longer need to endure uncomfortable morning temperatures in your dressing room, bath room or dining room. Nor need you force your heater and waste fuel to quickly make every part of your home comfortable. These In-Dor-Seals are ingeniously hidden in door bottoms where they operate silently and automatically. A thick but soft felt strip does the work—it rises clear of rugs when the door opens and drops snugly to the floor when the door closes. You need Chamberlin In-Dor-Seals all through your house. For, besides barring dust and under-door draughts, they deaden sounds and at kitchen doors prevent the spread of cooking odors.

As with Chamberlin Weather Strips, Chamberlin In-Dor-Seals are installed exclusively by Chamberlin mechanics, trained to work to the exacting Chamberlin standard. For homes, public and residential buildings, etc., be sure to buy Chamberlin—for 34 years the leading and standard weather stripping equipment—and obtain a service-guarantee effective "for the life of your building".

of reality. And with no talent, no profession, no training. Worse, no special longing, no definite ambition. I had wanted to sing. Once, in Florence, old Lombardi, Caruso's teacher, had said to me: "You have a pretty voice. But you will never be an opera singer. You are too refined." He used the word *gentile*. He was not being complimentary. He meant that I lacked that touch of vulgarity, that warmth of heart which makes the world akin. He could not see, of course, that I was *gentile* because nothing had ever happened to shake me out of it.

IT TOOK poverty, in the end, to point the way. From Italian villas to Washington Square. From a smart little carriage to the subway. From obsequious servants to no servant at all! And I became acquainted with the mysteries of the dumbwaiter, the push button and the shrieking summons of the janitor: "Garbage! Garbage!"

Soon after our return, my father was taken ill. Never strong, it soon became evident that he could not live, and that I must make ready to carry on in his place. He had saved nothing. This was as much our fault as his. We were all improvident, extravagant, and willful, never giving a thought to the future, and disliking the discipline imposed by economy and forethought. My brother had married. He was already climbing the long, difficult road to success as a landscape painter. Children. Poverty. Ambition. . . . He had his own problem!

And so I got in full measure what I had asked for when I said, "Bring on life!" I found myself up against the vast, powerful antagonist at last. Ill-equipped as I was, my first impulse was to run for mental shelter, there to cower in the dark with my hands over my ears. What should I do? What *could* I do? Measure ribbons in a department store? Scrub? Cook? Tend someone's children? Go into the chorus? I thought I was the unhappiest girl in the world. And perhaps I was. Now, for the first time, I realized my pitiful inadequacy.

What if the world didn't want me, after all?

There were no relatives to fall back on. I had had no time to reëstablish the old friendships lost or scattered by the years. I can understand the blind terror of the very poor. I know what it means to be thankful for the roof over my head.

Poverty is a good thing, provided it serves as a springboard for ambition. To know any man or woman truly you must know them in relation to adversity. Happiness is no test of latent power. We can do no greater harm to those we love than to protect them from suffering, since it is through pain that we reach, step by step, security and wisdom.

I began to write. Nowadays, when I hear a youngster say, "I'm going to be a writer," my impulse is to utter a solemn warning. "Write? Why on earth do you want to write?"

"Well, you do, don't you? And you make a very good thing of it."

"Yes. But—"

I am thinking of the difficult beginnings. Everyone wants to write. Men and women already established in other professions confess to a longing for a literary career. "I've always wanted to write. I know I could, if I tried. My head is simply bubbling over with great ideas. If I just had the time to put them down!"

If time were the only ingredient necessary to putting a story down on paper!

I wrote my first story in one day. I had tonsillitis. I sat in bed, alternately spraying and scribbling. It was the story of a French throat-specialist who operated on a soldier under fire, saving a life and getting, for his pains, nothing but abuse. The story was called "The Victory" and, strangely enough, it was my first victorious effort, for I sold it to "Scribner's Magazine." One hundred and fifty dollars! A fortune!

I shall never forget the letter of acceptance, the brief words of praise that seemed to burn themselves on my heart. They are still there, indelible. I carried the letter about with me for months. I was committed irrevocably to literature. It was sink or swim.

To close the door on dreams, after my father's death, was a simple matter; but to face the reality of "business" required courage, because I knew nothing about it. The rent had to be paid; we had to be fed and clothed. Whether I liked my fellow man or not, I had to understand him in order to write about him. But the development of sympathetic understanding, like tolerance, keeps pace with the development of character, and character is made, like a sculptor's wax model, by resistance here and compliance there to the molding fingers of experience. Sometimes a series of hard knocks will destroy the model; again, the hardest knock will produce unexpected beauty in the formative and malleable clay.

LOOKING backward, it seems to me that for every misapprehension, every false standard, every intolerance, life arranged a lesson. Where I was wrong, I was set right. Back of this there must be some extraordinary purpose. For why should all this trouble be taken to shape souls if it is not for something more practical than just growing old and dying? By the time we have learned what idiots we are, it is generally too late. Let us hope that we take our working model of life with us when we step out into the unknown.

I should like to have written on my diploma this recommendation: *She acquired a sense of humor.*

Of all life's lessons, this was the hardest.

For I was serious. Serious. Serious.

For several years I free-lanced. I wrote theatrical criticisms, sob stuff, recipes, essays on manners; I translated from the Italian, from the French, at half a cent a word, or less. I wrote travel articles about places I had never seen, advice to the lovelorn, to mothers, to sons. I pretended, in print, that I had witnessed the triumphs of Barrett, Booth, and Réjane. I wrote under three pseudonyms, and as an Italian of ironic wit and extreme worldliness appeared in a famous monthly for several years. I sat in editor's anterooms with a beating heart, cold with fear and self-distrust.

But then, out of this fear and self-distrust came, at last, joy in the game I was playing. To be a little quicker than thousands of others, thousands of young, clever, artful writers. To succeed in New York—winning a championship against enormous odds! I was a puny human engaged in a

Paige OFFERS A New CABRIOLET

~ at a Startling Price ~ $1295

If ever a motor car was manufactured in response to popular demand—this new Cabriolet by Paige most surely was. For its earlier companion car (which is still continued on the 6-75 chassis) has been by all odds, the outstanding sports car of the season.

This new Cabriolet is an exact prototype of its older and larger sister. Mounted on the 6-45 chassis—this charming car can be acquired for only $1295, f. o. b. factory.

And what a beauty it is in duotone colors of blue and gray, with its fashionable semi-landau top, which is fully collapsible, bullet-type cowl lights and flowing body lines. Two adults, even of generous girth, are comfortably seated on luxurious cushions, covered with blue colonial grain leather. And lo!—you simply touch a button—inside the car—and the rear deck cover opens to reveal an equally comfortable seat for another couple.

This Cabriolet is a capable car. Its enlarged motor provides greater power and speed, and much quicker acceleration. It has all of the latest mechanical developments, such as an air cleaner, rubber cushioned clutch, silent chain timing and bronze-backed bearings. Paige-Hydraulic 4-wheel brakes, of course, provide the very maximum of safety.

Be quick to see this charming car at the nearest Paige showroom. For at its amazing price, it is certain to be in high demand from the outset.

The Paige line comprises twenty models in a charming variety of body types and color combinations. Factory list prices $1095 to $2795.

Compare the Whiteness of White Houses

Look at the white houses in your neighborhood. How many that were once white are white now? To have a white house that will stay white you must use a white paint that stays white. 40-40-20 is that kind of paint. Exposure to sun, rain, gases—all the enemies of white paint—does not darken it. 40-40-20 is also made in tints which stay clear and bright. And wear long. It is a high grade paint, economical to use. Made by 118 paint manufacturers authorized to use The New Jersey Zinc Company's registered trade mark 40-40-20 on paint made from its specified products according to its specially developed formula. Sold by dealers near you. Write for full information.

life-and-death struggle with a giant! Suppose I could stop being sorry for myself long enough to swat the giant in the eye? Right then I saw what I needed most: a sense of humor. I set out to acquire one. And I have been at it ever since—seriously!

I had been writing stories of tragedy, lugubrious tales that reflected my own uncertainty. Editors who read them shook their heads. "How about a little human stuff? The girl next door and her boy friend? Something our readers will recognize as true and real? How about an occasional laugh?"

SO I borrowed five hundred dollars, abandoned free-lancing, and went to Maine. The war was on. The magazines weren't buying lugubrious fiction. It was up to me to cultivate a sense of humor before the five hundred dollars was gone.

I took a fisherman's shack for the summer. The tidal river ran in and out under the kitchen. The floor sagged and the roof leaked. But I made window boxes out of wooden shoe boxes, planted a garden, and set to work.

When I went back to New York in late October, driven out by frost and storms that flooded the shack, I had only fifty dollars. The country was in the grip of the flu epidemic. Peace was not dreamed of. We went to a hotel—still faithful to our weakness for the best—and I started out with my wares. Stories about human beings. Poorly written. Childish. But there must have been in them some of my own groping for laughter and tolerance, for the first editor who read them bought them. They made him laugh.

Since then, there has been no turning back. It is written that I shall go on trying to interpret human nature. The artist's business is not to make a photograph of what he sees. It is rather his duty to get at the inner meaning, to bite down to the kernel of life, and then, if he is wise enough, to make sense out of it for more hurried, less sensitive people than himself. He pays the penalty for feeling more deeply by suffering more deeply; but there is a compensation in success.

I have had to remake myself. This is perhaps a universal experience.

The demon illness reached out and tapped me on the head at this juncture. It seems that I had taken health for granted. I had not reckoned on the havoc wrought by overwork and worry. Cultivating a sense of humor was too much for me. I continued to write; but for four years I had to fight tooth and nail for health. Otherwise, perhaps, having been born with a strong body, I could never have had compassion. . . . People helped me. They talked to me. They brought me hope, and books to read and friendship and sympathy. Once a stranger, asking admission, came for a brief moment and spoke to me of faith. When he had gone, I was dedicated to a new quest. A new struggle. A new goal. Harder and harder! I must cure myself.

As, little by little, I grew stronger, I allowed myself to dream one more dream. I wanted to go to California. Now, at last, I was selling my short stories as fast as I could write them. But it was a risky business to cross the continent, to go so far away from my market. After all, I was a merchant, peddling stories! And

SPRAYED RUBBER WEB CORD FLAT BAND METHOD

United States Rubber Company
Trade Mark

Why is this Rubber from the United States Rubber Plantations especially strong and flexible?

RUBBER responds to scientific growing methods, just as wheat, cotton and farm crops do.

From first to last, rubber is grown for quality on these Plantations. Seed is selected for quality. The trees are bud-grafted—for quality. They are fertilized for quality—cultivated constantly and clean. Consequently, they yield exceptionally fine latex, which gives stronger and more flexible rubber, and better tires.

The United States Rubber Plantations enjoy an international reputation as the headquarters of scientific rubber cultivation.

NOBODY likes the thought of appearing at his work at the same old hour every morning for the rest of his life. Wouldn't *you* like to retire sometime? This page tells how you can.

When you are 65—

we put you on our payroll!

WHEN would you like to quit business and receive a monthly income for life? When would you like to ease up a bit and enjoy the leisure and travel you have earned?

We'll put you on our payroll any time you say. You begin by depositing a few dollars a month with us. Then when you are 60, 65, or 70—any time you specify—our checks start coming to you as regularly as the salary checks you now receive. And they will *keep right on coming* just as long as you're here to use them.

FOR EXAMPLE

Suppose you are 30, and begin by depositing about $28 a month with us. (Obviously, this amount depends not only upon your age but what you want to accomplish, and after the first year the use of dividends reduces the deposits appreciably.) Then, on the day you are 65, your postman will greet you with our first check for at least $100, and you will have the satisfaction and the comfort of knowing that a similar check will come to you *every month* as long as you live.

In addition, you will always know that if you should die before you are 65, the tidy sum of $12,750 will be immediately paid to your wife and family.

That's what the Phoenix Mutual "Income-at-65" Plan will do for you. It is the sort of plan that makes for freedom from worry, for more fun in living. It is a safe, profitable investment, protection for your dear ones, and an income for your leisure years—all in one!

We have just published an interesting little book that tells the whole story. It is called "How to Get the Things You Want." Retiring at 65 is only *one* of the many things it tells about; some of the others are listed at the bottom of this page.

Read the list. These are the things you want, aren't they? The booklet tells how to get them. Send for it *today*.

PHOENIX MUTUAL
LIFE INSURANCE COMPANY

Home Offices: Hartford, Conn. • First Policy Issued 1851

TO GET THESE . . . MAIL THIS

HERE are just a few of the things you can do under the Phoenix Mutual Plan:

1 RETIRE with an income when you are 60 or 65.
2 REALLY own your home.
3 SEND your children to college.
4 CREATE an estate.
5 MAKE sure your income will go on even though you become totally disabled.
6 LEAVE an income for your family.

PHOENIX MUTUAL LIFE INSURANCE CO.

DATE OF BIRTH .....

most of the editors, who might or might not buy them, were in New York.

And, right then, destiny arranged a surprise. As if my dream had been broadcast, opportunity answered. One of the women's magazines wanted a serial. The editor invited me to write "a novel concerning a woman of fashion." I signed a contract to deliver the work within a year, disposed of the book rights to a publishing house, and took the first train to California, headed West toward what destined to be a time of realization and happiness.

Our ticket read: "La Jolla." I had five thousand dollars. I was young. And the roughest stretch of road lay behind.

It is hard to be temperate about California. It means many things to many people. To me it meant equilibrium. If this has an ambiguous sound, it is because there is no word for the recovery of lost balance, mental and physical.

California . . . space! Where I had looked out from my windows upon fire escapes and factories, now I looked out upon a mountain called Soledad, "the lonely one," and upon the sea, changing, changeless. I could hear the clapping of cormorant's wings at night and the sound of the waves reaching up the cliffs. Winter and summer I could dig in the garden. I could have as many cats and dogs as I wanted. But best of all there was space—lots of it! Miles of mesa, sweet with sage. Miles of beach, deserted, good for the soul! Miles of road and, for the first time, a second-hand car of my own! I drove seventeen thousand miles the first winter and thirty thousand the next. Over mountains and across deserts. Not once did I regret New York, except when I remembered my friends there.

I HAD been a minnow in a little glass bowl, swimming 'round and 'round, bumping my nose on the transparent confines of my prison. New Yorkers are all like that. They are so accustomed to swimming around and around that they forget the rest of the world. They take for granted their immunity, and in the enjoyment of very special privileges forget the farmer, the planter, the builder. Surrounded by turrets and towers, secure in their moated city, they are as isolated and as insular as we imagine Martians to be. Nothing is as good for a confirmed New Yorker as going away from New York. It is so easy to fall into local habits of thought, and to feel, think, and talk just like everyone else. Where popular intellectuals meet almost daily and exchange ideas, it is inevitable that they should infect one another, and literary measles break out as a result. War novels. Negro novels. Sex novels. Business or mystery novels. Until the man who lives on the other side of the moat, and who has problems of his own, must wonder why he and his kind so seldom figure in the literature of to-day.

The most interesting men and women in the country seldom get between the covers of a novel. I mean the workers, the professional men, the teachers, the scientists, those who build the bridges, sail the ships, plant and harvest. Most of our modern heroes and heroines of fiction are pathological cases fit for the madhouse. The decency of the average man, fighting his fight against many great odds,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

fallible, bewildered, blundering, is not considered good literary material, whereas the exceptional man's sin and failure are exploited as picturesque, as if sin and failure were the only truths. The longer I live, the more I respect my fellow humans. The galloping thirties, hustling us willy-nilly toward middle age, bring most of us to the realization of life's appalling brevity. Then, on looking about us with new sympathy, we see men and women playing the game, working, educating their children, facing bravely the hazards of poverty and sickness, growing old—with no absolute assurance of life beyond death. If this is not courage, then, I ask, what is courage? If this is not faith, then there is no faith. Sublime, magnificent, daily courage, faith beyond words!

I take off my hat to humanity. I give it the old Roman salute, palm forward, arm uplifted.

CALIFORNIA is not alone responsible for this change in me. And no one cares a tinker's cuss except myself. But to me it matters a lot that by ceasing to listen to what other people had to say about mankind, I found out for myself that goodness is not a rare virtue after all. I might never have come to this conclusion had I remained in New York, unaware of the fact that quite a few people live somewhere else. Travel is a cure for provincialism. I was surprised, and at first a little taken aback, to discover that the rest of the country is civilized. The snob in me died when I found myself an unknown in a little California town, after being quite a big duck in my own small puddle in New York.

And now, as the wife of a naval officer, I am learning another lesson: to be a member of a family of several thousand! And to be, not myself, but my husband's wife. Naval officer's wives know, when they marry, that they must meet certain definite hardships with good nature. They have no permanent home. They must face long separations. They must be willing to go at a moment's notice to the ends of the earth, tumbling their travel-stained household goods into trunks and boxes, and hurrying from Boston to China, or from Cavite to Pensacola. Like their husbands, their first duty is to their country! The Government commands; they obey.

I have been married three years and already I am a veteran Navy woman. I talk their lingo and am one of the family. No longer Miss Cram. The Captain's wife. And this is a fine lesson in impersonality, in patience. To-day I am living in a fine big house in a navy yard near San Francisco, but to-morrow I may be at Pearl Harbor or Seattle or Samoa. Fortunately, I can carry my job with me, and, on the sly, continue to be Mildred Cram in print, even while I am the Captain's wife in fact.

I am beginning to be curious as to what lesson Fate is keeping up her sleeve. For it is written that wherever I am wrong I must be set right, until the time comes to take the working model, the road map, and the little lonely light of the spirit and step out into the next experience, whatever that may be.

I have learned, at last, to laugh at myself!

✣ ✣ ✣ ✣ ✣

Yes your baby's growing up

But in this she needs you still

When she was a baby your first thought was for her. Your days—long days, tired days—were filled with the busy routine a baby makes necessary.

And now she goes to school! Your most anxious years are past . . . Yet school authorities have found that your little school girl has certain special needs only you can supply.

One thing they point to as of particular importance is the *school day breakfast.*

Test after test on all kinds of children has convinced them of this: That the children who do the best school work in the mornings are the ones that have *a hot cereal breakfast.*

In 42,000 school rooms today you can see this Breakfast Rule displayed on the wall:

"Every boy and girl needs a HOT *cereal for breakfast"*

Here is where she who was your baby still needs your guiding hand. She cannot be left to the whims of her own appetite. *You* must see that every school morning she gets the benefit of a well cooked cereal—Cream of Wheat.

The reasons why for 30 years authorities have recommended Cream of Wheat as the ideal cereal for children are these:

First, children love its creamy deliciousness, so easy to vary by adding raisins, dates or prunes when you cook it.

Second, it is chock full of just the mental and physical energy your child's success in school demands.

Third, it is so easily digested that its wonderful store of energy is quickly released. Cream of Wheat contains none of the indigestible parts of the wheat which make extra hard work for the stomach.

There is probably a box of Cream of Wheat in your pantry now. Won't you begin tomorrow morning the *regular* serving of this favorite old food? You will see for yourself the benefits that follow—new energy for study, for play.

Cream of Wheat Company, Minneapolis, Minn. In Canada made by Cream of Wheat Company, Winnipeg. English Address, Fassett & Johnson, Ltd., 86 Clerkenwell Road, London, E. C. I.

To mothers and teachers

Watch him shoot the basket! Health habits build the energy that wins. Every school day eat a hot cereal breakfast — *Cream of Wheat.*

Do you want to get the enthusiastic interest of your children in forming the hot cereal breakfast habit? If so, send for attractive colored poster to hang in your child's room. Posters are designed to make a "personal success" appeal both to boys and to girls of different ages. There is a 4-weeks' record form which the child keeps himself by pasting in a gold star every morning he eats a hot cereal breakfast. We will send posters and gold stars free, also booklet on children's diet and sample box of Cream of Wheat to mothers. Quantities for school room use free to teachers. Mail coupon to Dept. P-4, Cream of Wheat Co., Minneapolis, Minn.

This little girl has learned to read well because she eats the right foods. Every school morning she gets a hot cereal breakfast — *Cream of Wheat*

Is this a partial portrait of you?

WHEN you look at this fellow dawdling while the work waits maybe you'll see in him something you wouldn't admit in yourself—laziness.

Yet it's a curious fact that most of us (whisper it, maybe all of us) are lazy about some things.

For instance, men:

Do you always get your suits pressed the minute they look baggy? Do you ever make a shirt "do another day" because you are too lazy to get out a clean one?

How about your housework, women? Do you always do it when you should? Shampoo your hair when it needs it?

If you are like most of us, you put off these and similar matters as long as you can.

Tooth brushing for example. Of all the little tasks people are lazy about, this one heads the list. In the morning we are in a hurry. At night we are tired. And always we lose sight of the pleasant after effects in contemplating the task itself.

Realizing the truth of this, the makers of Listerine set out deliberately to formulate a dentifrice that would furnish the *easiest, quickest way* to clean teeth. In short, a tooth paste efficient even in the hands of lazy people—for in tooth brushing, at least, the word *lazy* applies to so many of us.

Listerine Tooth Paste is really very *easy to use*. It works fast. With just a minimum of brushing your teeth feel clean—and actually *are* clean.

You have the job done almost before you know it.

This is on account of the way Listerine Tooth Paste is made! It contains a specially prepared cleansing ingredient —entirely harmless to enamel*—plus the antiseptic essential oils that have made Listerine famous.

And how fine your mouth feels after this kind of a brushing! Then, besides, you *know* your teeth are really clean—and therefore safe from decay. *Lambert Pharmacal Co., St. Louis, U. S. A.*

P. S.
Is your pocket book tired? Listerine Tooth Paste is only 25 cents for the large tube.

**This specially prepared cleansing medium (according to tests based upon the scale of hardness scientists employ in studying mineral substances) is much softer than tooth enamel. Therefore, it cannot scratch or injure the enamel.*

At the same time it is harder than the tartar which accumulates and starts tooth decay.

When life's at stake

or for just a blistered finger

Prevent suffering and infection from burns—ward off scars . . . *with this surgical dressing*

THE TOUCH of hot metal—the swish of boiling water—a little one's screams:—the agony of burns and scalds every family knows. And, without proper care, a greater tragedy may come—infection, with its legacy of hideous scars . . .

Today you need never stand by helpless—in your own home you can keep the same dressing hospitals use—the surgical dressing your own doctor would prescribe—Unguentine.

Ease the pain at once—with Unguentine. Prevent deadly infection of sensitive tissues—promote healthy healing—ward off needless, hideous scars. Minutes are precious—Unguentine, quick!

Spread Unguentine on thick. For severe burns and cuts, spread on gauze and apply, bandaging lightly. You will find many uses for Unguentine, with active children especially. Made by The Norwich Pharmacal Company, Norwich, N.Y. At your druggist's, 50 cents.

"My three-year-old daughter set fire to a box of matches and her dress caught," reports one mother. "Her arms and face were terribly scorched—all her lashes were burnt off. I believe Unguentine saved her life. I used it liberally. Now I can't find a trace of the burns."

"I was careless," says a housewife, "I should have replaced the cord for my old electric toaster. The worn connection caused a short circuit. My arm was pitted with tiny bits of molten metal. I applied Unguentine—the pain stopped at once. In a week I couldn't find even the slightest scar."

Livid scars are all too often the legacy of burns. And appearance is so important. Thousands have been spared disfigurement with this famous dressing.

FREE—a generous tube *Unguentine*

The Norwich Pharmacal Company,

"That Darned Literary Fellow Across the Lake"

(*Continued from page 59*)

a job in his publishing business at Boston, I accepted.

"'There are just two or three little things I want to do first,' I told him. 'They won't take long. Then I'll be ready to start in with you.'

"The two or three little things which weren't going to take long," laughed Dewey, "kept me busy for seven years.

"Among the small matters which I expected to settle in short order were spelling reform and the introduction of the metric system of weights and measures. Everybody admits that we ought to have both. But after fifty years I am still fighting for them.

"However, with the other 'little things' I had on hand, the story is a different one. This was in 1876, the Centennial year, and I had been asked to get together a library exhibit for the Exposition at Philadelphia. I did; and it was the best one that ever had been seen in this country.

"I had started the American Library Association; and if it wasn't to 'die abornin',' I must nurse it into health and strength. In connection with the A. L. A., I started the 'Library Journal.' It had to be nursed too! So that also was on my hands.

"I arranged to have a meeting of the A. L. A. in England; took a delegation over there, and succeeded in getting our infant 'Library Journal' accepted as an international organ for librarians everywhere.

"MEANWHILE, decimal classification was being widely adopted, and I was compiling and publishing successive d. c. bulletins. As a convenience to librarians, I started making the slips to be used for card catalogues; and that was the origin of the Library Bureau business.

"At first it was called the Library Supply Department—and I was the department. The Library Bureau business was sold for several million dollars two or three years ago. I didn't get the money, for I had sold my stock, a little at a time, to pull this club through the crises of its early years.

"But I don't regret those millions!" he said, looking out of the window at the great central clubhouse, the roofs of cottages rising among the trees, and the magnificent panorama of mountains beyond.

"Last year," he went on, "there were more than fourteen thousand registrations at the club. These people were built up in mind, body, and spirit. That, and not money, was the goal I wanted to reach. The club has earned much money. But it has all gone back *into* the club. Our plant is estimated by outside appraisers to be worth five million dollars. But I never think of it as belonging to me! It belongs to the *purpose* for which I created it.

"Well," he said, "to go back to the

story: By 1883 I had got my various projects on their feet—and consequently off my hands. At least, I could shunt most of the responsibility onto others. So when I was asked to be librarian at Columbia University, I accepted."

Yes, he accepted, and immediately began to play his usual rôle of "irritating cause." He cleaned house: literally and figuratively. First, he swept out the human dead wood in the library staff and hired a new lot of assistants.

One of the rules in force was that these assistants should take a sort of civil service examination, and be hired on that basis. Dewey had been training librarians in his own methods. He was determined to have his helpers from among these people whom he had trained. So he fixed up an examination which only *they* could pass.

He started a library school for teaching his methods. This conflicted with some other tradition. So he cleaned out an attic somewhere, set up his school there, and admitted women students to that school.

When the directors opposed him on this point, he dug up the original statutes of the university, so old that others had forgotten what was in them, and found a clause on which he could stand and defy his opponents.

He stayed at Columbia six years; completed and equipped a library building in which he incorporated his own ideas and methods; made his library school famous all over the country; roused all kinds of opposition and gradually changed that opposition to loyal support.

THEN Whitelaw Reid asked him to go to Albany, as head of the University of the State of New York. This is a union of all higher educational institutions in the state, and is in full charge of the State Department of Education. Reid was a regent of this state university. He had good reason to know that Dewey was a man who would fight to a finish for whatever he believed in. Reid was also in politics. The position he offered Dewey was a political appointment, and he controlled it.

When Dewey accepted this appointment, in which he would be pitted against the shrewdest politicians in the state, his friends didn't know whether to be shocked or grieved. They believed he could not survive, except by becoming tarred with the political brush. They would be sorry to see him sink. But they would be shocked to see him swim in that current.

However, they didn't know him so well as they thought. As he told me of those years at Albany, the light of battle was rekindled in his eyes.

"When I went to the State Capitol," he said, "I soon found myself as welcome, in that bunch of politicians, as a thorn would be in a sore thumb. They vowed they would get rid of me inside of a year; and they did their best to carry out their threat.

"I stayed *seventeen* years! And it was a Seventeen-Years War, from start to finish. During that time, I was cordially hated and detested by a legion of enemies. I had many a pitched battle. But I won often enough to succeed in doing most of the things which I knew *ought* to be done.

"Some of these victories were so long

Start them on whole wheat during the first year

—Eminent child specialists

Growing children need the hearty unrobbed nourishment of Wheatena

Doctors recommend Wheatena among the first solid foods for infants, because it contains in an easily digestible, most delicious form, whole wheat nutriments so essential to growth and health.

Health authorities advise hot whole wheat as a definite part of the child's daily diet because it contains valuable mineral salts, vitamins and the other vital nutriments nature provides in golden wheat.

Give your child the benefit of *the unrobbed, whole wheat nourishment of Wheatena.* No more coaxing—when you serve Wheatena for breakfast. Children love its delicious flavor and welcome it eagerly day after day.

Wheatena is whole wheat at its delicious best—chock full of nature's health-building nutriments: Protein for strength; Carbohydrates for energy; Mineral Salts for bone and tissue; Vitamins B and E for growth and protection, and Bran for safe regulation.

Ask your grocer today for Wheatena, in the yellow and blue package. Treat *every member of your family* at breakfast tomorrow.

Recipe for infants—
Pour half cup of Wheatena into four cups actively boiling water. Cook three minutes over flame, then place in double boiler and cook slowly for two hours. Strain and serve.

Wheatena

The delicious whole wheat cereal

Cut out and mail this coupon to The Wheatena Company, Wheatenaville, Rahway, N. J., for free sample package of Wheatena and recipe book.

At noon—each day

JAPAN TEA

Restful as a noonday nap

Just a cup or two of Japan Green Tea to finish off your luncheon.

Ten minutes' relaxation as you drink it slowly, every mouthful fully savored, *lingered* over to prolong the joy of its delightful flavor.

You'll feel its restful influence in every single nerve.

You'll get up refreshed and full of energy, ready to enjoy a better afternoon of work or recreation.

You'll make it daily practice after just a trial or two!

Japan Green Tea is tea at its best—the *natural* leaf, uncolored and unfermented, with all the flavor-laden juices preserved by immediate sterilization.

Specify Japan Green Tea when you buy. Put up for the home in packages under various brands. Several grades and prices. The best will cost you only a fraction of a cent a cup

ago that people have forgotten them. For example, it used to be as simple to get the degree of Doctor of Medicine as it is to get a chauffeur's license nowadays.

"Just think of it! Here was a profession which had the health and the lives of people in their keeping. Yet it was as easy to become a physician as to become a blacksmith.

"If a young fellow thought he'd like the job, all he had to do was to 'ride with a doctor,' as they called it, for a few months. He would hitch up the doctor's horse, and blanket it when a call was made. Perhaps he was allowed to go in, listen to the account of the patient's symptoms, and hear the doctor's directions. He read—and fell asleep over—the doctor's scant supply of medical books. And finally, after paying some state official a hundred dollars—or *ten* dollars, if that was all he had—he could hang out his own shingle and practice medicine himself; *practice* it until he perhaps learned a little by his experimenting!

"This sounds incredible, but it is a fact. It seems more incredible that we had to fight for a better state of things. That is one of the victories which most people have forgotten.

"Then there were the dentists. When I raised the standards for admission to that profession, a delegation of dental practitioners came to me to protest.

"I said to them, 'Gentlemen, you are going to have a chance, here and now, to decide whether you will be simply a lot of sublimated blacksmiths, or members of a scientific profession!'

"I said that, but it wasn't true," laughed Dewey. "They *didn't* have a chance to decide! The decision already had been made—*by me*. In spite of themselves, their profession was put on a scientific basis.

"The alleged 'degrees' given by business 'colleges,' and by some other so-called 'colleges' and 'universities' were then a disgrace to the state. We had a law enacted forbidding the use of the words 'college' and 'university' except by *bona fide* institutions of higher learning. Immediately, the heads of a lot of these fake colleges swarmed to my office, to protest against the bill.

"'It's no use!' I told them. 'That law has got to be obeyed. If you are willing to put yourselves on a sound basis, I will stand by you and help you. If you won't do that, you will have to leave this state.'

"In ways like these, we raised the standards of education all along the line. But I had to fight every inch of the way.

"Meanwhile, I had moved the library school from Columbia to the State Capitol. I had charge of that, and also of the State Library itself. I was as busy as a cricket on a hot griddle. And there was always the necessity of keeping a sharp watch against the would-be grafters.

AS I said before, this went on for seventeen years. In the meantime, I had started the Lake Placid Club. During the summer vacations, my wife and I used to travel in search of a place where we could be free from hay fever and rose cold. But that wasn't the only purpose we had in common. We wanted to devote our lives to the cause of education; and one way of doing this was to help the educators. If we could give them an opportunity to find health, strength, and inspiration, at moderate cost, we knew we *would* be helping them.

"The first time we came to Lake Placid we believed we had found the ideal place; but they wanted $1,000 an acre for land. We came back three years later, only to find that the price had gone up to $2,500 an acre! Finally, we found a house and five acres which we bought for $3,500 on what were then the usual terms: a ten-year mortgage for the entire amount. We lived in that house the first summer.

"The next year we bought a farmhouse close by, with five acres of land. The price was $5,500; we paid $500 down, and gave notes for the rest. We organized the Lake Placid Club, hired a housekeeper, and had thirty guests that season. Rooms were from fifty cents to a dollar a day, and the board was seven dollars a week. Our business last year was 844 times what it was that first season. That shows you how the club has grown. But it never has *out*-grown its original purpose.

"SOME people seem to think it is a playground for the rich. We do have a great many wealthy people among our members and guests. Their money has helped to build up this enormous institution. But people cannot *buy* their way into the club. They must be the kind of people who belong in this atmosphere.

"Our original plan never has been altered. Our rates differ at the different clubhouses; they vary according to the time of year; and in some specially deserving cases *they vanish completely*.

"The financial business of the club is conducted by the Lake Placid Company. Five years ago we organized the Lake Placid Club Education Foundation; and I turned over to its permanent endowment fund every share of our common stock.

"The entire net earnings of the club must be used for educating carefully chosen boys and girls, and for needed vacations, at less than cost, to teachers, clergymen, librarians, and other social workers. In the real sense of the word, these people are the 'educators' of the nation. The club was organized to serve them; and by means of this permanent endowment fund they will continue to be served.

"No matter what a guest pays—whether it is twenty dollars a day or not one penny—every advantage of the club is open to him. He eats the same quality of food, has the same recreations, enjoys the same music, lectures, and other forms of entertainment. The other guests do not know, unless he tells them, how much he is paying, or whether he is paying anything at all.

"The one motive here is *service*. We apply this, not only to our members and guests, but to our neighbors in this whole region. Two years ago, we started an annual Adirondack Music Festival, which is held at the club. We have competitions among the choirs and the schools from different communities. During the festival week, we give these visiting neighbors a chance to hear the best symphony music and distinguished soloists.

"We have organized, also, the Adirondack League, with a dozen committees to promote the best interests of this region.

"We have what we call 'Adirondack members,' for people of this section living

FRIGIDAIRE · · *Low Cost Refrigeration*

CLEANLINESS *that safeguards health*

ABSOLUTE cleanliness is one of the qualities that make Frigidaire a highly appreciated improvement in any home.

The constant low temperature prevents food spoilage, protecting and conserving the health of the family. And the Frigidaire cabinet, the finest development in refrigerator construction, is made exclusively for electric refrigeration. It is lined with gleaming white seamless porcelain enamel, is spotlessly clean, and easy to *keep* clean.

Yet delightful cleanliness is only one of the advantages of genuine Frigidaire. Adequate food storage space, generous ice-making capacity, fine finish, quiet operation, low operating cost, and low price, too—these have made Frigidaire the choice of more than three hundred thousand users—more than all other electric refrigerators combined.

Today new prices make the value of Frigidaire greater than ever before. And the General Motors deferred payment plan affords a very easy way to buy. Visit the nearest Frigidaire Sales Office for complete information. Or mail the coupon below.

"The best decision we ever made"

"I *GUESS* we're like most families. We always seem to want more things than our income will provide. Bob wanted a radio. Marion was going to college and needed a whole new outfit. I had been hoping to get a new sewing machine, but everything else seemed more important.

'Can't you wait another year?' the family asked.

"Then I had an inspiration. 'Let's get the Singer first!' I said, 'I can make all of Marion's clothes and mine and save enough that way to buy the other things.'

"They all saw what good sense that was. So we got the Singer at once, and it was the best decision we ever made. I've never enjoyed sewing so much. I've done work I never dreamed could be done on a sewing machine. And we've saved so much that there is going to be no money problem after this."

Maybe you, too, have been putting off getting a new sewing machine because other needs seem to be more urgent. If you have, remember that a modern Singer is not an expense but the best investment a family could make. Get the Singer *first* and the money it will save and earn will go far toward providing the comforts and luxuries you long to have.

There is an easy way to prove to yourself what a modern Singer will do. The nearest Singer Shop will gladly send a machine to your home to use for a few days in doing your own sewing. You may have your choice of the widest variety of models —electric, treadle and hand machines. Any one of them may be yours on a convenient plan by which you will receive a generous allowance for your present machine, and your new Singer will pay for itself out of savings on the clothes you make.

The Famous Singer "S"

You will find it on the windows of 6,000 Singer Shops, in every city in the world. It is the identifying mark of sewing machines of enduring quality. It means, too, that every Singer Shop is ready always with instructions, repairs, supplies and courteous, expert service. When the Singer representative comes to your home let him tell you about this service Singer maintains in your own neighborhood.

"Short Cuts to Home Sewing"

This interesting practical book shows you how to save time in a hundred ways on your sewing machine — how to do all the modish new details of trimming — no matter what make of machine you may have. The book is free. Phone or call at the nearest Singer Shop [see telephone directory] or send for a copy by mail, to the Singer Sewing Machine Co., Dept. 48-R, Singer Bldg., New York.

SINGER
SEWING MACHINES

Entire contents of this advertisement copyright U.S.A. 1927 by The Singer Manufacturing Co.

ten miles, or more, from the club. If they meet the conditions applied to all our visitors, they can enjoy the entertainments, sports, and other attractions offered here.

"In 1925, we opened the Lake Placid School for boys. One of our basic ideas always has been to cater to children! Most hotels frown on them; but we welcome them. From our point of view, they are immensely important. It is better to put up a good new building than to repair an old one. Children are new buildings! We believe in helping to make them sound and serviceable.

"Our new school is part of this plan. It is an effort to find *the millionth man!* Do you realize that it is 'the one man in a million' that is leading in all the big work of the world? Our idea is to search out the boys who might become some of these millionth men, if they were given the necessary equipment in health, and in mental and moral training. These are the things they ought to have: and they are the things we are trying to give them."

There, again, was Dewey's familiar phrase, "ought to have." It seems to be the text of his life; the cornerstone on which he has built so extraordinary a structure.

Marion Scores a Knockout

(*Continued from page 33*)

Marion to the dance—she had seemed so pale, and helpless, and brave. What if she *had* been a little unreasonable? Women were entitled to that. It was unbelievable, how much that normal protective instinct could hurt when it was snubbed.

The following night Fred, finding no solace in his law books, decided to go for a walk. His undirected feet strayed to Summit Avenue, where the grounds of the Milford Club were located. From atop the hill a river of multi-colored lights flowed down to greet him, and he wondered at the beauty that could be extracted from a hundred electric bulbs and a cloudless night.

Strange that he had never noticed such things before! Could it be that he was like a victim of amnesia brought back to realities by a sudden blow? Deep in thought, he plowed ahead until he could hear the distant violins. What was that they were playing? He wasn't much on dance music, but this piece had a familiar ring. . . ."I lo-ove you, I lo-ove you, I do-o!"

That was the point where Fred turned and started down the hill again.

Two weeks of unendurable misery passed, and each one brought a Friday night with Adela's customary party, but without Marion. At last he could suffer in silence no longer. "Look here, Adela, why doesn't Marion come here on Friday nights any more?" he demanded.

Adela looked at him with sweet serenity, and yawned. "I expect it's because *you're* here," she remarked.

Fred decided that sisters were of very little use, and, hauling down his proud flag, telephoned Marion. No, Marion assured him, she wasn't staying away

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

because she was angry with him. The fact was, she was fearfully busy. No, she was sorry to inform him, she couldn't possibly go out with him on Monday, or Tuesday, or Wednesday, or Thursday. In fact, the only other days on which she couldn't go out with him were Friday, Saturday and Sunday. . . . The telephone clicked, with ever so gentle finality.

MAY and June passed, and Fred was duly graduated from law school, comfortably near the top of his class, but by no means as brilliantly as he had seemed destined to. He won a coveted appointment in the ancient firm of Satterlee, Mabee, and Dykes, which was like drinking the nectar for which his lips had been thirsting for years—and also discovering that it tasted like dishwater.

And then Adela convinced him that there was, after all, a sisterly heart in her bosom. "Marion and I are going on a canoeing party with the gang on Saturday," she announced. "Do you want to be our ferryman?"

"Sure, I'd like to," said Fred, which is what is known as the exaggeration of under-statement.

Adela proceeded now to prove that that heart of hers was constructed of 22-carat gold, and that it was more than just a highly efficient pump—for she discovered at the last minute that she wouldn't be able to go on the river after all. She was sure, Adela continued, that Marion would be disappointed if the arrangements had to be called off, and hoped Fred wouldn't mind. . . . After that, there was always a special suite arranged for Adela in Fred's castle in Spain.

On Saturday, Fred made a still further revision of the program by separating bright and early from the rest of the noisy Milford party. Marion raised no objection as he floated into a backwater, waited for the procession to sweep by, then vigorously paddled up-stream.

Marion was in a lazy mood to-day, and she was content to let Fred do most of the talking, as well as all of the paddling. Trailing her fingers in the rippling water, she lay placidly on a heap of cushions in the bow, and her pert face might have been a figurehead carved on the prow—only figureheads don't freckle in the sun. Fred cut the stream gallantly with his dripping blade, and told her of his wonderful luck in securing that appointment with Satterlee, Mabee. and Dykes; and of how old Dykes himself, in that canny way of his, had remarked that there was a bright future with the firm for a lad who knew his textbooks, and knew a bit of life as well. And of how very much more enjoyable it was to paddle a canoe up-stream than down.

And Marion replied graciously, "Uh-huh," and "Um-hum," and trailed her fingers in the water.

It was over their lunch, which they took in a delightful, cool inlet shaded by overhanging green, that Marion made up her share of the conversation. What she talked about, Fred scarcely knew, for it was all music to him, and the words didn't matter. All that he was aware of wasthat she was bringing up old days at the Milford High School, and that it was an exceedingly pleasant subject. Brave memories, those of old Milford High, he reflected, as he lit his pipe. He didn't

COMFORT THROUGH FLEXIBILITY

Thousands are finding it in these smart oxfords

So many interesting things to do, so much to be accomplished—why must feet tire and ache? They needn't. There are good-looking shoes that will help you, as they are helping many others, by freeing the feet, increasing your ability to walk without tiring, giving you all-day comfort and supporting the arches of your feet with a wonderful buoyancy that does not restrict foot action.

In these smart Cantilever Oxfords your feet will be thoroughly comfortable. For they are natural shoes; natural in shape and *natural in action.* When you walk, Cantilever Shoes follow every foot movement, because these shoes are flexible from toe to heel like your feet. They are shoes that harmonize so closely with the shape and action of your feet that you forget you are wearing them. You only know that your feet feel fine and that you can do more without tiring.

The springy, all-leather arch of the Cantilever Oxford can be laced up snugly to fit the exact undercurve of the foot, giving you support without restriction. Your arch muscles can exercise and strengthen with every step. Circulation is free.

Cantilever Oxfords and Pumps are sold from coast to coast and are within easy shopping distance of almost every reader of this magazine. If you do not find your local Cantilever store listed in the 'phone book under the name "Cantilever", write the Cantilever Corporation, 402 Willoughby Ave., Brooklyn, N. Y., and they will send you the address.

Actresses favor Resinol Soap for daily cleansing

They find that its Resinol properties tend to prevent dryness and roughness of the skin

"*It is very easy to understand why Resinol Soap is so popular since it has special properties to keep the skin soft and natural,*" says Viola Dana, much admired F. B. O. star who is now being featured in "Home-struck."

With every trace of make-up to be removed daily if she is to care for her skin properly, the screen star must decide what will accomplish this cleansing most thoroughly without injury to the skin's delicate texture. Resinol Soap offers a solution of the problem, and women in all fields of activity are adopting its use.

To daily increasing numbers of women the name Resinol means a product with ingredients of particular benefit to the skin. In the abundant, creamy lather of Resinol Soap these properties are carried deep into the pores, and they make possible thorough cleansing without the smarting, dry, red, flaky condition of which so many complain.

Get a cake of this soap from your druggist now and use it regularly as directed, but note the softness, radiance and general improvement in your skin which follows the *first* treatment.

If you are at present annoyed by some skin irritation—a minor rash, a facial blemish, or one of the more serious forms of skin disorder—apply a bit of Resinol Ointment. It relieves burning and itching promptly and rarely fails to clear the trouble away. Prescribed by doctors for more than thirty years.

FREE OFFER:—*Mail this coupon today*

Dept. 7-C, Resinol, Baltimore, Md.
Please send me, free, a trial size package of Resinol Soap and Ointment.

remember exactly what Marion had looked like then, but he was vaguely aware of glossy yellow pigtails; and he knew that she *must* have been beautiful, to have been Marion.

Paddling gently down-stream, Fred discovered later, was, after all, quite as pleasant as the more vigorous going the other way. Besides, it gave him more time to think, and there were certain things that Fred wanted to figure out. Marion was being kind, ever so much kinder than he had deserved or dared hope; but he felt, as he watched her enigmatic face, that there was still a barrier between them—the barrier of that heart-snatching, mandolin-playing fraud, his brother Jim.

"Jim and Anna got back the other day," he remarked, ever so casually.

"Uh-huh," said Marion sleepily.

"Darned nice place for a honeymoon, the Thousand Islands."

"M-m, yes—I s'pose."

Fred rested his gleaming blade for a moment, and allowed the canoe to drift gently toward the shore. "I've often thought," he remarked, "that that scrap of ours was about the funniest sort of quarrel any two people ever had."

Oh, tactful Fred, riding past all danger signals with the throttle open and the engine at full steam! He did not see the ominous glint in Marion's blue eyes, and continued, "Gosh, if you knew how sorry I've been all these weeks for what I said that day, about you and Jim!"

THERE were no further warnings to guide so reckless an engineer. His fate was on his own head now. Marion seemed to wake up with a start, as from a bad dream, and her body flew upright with a swift jackknife motion. Then her hands came out of the water, and gripped both sides of the canoe. There was a single, very deliberate, jerk, and Fred found the cool water rising up to meet him. Unable to believe what he had seen, he spouted mouthfuls of the Milford river as he came up and circled the overturned canoe with desperate quick strokes. His agonized cry went over the water, "Marion! Where are you?"

Over by the bank there was the passing flash of a wet green garment, then it was camouflaged in the thick shrubbery. Simultaneously, the answer to his question drifted back mockingly:

"On my way home!"

A dozen tremendous strokes, and he had reached the shore. Frantically he followed the trail of broken bushes, dripping water from his sleeves, oozing it from every pore, spouting it from his shoes in little geysers that sounded a protesting, "Squ-ush! Squ-ush!" A clear path opened up through the shrubbery, and across it a wet green streak was shooting. It took his last breath of wind to catch her, the last ounce of strength in his arms to hold her when she was caught. Now he was aware only that she had attempted to push him off the rim of her world into bottomless space, and he was holding on grimly.

Marion's mouth opened pathetically, but no sound came from it. The inexorable arms closed still more tightly about her. She relaxed, resigned herself to them, and drew a heaven-sent breath—just in time, for Fred's lips had found hers.

A long time later, Fred called a truce for breathing purposes, and they sat together on a dry mossy hummock, while they dried in the sun.

Marion was the first to break the long silence. She surveyed the limp ruin of her dress ruefully, and said, "I *swore* I'd tip the canoe if you mentioned Jim again!" Then she smiled; and added innocently, "Do you *still* want to talk about Jim?"

"All I want to know," replied Fred, exercising his newborn firmness, "is when we are going to be married."

At the second Regent wedding of that year no shoes were thrown.

NOW, the chronicler of this tale would like to be able to add, as is customary in such cases, that the bride and groom lived happily ever afterward. But the fact remains that during the honeymoon, and for some time to come, there was one little black speck in the otherwise flawless bliss of the husband. That was the gnawing thought, to which he dared not give voice, that perhaps—only perhaps—Marion still cared a little too much for Jim.

Apropos of that question, Marion and Adela had a very frank talk one evening. "Marion," said Adela sternly, "there's something you've been holding out on me."

"What do you mean?"

"I mean that I saw you throw that shoe at Jim's wedding. And I've seen you throw a baseball. And if you'd been aiming that shoe at Jim you wouldn't have missed him by quite that much."

"Young woman," retorted Marion, "do you realize that I've pretty nearly drowned people for just *mentioning* the subject of Jim?"

"All the same," Adela continued relentlessly, "if I were you, I'd tell Fred."

"Tell him what?"

"Well, for instance, that Jim proposed to you maybe a dozen times, and you turned him down flat. Correct?"

"Entirely, Doctor Holmes."

"And that you've had a crush on Fred ever since your hair was in pigtails. Correct?"

"Disgustingly."

"And that you threw the shoe at him because you were furious with him for taking no more notice of you than the heathen of China. And—"

"Well, I ask you—wasn't I justified?"

"Absolutely—but aren't you going to *tell* Fred, before he curls up and dies of jealousy?"

"Um-hum, I am—some day. But I've only nine tenths forgiven him yet."

"Marion, you heartless, hard-boiled little flapper! If you don't tell him tonight, I swear I will myself!"

Marion looked up in swift alarm. "Adela Regent, if you do, I'll—I—I'll—" she paused, despairing of thinking up any threat that would be sufficiently terrible.

Adela's wistful face confessed her defeat. "Oh, well," she said resignedly, "*you* know I'm not the one to squeal. But why on earth—"

"Well, you see," Marion interrupted, "when I tell him, it's got to be over at old John's lunch-room. . . . There's a sentimental reason for that."

"The supreme combination of all that is fine in motor cars."

SILENCE

If any one quality above all others distinguishes the truly fine car it is quietness of operation. For silent ease of motion results only from fine designing and fine craftsmanship—the utmost precision in every part of body and chassis.

The Packard is the supremely silent car. For it is designed and built to standards of precision expressed in terms of even one ten-thousandth of an inch. And Packard power—unsurpassed in any motor car—is so much more than ample that response to the driver's need or whim is instant, smooth and silent.

The practical result is true luxury of transportation—comfort of body and mind—the constant assurance that fine mechanism in perfect adjustment is operating smoothly and without strain.

Silence is a permanent Packard asset throughout the car's unusually long life. For the precision of Packard parts is protected anew each day by an almost automatic lubrication system.

Hidden in a crumpled paper
New wall beauty for your home

BEAUTY hidden in crumpled paper? Yes, it is there, and paint brings it out. Glance at the beautiful Crumpled Roll finish shown at the right. Notice the soft, feathery design—the blending of the colors—the uniqueness of the figures. Unusual—but only one of the many distinctive wall finishes that can be obtained with an all-lead paint made of Dutch Boy white-lead and Dutch Boy flatting oil.

Perhaps the greatest reason for the popularity of the Crumpled Roll finish among those desiring distinctive wall effects is the absence of a planned design. The finish has the appearance of the free-hand work of a craftsman in wall painting—a finish without repetition of a set design anywhere. And Dutch Boy white-lead is the ideal paint for producing it. This paint can be tinted to any desirable shade or tint—simply because it is *mixed and tinted on the job for the job.*

A new booklet on decorating the home shows and describes the Crumpled Roll and other unusual wall finishes. This booklet will be sent to you together with a decorator's data form from our Department of Decoration. Use this form if you desire our color specialists to help you select a color treatment for a particular room, or to aid you in decorating the interior of your whole house. These men can help you as they have thousands of other property-owners. Send your request for the booklet to our nearest branch, asking for "Booklet E." You incur no obligation thereby.

NATIONAL LEAD COMPANY

New York, 111 Broadway — Boston, 800 Albany St.
Buffalo, 116 Oak St. — Chicago, 900 West 18th St.
Cincinnati, 659 Freeman Ave. — Cleveland, 820 West Superior Ave.
St. Louis, 722 Chestnut St. — San Francisco, 485 California St.
Pittsburgh, National Lead & Oil Co. of Pa., 316 Fourth Ave.
Philadelphia, John T. Lewis & Bros. Co., 437 Chestnut St.

This Dutch Boy is the trademark of pure white-lead which makes an all-lead, all-purpose, all-color paint. Such a paint both protects the outside of your house from the attacks of the weather and enhances the beauty of its interior. It is employed on plaster, stucco, concrete, brick, and stone, as well as wood. Professional painters and house-owners have used and specified Dutch Boy white-lead for many years. It saves the surface. It emphasizes the beauty of the entire decorative scheme. Its durability makes it a lasting and economical investment that no property-owner should overlook.

The Crumpled Roll finish should be applied over a fairly smooth wall. The first coat of paint is applied. This is allowed to dry thoroughly and a top coat, either lighter or darker than the first one, is then put on. While the top coat is still wet, crumpled paper is firmly placed against the wall and rolled downward. This lifts some of the wet paint and allows the undercoat to show through. Tissue paper, wrapping paper or old newspapers may be used. If newspapers are used, be sure the print on them is dry; otherwise it will come off and mar the paint job. Each kind of paper gives an entirely different design.

DUTCH BOY WHITE-LEAD

for CLEANLINESS *for* BEAUTY *for* DURABILITY

Why I Quit Thinking About Myself

(*Continued from page 29*)

my father hated farming and wanted to be a lawyer. He was disappointed in that ambition by the family's lack of funds. Being a shrewd trader, he began to buy the eggs and vegetables of the farmers in the surrounding territory, and hauled them into the Chicago market. After a time he had enough capital to move to the city and open a wholesale establishment. He prospered reasonably, owned his own home, and occupied a position of respect in the community. But he had wanted the law, with all its possibilities of political preferment, and, instead, he was only a wholesaler of produce. His chief determination was that his boy should occupy a more distinguished position.

As I read the works of the modern psychologists I keep running across the term "inferiority complex," and I imagine that this is the term which one of them might have applied to my good mother. She would have resented it indignantly, but the very intensity of her denial would have tended to confirm his diagnosis. She continually impressed upon us children that we were "as good as anybody." And in almost the same breath she would urge us to "get to know the best people." And by "best people" she meant those who had the most money, and got their names in the society columns.

WHAT I am trying to make clear is that the whole atmosphere of our home was one of strain and worry. We were all striving so hard to succeed that we overlooked some of the very best chances for success. Father was forever impressing on me that a man must "have a plan for his life," which is all very true; but one can be so busy planning that he loses the help of the greatest forces in the world—friendship and the good will of others. Mother urged me to read the biographies of great men, a form of reading which I enjoy and have commended to young people all my life. But she did not teach me to discover the one most important lesson of all great biography. To that fact I shall have occasion to refer fully later on.

Otherwise, my boyhood was quite normal. My first big disappointment came in college, and since it illustrates the principle which I am trying to set forth, I shall tell it just as it happened. My roommate in my freshman year was a sophomore. He was a writer, and had already won a place on the college paper. His people were wealthy, and he, being blessed with an easy social grace which makes men popular everywhere, was naturally a member of the best fraternity. I had been pledged to a smaller fraternity, so that a good many of our interests were divided; but this did not keep us from getting on very comfortably as roommates. Indeed no one could fail to get on comfortably with Bud.

There was a senior society at the college known as "The Pyramid." The membership in this organization consisted of eleven men who had won the most distinction in college activities during their

How is your family classified by physicians and nurses?

Many proud and enlightened households would be humiliated to know how backward are their ideals of health and cleanliness in the eyes of modern science

WHEN the physician steps through the door, do you realize that your household is, in a sense, immediately placed on trial? When a trained nurse is called, your family standards become an open book. There is nothing hostile . . . simply the natural attitude of the scientific mind. You are judged not by clothes, manners or interior decorations, but by your *hygienic standards*.

And properly so. Every member of a family, every member of a community, is under a moral obligation *to maintain and raise* the health standard. So it matters a great deal, just how you rank in the opinion of those who know.

Zonite marks the enlightened home—and protects it

The first step toward a higher sanitary standard is disease-*prevention*. This calls for an antiseptic or, far better, a genuine germicide. And right here has always arisen the difficulty. All the known germicides were poisons. Carbolic acid, bichloride of mercury—these were a menace in the house, especially if the family contained children. Furthermore, the uses of these preparations were very limited. For the nose and throat, it was necessary to depend on less effective antiseptics—weak mouthwashes which might retard germ-growth temporarily but could never even pretend to stamp out germs entirely.

Now comes Zonite, the Great War Antiseptic grown into the Great Family Antiseptic. Alone and single-handed, Zonite can perform all the services hitherto performed by a large number of different products. Because it is tremendously powerful it can do what the poisons can do, and with *no harm to the human body*. Because it is harmless it can be used as peroxide of hydrogen is used—and Zonite is *more than forty times as effective* as peroxide.

Zonite gives a *surgical cleanliness*. It is safe in the hands of a child. It is available everywhere. So is Zonite Ointment, invaluable as a deodorant and as an antiseptic vanishing cream.

Many in one:
Emergency antiseptic
Dental cleanser
Mouthwash
Nasal spray
Water purifier
Sunburn relief
Dandruff corrective
Body deodorant
Enema
Feminine hygiene

In bottles: 25c, 50c and $1

Full directions in every package

Zonite the Great family Antiseptic

Use Zonite Ointment for chapped hands, cracked lips, cold sores, and windburn. Also as a powerful deodorant in vanishing cream form.

Profit by his Lesson

Majestic Coal Window

The Mark of a Modern Home

An ordinary **basement window never fails to bring grief and repair bills when used to receive coal. But a Majestic Coal Window—guaranteed break-proof—protects your house when coal is delivered—and protects your pocketbook, too! When you buy or build, profit by the lessons of others and see that you get a Majestic Coal Window—with its Certified Malleable Iron and Keystone Copper Steel construction. More Majestics are in use than all other coal windows.**

ANOTHER MAJESTIC PRODUCT
You'll Want in Your Home

A new convenience **that costs but little—the Majestic Milk and Package Receiver. It receives deliveries from the outside—you remove them from within at your convenience. Saves steps—protects from annoyance, intrusion and theft. Outside door locks automatically when closed. Easily installed in old or new homes.**

Write for catalog describing all styles of Majestic Coal Windows, Milk and Package Receivers, and many other Majestic Quality Products you will want in your home.

THE MAJESTIC COMPANY
1200 Erie Street, Huntington, Ind.

first three years. It was understood that the captains and managers of three major teams would be chosen, together with the editor of the weekly paper and the president of the senior class, so that the elections for the most part were forecast long in advance. But always there was tense interest on the day when the "tapping" took place, for the society had a tradition that there should always be an element of surprise. Some one man was usually selected who had not held office but who, by his character, was considered a potential leader, or who exemplified qualities that were regarded as worthy of public recognition. And, on the other hand, a very important officeholder was sometimes omitted, because, though outwardly successful, he was thought to have fallen short of his best.

SITTING one night in our room, discussing things in general, I confided my secret ambition to Bud. "There's only one honor in college that really counts," I exclaimed, "and that's The Pyramid. Believe me, I'm going to begin right now to lay my plans for that." It was a foolish but rather natural boyish boast. Bud made no comment on it, and I forgot it completely until long years afterward.

We went through the regular processes of college experience. Bud became editor-in-chief of the paper, and I played two years as a scrub on the football squad, won my letter in my junior year and, joy of joys, was elected captain of the team. It was a foregone conclusion that I would be chosen for The Pyramid.

The day came in May when the new members of The Pyramid were to be chosen. The ceremony of election was impressive. After the morning chapel, the classes filed out onto the campus, and the juniors marched over and perched on the college fence, while sophomores, freshmen, and seniors stood around expectant. The chapel bell gave forth a single solemn stroke, and then from the little stone Pyramid House the members of Pyramid came forth in their caps and gowns. In stately file, they marched over to the fence and halted; one after another stepped forward and tapped on the shoulder the junior who was to be his successor.

I sat that morning with my classmates, while my heart thumped so loudly that it seemed to me the men on either side must hear it. I saw the dignified procession approach. I saw the president of the senior class separate himself from the others to tap the president of the junior class. I saw Bud Wilkins tap the new editor-in-chief of the paper. One, two, three . . . eight, nine, ten, the new men were chosen. Only one selection remained to be made, and I had not been tapped.

Slowly the eleventh man moved toward us. The whole student body fixed its eyes on me, and I felt the hot blood mounting to my cheeks. For a moment, he came straight for me, then, swerving suddenly, he passed me without a glance and stopped in front of a big, awkward, Lincoln-like fellow named Midgley, a chap whose character everybody respected, but who had never had time to distinguish himself in undergraduate activities because he was working his way through.

Instantly, the crowd was in a tumult. Friends of the new members rushed up to shake their hands, and my friends and fraternity brothers gathered around me, offering condolences and denouncing the injustice. Somehow, I managed to get away from it all, and fleeing across the campus with the feeling that the eyes of every man were upon me, I hid myself in my room. Even now after all these years, I can feel the agony of that next hour; and I am not ashamed to admit I cried like a kid.

Why had I, who had worked four years on the team, rubbing my nose in the mud and giving up my afternoons for the glory of the school, been passed over for an unknown who had never done a thing? Whom had I offended? What fatal defect was there in me that should make such a blow possible? For days I plagued my spirit with these questions; but it was not until ten years later that I learned the true answer. Then, at our tenth reunion, under the spell of the good fellowship which prevails on such occasions, one of my fellow graduates, who had been a member of The Pyramid that passed me over, slapped me on the back and said, "Joe, did anyone ever tell you why you weren't elected?" Even then I flushed and stiffened, but I pretended to take it as a joke.

"Why, no," I said. "What was the reason?"

"I'll let you in on the secret," he answered. "You roomed with Bud your first year. Remember? And one night, when you were a freshman and he was a sophomore, you confided to him that you intended to be elected to Pyramid, and that you were going to shape your whole college course to that end. The years passed, and Bud was elected, and it came time for us to elect, and of course we figured on picking you. But Bud spoke out in the meeting and told that story. And he made quite a speech, saying that Pyramid ought to choose the men who had done something for the college because they loved it, not because they wanted to be rewarded by an election. There was a hot argument about it, for you had some stanch good friends in the bunch. But Bud was all steamed up, and the rest of us were sort of influenced by the old tradition that there must always be a shock in the election, and we finally let him have his way."

IF THIS explanation had been tendered a few years earlier, it might perhaps have made my first years in business easier, though I am not sure. I was so self-centered, so completely dedicated to personal success, at whatever cost, that a pretty serious jolt was needed to change my point of view. There were four hundred employees in the bank in Chicago, and I began as nothing more than a number on the time clock. I remember punching that clock the first morning, looking at the long rack of cards which represented my fellow clerks, and saying inwardly, "Somehow I've got to push my head up above that bunch." To this problem I devoted all my days and most of my evenings.

I arrived at the office before the opening hour and stayed late, making it a point to pass through the front way, where I might be seen by any of the officials who happened to be at their desks. I formed the habit of sending little notes to my immediate superior, suggesting improvements. In the evenings I canvassed the Y.M.C.A. building where I lived, soliciting

I'm Keen For *its* Flavor..

and it does me good because I eat it daily

VERY few of us eat a food solely because it's "good for our health." Of course, it's natural to want foods that are good for us. But it's just as natural to eat regularly *only* the foods that tempt us regularly.

That's the very reason that millions of people eat delicious Post's Bran Flakes every morning. They make it a daily habit *because they like it*. They know it's doing a lot to keep them fit.

Bran is one of our best sources of natural bulk. But bran does good *only* when eaten regularly. And morning after morning your appetite will welcome Post's Bran Flakes with fresh delight.

"Now You'll Like Bran"

Millions of people have formed a new daily health habit since the Postum Company made bran so good to eat. Millions now get the required amount of bulk every day because they have found a "bulk food" they really like.

In addition to bulk, this delicious health cereal also provides: phosphorus, iron, protein, carbohydrates, and the essential vitamin-B. All are elements important to well-being.

Start now and get in the habit of eating Post's Bran Flakes every day as an "Ounce of Prevention." Enjoy it plain, with milk or cream. Try it with various fresh fruits and berries. Have it served in the form of inviting cookies, muffins and bread.

Delicious . . . in any form!

Start eating Post's Bran Flakes tomorrow morning. You'll like it!

Send for an "Ounce of Prevention" package: At your request we will send you free an "Ounce of Prevention" package of Post's Bran Flakes and a booklet that has important bearing on health.

Postum Company, Incorporated, Dept. B-54, Battle Creek, Mich. Makers of Post Health Products: Post Toasties (*Double-Thick Corn Flakes*), Postum Cereal, Post's Bran Flakes, Grape-Nuts, Post's Bran Chocolate and Instant Postum. In Canada: Canadian Postum Company, Ltd., 812 Metropolitan Bldg., Toronto, 2, Ontario.

Is it worth a few hours' Practice?

POPULARITY PLUS! The glad hand of welcome everywhere, and the smiles of those whose smiles are worth while, all yours when you learn to play a

BUESCHER

True Tone Saxophone

Would you clip the coupon below if you were sure that it would bring to *you* these things? It will! With just a *little* effort on your part. Just a *few hours' practice, a few quiet evenings* at home, and you will be *playing* popular tunes. It's so easy, even for people who *think* themselves musically dumb.

Here's a Test for YOU

Can you whistle or hum a tune? Can you keep step with the band? Could you walk up to the piano and thump out a tune with one finger? Then *you can learn to play a Buescher.* It is not uncommon for such beginners to master scales *in an hour* and play tunes *the first week.*

Only Buescher Assures Success

Only with Bueschers, easy blowing, easy fingering, perfectly tuned, is rapid progress assured. No expert lipping required. Just open the key and *blow normally.* It's almost as easy as your "one finger" piano solo. *But oh! how Beautiful.*

Take One Home on Trial

Try any Buescher Instrument for six days *at home.* If you decide to keep it pay a little each month. Easy to Play, Easy to Pay. Send coupon today for catalog of your favorite instrument. No obligation. Tear out coupon now.

BUESCHER BAND INSTRUMENT CO.
Everything in Band and Orchestra Instruments

new accounts for the savings department. When one of the clerks above me was fired, I went in boldly and asked for his job, and got it. The cashier, in promoting me, commented on my hard work, which gave me a thrill; but the boys over whose heads I had been jumped were openly resentful.

This was one of the penalties of progress, I said to myself; a man couldn't forge ahead without creating some ill feeling, and I dismissed the matter from my mind. Later, I learned how foolish it is to leave any enemy in the rear, no matter how seemingly unimportant.

By what I am saying I do not mean to cast any reflection upon zealous effort, nor discourage anyone who is earnestly seeking to render extra service in the hope of special recognition. Such zeal and effort are praiseworthy, *provided* a man does not squeeze all the juice of human kindness out of himself in the process nor lose the big prizes of life by fixing his eyes too intently on the immediate promotion.

I MADE steady progress through the various stages of the organization until, at twenty-nine, I became an assistant cashier, and felt secure enough to marry and undertake the purchase of a home. That I was not popular in the bank I knew very well, but I attributed it to jealousy. As long as the men above me were sufficiently impressed, I cared very little about the opinion of those below or on the same level. I joined two of the best clubs in the city. The home which I purchased was somewhat out of line with my immediate income, but it was not half equal to my opinion of my prospects. For by keeping my ears open and poking my nose into all sorts of conversations, whether I really belonged or not, I was managing to pick up some very good tips which proved profitable. There was no more satisfied or self-confident young man of thirty in Chicago than yours truly.

Then like a thunderbolt came the panic of 1907. Banks closed their doors, merchants failed. My own speculations crumbled in the dust, leaving me with nothing but an equity of fifteen thousand dollars in a house which nobody wanted to buy. To cap the climax, I lost my position.

The president of the bank, himself, did me the honor of firing me. It was quite a crisp, businesslike interview. He was kind enough to say that my energy and ability made them regret losing me; but that I was, after all, one of the younger men and better able to shift for myself than the men who had been there longer and had heavier responsibilities. Whether he knew about my speculative losses I could not tell, but I suspected that he did. At any rate, he could see clearly enough that he was talking to a very crushed young man, and his heart softened a trifle.

"I'd like to talk things over a little further with you, Joe," he said. "Could you come back here after dinner this evening? I have a dinner engagement at the club, but I'll be here at nine o'clock."

Grasping gratefully at any straw, I said that I should be there. At nine o'clock promptly he came in, offered me a cigar, lit one himself, and thereupon treated me to the most useful conversation of my whole career. It began curiously enough. He reached down into the lower drawer of his desk, pulled out a very worn little volume, thumbed it over for a minute, and then passed it to me, opened in the middle.

"I wish you would read those two pages," he said.

What I read was the following, which I have condensed somewhat in the interests of brevity:

> I propos'd that we should all of us bring our books to the club-room, where they would not only be ready to consult at our conferences, but become a common benefit, each of us being at liberty to borrow such as he wish'd to read at home. This was accordingly done, and for some time contented us.
>
> Finding the advantage of this collection, I propos'd to render the benefit from books more common, by commencing a public subscription library. . . .The objections and reluctance I met with in soliciting the subscriptions made me soon feel the impropriety of presenting one's self as the proposer of any useful object that might be suppos'd to raise one's reputation in the smallest degree above that of one's neighbors, when one has need of their assistance to accomplish that project. I therefore put myself as much as I could out of sight, and stated it as a scheme of a *number of friends*, who had requested me to go about and propose it to such as they thought lovers of reading.
>
> In this way, my affair went on more smoothly; and I ever after practic'd it on such occasions; and from my frequent successes, can heartily recommend it. The present little sacrifice of your vanity will afterward be amply repaid. If it remains a while uncertain to whom the merit belongs, someone more vain than yourself will be encouraged to claim it, and then even envy will be disposed to do you justice by plucking those assumed feathers, and restoring them to their right owner.

I LOOKED at the title of the book which was, of course, Franklin's autobiography, and, as I handed it back to the president, I could feel a flush mounting my cheeks.

"A great book," he said. "I never went to college as you did, and I'm not much of a reader. But I keep old Ben Franklin right here in the office as the hardest-headed adviser that any business man could have. I don't know what you thought of the paragraphs you have just read, but they made a tremendous impression on me as a young man."

He stopped abruptly and seemed in doubt a minute as to just how he ought to proceed. Then he rose and closed the door.

"I like you," he continued. "I know something about your present worries, and I want you to believe me sincere when I say that they can be, if you will make them, the greatest benefit that has ever come to you in your whole life. I am going to ask you to treat what I say as confidential, and I shall begin with a straight question: Do you regard me as a successful man?"

"Why, yes, sir," I finally managed to stammer. "Of course, you are one of the half-dozen biggest men in the city."

"Thanks," he answered crisply. "If I asked you to tell me by what methods I had become successful you would probably try to flatter me, but your secret thought would be, 'By being shrewder than his competitors. By always looking out first for Number One.' I sha'n't undertake to say what proportion of truth there is in that thought, but I shall say this: It is not the whole truth. The biggest advantage I have had over other men in this city is that I read those paragraphs at the beginning of my career.

"Let me give you one or two examples: Why do we have the account of the X

NEW!

Eveready Layerbilt "B" Battery No. 486, the Heavy-Duty battery that should be specified for all loud-speaker sets.

The Layerbilt patented construction revealed. Each layer is an electrical cell, making automatic contact with its neighbors, and filling all available space inside the battery case.

DIFFERENT!

For greatest economy all loud speaker sets require the new Eveready Layerbilt "B" Batteries

IT WILL pay you, in convenience and reliability as well as in dollars and cents saved, to use this remarkable battery.

The reason for the Eveready Layerbilt's surprising performance lies in its exclusive, patented construction. No other battery is like it. It is built in flat layers of current-producing elements, making practically a solid block. The layers make connection with each other automatically, and occupy all available space inside the battery case. Layer-building packs more active materials in a given area, and makes those materials produce more electricity.

Every loud-speaker set should use Heavy-Duty batteries, for they alone offer economy on modern receivers. When you buy new "B" batteries, be sure to get the Heavy-Duty size, and remember that the Eveready Layerbilt has proved to be the longest lasting, most economical of all Heavy-Duty batteries.

Our laboratories are continually testing batteries, and in all our tests we have yet to find a battery that is equal to the new improved and radically different Eveready Layerbilt "B" Battery No. 486. The development and perfecting of this remarkable battery is an outstanding battery-building achievement. It is the result of many years' experience plus the facilities and resources of the pioneer manufacturers of all dry cell batteries.

Your gums need calisthenics, too!

MANY of us find time for regular exercise to keep our bodies in trim. And even when the "daily dozen" is omitted, our muscular tissues in the course of a busy day get some work and stimulation to keep them healthy. But our gum tissues get none.

They are robbed of exercise by our modern diet. For these soft, delicious eatables we prize so highly have lost their invigorating properties. They are stripped of their roughage. They fail to keep the blood within the gum walls in lively circulation.

That is why gums soften and become prey to disease. "Pink tooth brush" is only a fore-runner of more stubborn troubles.

How Ipana and massage offset the harm that soft food brings

Very logically, the dentists turn to massage of the gums as the remedy. And, further, thousands of them direct that the massage be performed with Ipana Tooth Paste *after* the regular cleaning with Ipana.

For Ipana contains ziratol, an antiseptic and hemostatic well-known to the profession. Its special properties enable Ipana to aid in the toning and strengthening of the weak, undernourished tissues.

Switch to Ipana for one month

You'll find Ipana's flavor a delicious surprise. And Ipana will keep your teeth white and brilliant. The ten-day trial tube will readily prove these things. But the better plan is to get a full-size tube at the drug store. Use it faithfully for a whole month, and see how your gums respond to good care!

IPANA TOOTH PASTE

BRISTOL-MYERS CO., Dept. J47
73 West Street, New York, N.Y.

Kindly send me a trial tube of IPANA TOOTH PASTE. Enclosed is a two-cent stamp to cover partly the cost of packing and mailing.

Manufacturing Company in this bank, do you suppose? You know it is one of the most desirable accounts in the city, and that hardly a week goes by without one of our competitors soliciting it vigorously. Yet it sticks to us through thick and thin. Why? Because twenty years ago, when that company was going through a very serious period of reverses, and every other bank ran to cover, I stood by and helped the company through. That's why our competitors waste their time and breath when they go over to argue how much better they could serve than we do.

"Take the Y Company. Its regular balances with us are more than half a million dollars. That company started in a kitchen, with two boys and their mother, and a kitchen stove. I knew those kids, and believed in them. I lent them a thousand dollars, and guided them along the first mile of their business journey. One of our competitors sent a vice president to Florida last winter just to brush up against those boys and try to get their business. But I did my brushing up against them when they needed it.

"IF YOU'VE got the idea from what I've been saying that I've been doing decent things all my life just to get people to do good things for me, I've expressed myself clumsily," he continued. "Perhaps I kid myself. Perhaps I am much more selfish than I imagine. But what I think is that I really *do like* people, and that doing things for them is the grandest game in the world."

He looked at me searchingly.

"What are you going to do?" he demanded.

I told him I had no idea: I was crushed and bewildered, all my handsome plans tumbled about my ears.

"I'll make a suggestion," he offered. "I'll lend you five thousand dollars on your equity in your house. You take your wife and baby and go away for three months. Rest; learn to play golf; don't read the financial pages, and try to forget everything, yourself most of all. Practice a little this game I've been telling you about, by doing things for other people. At the end of three months the financial skies will be clearer.

"I don't think you ought to come back into the bank," he added quickly, and my spirits shot down to zero again. "There are too many people here who don't like you, and you'd be starting under a handicap. But I have some friends in —— (naming a thriving city) who are planning to start a bank just as soon as business picks up. If you come back from your vacation in the spirit which I think you'll have, I'll send you there with a letter. They'll need a man who has been trained in a big city bank."

He rose, gave my hand a vigorous shake, and before I could muster a word of thanks he had managed to get me out of the door.

Thus it was that I came here as vice president of a baby bank, at half the salary I had been getting in Chicago, but with considerably more than twice the opportunity. We worked and made progress, and the bank to-day is as nice a property as any institution of its size in the country.

I say "we worked;" but there was something more than work in our formula. From the day of my arrival, I began deliberately to practice the program which the president of my former bank had described to me. Indeed, I began before my arrival. On the train which carried us into town was a woman with two half-grown children and a crying baby. I helped her get food from the diner, and amused the older children while she put the baby to sleep. I never supposed I should see her again. You may imagine, then, my surprise, at the first reception to which I was invited here, to discover her as my hostess, the wife of one of the ablest young lawyers in the city.

To give a detailed account of my career would cause me to be discovered in the rôle of author, which I can hardly afford; also, I should be going over very much the same ground covered in the talk with my old boss, the Chicago bank president. All that he had suggested that night I endeavored to carry out.

I gave instructions to have my salary check divided into three parts, when it reached a figure large enough so that it *could* be divided. Forty-five per cent went into an account from which my wife paid all bills. Forty-five per cent went into a savings account, and was used for investments in local enterprises, run by young men, and giving promise of a big future. The remaining ten per cent went into a fund which I called my "Down-but-not-out-club fund." Of the payments that were made out of that fund, and what they did for the men who needed just a little help at a very critical time, I have neither time nor space to tell now. But I should hate to try to figure out how much has been added to the growth of this bank by the friendships of powerful men in this city who once were almost down.

At first, it was hard work to forget myself. I had been so long introspective, self-centered, envious of others' successes, restless for fear I was overlooking some chance, that I found myself repeatedly slipping back into the old ruts. But always, on making that discovery, I pulled out with a jerk by deliberately seeking a chance at once to help somebody else. Little by little, the kindliness, which at first had been hard and mechanical, became second nature. There was so much fun in it that I forgot to consider it as a matter of possible profit. And at that point, the real big profits began.

I HAVE seen amazing things take place in my business experience. Let me tell you just one: I know a man who made a tremendous sacrifice to stay with the business which was demoralized by his father's death, because he believed it his duty to clear off the debts and remove any possible criticism from his father's memory. He plunged into the task, forgetting every personal consideration, and not only saved the business but also developed a new process which has made him immensely wealthy. If he had accepted the position which looked so promising, he would still be a salaried officer, and nothing more.

All of which means, as I understand it, that if a man practices doing things for other people until it becomes so much a habit that he is unconscious of it, all the good forces of the universe line up behind him and whatever he undertakes to do.

"Now's our chance. I'd rather listen to the Radiola any day, wouldn't you?"

Radio that scored a musical triumph

A GROUP of famous acoustical experts came together for a hearing—before this new type of radio was ever shown to the public. After ten or twenty minutes of listening, a quiet hand switched off the new and on the old. And the men jumped from their seats!

Even their trained ears had been so accustomed to the older type of reproduced music that they could not grasp the great difference in this new radio, until they *heard the two together.* But when they heard it, they applauded.

This new thing in radio—and in music—was developed into Radiola 28 with the RCA Loudspeaker 104. Power was employed, not primarily for use in big rooms—though it can fill a hall with the music of a great orchestra. The real purpose of the new power in this home radio set was for its remarkable effect on *tone quality*—even in the softest music.

Radiola 28 with RCA Loudspeaker 104 made possible new perfection in musical reproduction.

Radiola 28, eight tube super-heterodyne. Particularly fine for apartment homes in crowded broadcast areas, for it needs no antenna, and is extremely selective.
With 8 Radiotrons . . . . . $260.

RCA Loudspeaker 104, complete, $275. A. C. Package for adapting Radiola 28 for use with Loudspeaker 104, for operation on 50-60 cycle, 110 volt A.C. lighting circuit, $35.

Do what these experts did. Listen awhile to this RCA combination . . . . then tune in any other. The difference *is* startling! With this development the engineers of RCA—with their associates in the laboratories of General Electric and Westinghouse—added one more triumph to the list of their many basic radio improvements.

Tune in Radiola 28 . . . . with the motion of a single finger. The loudspeaker is across the room—plugged in on the house current. Tune to a fine orchestra, and hear the music of each instrument clear and true!

Today—thoroughly tested and perfected—this combination has won many musicians to radio. And it has made possible great music at home, as it never could be heard before.

NOW FREE!

Raised My Pay 700%

This Book Showed Me How

How would you feel if your salary suddenly jumped seven times greater than before? That is exactly what happened to O. A. Jones of Missouri after reading this amazing book—now sent free to everybody. An unusual case? No. E. L. Palmer went from $3 a day to $4000 a year. F. J. Walsh went from $20 a week to $7285 last year. C. V. Champion became President of his company at a salary exceeding $10,000 a year! And all of them started by reading this free book!

The Secret of Big Earnings

Many of the successful men in the world today are successful salesmen. And every man is a salesman. if you want to make big earnings, you must learn to sell yourself. You must absorb the methods of saying and doing things that make men act as you want them to act. There is no more false statement made than the old saw about "salesmen are born—not made." Salesmen are made—not born! This free book shows how!

Big Demand for Master Salesmen

Master Salesmen are at a premium in American business today. They are never out of work. They can command their own salaries and their own time. They travel and see the country—the world. They dress well, live in the best homes, drive their own cars. Aren't these rewards worth going after?

How We Help You Succeed

For nearly twenty years, N. S. T. A. training has been developing Master Salesmen. The National Demonstration Method—an exclusive feature—gives you the equivalent of actual experience while studying at home. Our success in training inexperienced men into powerful salesmen is so world-famed that thousands of leading business houses have called on us to supply them with salesmen. This service is free—and we have placed thousands of men in good-paying positions.

Send for This Free Book

Don't say "I can't sell" until you find out whether you can or not. This free book, "Modern Salesmanship," proves that master salesmen can be made, regardless of personality, education or previous selling experience. Send for this free book right now.

Riders of the Gale

(*Continued from page 37*)

Akron, and has been with them ever since.

Within three months, he made his first flight in a balloon, and it was the forerunner of many others. In 1919 he participated in his first national balloon race as aid to Ralph Upson, a veteran pilot; he flew again as Upson's aid in the 1920 race. They won. In 1921, and every subsequent year, Van Orman has piloted a balloon himself, and for the three years, 1924, 1925, and 1926, he has won first place.

He participated in the international races first in 1920, again as aid to Ralph Upson. In four subsequent years also, 1921, 1924, 1925, and 1926, he took part in the international. In 1926, in a race where the conditions were extraordinarily severe, he won by flying twice as far as his nearest competitor.

"THE popular notion of a balloonist," Van Orman says, "is a man who makes parachute jumps at county fairs to give the visitors a thrill. No doubt it is a shocking thing for me to confess that, although I have made thousands of balloon ascents, I have never made a parachute jump in my life, and never expect to.

"Scientific ballooning is a wonderful sport—and much more. It is serving important scientific ends. By means of it, we are learning many hitherto unknown meteorological facts, and are accumulating facts which promise to be of incalculable value. We are testing and experimenting, and preparing for what may become one of the important methods of passenger transportation of the future.

"Heavier-than-air craft have played a great part in the recent history of aviation; the function and possibilities of lighter-than-air ships have not been fully appreciated. Some men who have given the matter much thought believe that the trans-oceanic passenger service of the not remote future will be lighter-than-air aërial service. This, of course, will be an air*ship* service; that is, motorized balloons, and they will be huge affairs, capable of carrying six million cubic feet of gas or more. The largest free balloons carry less than one tenth of *one* million cubic feet of gas, therefore you can judge what enormous affairs they will be. Free balloons are those which have no motor or means of locomotion other than being blown by the wind.

"The sensation of flying in a free balloon is similar to that of riding in an airplane in that, in leaving the earth, you have no sense of motion; rather, the earth seems to sink away beneath you. But once you are in the air, there is no sense of motion at all, for you move *with* the wind, and at the same speed as the wind. There is absolutely no noise. We hear the wind 'whistle' on the ground only because it strikes against something that offers resistance to it. The balloon does not resist. Only once did I ever hear wind in the rigging, and that was when we were ascending from one air current traveling at a certain rate of speed in a certain direction, to another current traveling at a different speed in a different direction. At that time, too, there was a slight swaying, the only motion you ever notice in a balloon in the air.

"In spite of the fact that the balloonist has to go wherever the air currents take him, success in flying is not a matter of luck. Sometimes luck is a factor, and a few important races have been won by flukes; but consistent winners, men like Lieutenant de Muyter, of Belgium, and Captain Honeywell, of the United States, do not depend on luck, but on their knowledge of air currents and meteorological forces, and their ability to manipulate their balloons to take the best advantage of conditions.

"In the 1924 national race, to cite one little example, San Antonio, Texas, was our starting point. I reckoned Captain Honeywell was our most formidable competitor.

"That year, for the first time in any race, I carried an excellent radio receiving set. Toward the afternoon of the second day, having traveled in a generally northerly direction for eight or nine hundred miles, I felt we must have gone nearly far enough to assure us the victory; but about then we picked up the news on the radio that Captain Honeywell was still in the air, and had covered more distance than we had!

"From statements of his position, I surmised he must be following the same general storm movement, or air currents, in which we also were moving. These storms travel roughly in great circles; and, as in any other circle, the nearer you get to the circumference, the more remote you are from the center or any point of the other side of the center. I saw in this fact our only possible chance to wrest victory from the captain.

"Releasing enough ballast to rise to seventeen thousand feet, we fell in with another set of air currents traveling in an easterly direction. They took us fully one hundred miles to the east of the point where we had picked up the news about Captain Honeywell. We then released some gas, and descended to our former altitude of about ten thousand feet, and encountered the former storm currents; but by now we were on their outer circumference. We rode there until the next afternoon, when we had to descend.

"We learned we had won the race. Our margin of victory was a scant *twenty* miles. We could never have won at all had we not been able to make good use of those upper air currents.

"ONE of the merits of free ballooning is what it teaches about air currents and meteorology in general. Practically all that we know about the topmost air areas, where there is too little oxygen to support human life, has been learned by the use of free balloons sent up with no passengers, but with self-recording scientific instruments. These instruments are equipped with parachutes that automatically open when the balloons burst. One of these balloons has been known to rise to a height

Ask *me* how I like Prince Albert!

IF YOU want to hear a speech that will put the silver-tongued boys to shame, get me started on *that* subject! You're talking my language when you bring up pipe-smoking. I've got diplomas in that! How do I like Prince Albert? First of all, I like it *frequent!*

"Frequent" is right. I start in the minute I've folded my breakfast napkin and stay with it until I snap off the light for the night. No matter how often I load up and light up, P. A. never nips my tongue. It is cool and consoling. Every puff is a genuine joy.

Cool as a tax-collector. Sweet as an extra dividend. Fragrant as the flowers that beckon the bees. Mild, too, with a mildness that lets down the bars—yet with that full, rich tobacco body that spells Satisfaction with a capital S. That's Prince Albert, Men!

I say to you in all seriousness, that what you get *out* of your pipe depends on what you put *into* it. If you have never smoked P. A., you have never really experienced 100-per cent pipe-pleasure. Buy yourself a tidy red tin of P. A. today and make up for lost time!

P. A. is sold everywhere in tidy red tins, pound and half-pound tin humidors, and pound crystal-glass humidors with sponge-moistener top. And always with every bit of bite and parch removed by the Prince Albert process.

PRINCE ALBERT

—no other tobacco is like it!

Taking *the* Drudgery out of night work

UNDER the urgent pressure of modern business, there are inevitable occasions when a man MUST "Take his office home with him at night." Here, in the quiet hour of release from office pandemonium, he can THINK wisely and well. Such men "get ahead."

"Your Private Secretary" at home is your Globe-Wernicke home desk. Here system-inspiring partitioned drawers—large correspondence drawer with steel letter compressor holds your filed records erect, tabbed, handy—all eager to pitch in and help.

Here is a beautiful desk that will win the lady of the house herself—its sure-footed, sturdy, practical features make it a permanent part of every home. Its price, too, is amazingly attractive.

Your study corner is a reality when you see this new home desk at your dealer's store. Ask him about it—or mail the coupon today for the booklet, "Your Private Secretary."

of one hundred and six thousand feet, or nearly twenty miles, which is about three times as high as the highest altitude ever reached by man. If any purpose would be served, with a satisfactory means to supply the oxygen to keep us alive, there is no mechanical reason, so far as is known, why we should not ascend in person to similar heights in free balloons.

"The dangers of ballooning are so few as to appear almost negligible. Perhaps the one danger greater than all others is lightning; yet this the balloonist can easily avoid. Electrical discharges from the clouds to the earth are not likely to hit him, but only discharges from cloud to cloud. The area of danger, when there is any danger, is roughly in the region from three thousand to eight thousand feet above sea level. Below three thousand feet, and above eight thousand feet, there is practically no danger at all.

"Only once was I ever in any real risk of my life, and that was not from lightning or anything of that sort, but was entirely due to a foolish mistake of my own. During the war, when I was busy training balloonists for the Navy, and thought I was badly needed, I was taken down with typhoid fever in spite of all inoculations to the contrary. It made me furious to think I had to lie in bed for nine long weeks, and I got up and around at the earliest possible moment.

"For a week I puttered around, trying to regain my strength; by the end of that time I imagined I was a good deal stronger than I actually was, and decided to make a flight. A certain man in training was ready for his *solo*, as we call it; that is, he was to take up a balloon and bring it down all alone. Three of us climbed into a balloon and flew with him to a place some little distance away, where we planned to get out and let him do his stuff.

"The idea was that, as each of us stepped out of the basket, he would hold on to it until enough sand was piled aboard to make up for his weight; otherwise, the balloon would leave the ground before we were ready. As I say, I had greatly misjudged my strength. It came my turn to hold on to the basket, but I suddenly found I could not hold the balloon down. It started up. I went too, clinging to the outside of the basket!

"This would have been of small consequence if I had had my customary strength; I would merely have pulled myself over the edge. As I was, it was utterly beyond me to do that, and, in fact, it was all I could do barely to hold on.

"The man in the basket went white.

"'What shall I do?' he whispered.

"I summoned all my strength and replied, 'Pull the valve cord.'

"He did as directed, gas escaped, and we began to descend. I managed to hold on until we touched ground.

"I CURED my wife of feeling any special concern about my safety when I am in the air by taking her for a balloon ride. We had a beautiful trip, flying for eight hours from Ohio into New York; and when I decided it was time for us to come down, she begged to keep on going!

"A race, of course, often involves a lot of strenuous work. You may be in the air as long as thirty-six or forty-eight hours with little sleep, or none, and perhaps with a lot of hard work on your hands in handling the balloon, in addition to developing your strategy of the race. It is amazing to me, however, what a difference the radio makes. It is one of the greatest aids to ballooning developed in recent years.

"A race used to be a long, weary grind, in which two men, absolutely cut off from communication with the world, were constantly being worn down, until their vitality reached almost the breaking point. Success, even in a balloon race, may depend largely on the physical condition of the contestants, and their ability to think clearly and take advantage of every possible condition of air and weather. Sleep is the great reconditioner. In a balloon race, however, the amount of sleep you can get, if any, is sure to be limited. But with a good radio receiving set along, even if you cannot sleep you can listen to music. I will leave the explanation of the effect to psychologists, but it is a fact that you can do a stiff twelve- or fifteen-hour trick, after twenty-four or thirty hours of constant going, and a concert afterward seems to refresh you almost as if you had slept.

"I SHALL never forget one night in 1925, in the national race of that year. It was a moonless, starless night, black as the inside of a cat, and near midnight. We seemed to be utterly alone. Suddenly a voice spoke in the corner of the car. It was my wife!

"I had known she was going to broadcast a message to me at that time. But the sensation of actually hearing her under those circumstances was eerie. The radio on the ground is wonderful, but somehow it is impossible to free your mind of the idea of wires, or waves through the ground, or some other tangible physical medium for carrying the messages you hear. But at ten thousand feet in the air in a balloon, you have the sense of being cut off from all physical ties with the world. Then it is that you realize the real wonder of the radio.

"In the 1926 international race I carried a fine receiving set, and might almost say it won that race for us, not merely by keeping up our spirits but also by rendering a more tangible service. The weather conditions in that race were terribly bad. We left the ground in a gale of wind so strong that sixty soldiers were required to keep the balloon from leaving the earth before we were ready to go, whereas fifteen are ordinarily enough. Four of the balloons entered did not leave the ground at all, and four more merely rose high enough to fly over Antwerp, shout a couple of '*Vivas!*' and drop down on the other side. Once, before we received the order to go, our own bag was blown to within six inches of the ground. Rain fell almost incessantly for eleven or twelve hours after we took the air. In the clouds and fog we could hardly see fifteen feet. As we went higher, the rain became snow, and icicles formed on the ropes.

"We were well outfitted with means to determine our location; we had a list of all lighthouses, so that if necessary we could count the flashes, and tell where we were; we also had plats of principal cities of that part of Europe, so that we could tell from the street layouts what the places were; and of course we had the finest maps it was possible to procure.

Clean, Smooth Streets
OF LASTING BEAUTY

The lasting beauty and even surface of concrete pavement, combined with its remarkable durability under the heaviest traffic, make it the ideal material for downtown streets as well as for residential districts. Write Portland Cement Association, Chicago, for a booklet which tells all about concrete streets.

WHAT impression does your town make on visitors — on you? Of course you who live there want it to be beautiful and attractive — because it is good business, and for your own happiness.

Consider your streets. Are they crumbling under motor traffic which must pick its laborious way around ruts and holes in a street designed for the horse and buggy? Or are they smoothly paved — clean and attractive — a good advertisement? Do they make the visitor wish to return?

Concrete is the ideal pavement for this motor age — in roaring metropolis or prosperous rural town. It is economical both to build and maintain, distinguished in appearance and — the safest pavement wet or dry.

CONCRETE
for permanence

1827 THE 100TH YEAR OF DIXON SERVICE 1927

But with the fog and rain we could not make use of any of these for direct observation, and even our sextant was useless. It was at this point that the radio, employed as a compass, came to our aid.

"The principle of the radio compass is that when you are receiving from a certain station, messages come loudest if the loop of the receiving set is turned directly toward the sending station; you can very nearly tune out a station some distance away by turning the loop so it faces ninety degrees away from the station. Your receiving set, therefore, enables you to determine very accurately from what corner of the compass a message comes, and you can draw a line on your map through the city where the sending station is, in the direction indicated by the compass; you know that you are located somewhere along that line, but of course you may be a hundred or a thousand miles away.

"That information by itself is practically useless. The next step is to get a similar line on another sending station, and draw a second line on the map; and the point of intersection of the two lines, barring errors, is your location.

"On the night of the 1926 race, while we were completely 'blind' in the fog and rain and had not the least idea where we were, I tuned in, and got Bremen. I drew my line on the map, then tuned in with Hamburg, and drew a second line. I assumed that we must be somewhere near the point of intersection of the two lines, but I wanted to be quite sure. I tuned in once more, and got Madrid, Spain, and drew a third line on my map. It was almost startling to see that it crossed *within one mile* of the spot indicated by the first two lines. Five minutes later the rain forced us down to five hundred feet above the ground; and the city of Bremen, verifying our position, appeared through the fog below us. Nothing during that race reassured us so much.

"Our landing point on this race was a potato patch near the little town of Solvesborg, in Sweden, and we had the misfortune to knock over a telephone post, an accident that ruined nearly all of my instruments.

"AN AMUSING incident followed this particular landing. The police met us upon our entry into town with a demand from the telephone company for pay for the post we had knocked over. They took us to the station and, after they found who and what we were, had us come back two or three times, making a circus of us, until I got thoroughly tired of it. Of course during this time we had no news as to the outcome of the race.

"That afternoon we visited several shops to buy souvenirs we wanted. At the first store we entered, a little man, wearing, to my intense disapproval, a brown derby hat, came in and addressed us. He could not understand English; and we knew no Swedish. However, he addressed us in great and growing excitement, and finally got so wild that he fairly jumped up and down. But it was no use; we couldn't understand a thing. At last, I impolitely turned my back and visited another shop.

"He followed. Again he talked and gesticulated, and jumped up and down. This continued in the next store, and the next, and was a great nuisance. I thought the stranger was from the police, and at last I sent for a man who had done some interpreting for us earlier in the day.

"'Tell this chap,' I said, 'that I'm not going to call on the police again. If they want anything more, they can refer to the American consul.'

"The interpreter conversed with the little man; then turned to me.

"'He is trying to tell you,' he said, 'that you have won the international balloon race!'

"I instantly lost all prejudices against little men in brown derby hats!

"ROUGH landings, such as ours in Sweden, are not common in ballooning. In fact, a balloon landing is a good deal like an airplane landing, as we can come down at practically any place we choose, no matter what the condition of the wind may be. A kind of landing place I often look for is an open field beyond a woods. The trick of landing in such a place is to descend fairly close above the trees and drop the drag rope. This rope, which is from one to two hundred feet in length, depending on the size of the bag, drags among the tree tops and offers enough resistance to slow down the balloon. If still more resistance is required, we descend a little lower and let the basket itself brush along among the tree tops. By the time we reach the far edge of the woods, the balloon is traveling very slowly, and it is an easy matter to let a little more gas escape, and drop down into the field in the pocket of still air which the trees, acting as a windbreak, create.

"A couple of pontoons attached to the basket serve a dual purpose in landing; they act as shock absorbers if you descend on land, and prevent you from sinking if you come down on the water.

"A successful landing may produce hardly enough of a jolt to spill a cup of water. If no trees are handy, your drag rope runs along the ground.

"It is usually possible to land within a hundred feet of any spot you select. Once, to avoid a wetting, I had to do it in considerably less than that. It was during the international race of 1924, and we were forced down in Holland near the North Sea. The ground was netted with canals flowing between gardens, and they were not more than fifty feet apart. We didn't get wet, but we practically ruined a Dutchman's pea garden!

"In one race we missed our guess a little, and landed at a spot in southern Minnesota right across a railroad, with the bag on one side of the track and the basket on the other. Just as we touched ground, I heard the whistle of a locomotive! We had barely time to run down the track and, with the aid of a section crew, flag the train. Even at that, after nearly everything was clear, a second train came along, and cut our guy ropes in two!

"In the national race of 1926, when the starting point was Little Rock, Arkansas, we flew very nearly to Norfolk, Virginia, and had enough gas and ballast left to carry us several hundred miles farther than we actually went. But I decided to sacrifice the few remaining miles to the Atlantic, even if I risked losing the race. We had left Little Rock on April 29th.

A NATION-WIDE INSTITUTION-
J.C.PENNEY Co.

The 25th or Silver Year of

This Nation-Wide Shopping Service

To Be Signalized — Starting April 1st — by

Extraordinary Memento Offerings

FOR a quarter of a century the J. C. Penney Company Department Stores have been solving the shopping problems of American families through utilizing their tremendous cooperative buying and selective power.

Our great buying advantages and cash purchases save millions of dollars every year. These important savings are passed on to our customers in better quality at lower prices.

The J. C. Penney Company has become a household word thruout the United States for *quality* in General Dry Goods, Outer Apparel, Millinery, Corsets, Dress Accessories, Clothing, Hats, Furnishings, Footwear for the entire family, also well-known Notions at 4c. and 8c.

Some of our own Nationally-known brands and values: Lady-Lyke Corsets, 445 and 449 Full-Fashioned Silk Hosiery, Honor Muslin, Penco Sheets and Sheetings, Ramona Cloth, Pay-Day Overalls and Work Shirts, Nation-Wide Work Suits, Big Mac Work Shirts, Marathon Hats, the famous J. C. Penney Company Shoes and other brands.

The convenient location of our 773 Stores, distributed over 46 States, gives everyone the advantage and pleasure to be had from personal selection. If there is not a J. C. Penney Company Store near you we would like you to write to us.

26-PIECE SET

Original and Genuine Rogers' Guaranteed Electro Table Silverware

6 Forks	6 Tablespoons
6 Knives	1 Sugar Shell
6 Teaspoons	1 Butter Knife

$5.90

Per Set, In Artistic Box
25c. Extra If Ordered by Mail

PROMINENT among our Silver Anniversary offerings is an extraordinary saving in 26-piece sets of original and genuine Rogers' guaranteed electro Silverplate Tableware.

One of the largest makers of quality silverplate has liberally collaborated with us in providing this Silverware in a new original "Silver Anniversary Pattern," as illustrated above. Its chaste lines and beautiful design will always be in good taste in every home and for every occasion. It is made of the highest quality nickel silver metal with a heavy deposit of pure silver. Knives have quadruple silverplated handles with steel blades that will not corrode or stain. Forks and spoons have reinforced plate where wear is greatest.

The manufacturer's certificate of guarantee accompanies every set. The price—$5.90—is so low as to bring this Silverware within reach of all for everyday use.

This remarkable Silver Anniversary offering is a high spot in our long, enviable history of Value Giving. Whether you buy one of these beautiful sets for yourself or for a gift, it represents one of the most extraordinary savings ever offered.

It is a Great Memento Silver Offering for a Great Silver Anniversary.

"THE PROOF OF GOOD SERVICE IS CONSTANT GROWTH"

$2500 in cash prizes

$1000 for best ceilings

UGLY ceilings with sprawling cracks can now be easily transformed! *Upsonize.*

Then you have *safe* ceilings that even ordinary leaks will not injure—*paneled* ceilings that decorators unite in saying are most-pleasing.

Upson Board goes on in ⅓ the time of *re*-plastering—without irritating muss or confusion. It can never crack—properly applied, should never warp or bulge. Mail the coupon for facts about the $1000 ceiling contest.

$1000 for the best uses of waste space

Reclaim your attic and cellar with Upson Board! Build in an attractive maid's room—bedroom, playroom, or workshop—valuable new living space that should pay for itself by saving heat. $1000 in cash for the best uses of waste space.

$500 for ingenious uses

Aside from walls and ceilings, Upson Board builds furniture, toys, shelves, cupboards, screens. How do *you* use it?

Your way may win you part of $500 in cash. Mail the coupon or ask your Upson lumberman today.

Identify genuine Upson Board by its blue-center edge.

The international race was to be held in Belgium on May 30th. That left us a month to pack up, sail, and get ready for the international race, in which we would be qualified to enter if we took one of the first three places in the national race.

"My maps showed a terrible swamp around Norfolk, and we were headed straight for it. I knew, if we landed in it, it might be ten days before we could get out and bring our balloon out, and that would mean giving up the international race, even if we won the national. So I decided to come down. We actually landed at two A. M. in the moonlight, less than half a mile from the edge of the swamp. And, luckily, we did not lose the race by sacrificing those last few miles.

"If you land on private property, you may do some damage, and of course we always offer to pay.

"THE strategy of balloon racing consists in knowing as much as possible about air currents, so you can take advantage of those that are helpful and avoid any that may hinder you. Sometimes everything sets in against you.

"In the 1924 international race, our balloon left Brussels on the afternoon of June 15th, and, flying at a height of about ten thousand feet in a general southeasterly direction, we finally found ourselves over Kaiserlautern, Germany, at a distance of some two hundred and fifty miles from Brussels. At that point we were becalmed. We sat there without any perceptible movement until evening; I anticipated that at about sunset the wind would spring up again.

"It did so; but in exactly the opposite direction. That is, we found ourselves moving back in almost a straight line toward our starting point of the day before. The question was, What should we do?

"We could have descended where we were, and I felt sure we had flown far enough to claim at least third or fourth place in the race. But I feel in a race that there is only *one* place, and that is first. Therefore, I decided to see if we couldn't maneuver in the air and strike a current that would take us on in our original direction.

"We descended, however, as low as one thousand feet and less, and rose as high as seventeen thousand feet, and found an extremely rare condition: at all altitudes, the wind was blowing in the same direction.

"Finding that we could not go any farther in our original direction, I decided not to land, even then, but to go back, and take a chance on being able to go far enough in the opposite direction to make a decent record. I hoped we might even be able to reach England, and, if we did, I concluded we would still have a chance at first stake. Toward the second morning, after forty hours in the air, we reached the North Sea. Beyond was England.

"But England was two hundred miles away; and we had ballast enough to carry us only ten. Discretion finally seemed the necessary choice, and we came down.

"Our balloon, owing to this freak of the air currents, had flown first in one direction and then back over the same route, covering approximately five hundred and seventy miles: Yet we were officially credited with a distance of ninety miles, for our landing point was only that far from the starting point. In a balloon race, it's not how far you travel, but how far away you get, that matters.

"THE 1926 international race was, on most counts, the hardest one I ever entered. One of the most disagreeable features was the rain. From the time we left the ground until half past eleven o'clock at night, it rained steadily and hard, and, unprotected as we were in the basket, we were drenched and thoroughly miserable. However, we had the satisfaction of knowing that the other contestants no doubt were fully as miserable as we were; furthermore, the rain probably helped us almost as much as any one thing to win the race. We made good use of it.

"At the very top of a balloon is a valve controlled from the basket by a cord; you allow gas to escape through the valve if you are too high and want to descend. This valve is a little heavier than the fabric of the bag, therefore it makes a slight depression like a crater, on top of the balloon.

"Water collected in this depression during the rain. Adding its weight to that of the valve, it automatically increased the size of the depression and collected more water, so that every so often we had an appreciable weight on top of our balloon. It was as if we were carrying so much additional ballast, and the tendency was to bring us down toward the earth.

"Ballast is precious to the balloonist. Even a handful thrown overboard makes a difference in the equilibrium of the balloon, and causes it to rise a little. When the ballast is all gone, the end of the flight is in sight. This is true, because there is a necessary relationship between the amount of gas in the bag and the amount of ballast you carry. Ballooning, in fact, requires continuous juggling of gas and ballast to keep yourself at the altitude where you want to fly.

"There is a natural loss of gas, due not to leakage but to the fact that the sun's rays superheat the gas and cause it to expand, and you have to let some out or the bag would burst. As the gas escapes, you tend to lose altitude; to maintain it, you have to throw some ballast overboard. This process is repeated many times throughout the flight, and if you are up for a long time, your bag, because of losing so much gas, finally comes to look like an old, tired, badly-wrinkled man; and your ballast is nearly gone. Not long after that, you have to hunt a place to land.

"NOW, in this 1926 race, the water which collected near the valve was in effect so much free ballast; and it kept accumulating. When we wanted to rise, instead of throwing out any of our precious sand, we merely pulled the valve cord for a few seconds. Not much gas could escape until the water that covered the opening had poured through; then we quickly closed it. The water came on through the open bottom of the bag, deluging us like a cloudburst. But the process saved us a lot of ballast in the early hours of the contest, enabled us to remain at the altitude we wanted to keep, and probably of itself gave us enough margin over our competitors to win.

When March winds and fire sirens blow

On the nation's fire records, listed among the partly preventable causes of fire, appears the word "Exposure". Against it is written a staggering total in millions of dollars, representing the property lost as a result of fire originating on adjoining properties or in different parts of the same property.

Flying sparks and swirling embers plead most effectively for fireproof construction. A non-inflammable roof is less expensive than the ruin of a home. Writing fire prevention into building plans costs far less than rebuilding after a fire.

The North America Agent can secure for you practical advice on safeguarding your home against the menace of fire from within and without.

Healthy hair is young-looking, abundant

Help *your* hair stay strong and thick

NEGLECT the hair and it grows dull, lifeless. Dandruff infection sets in—and before you realize it you are getting bald.

Don't let this happen! Start now to give your hair the care it needs:

EVERY MORNING moisten hair and scalp with Ed. Pinaud's Eau de Quinine. Then with firm fingers move the scalp vigorously in every direction to work the tonic down to the very hair roots. Brush the hair while still moist. It will lie smoothly just the way you want it.

The response to this care is astonishing! Dandruff disappears. Invigorated scalp circulation feeds the hair to new strength and growth.

Get Pinaud's Eau de Quinine at any drug or department store today. Signature of Ed. Pinaud on every bottle. Pinaud Incorporated, 220 East 21st Street, New York,—sole distributors for Parfumerie Ed. Pinaud, Paris.

Eau de Quinine

How Life Looks to Me at Forty-five

(*Continued from page 53*)

family are very long and very real. I am always conscious of the fact that it is a day's journey back to them. They are in Detroit and I am somewhere else. I cannot imagine them with me; but with my father it is no longer that way. I have but to think of him to have his spirit very near me.

I used to think forty-five was the very threshold of old age. I have changed my mind about that, and I am wondering just when old age does begin. What it is like to feel old, I cannot tell, for I have never felt old.

I married in 1906. Mrs. Guest may not have known it then, but she knows now that she was taking a boy to look after. I still do foolish things; still hanker for pie and cake and candy and ice cream. I am still fond of bats and balls and pigeons and goldfish and puzzles. I am still careless about my clothing. My wife finds in my pockets the disgraceful handkerchiefs of boyhood. I toss my hat on the first chair I come to in the hall; she picks up after me as she must pick up after Bud. Apples on a tree still look better to me than apples in a store window.

I gave up playing baseball some years ago, not because I had ceased to love it but because I had ceased to play it well. In the last game I played, I found myself shirking the hard chances. The boys were getting base hits through me which should have been easy put-outs. I wasn't holding down my job as third baseman. I missed the first hot grounder which came my way, by inches, and I knew that I should have had it. Three years before, I would have handled it without an effort. When another came sizzling my way and my hands flinched, I knew that my baseball days were over.

"Old boy," said I to myself, "you're slowing up. You're missing the ones you ought to get. You've played third base for the last time."

AND now, looking back, I wonder if that isn't what getting old means. Don't we all gradually find ourselves slowing up a bit in the game of life. And then, one day, we suddenly realize that we can no longer handle the fast balls with ease. But so long as the spirit of boyhood survives in us, we can never be really old.

My father was older at forty-five than I am. In his day, there was a marked difference between a boy and a man. A boy was supposed to have his fling, come to manhood, and settle down. And the settling-down process seemed to include an elimination of the boy spirit. Games were for youth, but the burdens of life were for adults. Being a man meant being grave and serious-minded.

Personally, I have never thought it important to be dignified or imposing. I have never grown used to the title "Mister." I have been called by my first name so long now that any other form of greeting seems awkward and unnatural. Only the other day, one of the caddies at our golf club, trained by a caddie master to be respectful to all club members, called out:

"Here's your ball, Eddie."

The other members of our foursome were a little shocked, and one of them even suggested to me that the boy needed a lesson in manners. I took his camaraderie as one of the finest compliments that could be paid me. He was thinking of me not in terms of age, but in terms of boyhood. I am forty-five years old, but I was considered a boy by a boy. That in itself is an achievement.

IT SEEMS to me now that I am constantly discarding price tags. Things which once loomed large and magnificent when viewed through the eyes of vanity and personal pride now look trifling and inconsequential. The more I shop around for the real values of life, the more I realize that most of the things we fret and worry over aren't worth it. Much of our discontent and unhappiness is silly, if we only knew it. Wisdom, it seems to me, consists largely in the discovery of the shams of life. I should say that I am wiser at forty-five than I have ever been before, mostly because I have learned that so many things are not worth bothering about.

What does it matter that the rich people on the other street ignore us? We still have our own good friends, haven't we? We can be happy with them if we will, and we could be no happier with all the rich in Christendom.

What does it matter that some people seem not to recognize our worth or position? We know best our own good qualities. They are neither increased nor diminished by what others may say of us.

I believe that the greatest happiness in this life comes from living for others, and the greatest unhappiness is caused by living to please the whims of others. To grieve that you are not "taken up" is to admit that you have not the ability to get up by yourself.

I long ago made up my mind that I could never see everything, do everything, or share in everything. If I were invited to all the great events in the world, I could not attend them all. Not to be among those present at any gathering creates in me no bitterness or regret. I am living my life as best I can, grateful for what comes to me of pleasure and delight. And I am determined, as far as is compatible with good friendship and good feeling, to reserve some of my time on earth for myself, to do those things which best please and satisfy me. I will not go to dinners and balls and the so-called big events, merely to be seen there. I will go for friendship, not for vanity.

At forty-five, after half a lifetime of sifting values, I have come to the conclusion that there are very few things which really affect a man's usefulness and happiness in this world. I would list six. They are:

Character
Gentleness
Faith in God and Man
Industry
Straight thinking
A willingness to suffer a little that others may suffer less.

Take character: No human being can

Why Camel leads the world

GOODNESS has made Camels the leader of the world that they are today. Goodness means the quality of the tobaccos from which they are made, the skill with which the tobaccos are blended to bring out the fragrance, to produce the mildness, to give that subtle quality and taste that smokers find only in Camel.

Goodness means such a standard of uniformity that the billionth or the trillionth Camel is sure to be just as good as the first. It means the honesty, the truthfulness, the sincerity of purpose to make and keep Camel the leader—the cigarette most preferred by the greatest number.

Have a Camel!

achieve contentment or even tranquillity without it. It is one of the few human possessions which commands universal recognition, and which will always sell at par at any time under any conditions.

Here is an incident which illustrates what I mean by character: Some years ago, in Rochester, New York, an important will case was to be tried. Witnesses and heirs had come from Europe for the hearing. The value of a piece of property was in question. An appraisal must be made, and it would require time to make it. The judge suggested a two-months postponement. This would have meant a great hardship for the foreign witnesses. One of the lawyers arose, and said:

"Your Honor, if we can get him, there is one man who can tell us at once what this property is actually worth."

He named the man, and the attorneys for the other side readily agreed to abide by his decision.

"If he will serve," said one of them, "we will accept whatever price he sets. He has never been known to do an unfair act in all his career."

The next morning, the man came into court, the property was appraised, and the case was settled.

That citizen of Rochester has character —the sort that must be earned, not by one act but by a lifetime of acts. It cannot be bought at any price. It is developed slowly and, once attained, it is more precious than anything else on earth. It is possible to the many; but it is achieved only by the very few. Men can get rich without it, and many do; they can become famous without it; they may have skill, without character; they may win fame, and still be lacking in personal honor. But they will come at last to know that the far more satisfying thing would have been to earn and keep the respect and good will of all their fellow men.

ONE of the qualities that I believe to be essential to full living is gentleness. So many of the things which irritate us to desperation don't really matter, after all. Just a little more patience and good nature would make most of us far happier than we are.

By a strange coincidence, I have just had a chance to practice my own preaching along this line. This article was finished a few days ago. I had put almost a week of time upon it. The morning I was preparing it for the mail, I laid it upon my desk, happy that the task was finished. I had only one copy. I stepped out of my room for a few minutes, and when I returned the manuscript had disappeared. A blazing fire on the hearth told the story. The wind had blown the papers from my desk into the wastebasket. In the few minutes of my absence the maid had entered the room and carried the papers to the fire. Thus a week's labor was lost in one careless moment.

It was a pretty stiff loss. But would anger improve my situation? Could I recover a single page of that manuscript by resentment or ill feeling? I could storm and rage and work myself up into a fury of temper, but I should still have all that work to do over again. I could make the maid miserable and unhappy, and upset the entire household with my wailings, and all to no purpose. At thirty-five, I should probably have acted just that way. At forty-five, I simply said, "From now on, everybody stay out of my room, and leave my papers alone. I'll empty my own wastebasket in the future."

Then I went back to my typewriter and started in again. As a matter of fact, I suspect that this is a better article than the one which was burned. And out of the incident has come this thought: To bewail an accident is pure waste of time. It is better to get busy on what is to be done than to spend a minute deploring what has taken place. Life is to be faced always as *it is*, not as we should *like it to be*. And all the ill temper we display and all the harsh words we speak will not alter any situation for the better.

AT FORTY-FIVE, I know that I could not be happy without faith in my fellow man. I don't believe that you can be, either. Understand, I am not urging anybody to drink in the smooth talk of every fellow who comes along with a gold brick, or a bunch of oil stock for sale. I'm not even suggesting that we should drop in a quarter every time the hat is passed. What I am arguing for is a little more faith in the motives and aims of the chap next door, and a little more charity toward the one at the next desk.

We cripple our neighbors and ourselves when we suspect them of littleness and selfishness. On the other hand, if we stubbornly believe in their generosity, and high-mindedness, and loyalty, they are pretty likely to exhibit these qualities sooner or later.

Faith in God and in the eternal and everlasting purpose of the soul is vital to contentment and peace. Without it, we should be no better than the beasts. Indeed, without faith in God and the hereafter, life on this earth, at its best and longest, would be hopeless and a futile waste of time. If he does not possess such faith, man is doomed from the start; doomed to disappointment and despair; doomed to lose everything he gains; doomed to unhappiness, wherever he may go. If love finds him, it is only to bring him the pain of giving up that love. If everybody believed as he does, he could have no rest and no pleasure. He would be in constant battle. What he gained by fighting, he would have to fight again to keep. The strongest would be the richest.

The folks who scoff at religion to-day are safe only because most of us are believers. The majority of us are decent and kindly and forbearing and forgiving, not because the law says we must be but because we have faith that this life continues; that the spirit progresses and goes on. And in that faith we find consolation for our griefs and strength for our burdens.

I have listed straight thinking and industry as necessary to a happy life. It seems to me that before anyone can do anything well, he must first see the need for the task. And to do that, he must think straight. The most irksome tasks are those beyond which no vision arises. The unhappiest man on earth, I think, is he who is doomed to labor from which he gets no ray of hope and no touch of joy.

If I could have my life to live over, I am sure that I should be more industrious. I have not wasted all my time, but I have neglected many an opportunity, and I have shirked many a task which I wish now that I had performed. Given a sec-

Mountains of precious minerals . . Power of

THE giant buttresses of the Continental Divide form the western bulk of Montana. A dazzling mass of enormous mountains, capped with glaciers, blanketed with primeval forests, with torrents of blue water rushing down their slopes and out upon the vast sweep of open plain to the eastward. The western slopes open into enormous valleys scoured by swirling rivers that rush away through Idaho, Oregon, Washington to the Pacific.

Raw, magnificent country, hardly touched by man, though its potentialities are staggering. Vast areas of unprospected mountains packed with immeasurable mineral wealth. Great timber resources lightly touched. Warm rich valleys of extraordinary beauty.

POWER: One-tenth potential minimum water-power of United States. Volume sufficient to submerge all Montana's plains under six inches of water. Montana already leads in per capita electric consumption. Monthly hydro-electric production, 82,000,000 kilowatt hours.

MINERALS: Second in copper, silver, zinc production. Butte alone has produced one-third of America's copper, one-sixth of world's supply. Two billion dollars mineral wealth from this one spot. Big iron resources. Enormous phosphate deposits. Largest known reserve of manganese in America. *Estimated available coal, 381 billion tons!*

GAS, OIL: One of the largest natural gas reserves. Geological reports now indicate Montana will be among greatest oil-producing centers. Over a hundred companies already operating.

TIMBER: One of the three great bodies of soft timber left in the world extends through Idaho into Montana.

AGRICULTURE: Agricultural Montana occupies chiefly the fertile plains watered by the Missouri and Yellowstone and numerous tributaries. But the warm valleys of industrial Montana are also extremely rich in diversified crops and livestock.

On top of the world

More great national parks are embraced in this mountainland of romance and adventure than anywhere else in the country. It forms the shoulders of the Nation with hands stretched east and west. Its great resources, converted by cheap power into commercial products, are finding rapidly expanding markets on the Pacific. As the Appalachian Mountains dominate the Atlantic Region with their great resources of coal, iron and water-power, so this colossal mountain region is destined to dominate the Nation.

Life is at its best in Montana. Its wine-sparkling climate has reduced the human death rate to one of the lowest on record. It is a big and wholesome country where wild game, mountain trout, indescribable natural beauty add much to the joy of daily existence. It is a land, too, of startling contrasts, where beautiful modern cities are rising rapidly.

One of the proudest boasts of a man of the Northwest is that he is a Montanan!

SHORTEST AND MOST MODERN ROUTE TO THE PACIFIC AND FAR EAST

great rivers . . Richness of plains . . Montana!

Water-power harnessed to the rails

ONE of the most notable advances ever made in transcontinental travel was the electrification for 660 miles of the vast Chicago, Milwaukee & St. Paul system. Electrification extends from Harlowton in Montana across four mountain ranges —the Belt, Bitter Root, Rockies and Cascades—to shipside on Puget Sound. Most of the power is drawn from the Missouri River at Great Falls.

Utilization of this force by The Milwaukee Road is typical of its modern character. Also typical is the equipment of passenger cars with roller bearings—*the first railway in America to adopt this revolutionary improvement.*

Not only does The Milwaukee Road penetrate the mountains and valleys of industrial Montana, its vast system also forms a network over one-fourth the Nation. From Chicago to Kansas City, Omaha and Sioux City; to Milwaukee, Upper Michigan Peninsula, Minneapolis and St. Paul; to the Black Hills; to Spokane, Seattle, Tacoma, the Olympic Peninsula and the Pacific Ocean.

This great artery, 11,000 miles long, employing 60,000 people, brings life and energy to the great body of all the Northwest. Machinery, tools, manufactured products, pure-bred stock, high-grade seeds, and people, pour in an endless stream along its tracks. Raw materials come pulsing back to the great industrial centers both east and west.

When you go West

This year saw imports from Asia gaining over imports from any other part of the world. When you go to the Coast, take the famous *Olympian* over the shortest route to the sea where America comes closest to the unlimited markets of the Far East. Study this significant trend at first hand while passing in greatest comfort through one of the most beautiful regions on earth.

ond chance, I should think more about my job, and know more about it. But knowing how to do a thing is only half the battle; the other half is in performance. He who knows what should be done, and fails to do it, causes more damage than the untrained man who attempts to do the work and blunders. Knowledge is power only when it is put into action. The world is always afraid of the man who is afraid of himself. The world cannot guess what is in a man's head. The timid man may know much; but unless he demonstrates his wisdom, it will remain forever useless.

In every institution, there are men who know more than the leaders. I know several minor employees whose minds are rich treasure-houses of information. They have tools, but they don't use them. They are afraid of responsibility. They stay in the background when they should be in action at the front.

IF I had to start over again, I should learn everything I could, and, once having learned it, I should put my knowledge into service. I should welcome every task as an opportunity to show the stuff I am made of; I should work hard and willingly; I should be keen for responsibility; never too forward or pert or smart, but always on hand ready to be of service. I should not only know my own job, but also the job just ahead of me.

I was driving with some friends in Detroit one day last summer, when we passed the handsome home of a man we all know.

"That's Joe's home," said my friend, who is well over middle age. "It's a beautiful place, isn't it? I'd like to have one like it."

"You could," chuckled his wife, "if you had worked as hard as Joe has."

And that, I think, is the answer. The sentence which she so lightly uttered in jest is as fine a rebuke to envy as I have ever heard.

All that we have at the last stands out as a symbol of what we have been. We get out of this life just about what we are willing to earn. Hard as it may sound, the measure of our possessions—especially our spiritual possessions—is likely to be an accurate measure of our earning capacity.

The longer I live, the more clearly I see that the fine souls are the ones who bear the little inconveniences most gracefully. In the big tests of life, most of us measure up fairly well. But how easy it is to fall down miserably in the small tests. We can all sympathize from a long distance. We can all do nice things when they do not inconvenience us greatly. Most of us, however, are too busy to visit the sick; we are too much occupied with our own affairs to go out of our way to be friendly and kindly and thoughtful. We would like to say a word of comfort and hope and encouragement to the friend who is in deep trouble; but too often we take it for granted that our friend will know that we are thinking of him, without any evidence from us.

It takes time to be a real friend. Friendship is founded on sacrifice. Affection must be earned, and none of us will get any more than he has worked for.

Here at forty-five, I understand clearly what my father meant when he used to try to tell me that beauty of character is not accidental. He was trying to picture for me all that he had found in his journey through the years, trying to show me what he had discovered. But I insisted on burning my fingers to learn that fire is hot. And I had to throw a few stones in order to learn that window panes are easily broken.

Perhaps these experiences have been good for me. I am making no complaint now about my lot. I have much to be thankful for. To me, this has been a kindly and gracious world. But I do know now that I have had the opportunity to be better and finer than I really am, and the fault is all mine that I am not. I have shirked many an inconvenient duty which I wish now that I had performed. I could have filled up the niches in my life with countless little deeds of grace and courtesy which would have brightened my life as well as the lives of many others.

Most tasks are inconvenient and many of them are irksome. Care never comes when it is welcome; duty seldom chooses the hour when we have nothing else we would rather do. Tasks fall to us when we want to play. But it is well to remember that he lives best and is happiest in the end who faces his duty ungrudgingly and bravely, and thoroughly, and with good grace.

TO BE a good friend is never easy. Friendship cannot be achieved without effort and sacrifice. The good man among us stands out because he does the little things so graciously. He comes to us when we are in trouble, as though he were just passing by. Yet he has dropped his own interests and his own business to come out of the way merely to comfort us. The love which we give him for that little service, he has earned. The selfish man could have had it too, but he was too busy to turn aside for us.

At forty-five, this is the picture I would like to pass on to my children: Their lives are rich with opportunities for achievement, but their destinies lie within themselves. They will become exactly what they are willing to make themselves. They will get no more than they are willing to earn; and they will receive from others no greater love than they have been willing to bestow.

"IS COLLEGE Worth Four Years Out of Your Boy's Life?" Offhand, most parents answer that question with an enthusiastic "Yes!" But, according to the president of a famous university, this answer may be wrong. "Fully half the boys whom well-meaning parents send to college would be better off, in all likelihood, if they had never come!" he declares. This is an arresting, an amazing statement to come from an educator; but he has his reasons for opposing the indiscriminate selection of boys for college. In an interview, next month, he maintains that one of the real American tragedies is the unquestioning manner in which parents decide upon college for their children, and deny themselves to get for the boy something he may not want, or is not equipped to use. This educator tells what a college has to offer, and gives a list of questions a boy should ask himself before deciding to enter college. By all means read this article. It will give you something to think about, to talk about, to argue about.

WHERE LIFE IS BETTER

Starting May 15th
CALIFORNIA
$90.30
Round trip from Chicago
to
SAN FRANCISCO
America's Coolest Summer City
Similar low fares from all points
Only $18 additional fare for full Pacific Coast Empire Tour from Canada to Mexico

A women's golf championship at a San Francisco course

A day in the poppy fields near San Francisco

If you were a Californian, you'd enjoy more days of California's outdoor living . . . more week-ends of sunshiny rambles . . . for twelve months each year you'd breathe the fragrance of growing things . . .

GOLDEN POPPIES and blue lupines are blossoming at the edge of San Francisco—acres of them along the roadsides. Bareheaded youngsters who have never seen an icicle in their lives are knee-deep in poppy-fields. You should be in San Francisco now to see how plentiful are California's opportunities for better living—and for success.

Californians are a busy, prosperous people. It is a fact that we five million Californians *make* more money, *spend* more money, and have more money left for *savings* than any other five million average Americans. Income tax statistics, standard of living comparisons and savings bank reports prove it. Look them up!

We work for our prosperity and our fun—and we have more of both. The man who succeeds here, as anywhere else, needs some capital and a lot of enterprise. But if you are the kind of a man who has enough of a stake and sufficient ability to get ahead in your business or on your farm where you are now, the odds are all in favor of a *greater* success in California.

Come out to San Francisco and look us over. San Francisco is your central point, your starting place, for the vacation and the opportunities you want to find in California. By rail, it's almost a business day nearer to Chicago than ever before; by the new Victory and Lincoln Highways you can motor across the country, over good roads, directly into San Francisco.

If you're looking for a farm where life is better, we'll show you not one but two-score rich counties in the Great Central Valley, or smaller valleys equally attractive, where the farmers and the city people who will be your neighbors will see that you get started right. In business, the opportunities are broad, and growing fast.

And for your family—read the letter on this page from a typical "Californian."

San Francisco is the headquarters of Californians, Inc., a non-profit organization of business institutions and citizens active in the sound development of their state. It is ready to give you information on any business or agricultural inquiry, to plan your trip through California whether for investigation or pleasure. Now read this authentic letter:

"Oakland, Calif., Jan. 9, 1927.

"To us as to so many other American families, the close of the Great War brought home the question of our entire future—where we should live and what we should do. Our household furniture we sold for what we had paid for it in pre-war days. In late winter we started for California where we had relatives—and found a land of blossoming orchards!

"Nine joyous years have passed. Our three lads have grown—two of them into young manhood—with school and university facilities of the very highest order, and we have another one, just starting out in life. Life is something of a continuing picnic. I have driven our various cars more than one hundred thousand miles, generally with most or all of the family along. A lake near the Oregon border is named after me because I was the first white woman to stand beside it, and the more widely known scenic attractions of the state, like Yosemite, Tahoe, the great Redwood Highway and the Monterey peninsula, are our familiar friends. A few hours will take us to any of them. Fishing and hunting are ours for the asking. My largest trout weighed 7 pounds.

"If, besides living comfortably, we have all these pleasures, all the time—no wonder we are enthusiastic about California.

[Name on request.] Mrs. B. S. A."

Begin to plan for California now! As the first step, send this coupon, today, for the 48-page illustrated free booklet, "California, Where Life is Better."

WHAT THE *Californian* OWNS:

Climate: Year-round producing climate. *The Californian* can work, grow crops or play every month in the year.
Growth: From 3,500,000 to 5,000,000 population in six years—three times faster than the United States average.
Wealth: Twice the national average of wealth, twice the average number of savings bank depositors and twice the average deposit. Only three states report more income tax returns; none has so many automobiles per capita.
Health: 6 of the 15 most healthful cities in the United States are in California. U. S. investigations prove California children bigger and taller, than the average.
Education: *The Californian's* schools share first rank only with Massachusetts in efficiency. Five states have larger enrollments; only two exceed California's expenditures.
Recreation: Four National Parks, a thousand miles of ocean shore, a thousand-mile-long Sierra playground, 30,000 square miles of National Forests, 42,000 miles of improved roads. Year-round motoring, golf, fishing, week-ending out of doors.
Crops: More than $600,000,000 yearly. Six million acres under irrigation with great mountain reservoirs supplying abundant water.
Industry: One of the youngest states, California is eighth in value of manufactured products.
Markets: From San Francisco's great harbor, the largest on the Pacific Coast, the Californian successfully sells his manufactures and crops throughout the Western and Eastern States, and exports enormously.

For every Californian—here or on the way—these advantages spell Opportunity.

A sailor of the seven seas returns to his home port

TO GET THE TRAINS THROUGH . . . SAFELY, SWIFTLY, AND ON TIME

A hundred miles ahead they prepare for the coming of a swift train like the Broadway Limited between New York and Chicago. At each stopping point, a trained crew is ready to receive it, to go over it with painstaking care, to speed it on again with the utmost security.

When the great Limited pauses in its flight

Over it . . . under it . . . through it . . . skilled inspectors move quickly, quietly, testing every vital part.

YOU have probably seen them at some stop along the way: a group of intent, unhurried men, going over the running gear of your train with sure, professional touch.

Ungloved hand pressed to the journal box for an instant, testing its temperature; an experienced glance at the packing of each bearing; on every wheel careful tests which tell the trained man almost as much as the X-ray could.

And other men whom you did not see were testing water supply, lights, couplings, and a dozen hidden things.

Then at the warning call of departure you climbed back on board again, possibly to bed. And far ahead at the next stopping point another group of men were on watch for your train, to go over it with infinite care, again and again, until it brought you safely to your destination.

Day and night these inspectors are on duty in every terminal, at every division point on the Pennsylvania Railroad.

Almost before your train has come to a stop, they are at their posts, testing, examining, going over every detail of equipment that makes your journey safe, swift, and comfortable.

Martin's Tree

(*Continued from page 23*)

bobcats screeched. And in the long Vermont winters, gray twilight after gray twilight, starry night after starry night, the empty cabin stood buried to its eaves in snow.

Few persons came to the clearing: a group of Boston hikers now and then in the summer, deer hunters in November. Occasionally old Jake Tierman would stop there as he roamed that part of the mountains in search of a bear whose pelt might buy much liquor. It was one of those lost mountain clearings which remain the same, generation unto generation, like the lordly elm on its western edge.

The years seemed to have no effect on that tree except to enhance its majesty. It was first to put out its leaves in the spring; last to drop them in fall. Thunderstorms whipped and clacked about it, mountain winds lashed it to fury, a rumor spread that its higher branches held an eagle's nest. Old Man Tierman's eldest boy tried to climb it one year to find out. He soon gave it up. Its area was too vast, its foliage too dense, its height too terrifying.

AND with the years the War came and ended, and the Peace came, and did not end, and the world took up its addled way once more. But the man who had paid this forest king's ransom from a beggar's purse remained away, and no word returned to tell us of his fortunes.

No word, I say. But the man himself came back—as it was inevitable he would come back.

One hot July night the light screen door of my newspaper office slapped shut behind a fellow whose appearance alarmed me at once. Not until he spoke did I recognize Ellen Bell's one-time lover. Then compassion overwhelmed me.

He was not a derelict. That is, physically. His clothing looked rumpled, but that might have been from his lengthy ride in a sooty train. His soft felt hat was pulled low on eyes that I thought at first were burning with fever. But the old, old ache of loneliness was on his deeply-creased countenance until now it showed itself terrible.

"Martin!" I cried. "What's the matter, Martin Brewster?"

"Thought I'd look in on you a minute, that's all. I'm going . . . up in the woods."

In my private office I closed the door and we talked as men will talk. It was nearly midnight when we finally broke up.

He'd been "all over" as he expressed it, "though places were all much alike." He'd been first to enlist when the war began, last to come from France when it ended. No; there hadn't been any more women. And wearied of wandering around strange cities, he had finished his trek with our town that night. He was going up in the Green Mountains, to the clearing he had purchased, to the tree he remembered, "to end it."

I was jolted by that "end it." Did the fellow mean end the trek, or did he mean suicide?

After he had departed, I began to

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

worry. It was a hot July night in a week of bad thunderstorms. I tossed on my bed and longed for cooling rain. And next morning—"I'm going after him!" I told my family. "The Lord only knows what he may do to himself up there in the solitude of Camp Eleven clearing."

IT WAS long after sunset when I finally arrived in the clearing, sixteen miles northeast of town in the mountains which were slowly being mantled in mauve. Dew was falling on the woodlands, making them doubly fragrant. Somewhere off to the southward a wood thrush sang its peculiar fluted note. Little clouds of gnats rose and fell in the quiet air. And the solitary tree never looked more venerable, more regal.

There was really no cause for my worry of the previous night. I saw Mart's ruddy cabin light, and hallooed from the edge of the trail.

We shared the evening meal and talked. To keep away the mosquitoes, we built a big smudge in the yard. Then we sat out in front of the shack with pipes, for the heat inside was oppressive.

And gradually the stars were blotted out. The low northwest showed intermittent flashes of lightning. Heat lightning, I thought it first. But when faintly borne to our ears came ominous growls of thunder, I knew we might face a storm.

We arose at last and went inside. Steadily the storm came on from the northwest quarter. Martin laid his great hand on my shoulder.

"I think you've worried about me," said he. "Please don't any longer. A summer up here with the Tree will fix me. There's a lot a man can learn from a tree. For one thing, patience. For another, philosophy."

The storm was upon us in another quarter-hour. The night outside had grown black as ink. A storm in these mountains is doubly elemental; never had I seen such blackness, never such gigantic whips of lightning. For ten seconds at a time the clearing blazed with great white radiance, seething sky-flares that prickled the scalp. Every stump and briar patch stood out as though etched in silver. It passed directly over our head, that storm, the thunder smashing at our very doors. Then came the awesome barrage of rain. . . .

We dropped our windows and wedged a log against the one door. In pauses between all that driven fury we could hear the golden trout brook becoming a swollen torrent. In a dozen places our cabin leaked water. It dripped to the floor, hissed on the still warm stove that had cooked our supper, ran rivulets through the bunks.

"Clackity-clack! . . . Boom-m-m! . . . Zip! . . . Zip! . . . Crash! . . . Clack-ity-clack! . . . Boom-oom-oom-mmmmm! . . ."

"Lord!" gasped Mart. "I hope this lightning doesn't hit the Big Tree!"

I shuddered as he said it. We were close enough so that if a bolt did wreck it, our cabin would be crushed like matchwood.

"Listen!" cried Mart hoarsely, "do you hear a peculiar noise?"

"I hear the thunder. What kind of noise?"

But his answer was drowned out by a

The beach at Venice—Los Angeles.

60 Golf Courses.

Palms—Oranges—Snow—San Bernardino County.

Go This Year to a Summerland Supreme

A rare experience is in store for you who love the Great Out-of-Doors—mountains, valleys, canyons, camping, ocean bathing, sailing, motoring and golf. See coupon below.

HERE are the advantages of all resorts in one—where you choose your recreation according to the day's most urgent whim *and are never disappointed by the weather!*

For this is Southern California—*rainless* during summer, yet with delightfully cool days and nights throughout the summer season. *U. S. Government records* of the average mean temperatures in Los Angeles, for instance, for the past 50 years are as follows: 50 Junes have averaged 66 degrees; 50 Julys, 70; 50 Augusts, 71; 50 Septembers, 69. And humidity is always low.

So here even in this glorious, bright, summer sunshine there is no suggestion of depressing heat.

In such a land your sport—no matter what it is—is always at its best and your opportunities are practically boundless.

A new environment, a new topography, new sights, new interests, offer here that complete change which benefits so many people. Orange groves, old Spanish Missions, a great desert resembling Sahara, rich valleys, mountains rising up 10,000 feet and more strange trees and unusual vegetation add variety to charm.

5,000 miles of wonderfully paved motor roads run through it all—down the valleys, through the canyons, up to inspiring elevations where hundred mile views stretch out on every side.

Great wide ocean beaches lure you, camping sites in vast wildernesses excite the fisherman and hunter.

In fact a thousand things to see and do are here access ble.

We have prepared probably the most complete book ever published on the subject of vacation opportunities which we will gladly send you *free*. It tells about this great playground as we could never do it in an announcement such as this.

Get it now, before you make your reservations elsewhere. Decide after reading it where you'll go this year.

Living costs, hotels and boarding rates and rents are very reasonable.

Low round trip fares on all railroads are in effect from May 15th until October 31st. Ask your nearest ticket agent.

Come via Los Angeles and San Diego, return by way of San Francisco, Oakland, Portland, Seattle, Tacoma and Spokane. See the Great Pacific Coast in one memorable trip.

Mail coupon now.

Southern California

All-Year Vacation Land Supreme

The city of Los Angeles, with a population of well over a million, is the largest city on the Pacific Coast and is the hub of one of the country's richest agricultural communities.

The growth, wealth and marvelous resources of Southern California are indicated by the following facts and figures pertaining to the County of Los Angeles alone:

Value of Agricultural and Live Stock Products (1926), $89,807,515; Value of Citrus Products (1926), $26,692,846; Oil Production (1926), 122,564,276 bbls.; Harbor Imports (1926), 4,962,482 tons; Harbor Exports (1926), 17,132,494 tons; Total Harbor Tonnage (1926), 22,094,976.

A producing season of 365 days a year permitting year 'round crops.

jarring roll as of a mammoth bowling ball directly overhead where Titans played at tenpins.

"I hear something that sounds like a lawn mower," he finally bellowed. And catching up the lantern he sprang toward the window. He held it up in front of the glass.

"A lawn mower! What on earth—?"

And then a woman screamed!

A woman screamed, I say—long drawn, agonized, mingled with cascading of torrential water.

"A bobcat!" cried Martin. "They sound like women—when they're hurt!"

"But that sounded just outside. No cat would venture so near our lights." A booming roll of thunder drowned my voice.

Gradually it quieted. Nervous chills played down my spine. Mart turned from the window. "I can't believe—"

"Listen!" I begged him. "I heard a voice!"

We stood, straining our hearing above the roar of wind and water. In that interval a faint cry came distinctly:

"Help! Oh, help!"

Martin caught up the lantern and sprang to the door. He kicked at the log and it fell on my foot. No matter. A wild wash of rain swept into the cabin. Both of us were drenched at once. Our lantern made a sickly light in a void of darkened immensity. Only the lightning could assist us in our search.

The lightning did assist us, long serried flashes of electric magnificence that showed distant mountain peaks against bloodcurdling thunderheads. Yet we scarcely saw distant thunderheads. . . .

"There's a woman over there," bellowed Martin. "Over by the tree!"

I caught a flicker of the picture before the world snapped black. Something white lay beneath the elm. But in those flashes I had seen something more.

The tree's great trunk had been riven open!

I followed Mart somehow. Blinded by the rain, caromed by the gale, our lantern whipped blue, we slipped and stumbled across that tract.

AT THE foot of the fissure we found a young woman.

She was a comely girl with body that seemed partly nude, because of filmy, diaphanous garments made half invisible by rain. Her coal-black hair was a sodden mass, she was bleeding in a dozen places, and her eyes were glazed with shock.

I took the lantern. Mart slipped strong arms beneath her and carried her back to the cabin.

"She came from the tree," whispered Martin as I refastened the door with the log. "Look! . . . her clothes . . . splinters of fresh wood!"

"Nonsense! The bolt opened the tree while she stood beneath it. She was showered with slivers. But why she wasn't killed herself is something I can't understand."

Somehow, I felt Mart didn't believe me. "She came from the tree," he persisted. "The elm gave her to me—my elm!"

"Don't lose *your* sanity, too."

"Well, I'd like to think—"

Suddenly, however, the girl collapsed. Flesh and blood, unable to stand further tension, went limp and flaccid. Her eyes turned upward. Her face paled grue-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

somely. With an awful qualm I thought she had died.

But she did not die. It was only unconsciousness. I shall never forget our night in that cabin.

We covered her with such blankets as we had. We bathed her wounds and bandaged them as well as we could. And she continued in her unconsciousness. We forgot the storm. It rolled off southeastward. By two o'clock the fine, cool night was lighted by a mammoth moon.

Mart and I crossed over to the tree. It had been wounded down twenty feet of its lower trunk. Yet the bruise was by no means fatal. I had seen trees survive worse gashes than this one.

"You see," said I, capriciously, "the opening isn't large enough to have produced our lady of mystery."

"Won't you let me enjoy my little myth?" he asked, with a choke in his voice.

"Well, why in thunder was she ever wandering around these woods in such clothes? And who on earth can she be?"

"I don't know and don't care. My tree gave her to me—for saving its life. That's my explanation, and I'm going to stick to it!"

ALL through those early morning hours the girl's trance continued. I stood by the side of the bunk and looked down in her face. Certainly, I had never seen her before. Mart came and stood beside me.

"Which one of us goes down to fetch the doctor?" he said.

"I'll start at the first signs of daylight. I'm afraid of losing the trail in the dark."

Two hours later I left him seated on a box beside the bunk, a shapely feminine hand in his own, all the hunger of his manhood showing in the eyes with which he watched the sleeper's every breath. . . .

I got down into town at half-past ten. Locating old Doctor Johnson, I drove back with him through Hebron and North Foxboro. We got into the tract by the back road. One of the doctor's nurses accompanied us, bringing a suit case of clothing.

We found them almost as I had left them, the girl still stricken, the big blond giant with his head dropped on his wrists at the bunk edge, asleep from sheer exhaustion.

It was half-past four in the afternoon before Doctor Johnson succeeded in arousing her. But her mind was clouded. She was weak and childlike and piteous. And she remembered nothing. Her eyes remained fixed on Mart's face. At length she whispered:

"You're kind and good, aren't you? You won't hurt me, will you?"

As if he would! He looked at me with a pathetic expression. . . .

He picked her up tenderly at length, as though she had been a child, and carried her down to the doctor's car. He held her all the way around Hebron Four Corners and down the long drive into Paris. The two of them were taken to my home. But the shock had pathetically hazed the girl's brain. Not exactly an idiot. Just helpless.

The story spread over the valley. Nearly everyone had his pet theory. Some said she must have been living clandestinely in the mountains, and the garments in which we found her the vestiges of night

Visit Spokane
"The City Alluring"
—in the Land of Many Lakes

ENCHANTING Hayden Lake, pictured above and only a short drive from Spokane, is one of 76 lakes within 50 miles of "The City Alluring."

Rest and relax on the shores of these beautiful lakes. Fish, boat and swim to your heart's content.

Hike along mountain trails through virgin forests of pine and fir.

See the many points of special interest in and around Spokane, including the geographical wonders of the Grand Coulee; the storied Cœur d'Alene mining region; the gigantic water power development at Long Lake.

Visit old Spokane House, Cataldo Mission and other famed historic spots.

You can spend many enjoyable days in and around Spokane, "The City Alluring."

A beautiful modern city, in the heart of the glorious inter-mountain playground, the natural gateway to Yellowstone Park, Glacier Park, the Canadian Rockies and Rainier National Park.

Spokane
Capital of the Inland Empire

No other territory of equal size is as rich in natural resources. Its farms produce one-tenth of the country's wheat; it contains the largest remaining stand of white pine; its mountains pour forth a steady yield of mineral wealth; millions are being spent in the development of its immense water power resources—truly a land in the making. 2 WEEKS of Wonderful Adventure in COLORADO

In Rocky Mountain National-Estes Park a hundred skyland trails like this await you. Send the coupon for a booklet which tells you all about this charming country

Costs No More *than a* Vacation NEAR HOME

Send for Book

Let's figure a little. Put down these facts about a wonderful vacation adventure this year in Colorado—the *real* vacation you have longed for.

Say you have two weeks. That's enough. Colorado is *near!* You're in the heart of the Rockies the day after you leave Chicago or St. Louis. Ten days—at least—of wonderful fun in the mountains!

Now, the cost. It's much less than you may think. Summer rates via the Burlington are surprisingly low. Convenient lodging and board can be had for as low as $17.50 a week. You would pay as much for an ordinary vacation near home!

And where else *anywhere* will you find the thrills of Rocky Mountain National-Estes Park, the Pike's Peak region, Denver's Mountain Parks, the unforgettable 236-mile Grand Circle Tour? These are only a few of a hundred delightful experiences in store for you.

At moderate additional cost you can also have your Burlington ticket take you to Yellowstone and Glacier National Parks. Only the Burlington's complete service to the entire Rocky Mountain region makes vacation bargains like this possible.

Three fine Burlington trains daily from Chicago and two from St. Louis provide a service to Colorado which anticipates your every travel wish—a service that has won for the Burlington the largest patronage of Rocky Mountain vacationists given to any railroad.

Burlington Escorted Tours

Here is a new, carefree way to see the Rockies—with a Burlington Escorted Tour party. Definite cost covering all necessary expenses. Everything planned in advance. Travel expert with each party. Ask for Tours Book.

Going to California? Don't miss the chance to go via the Burlington and see the matchless Royal Gorge and Salt Lake City.

The coupon below will bring you an interesting book about Colorado. Mail it today.

clothing in which an aberration of sleep drove her forth. Others claimed she must be a summer camper lost from her party, wading down the brook when night and the storm came upon her. But no reports reached us of such a woman missing. Time must solve the mystery. She could not even recall her name.

"She came from the tree. My tree gave her to me," contended Mart whimsically. And though he knew it to be a fancy, he always added: "Anyway, I want to think so!"

THE days passed. The nameless girl recovered her strength. Her wounds healed, and she began to go about. But always Mart was near to assist her. It was heart-pinching, the way he served her. And the manner in which she accepted his ministrations was equally tender and beautiful. She was a girl of amazing grace, though she came only to his shoulder.

"I don't know," she mused piteously as we sought to help her recover her memory. "I remember lawns . . . a lot of people . . . someone I dreaded and was always trying to avoid. Was it something he made me drink? . . . It's all a blank, what happened, except I was falling into someone's arms, and then . . . the awful, awful thunder and lightning. . . . I don't know. . . . I wish I could . . . it's worse than a hideous dream!"

But Mart was no hideous dream. He was very much a reality. And his devotion again grew doglike. He had the right type of woman now, however, the girl he had needed from the first, because she needed him, and his quiet strength, his steady devotion. They appeared on the streets much together that autumn. They made a pretty couple. We hoped they would marry. Dolly Wendell she finally called herself, though she wasn't sure whether that was her name.

She could not recall that she had ever been married, and Mart took the risk. Gradually she would recover her memory and tell us about her past, Doctor Johnson said.

But the physician was wrong.

The last day in October they became man and wife in Calvary parsonage. They left at once on a motor trip honeymoon. They planned to tour autumnal Vermont, down through Rutland, Manchester, Bennington.

Down the long wide street of Manchester village they came the third day of their trip—Manchester, with its Colonial homes, its lofty maples, its white granite shaft in its business center. And just before they reached the hotel where they would stop for the night, they passed a residence set high on their left. The wife looked about her with sudden keen interest. Then she uttered a sharp cry of panic. She clutched Mart and pointed:

"That's the house! But where are the awnings, the lights, the musicians? . . . Oh, where am I, anyhow?"

"In Manchester, dear, with your husband."

"There were musicians. They came up with us from New York. We were dancing—the troupe. And wild Bill Seelley managed to follow." She was perfectly rational now. The haze had lifted. She seemed surprised Mart couldn't know all about her.

"Wild—Bill—Seelley?"

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"He swore he'd get me, Mart, in the end. Maisie said if he bothered me much more, she'd tell La Due."

"Who's La Due?"

"The manager—who taught us our steps. Mrs. Van Spiegal hired him to bring us all up . . . her lawn fête . . . don't you understand? . . . Greek dancers . . . Corinth troupe. . . ."

"You remember your name?"

"Of course I remember my name. Why, I'm Dolly Wendell!"

MART had nosed the roadster in at the curbing. "But how did you get away up in Camp Eleven?"

"I suppose Bill took me up there. I saw him watching from the circle of the guests . . . the dancing ended . . . I tried to get back to the cottage that was our dressing-room. He led me off to a little table and pleaded with me to go with him. I couldn't refuse him without making a scene. I felt faint. He persuaded me to drink something he had in a flask. Next I remember . . . it was thundering and lightning in an awful void . . . and Bill seemed sobbing crazily, 'I only see one light—I only see one light—it's a chance in a million—I've got to take it!'"

"He only saw one light—he had you up in those mountains? You mean the light from our cabin window?"

"I don't know. I was drugged. I couldn't think. It was raining frightfully and I seemed terribly hurt, and falling . . . falling. . . . Then you were carrying me . . . and the light was very close . . . even glaring in my eyes."

"Dolly—you've never been married before?"

"Married? Of course I haven't been married—only to you."

"But what became of this man Bill Seelley?"

"I haven't the slightest idea in the world."

"He tried to abduct you? What sort of a man?"

"Rich—spoiled—reckless. I was afraid of him from the first time I saw him."

They completed their honeymoon, and Martin Brewster brought a normal wife back to Paris. In time she wrote to her friends in New York. They had not troubled to search for her when she vanished that night in Manchester; they had assumed she had eloped with the rich boy to Canada. It was really none of their business.

"It sort of hurts—the explanation," stammered Mart to me one night in late November. "I wanted to believe the tree gave her to me!"

"Perhaps it did," I finally told him. For I was familiar with Dolly's explanation in Manchester. "At least our lighted cabin windows were just beneath it, and he saw them. Otherwise, it might stretch the long arm of coincidence too far."

I spoke queerly and he saw it. Happily married though he was at last, the mystery disturbed him.

"You know something you're not telling me."

"Yes. I do."

I took him into my office and supplied the missing detail:

That afternoon, Jake Tierman and his boy had wandered into Camp Eleven clearing. Dumfounded, Jake had stopped in his tracks.

CHOOSE A CANADIAN NATIONAL VACATION THIS YEAR

Motoring and riding are among the sports enjoyed at Jasper National Park.

Vacation at Jasper National Park

Guarded by Nature's Grim Grenadiers

The Snow Capped Peaks of the Canadian Rockies

PLAN to visit the Canadian Rockies this summer. See the towering snow-capped peaks, ghost-like glaciers, yawning canyons, rushing rivers and primeval forests of this mountain wonderland—mile upon mile of nature in her grandest mood. And the finest of all this rugged splendor is found in that 4400 square miles which is Jasper National Park.

Visit this vacation paradise, making your headquarters at Jasper Park Lodge. Here—climb with Swiss guides, hike, ride, golf, swim or rest; and in the evenings join in the social life of the Lodge. Rates $7.50 a day up, American Plan. Accommodation for 425 guests. Open from May 21st to September 30th. Jasper Golf Week, September 10th to 17th.

From Jasper take the Triangle Tour of British Columbia, by train down the beautiful Skeena River Valley to Prince Rupert, thence by palatial Canadian National steamer through sheltered seas to Vancouver, returning by rail along the roaring Thompson and Fraser River Gorges.

For information concerning Jasper National Park send coupon to our nearest office or call for literature listed.

Spring time—an ideal time to go abroad

NOW before the summer rush starts—now when the breath of spring has made the old world gay and happy—is the time to go to Europe.

On these luxurious American Flag ships, comfort, service and unsurpassed cuisine make the trip a constant delight:—

S. S. GEORGE WASHINGTON

A luxurious colonial home on the sea that carries you in steady swiftness on a trip of constant pleasure.

S. S. LEVIATHAN

America's largest, fastest ship and flagship of the fleet. Every provision for unusual comfort, service and enjoyment.

S. S. REPUBLIC

The great 18,000-ton Cabin Ship. Modern and comfortable in every detail—exceedingly popular with experienced travelers.

S. S. PRESIDENT HARDING and S. S. PRESIDENT ROOSEVELT

The fastest Cabin Ships on the North Atlantic, plus everything you desire in accommodations and cuisine.

[TOURIST THIRD CABIN ACCOMMODATIONS ON ALL SHIPS IN SEASON. WRITE FOR NEW BOOKLET.]

See your local agent now for reservations from New York to Cobh (Queenstown), Plymouth, Cherbourg, Southampton and Bremen, or write—

S. S. LEVIATHAN $147.50 and up *S.S. GEORGE WASHINGTON $136.25 and up*	*From $85.* *Tourist Third Class in season $95 up*

"Good lord!" he cried. "*What's that?*"

The elm was now naked of foliage. And up in the topmost boughs, hidden completely from sight while the leaves still clothed them, was the tattered wreck of something the like of which Jake had never encountered during all his life in those mountains.

Heaven only knows what had become of the tiny airplane's pilot, Canada-bound that night with his victim; heaven only knows how the girl got to the ground alive. But it was certainly the tree, towering in the darkness above the lighted cabin windows which had stopped the mad prank. The tree had repaid its debt to the big blond woodsman who had bought its life for six hundred and fifty pieces of silver.

As Jake left the clearing to spread the news in the village, the thing in the tree top which had sought for a landing that night near the cabin light, swayed rakishly in the first rugged winds of oncoming winter.

SCATTERGOOD appears again next month—shrewd, calm, hard-headed, soft-hearted old Scattergood. And along with Clarence Budington Kelland's story about the famous hardware merchant of Coldriver, you will find other short stories of distinction: Octavus Roy Cohen's "The Feud in Hell's Kitchen" is a powerful yarn; "The Grateful Lunella," by Elisabeth Sanxay Holding, is an unusually appealing love story; and "Free, Wide, and Handsome," by Stewart Edward White, is a remarkable picture of a man who was given another chance at life. These and two serials are fiction offerings which promise you many hours of fascinated reading.

This Earth We Live On

(*Continued from page 28*)

of the internal heat of the earth are hot wells, such as the geysers of Yellowstone Park. In Italy, not far from Florence, there is a large electric power plant operated by the natural steam which spouts up through vents in the ground. The steam is caused by the flowing of an underground river over the heated rocks. Similar steam-springs exist in California, Nevada, Alaska, Chile, Bolivia, New Zealand, and Japan.

"The temperature grows hotter as we descend into the earth from the surface, but it does not continuously increase one degree for every sixty feet of descent. If that were true, we would have hundreds of thousands of degrees at the center of the earth, temperatures greater than exist on the surface of the sun.

"The judgment of the leading geophysicists to-day is that the earth is solid from surface to center, and of about the same rigidity as steel.

"These authorities say that if the earth's core were a mass of hot liquid, the gravitational pull of the sun and the moon would cause such tides within the interior as would burst the crust. It is the pull of

the sun and the moon that causes the tides of the ocean to rise twice each day. Recent measurements show that this attraction of the sun and the moon also causes a slight rising of the crust, a tidal pulsation of the solid earth. A liquid interior would rise to the pull of this gravitational force like a gigantic hydraulic ram, and the earth's crust, even if hundreds of miles thick, would burst like the overstretched membrane of a toy balloon.

"EARTHQUAKES give additional proof of the solidity of the interior. Most earthquakes occur within five to ten miles of the surface; but they frequently set up vibrations which pass through the interior and are felt thousands of miles away. It is known, by experiment, that the transverse vibrations, which thus pass through the inner core of the earth, cannot pass through a liquid.

"And so, our best information to-day is that the earth is made up of a series of solid layers. After you get through the crust, which is predominantly rock, you pass into layers of mixed rock and metal, and finally to a central core, which is iron with a slight alloy of nickel. The inner core is estimated to extend more than halfway to the surface. This core probably is the hottest part of the earth, and very likely has a temperature near the melting point of iron, around 3,000 degrees."

"And it takes only 212 degrees to boil water! Well, 3,000 degrees is hot enough to make a pretty realistic inferno, isn't it?"

"Oh, it's hot, hot enough to crisp any living tissue in a few seconds, hot enough to melt most metals; but not a core of liquid fire," answered the physicist. "Of course the iron and nickel are subjected to unknown conditions down there. The pressure at the center of the earth is computed to be about 22,000 tons to the square inch. Whether the metals retain their familiar structure under this squeezing, or whether they assume different forms, as in meteorites, we can only conjecture.

"The composition of meteorites is another of the strong evidences for the nickel-iron theory of the earth's core. The metallic meteorites that fall on the earth are predominantly of iron, and the iron is always mixed with a small alloy of nickel. The earth is presumably an immense meteorite—or the thing that meteorites were before they broke up. The density of meteoric iron is between seven and eight times that of water, which is about what we would expect for the density of the earth's core."

"So, iron is our principal ingredient, is it?"

"Yes, by far. Dr. Henry S. Washington, of the Geophysical Laboratory of the Carnegie Institution, recently stated that iron constitutes forty per cent of the earth. The next most abundant element is oxygen, nearly twenty-eight per cent; then comes silicon, less than fifteen per cent; magnesium, under nine per cent; nickel, a little more than three per cent; calcium, two and a half per cent; aluminum, one and three-quarters per cent, approximately.

"Each of the remaining elements contributes less than one per cent to the whole. Carbon, for example, the element that enters into every form of life, both

The Helpful Hand of a Great Service

Probably no other personality, in all the world, is so well known, or so welcome to travelers in doubt or in trouble, as the uniformed service men of the American Express Company. Their fame is international. Familiar with the details of foreign customs, of dominating influence everywhere, their presence is a guarantee of intelligent, courteous assistance.

Travelers in foreign lands everywhere are assured this Helpful Service to the full extent when they carry

American Express Travelers Cheques

These Cheques insure you, wherever you are, against the loss or theft of the money you invest in them. They are safe and serviceable, convenient to carry, handy to use. They are spendable coin in any country. Their sky-blue color is known everywhere, their money value recognized.

American Travelers abroad have used these Cheques with confidence and satisfaction for more than 35 years.

Yet they are of even greater value for every day use at home. They safeguard the money you carry every day in your pocket—protect it against theft or loss, and give you a most comfortable feeling of safety; since, if these Cheques are lost or stolen (uncountersigned or not exchanged for value), you are entitled to a full refund.

American Express Travelers Cheques are issued in $10, $20, $50 and $100 denominations—bound in a small, handy wallet—and cost only 75c for each $100.

FOR SALE AT 22,000 BANKS, AMERICAN EXPRESS AND AMERICAN RAILWAY EXPRESS OFFICES

animal and vegetable, constitutes only four one-hundredths of one per cent of the material of the earth. If the earth lost this minute fraction of carbon, life, as we know it, would probably perish from our planet."

"Can the earth lose any of its substance?" I asked. "For example, do the gases which rise into the air escape into outer space?"

"The upper air is almost as unexplored as is the interior of the earth," answered Doctor Heyl. "Light gases, like hydrogen and helium, rise very rapidly when released, and are not found in our lower atmosphere. Whether the earth's gravitation is able to hold hydrogen we do not know. It may be that hydrogen, the lightest of all known substances, escapes into outer space, and passes off to join the sun, or other stars, or nebulæ. Or it may be that it remains and forms the extreme outer layer of our atmosphere, fifty or one hundred miles above the ground.

"But I don't think there is a likelihood that anything else escapes. The moon long ago lost its atmosphere through the escape of its gases into space. But the earth's mass is eighty times that of the moon, and because of this larger mass the force of gravitation here is sufficient to hold on to what we have. The only thing that would affect the earth's power to hold would be an increase in its velocity of revolution."

"YOU mean that if the earth turned more rapidly on its axis, the force of gravitation would be reduced?" I asked.

"The force of gravitation would continue to operate unchanged; but the centrifugal force, the force which throws mud off a cart wheel, would be increased, and to just that extent it would counterbalance the pull of gravitation.

"There is no centrifugal force at the poles. Suppose a man stood on a square foot of territory centered at the north pole. He would scarcely seem to move. It would take twenty-four hours for that square foot to turn him around. But suppose the same man stood on a spot at the earth's equator. The equator is 24,900 miles around. Each point on the equator travels that distance in twenty-four hours. The equator may be imagined as a gigantic cart wheel whirling at the rate of more than 1,000 miles an hour, and any unattached object, like a man, is subject to the centrifugal force generated by that velocity of revolution.

"This force is easily detected and can be measured. If you should take a set of spring scales and weigh a ton of material, say coal, at the north pole, you would find that it weighed exactly 2,000 pounds. If you could then transport the coal unchanged to the equator, and weigh it there, you would find that your spring scales showed only 1,994 pounds. Centrifugal force, tending to throw the coal off at a tangent, would overcome the gravitational pull of the earth to the extent of six pounds.

"Every object at the equator is affected in like degree, in proportion to its mass. As you come north or go south from the equator, the centrifugal force decreases, because the speed of the earth's revolution decreases, and at the poles it disappears.

"All these weighings must be done on a

spring scale. If you use balances, the difference would not appear, for the force of gravitation would act equally on both sides of the balances.

"Weight is affected also by distance from the center of the earth. A body on the top of Mount Everest weighs less than the same body at sea level. When you go up to the top of the Woolworth Building, you weigh less than you did down on the street. These differences, however, are so slight that ordinary scales cannot indicate them.

"Centrifugal force remains, however, the most conspicuous factor in reducing weight. The difference in avoirdupois between a weighing made in Portland, Maine, and one in Key West, Florida, is quite noticeable, provided, always, that spring scales are used."

I asked how fast the earth would have to revolve in order to develop centrifugal force sufficient to equal gravitation.

"It has been computed that if the earth were to turn seventeen times more rapidly than at present, the force of gravitation would be exactly matched by the centrifugal force. Under these conditions, nothing at the equator would have any apparent weight. A man couldn't walk or run—he'd have no pressure on the ground, his feet couldn't get a grip. Automobiles couldn't move, they'd simply spin around on wheels that could get no traction. If a man jumped, the only thing that would limit the height of his ascent would be the friction of the air. But it is doubtful if there would be any air, under the conditions we have imagined.

"There is no likelihood that the earth's rate of rotation is going to increase. Observations indicate that the change will be rather in the other direction. In fact, it is generally believed by authorities to-day that the earth is being slowed down by the gravitational influence of the moon. The moon's continual dragging of the liquid part of the earth against the natural tendency of the earth to rotate as a whole, serves as a brake. It has been computed that the effect of this tidal action is lengthening our day by about a thousandth of a second in a century.

"This need not worry us—nor our heirs for many generations. For at that rate it will be thousands of years before the longer day will be appreciable. But the fact is important and, to scientists, very significant.

"The drag of the moon upon the earth is credited with responsibility for other peculiarities. It is responsible, for one thing, for the wobbling of our sphere in its course, and, for another, for the movement of the poles."

THE curious fact that the north pole is not stationary was discovered simultaneously by astronomers at the Harvard Observatory, in America, and the Berlin Observatory, in Europe, between 1884 and 1885, when they found that the latitudes of their observatories had shifted. These determinations were made by observing the fixed stars. Later, an International Geodetic Institute was organized to study the movement of the poles. Charts have been drawn, showing the curious wobbly path which the north pole describes in its meanderings. It seems to keep, however, within a space about fifty feet in diameter.

Not only does the pole, or imaginary

"He is leaving to work *for himself* at Venice"

Building Independence

out of Sunshine, Friendship and Fun

AFTER all it isn't such a bad world—when a national organization such as the Brotherhood of Locomotive Engineers deliberately develops a community among the most beneficent living and working conditions made possible by Nature, brains and cash.

Back of all the excitement about Florida there has been the age-old truth of a remarkably productive combination of sunshine, soil, temperature, rainfall. There are speed-crops in various areas and one of the most favored of these is the Myakka Valley that lies back of the model City of Venice directly on the Gulf

Maybe you should recast your ideas of this Summerland a little, for Brotherhood capital has assembled here every factor for a modern ideal farming community backed by the advice of the Venice Farm Board which operates the Venice Demonstration Farm, the Venice Nursery and the Venice Dairy Farms.

Venice Farms are located on good roads, in easy distance of the city; they have main drainage available, are cleared and ready to plant. Venice crops are among the earliest and bring the highest prices in the big Eastern markets.

Venice Farms are sold at moderate prices on liberal terms. It is possible to make a farm pay for itself in a few years, years of sunshine, friendship and fun.

axis of the earth, move in this way, but also the earth itself is shifting its inclined position in space, and eventually the north pole will point, not to the North Star, but to the brilliant first-magnitude star, Vega. Ten thousand years hence, it is reckoned by astronomers, Vega will be our pole star and the familiar North Star will assume an insignificant position in the heavens.

"But these are not the only movements, nor the only poles, of which our earth is possessed," went on Doctor Heyl. "We have, in addition to the north and south poles, the two magnetic poles. They are the spots on our globe to which the mariner's compass points. They are about a thousand miles distant from the other poles, the north magnetic pole being, at last accounts, on the Boothia Peninsula, in Hudson Bay, a point due east from Point Barrow, Alaska, and due north of Omaha, Nebraska.

"Columbus discovered not only America but also the variation of the compass needle on his first voyage across the Atlantic. It is said that when he saw the needle of the compass shifting, and no longer pointing toward the North Star, he tried to conceal the fact from his men. Finally, it was noticed by them, and there was consternation, and threats of mutiny. Columbus pacified them by explaining that the needle, like the stars, revolved around the pole. That was a pretty lame explanation, but he seems to have been able to make it sound real.

"We judge from this circumstance that back in 1492 the magnetic pole was so situated that in Europe it coincided with the true north position. To-day that is not the case. The magnetic pole is continually moving about, and it is necessary to make surveys to determine its new location about every ten years.

"The south magnetic pole, which attracts the compass needle south of the equator, is not at a point exactly opposite to that of the north magnetic pole. If it were, it would lie directly south of the point of India. Instead, it lies south of the easternmost point of Australia, somewhere on the great Antarctic Continent.

"BUT the earth has still another pair of poles," continued Doctor Heyl. "They are called the poles of cold, by which is meant the coldest two spots on our planet. You might expect that the north and south poles would be the places of extreme low temperature, but such is not the case.

"The northern pole of cold is in Siberia, about two hundred miles inland from the mouth of the Lena River. The usual temperature during January is around 60° below zero, but 94° below has been known there. Compared with this, the north pole is mild and pleasant. The fact that the north pole is on an ocean no doubt keeps its temperature down. Water absorbs and retains heat better than land, and there is probably an under-current flow of warm water from the Southern seas.

"We have few temperature records for the south polar region, but the southern pole of cold is supposed to be in the highlands of the Antarctic Continent, probably not far from the south pole."

I asked Doctor Heyl what effect the melting of ice at the poles, the fall of snow, and atmospheric storms has on the motion and mass of the earth.

"Hardly any appreciable effect," the scientist answered.

"One of the poets has pictured the universal sway of the law of gravitation in these words:

"All things, by immortal power,
Near or far,
Hiddenly
To each other linked are,
That thou canst not stir a flower
Without troubling of a star.

"Is that science, or is it just poetry?" I asked.

"Oh, it is science as well as poetry," answered Doctor Heyl. "Everything that stirs on the earth, or inside it, or in the atmosphere—every movement, every rise and every fall of bodies, has its effect. The balance is so perfectly adjusted among all the things of the universe that one object cannot be displaced without disturbing others. Undoubtedly, the bonds of gravitation reach through starry space, and bind our solar system to the whole universe of stars. But we have no instrument delicate enough to detect any force of gravitation exerted by any celestial body except our sun and its train of planets and satellites.

"A great snowfall over Canada and the northern United States might affect the motion of the earth and displace its center of gravity somewhat; but the effect would be infinitesimal so far as our measuring instruments are concerned.

"THE whole atmosphere of the earth is estimated to weigh five million million tons. That looks like a big figure; but the earth weighs more than a thousand million times as much, and in comparison the atmosphere sinks to an incredibly small fraction.

"If you were weighing a ton of coal, for example, do you suppose your scales could detect the loss or gain of one thousand millionth part of the ton? That would be a minute fraction of a gram. You would need to use jeweler's scales to determine such microscopic parts. And you cannot use jeweler's scales in weighing a ton of coal.

"The same principle applies here. We are dealing with a body of enormous mass. The whole population of the earth does not weigh one four-hundred billionth part of the earth. Every man, woman, and child, and all the animals, might move to Mars in a body, and their departure would not lighten our scales a trifle nor affect one figure of our result.

"Yet," added Doctor Heyl, his eyes twinkling, "we are aiming for the most exact result ever attained in answer to this question of the earth's mass. We expect to achieve accuracy to one ten-thousandth part. The present figures for the earth's mass are accepted as accurate to one seven-hundredth part."

And now for the actual method of "weighing" the earth! It is so obvious, in principle, that you must smile at the nonsense of puzzling over such fantastic questions as how to construct a set of scales large enough, how and where to support the scales in the firmament, and how to quiet the earth long enough to get it on the scales.

The method is simply to set up a minia-

The Easy Way to Bring Color *into your* Home

Think of being able to do over a floor or a piece of furniture in any color and have it ready for use in less than an hour!

With Valspar Lacquer you can do this very thing. With Valspar Lacquer you can bring beauty of color and finish into your home—you can quickly transform shabby, mismatched chairs, tables and woodwork so that they harmonize with the decorative scheme. And you can do it at small expense.

Valspar Lacquer is a new kind of finish that looks like Enamel and is applied like Enamel *but it dries in a few minutes.* Anyone can easily learn the knack of using it to secure beautiful results.

Valspar Lacquer may be obtained in the lovely colors shown on this page. These colors, chosen by experts for their decorative value, are reproduced as nearly as printers' ink can duplicate them. Each color has a key number so that you can find its name in the list below. Select the ones you would like to try and use the coupon to order them.

And send for the Valspar Lacquer Book, "*How to Keep Your House Young.*" It gives a few fundamental principles of Interior Decoration and Color Harmony that will help you work out pleasing and correct color schemes for your home.

The Valspar Lacquer Colors are

1 Italian Blue	*7 Java Brown*	*13 Coral Sand*
2 Peacock Blue	*8 Palm Green*	*14 Black*
3 Jonquil Yellow	*9 Persian Lilac*	*15 Chinese Red*
4 Nile Green	*10 Oriental Green*	*16 Cardinal Red*
5 Holland Blue	*11 India Ivory*	*Also White*
6 French Gray	*12 Argentine Orange*	

VALSPAR BRUSHING LACQUER

This coupon is worth 25 to 75 cents

VALENTINE & COMPANY, 460 Fourth Ave., New York

I enclose dealer's name and stamps—20c for each 45c sample can of colors specified at right. (Only three samples of Valspar Brushing Lacquer supplied per person at this special price.) Print full mail address plainly

ture system of earths and moons in the laboratory, and measure the attraction of these bodies for one another. By determining how and to what extent the force of gravitation acts between the baby planets in the laboratory, the physicist arrives at the gravitational constant. When he has determined the gravitational constant, it is a simple problem in mathematics to apply this constant to the earth, and compute its mass.

Thus, indirectly, but with the utmost delicacy and precision, the earth is being weighed in that underground room in Washington.

"Why must you do the 'weighing' underground?" I asked Doctor Heyl, as he was leading the way through one of the long interconnecting tunnels to his subterranean laboratory.

"The apparatus is very sensitive," answered the physicist, "and to function right must be kept at the same temperature and out of the gravitational range of any moving bodies. Down here, thirty-five feet below the street level, the temperature never varies, summer or winter. And down here there is no possibility of an automobile driving up and parking. The force of gravitation exerted by a car, or even by the body of a passer-by, is sufficient to affect this delicate apparatus. The laboratory planets would be deflected in much the same way that the sun and its planets would be affected if some large star should suddenly move into the solar system. By working underground, I am safe against these disturbing factors."

The first effort to "weigh" the earth made use of a mountain. Plumb lines were let down on opposite sides of the mountain; the mountain attracted the bobs of the plumb lines toward it, and by measuring the shift of the lines from the vertical the degree of gravitational force was computed. Of course this method could get only a rough approximation, for the density and volume of the mountain had to be estimated, and the experimenter could not be sure of the accuracy of his estimate.

THE idea of setting up a miniature planetary system, and measuring the gravitational force existing between small globes of metal, was first carried out by Cavendish, the great British physicist, in 1798. As Joseph Bertrand said, "He made a balance to weigh the earth." Doctor Heyl's method is an adaptation and refinement of that used by Cavendish.

The apparatus looks complicated, but in reality it is simple. Its main parts are two cylinders of solid steel, weighing 140 pounds each, and two balls of platinum, weighing 1½ ounces each. The steel cylinders may be regarded as the "earths" and the platinum balls as the "moons" of this experimental system. And the "weighing" consists of moving the "earths" about, so as to change their distances from the "moons," and accurately observing and recording the motions of the moons in response to these changes.

There are many details that seem to complicate the apparatus. For example, the platinum "moons" are attached to the ends of a small aluminum bar, and suspended by a tungsten filament, thus making a pendulum; and they are suspended in a bell jar from which the air is exhausted, thus leaving them free to swing in a vacuum; and the steel "earths" are suspended from a movable turn-table, and they hang outside the bell jar; and the bottom of the bell jar is thick glass, through which the image of the swinging "moons" may be observed. But all these, and other complexities, are simply refinements to insure the greatest possible sensitivity of operation, and the greatest possible accuracy in observing.

The swing of the "moons" is very small at its maximum, not over five millimeters. To magnify this, a mirror reflects the image of the "moons" through the glass bottom of the bell jar to a graduated scale some yards away, where Doctor Heyl observes through a telescope. It takes on the average about fifteen minutes for the "moon" to return to center, and the task of the observer is to time this appearance exactly.

He does not trust to an ordinary clock or stop watch. The thing is done electrically. In the same room with the observer is a chronograph, or time-recorder, operated by an astronomical clock. Its pen writes continually on a moving tape, one nick for every second of time. Poised by the side of the pen of the chronograph is another pen, which is actuated by an electric switch at the observer's hand.

The instant the reflection of a "moon" appears in the telescope field, the observer presses his switch, and he keeps pressing it at intervals until the image has passed out of his field. Every time he presses the switch, the pen makes its mark on the chronograph tape. Experiment shows that thirty-one marks represent the passing, or "transit" as it is called, of the "moons." By taking the average of these, the exact time when the body was in the center of the field is determined to a split second.

ONCE a week Doctor Heyl spends his day observing. He arrives at his underground room at 8 A. M., and starts the apparatus. By 10 o'clock, usually, it is swinging sufficiently to keep going all day. Until 5 P. M. the scientist sits in his chair at the telescope, and observes and records the transit of his miniature planets.

"I can't move around the room," he explained, "because if I did the mass of my body would exercise its gravitational force from changing directions, and there would be serious deflection of the swing of the platinum balls. So long as I keep in one place this factor is constant, and therefore makes no disturbances."

"But when you've eaten your lunch, haven't you changed your mass?" I asked, and the scientist laughed.

"Well, the lunch is there in a small package beside me at the beginning, and its transfer to my stomach doesn't make any appreciable difference to the platinum balls."

At five o'clock Doctor Heyl calls it a day, takes the chronograph record off its machine, swings the steel "earths" around to near position, and goes home. For the next three days he is busy computing, figuring the results which are tied up in that one day's observations. After the period of computing, he spends three days getting the apparatus ready for the next "weighing." Thus, it takes full weeks to weigh the earth.

And not only the observer's weeks but

C. E. Worthen

F. B. Bennett

H. D. Van Houten

A. W. Fosgreen

W. E. Shoop

Elden E. Mitchell

Mrs. Hastings

Big Profit on First Deal

Mrs. Evalynn Balster, Chicago widow with 3 children, made $5,500 on her first real estate deal.

Small Fortune in 6 Months

Thos. Mone, Jr., Brooklyn insurance solicitor, sent for my free book and made $28,000 in his first six months.

In Massachusetts, Chas. E. Worthen read "How to Become a Real Estate Specialist" and earned $8,500 in 17 weeks.

One Day's Work

F. B. Bennett, California lawyer, also followed my instructions. His first day in real estate netted him $435.

H. D. Van Houten, New Jersey grocery clerk, sent for this free book, regained his health, built a $100,000 business. All in 1 year.

Big Money in 90 Days

My free book took A. W. Fosgreen out of his candy store and into the real estate business. In 3 months he made $8,000.

W. E. Shoop, ex-Pennsylvania weaver, writes that he made $6,000 on his first deal and has others pending.

Two Hours Pay

A copy of our free book reached Elden E. Mitchell, Florida baker. His first deal took two hours; brought him $1300.

In Michigan, Mrs. J. H. Hastings followed the advice of my free book; cleared $248 on her first effort.

You call in a specialist for your baby

demand this *special* treatment for DANDRUFF

IF YOU want a "cure-all," don't pick Wildroot. If you want to get rid of dandruff, Wildroot is your best bet. Without making any absurd claim, Wildroot is offered to you simply as a most effective and *special* dandruff treatment. Wildroot *does destroy* the *dandruff germ.*

NOT a Hair-grower

Wildroot does not wish to be classed with the so-called hair-growers. *Only a healthy scalp can grow hair.* Dandruff is unhealthy. Wildroot fights the dandruff germ . . removes dandruff.

A Typical Case

Mr. D. Curro of 1929 61st Street, Brooklyn, says:—"After many years of unsuccessful search for a dandruff remedy . . a friend recommended Wildroot. At last I found genuine relief. No more dandruff and itching of the scalp."

Such experiences are frequent among Wildroot users. They apply Wildroot. The dandruff loosens up and is quite apparent for a few treatments. Then—after faithful use, the dandruff disappears.

Send for Trial Bottle

A letter and dime to Dept. 4-4-2 Wildroot Co., Inc., Buffalo, N. Y., will bring you a generous trial bottle. But please do not expect a small bottle to do a complete job. Your druggist has Wildroot in large, generous bottles for people who really wish to *end dandruff.*

WILDROOT
HAIR TONIC

also those of a Bureau computer, whose entire time has been concentrated on this work for more than a year. You may wonder why so much figuring is necessary. If it is merely a matter of observing and timing the movement of toy planets, why so much bookkeeping?

If you could see the sheets that have already been filled with figures, the original formulæ, equations, and other pyrotechnics of higher mathematics that had to be worked out, you would decide that the task of weighing the earth requires, not so much an Atlas or a Hercules, as a Euclid or an even better mathematician.

"TO MAKE our apparatus required about one year," said Doctor Heyl. "I intended to make the steel 'earths' globular, but our machinist said that he could guarantee greater accuracy in cylinders. So we adopted the cylindrical form, and I spent some months reducing the cylinders to theoretical globes.

"We started with gold balls as the 'moons,' but after six months of observing I found that the gold had seemingly turned to silver. We examined the balls, and found that they had taken in quicksilver—absorbed it from a mercury trap which we used as a valve to keep the air out of our vacuum.

"That was a surprise. I didn't expect it, but I couldn't blame anybody but myself. Nature always answers correctly the questions we ask. The trouble is that sometimes we put a question we didn't intend to. What I really asked was not, 'What is the mass of the earth?' but, 'Will gold attract quicksilver?' And nature answered, 'Yes.'

"That mistake cost us six months' work. I substituted platinum balls for the gold ones, and since then we have had no serious interruption. Our plan is to get what we call five values of results. The first series of tests is designed to get the whole figure we want. Then we repeat that series four times. That gives us five values, and the average of the five will be our final figure.

"The figure that we are seeking first is the 'gravitational constant,' which we accept to-day as .0000000665. This figure was determined thirty years ago by two European scientists, working independently, and using slightly different apparatus. These men were Professor Boys, of England, and Dr. Karl Braun, of Bohemia.

"A few years later an American, Dr. G. K. Burgess, while studying at the Sorbonne, in Paris, began experiments looking toward a redetermination of this constant, with a view to correcting and eliminating some errors which Doctor Braun had recognized as existing. Because of time limitation, Doctor Burgess did not complete these experiments. But he kept the problem in mind as one of the things that needed to be done, and when he was appointed director of the Bureau of Standards, the opportunity came to do it. It was in 1923 that the work was assigned to me. The apparatus was completed in 1924. Since then, we have been observing and computing."

Knowing the gravitational constant, the task of computing the mass of the earth will be simple, comparatively. For the force of gravity follows a very definite and universal law. The only factors that

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

affect gravitation are mass and distance.

So, as soon as the constant is determined to the last possible figure, all that a physicist will need to do in order to learn the mass of the earth, will be to take a body of known mass down to sea level and weigh it. His body may be a pound weight or a ton weight. Whatever it is, he can compute the earth's mass by a well-known formula. For he knows (1) the distance from sea level to the center of the earth, he knows (2) the mass of the comparison body, and, thanks to the Bureau of Standards, he will have (3) an accurate gravitational constant to use as a multiplier. The rest will be a simple problem in mathematics—simple, that is, for a mathematician.

"Can you tell, by your computation thus far, what the earth's weight promises to be?" I asked Doctor Heyl.

"The present accepted figure for the earth's mass is, in tons, 5,997 followed by twenty-one ciphers," answered the physicist. "That is five thousand nine hundred and ninety-seven million million million tons. We expect that our results will not alter the first three figures, but we are confident that we shall change the fourth figure. The '7' will give way to a new quantity."

This underground laboratory has become a center of curiosity to visitors to the Bureau. Many people, who have read somewhere that here a man has set up "a balance to weigh the earth," make the long trip out to the Bureau in the outskirts of Washington, to see this marvelous instrument.

Usually, they come away somewhat mystified and, in many cases, a little disappointed. For, what is there marvelous or spectacular in a pair of steel cylinders and a pair of platinum balls!

But, the law of the universe is on exhibition there, in those delicately moving bodies—the central law by whose control our sun rolls along its stupendous path through space, and under whose command our precious earth whirls and travels on around its star and among the stars.

Our night and our day, the four seasons, the silvery lantern of the moon in our evening sky, and the whole firmament of stars—all these are there, bound up in the universal law of gravitation which moves the platinum "moons" exactly as it rules our moon and the eight moons of Jupiter.

Spectacular?

Why, it is the pageant of the universe if only you look beneath the skin of things.

"THE Great Cascade Tunnel," a new chapter in the romance of railroad building, will be the subject of an interesting and dramatic article next month. It tells how engineers are digging a great hole through the Cascade Mountains, why they are digging it, and how they live while engaged in this Herculean task. A record is being made in the drilling of this short cut for the trains of the Great Northern Railway. You will read more than the story of a big tunnel; it is also the story of how men work when they see their labor as a grand adventure.

Lysol Disinfectant

REG. U.S. PAT. OFF.

This morning, at many a breakfast table, a scene like this occurred:

The husband: energetic, debonair, ready for the Battle of Business—

The wife: listless, careless, disinterested, perhaps even a little jealous of his health and youthfulness.

Here is the making of a marital tragedy that is all too common.

Yet a woman's youth and health need not necessarily fade with marriage. She *can* stay young with her husband. Modern science has provided a help in sane habits of living, sane habits of eating, plus the proper practice of feminine hygiene.

For 30 years "Lysol" Disinfectant has been the standard personal antiseptic in hospitals, doctors' offices and homes. It is still without substitute in professional use because its germicidal action is *certain* when properly used, it is harmless and it cleans as it kills germs.

Send for the booklet now. It will help you as it has helped thousands of other women. It will contribute to your peace of mind. In the meantime play safe by using "Lysol" Disinfectant only. Get a bottle today.

Made by Lysol Incorporated
A division of Lehn & Fink Products Company
Sole distributors Lehn & Fink, Inc., Bloomfield, N.J.

"Lysol" Disinfectant is sold *only* in the *brown* bottle packed in the *yellow* carton.

"The Amateur of Crime"

(*Continued from page 51*)

"Infernally convenient," admitted Lang, with a certain tenseness. "Well—" This time his hand fell definitely upon Scarlet's shoulder, and the latter permitted himself to be led back toward his own wing of the house. Mr. Lang paused outside a door halfway down the Ruritanian corridor.

"Well, here I am," he said. "Good night, Scarlet. And I wouldn't go wandering about at night if I were you. It isn't done—take the word of an older man."

Scarlet seemed entirely unperturbed by the rebuke. He walked noisily back to his own room and waited there for some time. Then he emerged again, slipped up to the third floor, retraced his way to the Ruritanian wing, and concealed himself on the third-floor balcony. He had hardly done so when the tall figure of Baron Kossovar ascended from the second floor and entered his quarters. Scarlet smiled, and devoted his attention to another point. A little while later his vigil was rewarded by a curious sight that gave him much food for thought. But it was not until half an hour at least had passed that he heard the scream from the second floor.

Twenty seconds later he was outside the door of Prince Mirko's suite—but the mysterious Mr. Lang was there before him, now rapping upon the door with a sort of muffled fury, now trying to force the lock with what looked suspiciously like a skeleton key.

He saw Scarlet and wheeled. A revolver glittered suddenly in his other hand. "You infernal meddler—" he began furiously, motioning him back; but Scarlet continued to advance.

"Oh, shut up!" he said, somewhat tiredly. "I know you're a detective—known it for hours. You get in that room—I'll keep the others back!"

LANG gave him one sharp, very searching glance, then turned back to his work with the key. After a moment the lock yielded—the door flew open.

Scarlet, glancing in at the room over Lang's shoulder, felt the bristles at the back of his neck begin to rise. Prince Mirko of Ruritania lay on his face in the middle of the luxurious sitting-room, dead, with the hilt of a silver dagger protruding from his neck. The princess knelt beside him. Her hands were stained with his blood, her eyes were staring, and the silver dagger ornament was gone from her hair. A tiny handkerchief lay on the floor, and a little white dog ran in circles about the body, moaning and whining.

As Scarlet was turning away, the princess succeeded in rolling the body over on its back. There was a curious incision on the dead man's forehead—two little slashes that formed a capital T.

When the initial confusion of the event had somewhat subsided, a strange court of inquiry met in the disfigured sitting-room. Luckily, Mrs. Culverin's house was huge, and many of the guests had not been aroused at all. Those who had, Peter

Now a new

"Pick-up" drink

from Switzerland

Picks you up when you feel low . . . Ends afternoon "let-downs" . . . keeps you on your toes . . . Make this 3-day test

Modern science now offers you a *natural* means to keep you "hitting on all six." A way that picks you up in a most surprising manner. Both mentally and physically.

It is the delicious new Swiss food-drink called Ovaltine. Not an artificial stimulant. But a quick building-up beverage. Doctors advise it.

Thousands of successful people now drink Ovaltine regularly at home. In their offices. At soda fountains. It rejuvenates. It sets tired minds a-sparkle. We urge you to make a 3-day test.

Cause of loginess—how Ovaltine overcomes

Mental and physical "let-downs" are mainly due to overstrained nerves or digestive unrest—or both. Delicious Ovaltine helps to overcome this trouble. This is why:

FIRST—it combines in easily digested form, certain vitalizing and building-up food essentials, in which your daily fare is often lacking. One cup of Ovaltine has more real food value than 12 cups of beef extract.

SECOND—Ovaltine has the power actually to digest 4 to 5 times its weight in other foods you eat. Thus soon after drinking, it is turning itself and other foods into rich, red blood.

This quick assimilation of nourishment is restoring to the entire body. Frayed nerves are soothed. Digestion goes on efficiently. Energy returns. Your mind clears; your body responds.

That is the experience of most Ovaltine users.

Doctors recommend

Ovaltine has been in use in Switzerland for over 30 years. Now in universal use in England and her colonies. More than 20,000 doctors recommend it. Not only as a quick "Pick-up" beverage, but because of its special dietetic properties they also recommend it for restless sleep, nerve strain, malnutrition, backward children and the aged.

A 3-day test

Drink a cup or glass of Ovaltine whenever you feel low or nervously tired. See how quickly it picks you up.

All druggists sell Ovaltine in 4 sizes for home use. Or they can mix it for you at the soda fountain. But to let you try it we will send a 3-day introductory package for 10c to cover cost of packing and mailing. Just send in coupon with 10c.

OVALTINE

Builds Body, Brain and Nerves

©1927, T. W. Co.

I took Ovaltine for pep and got it. In wrestling an awful lot of energy is used in a short time. I take a cupful of Ovaltine 45 minutes before each match. I am now always full of pep and can get more speed and quick action.
(*Signed*) F. M. Harlan

I took Ovaltine because I needed something to tone up my system. I found Ovaltine to be more than you claim and use it for its "Pickup" results.

Seven-Room House No. 702

Make yours a Home of Lasting Satisfaction

AS THE years pass, the house built of beautiful Face Brick becomes more charming with the mellowness of age.

Annually it has cost less for repairs, fuel and insurance. Depreciation has been slight.

All these unite to justify your wisdom in the selection of Face Brick for your investment in a home.

"The Story of Brick"—a valuable booklet sent free.

TO HELP YOU PLAN YOUR HOME GET THESE BOOKLETS

"Face Brick Bungalow and Small House Plans" embrace 128 unusual and distinctive designs, convenient in floor plan, and economical to build. Issued in four booklets showing 3 to 4-room, 5-room, 6-room and 7 to 8-room houses. Each 25 cents. Entire set $1.00.

"The Home of Beauty" contains 50 two-story, six-room houses, submitted by architects in a nation-wide competition. Sent for 50 cents.

Complete plans for all these houses available at nominal prices.

"The Home Fires" tells how to build a real fireplace and shows many attractive fireplace designs. Sent for 25 cents.

"A New House for the Old." Stop repairing and painting by veneering the old house with beautiful Face Brick. Pamphlet sent free.

Scarlet sent back to bed again, with the news that Princess Mirko's maid had suffered a minor accident. As for Mrs. Culverin herself, she had risen to the crisis astonishingly, and she now sat patting Princess Mirko's limp hand with a certain sturdy kindliness that made Peter Scarlet like her better than he ever had before. Baron Kossovar, Lang, and Scarlet completed the party.

Mrs. Culverin rose at last. "Well, Mr. Lang," she said, "the matter is entirely in your hands. I'll do and say whatever you tell me. Meanwhile, I'll go back to my room, unless, Your Highness, you—" She turned to the princess.

"No," murmured the latter weakly. "No, thank you. You are very kind. But—"

"I know," said Mrs. Culverin. She gathered her wrapper about her. "Oh, one thing," she said to Lang, "if I might make a suggestion?"

"Yes, Mrs. Culverin?"

"You'll find that young man useful," she said, indicating Scarlet. "His talk about murders may be all bosh—but he knows Ruritanian." She swept away.

Lang turned to Scarlet. "You do speak and understand Ruritanian?"

Scarlet nodded. "Yes, I've kept it up fairly well."

Lang considered. "Well, I suppose you'd better stay," he said at last. "Only—no interference—no amateur detecting! And, naturally, if your father was in the Service, you understand the gravity of—"

Scarlet's face was very grave. "I do. And I shouldn't think of—interfering. But—I could make a suggestion? If one occurred to me?"

"You could," said Lang grimly. Scarlet's spectacles blinked.

LANG turned to the baron and the princess. "I have no wish to put impertinent questions," he said, with a good deal of dignity. "But you must realize, as I do, the very delicate position in which this murder has placed, not only everyone in this house, but the Governments of two countries. Prince Mirko was in this country under the protection of the United States. He was murdered while under that protection. Naturally, in view of the diplomatic issues involved, this inquiry cannot follow the normal course of such inquiries. But—I take it you both are willing to help me in finding the murderer?"

The princess stared at him, dry-eyed. "My husband's murderer must be found," she said in a dry, toneless voice.

Baron Kossovar stiffened. "Prince Mirko was my political enemy," he said; "but I am no less anxious than you, Mr. Lang, to find his murderer."

Lang received their statements gravely. "Thank you," he said. "Now—you'll pardon me if I'm frank—there are three ways in which Prince Mirko might have been murdered: He might have been murdered by an intruder from without. He might have been murdered by a servant or a guest. Or—"

"Say it," said the princess, in a dry, terrible voice. "He might have been murdered by me, his wife."

"Or me," said Baron Kossovar rigidly.

Lang made a little bow. "I regret the necessity," he said; "but we must take every supposition into account. First: the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

intruder from without. In the first place, my men—and they're skilled men—have been guarding the gates and so forth since Prince Mirko's arrival. It would have been practically impossible for an intruder to get past them. In addition,"—he stepped toward the window—"the windows of this room and of Prince Mirko's bedroom were all locked on the inside when we found the body; and it is a sheer fifteen-foot drop from the windows to the ground."

"Also," said the princess, still in that toneless voice, "I had locked the door from my part of the suite earlier in the evening. When I unlocked it again, it was to find my husband dead." She shuddered.

"I remember," said Lang noncommittally. "You wished to be alone!"

"For a time, yes—my husband and the baron were talking business; I did not wish to disturb them. Then later, I heard the dog barking and came to say good night to my husband—and then—"

"Yes," said Lang. "But even supposing the intruder had flown through the walls and gotten in—how did he get out? We made a thorough search. Of course he might have jumped from one of your bedroom windows, Princess, supposing you did not lock the door as you say you did."

"I did lock the door," said the Princess. "And—my maid, and myself, of course, were in our part of the suite the whole time. He could not have concealed himself or escaped."

"Exactly," said Lang. "Therefore, if there was an intruder, he is still here. But he isn't here. Therefore, Prince Mirko was not murdered by an intruder from without."

HE PAUSED. The logic of his explanation seemed inevitable. Scarlet took the opportunity to emerge from his silence.

"May I ask a question?" he said diffidently. Lang nodded.

"You didn't hear any sound of a struggle—a fall—either you or your maid?" he queried owlishly.

The princess seemed greatly perturbed. "No," she muttered. "That is strange—strange—yet the door was thick."

"Very thick," said Scarlet agreeably. "I wonder you heard the dog through it. Yet you did hear the dog barking."

The princess moved her hands. "Yes," she said weakly. "But that was the first we heard. It is—strange—yes, strange!"

It did not seem so strange to Lang. By the expression on his face it obviously seemed either impossible or untrue. But he resumed his questioning, with a scrupulous, heavy fairness.

"Then," he said, "we come to the valet and the maid. The valet's room did not communicate directly with the rest of the suite. I saw him go out before Baron Kossovar came to talk with Prince Mirko. He could not have entered again without my seeing him. So we may dismiss the valet. As for the maid—you insist, Princess, that she was under your eye all the time?"

"I do," said the Princess, in a ghost of voice.

"Very well," said Lang. "Then we must dismiss the maid. As for another guest, or servant, getting in from the corridor—I was there on guard. I would have

Top—Wind Mill, Ensilage Cutter, Walnut Dryer, Manure Spreader, Material Carrier

Only a window sill—but what a story it tells

When John Trulson built his first home at Princeton, Illinois, in 1892, all interior woodwork was finished with Liquid Granite.

Only once in 35 years have the floors required refinishing.

Still more significant is the history of a window sill at which two generations of children have played.

The window has a west exposure and is subjected to the blistering rays of the summer sun. Many times on winter nights when the window has been open, sleet and snow have encrusted the sill.

In all these years the varnished surface has not been refinished. Today, after nearly two generations of use, the protective film of Liquid Granite retains its original beauty, unmarred by even a hair-line crack.

Here is varnish that *wears*. It withstands millions of steps and gives years of service. It is the kind of varnish you need on your floors. Buy it from a Berry dealer near you—and eliminate the cost of frequent refinishing.

BERRY BROTHERS

Detroit, Mich. *Liquid Granite* *Walkerville, Ont.*

stopped and questioned anyone who came."

"Yes," said Scarlet; "you stopped and questioned me."

"And so you come to us," said the princess bluntly. Her voice rose. "Oh, it is terrible—terrible!" she said. "You suspect me—you have reason to suspect me! My husband is killed with the little dagger I wear in my hair—I do not hear him killed, though I hear a dog bark afterward—you find me beside his body when you come—you find a handkerchief too, a woman's handkerchief—you find—" her voice broke—"the mark on his face—And yet, I swear before God, I did not murder my husband!"

BARON KOSSOVAR rose, his eyes burning. "But if you must suspect her, you must suspect me more!" he cried. "I was with him, and we were talking, sometimes angrily, till half an hour before you found him dead. I had reason to kill him if I wished. I might have killed him—pretended to say good night to him at the door, so you could hear me and think he was still alive, and then gone back to my room, to be aroused by the news of his murder!"

"Only," said Scarlet quietly, "in that case, after you had said good night to the dead man, the dead man got up and locked the door after you."

"Well, he might have had strength enough left to do that," said the baron impatiently. "Or it might have been done somehow else, or—" Then his head drooped suddenly. "No, it is useless," he said; "I did not kill Mirko; I cannot pretend I did. But you should not suspect her, when you have better reason to suspect me."

"Ah, my friend, you are very noble," said the princess, lightly touching his hand with hers.

"You're both noble," said Scarlet dispassionately; "but you're both very silly. There is another possible murderer that Mr. Lang has not mentioned."

"And that is?" said the latter with a dangerous calm.

"Mr. Lang," said Scarlet demurely. "He might have got in with his master-key after the baron left, murdered the prince, relocked the door, and—"

"But what reason would I have to murder Prince Mirko?"

"Oh, you might have had a dozen reasons," said Scarlet airily. "But you didn't. Because you wouldn't have used a dagger. You'd have shot him—or killed him with your hands—in the good old Anglo-Saxon way.

"On the other hand," he continued reflectively, "Madame is a Ruritanian, and might very possibly use a dagger—especially this one." He lifted the stained weapon delicately from the table. "But Madame asserts that she lost her dagger-ornament earlier in the evening, and did not see it again till she found it in her husband's body."

"Yes," said the princess desperately, "that is true. The dagger fell from my hair. I do not know where. I do not know how. But at first, when I found it again"—she shivered—"I did not see how it could be mine."

Scarlet blinked. "I see. And then—the handkerchief." He replaced the dagger and took up a tiny square of fine linen. "Obviously not a man's handkerchief.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

from its size, and"—he sniffed it—"scented. But Madame asserts that the handkerchief is not hers, that she found it beside the body."

"Yes, I have never seen it before. It is not mine," said the princess, in the voice of an automaton, staring down at her feet as if she saw them already enmeshed in the net which Scarlet's diffident sentences slowly wove about her. Scarlet went on:

"Third point. The slash on the prince's forehead—the slash like a capital T. Well, that rather points to the baron, on the whole. At least, Mr. Lang, who has had great experience with Italian criminals, has informed us that a similar T-shaped slash is a common occurrence in political assassinations—the "T" being for 'Tradditore' or 'Traitor.' Now, the baron's political views might easily lead him to consider the prince a traitor to their mutual country. On the other hand, the T might be a blind—employed for the purposes of argument by Madame. Curious clues all of them; and yet the most curious thing of all is—that every one points in the same direction—"

"I'm afraid they do," said Mr. Lang heavily. "Princess Mirko—" he began in an official voice.

"But I did not murder my husband!" said the princess, with a terrified gasp.

"One moment," said Scarlet bashfully. "Think of the nature of the wound. The prince was a tall man—the wound was high on his neck and slanted down—such a wound as would suggest a tall assassin—woman or man. Now the baron and madame are both tall, but—"

"STOP!" said the baron suddenly. He turned to the princess. "It's no use, Nadja," he said. "One of us must speak to protect you. Gentlemen—Prince Mirko's wife was not even in this suite when her husband was murdered. She was on the balcony of my suite; I had asked her to come there—to talk of a private matter—"

The princess put her head in her hands with a gesture of utter defeat. "Oh, Stanislas, Stanislas!" she sobbed, "you have ruined everything. They will never believe me now!"

"Yes; I think that clinches it, if that's true," said Lang with austere triumph. "Gives a better motive than politics. And they both killed him. Princess Mirko—"

But Scarlet cut in before he could finish his sentence. "Oh, what the baron says is true enough," he said briskly. "I saw and heard them from the other balcony. Only your deduction's wrong, Lang. It wasn't a love affair—she went because she was worried about her husband. But why do you keep on calling her 'Princess Mirko'? She isn't really Princess Mirko, you know," he went on in tones of shy patience.

The princess raised terror-stricken eyes to his. Lang gasped.

"You mean that woman isn't the prince's wife?"

"Oh yes; she was the prince's wife, right enough—she merely isn't and wasn't Princess Mirko. Have you never heard of a morganatic marriage? If she had been a princess," he concluded thoughtfully, "the murder, most probably, would never have been committed."

WATERWAYS ARE NEW HIGHWAYS OF HAPPINESS

Motoring on the Water

HIGHLIGHTS on the AQUAFLYER
(*Not* illustrated)

The sensation of the Motor Boat Show. This boat makes available, at a moderate cost, the speed, comfort and beauty of craft formerly costing much more.

Through large scale production and sales methods Johnson is able to offer at an incomparably low price a boat that attains a speed of 18 m. p. h. First cost and maintenance have been reduced to a fraction.

The seventeen foot hull of gleaming mahogany is marked by unusually beautiful lines and perfect balance in the water.

The Aquaflyer is remarkable for its safety construction features. Non-sinkable, light, weighs less than 500 pounds. Very ruggedly built.

Powered with a Johnson Big Twin outboard motor installed in a sound-proof hatch at the stern.

Advantages never before found in a speed boat are included in this wonderful craft

Write for details.

THIS summer—know the joy of motoring on the water. Go where road maps are the sunny skies. Go where you can follow any trail you might desire through shady inlet or clear rippling stream.

There is no sport like water motoring. As you hear the call of distant shores you answer, knowing full well that your Johnson will get there and back swiftly and safely. Know the thrill of Johnson speed: Know the ease of Johnson operation—starting, steering and controlling. And, above all, know the freedom from worry—from mechanical troubles—that a Johnson can give to the water motorist.

This year Johnson enhances its leadership in the outboard motor industry with four motors that are marvels of mechanical perfection. Revolutionary developments have greatly increased the power of all twins.

Thru an exclusive arrangement Johnson owners can have their motors insured against fire and theft at little cost.

If you are considering the purchase of an outboard motor, you owe it to yourself to see—or better, try one of these new Johnson motors. Johnson dealers are prepared to sell you on easy payments. If you do not know who handles them near you, send the coupon.

Sore throat, unchecked, may be grippe, tonight!

Throat Sore?

Don't wait till you get home! Start antiseptic treatment NOW!

SORE throat quickly grows worse!—unless you start to fight it instantly,—unless you make your treatment *continuous*.

A mere gargle night and morning is not enough.

Hour by hour, with incredible speed, the poisonous sore throat germs multiply. Unchecked, millions of them breed every hour. Before you know it you may be on the road to a more serious illness!

This is not necessary, today! With Formamint, the sore throat germs cannot multiply rapidly because your throat is kept continuously bathed in an antiseptic of proved germicidal power. Yet Formamint is harmless to the delicate throat tissues.

Just dissolve one of these pleasant-tasting tablets slowly in your mouth. Do this at the first sign of sore throat, and again at intervals throughout the day. To *treat* sore throat take a tablet every hour or so; to help *prevent* it, one every two or three hours.

Don't carry a germ-laden throat home to your family! Carry a bottle of Formamint Tablets with you and guard against infection and disease in crowded stores and street cars, and in cold, rain and dust. All druggists.

DOCTORS ENDORSE IT

Formamint

THE GERM-KILLING THROAT TABLET

"I don't see why?" said Lang, with the air of a baited bull. "And I don't see why it makes any difference whether the princess was a princess or not. Someone murdered Prince Mirko—if it wasn't this woman here—what woman was it?"

"NO WOMAN murdered Prince Mirko," said Scarlet quietly.

"A man, then? What man? The baron?"

"Nor was the murderer of Prince Mirko a man, as we think of men."

"Well then, in heaven's name, what was it?" cried Lang, in a sort of fury. "A ghost that walks through the walls? A gorilla? An act of God?"

Scarlet's eyes, behind his spectacles, danced with little points of light. "On that point," he said, with deceptive meekness, "I should like to take the evidence of the dog." He turned quickly to the princess. "The little white dog your husband was so fond of," he said. "The dog we found running about when we came in—do you remember when he was brought back to your suite this evening?"

"Why, yes," said the princess, with obvious bewilderment. "Stepan, the valet, brought him up from the kennels when we came back, after the dancing; my husband liked to have him in his room at night."

"Ah," said Scarlet, obviously laboring under some mounting excitement. He flung open the door of the princess's room and whistled. The dog came bounding in, ran about for a moment, sniffing, then, lifting his head toward the ceiling, gave a long, doleful howl. The princess burst into tears.

"What in thunder do you think you'll get from the dog?" queried Lang. "And we know he's tracked up the carpet," he added as Scarlet stooped to examine certain dull red paw marks on the floor.

Scarlet straightened up, his whole body alive and tense. "Yes, we know he's tracked up the carpet," he said, in a voice like a trumpet; "but what we don't know is how he tracked up the wall!" And he pointed at a spot on the glazed wallpaper above a tall painted wardrobe—a muddy spot, near the ceiling, that looked singularly like the imprint of a dog's muddy paw.

For a moment none of the others could believe their eyes—and the world seemed to slide and alter into a distorted and monstrous cosmos, where a little white dog could run up a wall like a fly, and a tall prince might be struck dead with a dagger wielded by neither a man's nor a woman's hand. Then Scarlet threw open the doors of the painted wardrobe. There was nothing there but an overcoat on a hook, some hats on a shelf above, and a large leather hat trunk beside the hats.

"We've looked through that wardrobe already," called Lang.

"No," said Scarlet; "you've only looked at it. For instance,"—he shook out the overcoat—"here are the same kind of paw marks there are on the wall, only here the marks are bloody. While, as for the hat trunk—"

The dog burst into a fury of barking that drowned the rest of the sentence.

"For heaven's sake!" shouted Lang, in a final exasperation, "you don't expect to find the murderer of Prince Mirko inside a brown leather hatbox, do you?"

"That," said Scarlet, quite unruffled, "is precisely what I expect to find!"

He started gingerly to lift the hat trunk down from its shelf. As he did so, its lid popped open like the lid of a Jack-in-the-box, and something bright and tiny struck at his eyes. There was an intense little scuffle for an instant; then Scarlet was holding out for Lang's inspection a kicking, fighting little creature hardly three feet high. The thing was grotesquely disguised in the stage-garb of a midget Beast, and its distorted lips poured forth a stream of denunciation in a hissing, clucking language that Lang did not understand.

"Permit me to present the murderer of Prince Mirko," said Scarlet, with a boyish flourish.

"Well, I'll be—" said Lang, with a long whistle. "One of those Russian midgets that played the pantomime! But what is he talking—Russian?"

"No," said Scarlet pensively, "Ruritanian. He's telling the princess—if we may give her her title—that she was always a bad sister to him, and he's glad he killed her husband; and she's telling him she hopes he hangs, if he *is* her brother. You see, the whole was what one might call a family affair," he added, with a touch of embarrassment.

SOME time later, over cigarettes and full glasses, Lang and Peter Scarlet watched the dawn brighten the window of the latter's chamber, and discussed the extraordinary events of the night.

"But I don't see yet—" said Lang, and paused.

"Oh, I was very lucky," said Scarlet. "Very. Knowing Ruritanian—and some of the previous story. And then, hearing the princess and the baron on the balcony. Though, of course, the minute I saw the weapon I knew the baron hadn't committed the crime."

"Why?" said Lang, with heavy patience. Scarlet considered. He flushed.

"Sounds absurd—my trying to lay down the law to you," he said. "But—the baron had motive enough; but he wouldn't have killed that way. He might hack his enemy to bits with a cavalry saber; he wouldn't stab him with a toy. It wasn't in his character—as I'd heard of it, and knew it in other Ruritanian nobles of his sort."

"The princess might have stabbed, though," said Lang thoughtfully.

"Oh yes—she'd be a stabber, if she'd be anything," agreed Scarlet promptly. "But I also happened to know that she was devoted to her husband. In fact, she'd as much as told me that she was worried for his safety, earlier in the evening. I know now she was worried on two counts: Baron Kossovar, and the brother she thought she'd recognized among the midgets. She wasn't quite sure it was he—she hadn't seen him for years and he was made up as the Beast in the play. That was the real reason she had her talk with the baron above—though the baron used to be in love with her, right enough. She wanted to try and find out if the baron had recognized any of the midgets, either. She didn't dare ask her husband."

"Why not?"

"Well, that's a long story. I'll cut it as

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

short as possible. But they *are* blood brother and sister."

"That beautiful woman and that little deformity? It seems incredible."

"Not as incredible as it sounds. There have been numerous cases—one or two normal children in a family of giants or dwarfs, and vice versa. But Nadja was the only normal one in her family, except for a brother who died. The other two were midgets—two brothers. The family were small farmers, but proud as Lucifer. They'd been great people, long back. Well, Mirko came along and fell in love with Nadja, so much in love he was ready to make her his morganatic wife; but he couldn't stick her family—one can see why. And she was in love with him; so she married him. But her being willing to be his morganatic wife struck her family in their sorest point—their pride."

"They got ready to make trouble; and Mirko, very quietly, had them shipped to England—saw they got an allowance, but were never to come back to Ruritania. This was just the midget brothers, the old people were dead. So the midget brothers—they hadn't thought much of Nadja when they had her; in fact, they'd been pretty spiteful to her; but now she was their wronged sister—they were going to get Mirko if they ever had a chance. Then the war came along, and one brother died. The one who was left organized a troupe of performing midgets—when Mirko's allowance stopped coming after Ruritania was invaded by the Germans—and brought them over to America after the war. They called the troupe 'Royal Russians' because they came at the height of the Russian craze; but that was just a name."

"And—he got into the room—"

"With the help of the others. Bribed them, probably. You saw them do their living tower on each other's shoulders. Well, they did it for him under the window, and it was just high enough to get him up to the window sill. The window was open—the valet locked it later. Then our friend hid on top of that wardrobe—he's an excellent acrobat for his size—and he probably swarmed up to the shelf by way of the overcoat and so on. That was how he got the mark on the wall. It looked like a paw mark because he was still wearing his Beast's costume from the pantomime—perhaps for a blind, perhaps because he didn't bother to change."

"WHILE the marks on the carpet?"

"Were some of them his and some of them the dog's. The handkerchief was his, too; it was scented, because, like many midgets, he was very vain. And the dagger that actually killed Mirko was his—one of a pair of family heirlooms. The princess was speaking the truth when she said she lost hers—it fell from her hair while she was on Kossovar's balcony. She got up there without your seeing her, by the same sort of little stair there was on the balcony you and I visited. And her maid was waiting for her on her own balcony. That's why neither of them heard the prince fall when he was killed—or cry out, if he did."

"I see; and, of course, the actual attack was entirely unexpected."

"Entirely. The little fiend waited with monumental patience till the prince was alone. Then, at some moment when the

For that clean-cut look of success

try this invigorating massage after shaving

SUCCESSFUL men look the part. They are clean shaven, clean cut, and well groomed. They have that glowing look of health and vitality.

A muddy, half clean, blackhead-dotted skin can never be a partner of the successful man. Yet you can have the clean look of success. It takes no extra time. It can be acquired easily and pleasantly in your own home.

After you shave, use Pompeian Massage Cream. You usually use something after shaving—hot towel, lotion or cream—to remove the dirt and clinging soap particles that become imbedded in the skin. Water, lotions, soaps—all reach the surface only. They do not remove imbedded dirt and secretions. Pompeian Massage Cream does.

Use this pleasant, gentle cream after shaving. See how your skin takes on the glow of life and action. See how imbedded dirt, even blackheads, rolls out under the mild but efficient urge of this quickly applied massage. You will like its restful, zestful "feel." Above all, you will like it for the feeling it gives you that—by gosh! you really are clean.

Make this convincing hand test free! Wash your hands thoroughly. Rub a little Pompeian Massage Cream into the back of your hand until the cream first disappears, then comes out again. Notice this — *the cream goes in pink and comes out black!* The black

is dirt that you could not remove by washing. You can make this simple but convincing test today. Get a jar of Pompeian Massage Cream in any drug store for sixty cents. If you prefer to make the test before you buy, merely mail the coupon below.

Strop your blades and put the saving away for a rainy day

Perhaps you don't realize how much you spend for blades in a year. Figure it out some day—the total will surprise you.

Stropping will save a big part of it, for stropping not only puts a much keener cutting edge on a blade but keeps it keen indefinitely.

Here are the cold facts from a Certified Public Accountant—

"I shave practically every day, therefore my Twinplex has stropped a blade over four thousand times. If I had used a new blade daily, as I had to before I bought the Twinplex, at 75 cents for 10 blades, I would have paid out at least $300.00 for blades. But with the Twinplex, a blade always lasts at least a week, and some two and three. I have had fine, smooth shaves, better than the new blade without stropping for less than $30."

But the saving is only half the story. If you've never used a NEW blade stropped, you've never had a really good shave. Take this opportunity to get one.

Stropped NEW Blade Free

Name your razor and we'll send you, free, a NEW blade stropped on a Twinplex. We would like to show you what real shaving is.

All dealers are authorized to sell you a Twinplex on 30 days trial. If after four weeks of marvelous shaving you are willing to forego the comfort and economy you have enjoyed, give up your Twinplex and get back your money. If you can't find the model you want, write us.

TWINPLEX SALES CO.
1688 Locust Street, Saint Louis
New York Montreal London Chicago

Twinplex Stroppers

prince passed fairly near the wardrobe, he jumped at the back of his neck like a striking snake. You see, we deduced that, because the wound was high and slanted downward, it must have been made by someone tall. But put a short man on stilts, and he's as tall as a giant. Our friend, with the aid of the wardrobe, was much taller than the prince. Then, when he'd killed his man, he marked him with that T—used his own pocketknife that time."

"T for traitor?"

"No; that was where your Italians misled you. The Ruritanian word for traitor begins with a J. But the Ruritanian word for seducer does begin with a T—and that was what he meant. That was what finally put me on the right track—that and the dog."

"I couldn't see why you made so much fuss about the dog!"

"I didn't see it for a long time—and then everything hitched together, with a sort of flash. The dog hadn't been there when the midget first got in the room, he was brought into the bedroom by the valet when the Mirkos returned. And he stopped our little murderer from getting away by the bedroom window—his friends must have been ready to catch him in a blanket or something. Your men wouldn't have found them, except by great luck; they were too small.

"Well after the murder, the midget made for the bedroom, and the dog jumped at him—there are paw marks on the bedroom door. He couldn't get to the window—the dog wouldn't let him—so he scuttled back to the wardrobe, climbed up the overcoat and stowed away in the hat-box. The dog found his master's body and stopped to whine at it; then he turned back to the midget, who had shut the wardrobe doors from the inside and was safe. But the dog kept barking—and the next minute or so, the princess came back and heard him. Then—you know the rest."

Lang smiled a trifle dubiously. "And I used to have a fairly good conceit of my own reasoning powers," he said somberly. "Well—but there's just one more thing—"

"Yes?"

"For heaven's sake tell me how I gave myself away to you—on the big-game-hunter stuff. It passed everyone else."

Scarlet blushed to the tips of his ears. "Well, there had to be somebody like you guarding Prince Mirko," he said. "And you were the likeliest candidate—the rest were too old or too flabby. So I tried you on the murderee idea. Naturally, if you were what I thought you were, you'd run into more chances of being murdered than the rest of us. And you played up marvelously—but you couldn't help blinking for just a second. So then I asked you about Lipmann's gazelle—and when you said you'd shot a couple I knew, whatever you hunted, it wasn't African big-game!"

"But what the dickens is the matter with Lipmann's gazelle?" queried Lang heatedly. "Isn't it an animal you shoot? It sounded all right."

"Old man," said Scarlet a trifle sadly, "it isn't an animal at all, at least to my knowledge. I made it up that minute—out of my own little head!"

A Rare Little Dog

(*Continued from page 39*)

growth of bittersweet, twining high about a great sycamore. I tried to secure a cluster but failed. Later, we returned with a light ladder. It was a twenty-foot ladder, and, standing upon the topmost rung, Bob reached the lowest limb of the sycamore and climbed up. He was cutting away the yellow berry clusters when I noticed Roddy. The little dog was half-way up the ladder. Fully extended, he was scarcely longer than the space between the rungs, but he was climbing up. I called to Bob, and stood beneath to catch Roddy if he fell. Steadily the puppy climbed and, swarming down to reach him, Bob lifted him from the ladder top to the limb above, where Roddy clung until the last bittersweet cluster fell and he rode down in his master's arms.

A large dog might have climbed that ladder, but it was a surprisingly difficult feat for one so small as Roddy to accomplish.

I returned home with the memory of my irritation over Roddy's puppy peccadillos buried under a warm affection for a brave little pal. Later, I was to understand that I comprehended Roddy as faintly and did him as scant justice, when I believed him to be only brave and companionable, as when I considered him only a nuisance.

Before I saw Roddy again he went through a hideous experience. He was struck and severely injured by an army truck. The wheels did not pass over him and no bones were broken but he was dreadfully hurt. For forty-eight hours he remained unconscious, and for weeks he lay motionless and helpless. He had been at once taken to the post veterinary hospital, and the verdict had been that nothing could be done, beyond making him as comfortable as possible. For days only his eyes seemed alive, but even then it was apparent, his master told me, that he was unhappy in his strange surroundings, and Bob carried him home.

It was weeks before Roddy stood upon his feet, and weeks longer before he could take a step without falling. As his strength came back, the little dog solved his own problem. When he fell it was always to pitch sidewise to the left. Roddy crawled to the wall and stood, leaning against it. In time he was walking, leaning against and scraping along the wall. For months he was able to walk only as he leaned against the wall. But continually he kept trying, until at last, bracing against the wall for a take-off, he could accomplish a few steps to the support of a chair, or the legs of a table.

When I first saw him after this experience, he was out of doors, but moving about in a succession of short rushes. He could stand, and he could plunge ahead in a run for varying distances, but he could neither turn from his course nor walk, unsupported, without falling. It would have been a courageous human who would have

"MOTHER!"

A PLAINTIVE, quavering call in the dark. A cry that pierces through the soundest sleep. Instantly you are wide awake, tense, a little afraid!

Happily, there is seldom much the matter. But some night you may awake to find the summons serious. Perhaps you will have to call the doctor and get quick relief instructions. Whatever the circumstance, when you go to your medicine cabinet will you *know* that the remedy for which your hand anxiously reaches is the best of its kind—pure, safe, effective and trustworthy?

There is one way of being sure. That is by having in your medicine cabinet the Household Products made by Squibb. Your doctor will approve them. They come from laboratories which, for almost 70 years, have served the medical profession with exacting care. Medicine cabinet products bearing the Squibb label are unsurpassed. You may trust them as you would trust your physician.

Squibb's Milk of Magnesia is a typical example of the high Squibb standard.

Milk of Magnesia is a very important item in every medicine cabinet. All ages use it, the youngest infant and the oldest adult. Under the circumstances it is vital that you should have the best. Squibb's Milk of Magnesia is the purest you can buy. It is manufactured from exceptionally pure materials and by a special process which yields a product of correct strength and uniform purity. Squibb's Milk of Magnesia is perfectly smooth, it has just the right fluidity and it is entirely free from the "earthy" taste that many people object to in ordinary brands of Milk of Magnesia. Its purity assures freedom from harmful effects. Consequently, it is pleasant to take. Little children and infants accept it readily. Truly, it is the *Standard of Quality*.

Consult your doctor. He will tell you that the name "Squibb" on the label of any product is in itself a guarantee of superior quality.

We have prepared a booklet, "What Your Medicine Cabinet Should Contain," that is full of helpful information. The coupon will bring you a copy—free.

You will find distinctive points of superiority in these Squibb Products:

COD-LIVER OIL	EPSOM SALT
TASTELESS CASTOR OIL	BORIC ACID (Powdered and Granular)
SODIUM BICARBONATE	ANALGESIC BALM
COLD CREAM	

NURSERY POWDER

ALWAYS SPECIFY THE NAME SQUIBB

If you enjoy *colorful things* you may now have them with slight effort

IT IS a pleasure to apply *Luco-Lac* and see a chair, a table or a chest blossom out into new beauty.

But the greatest enjoyment comes from the distinct effect these new colorful objects have in brightening up the home.

In the heart of every woman is the desire to beautify—to make home more attractive—to enhance its charm.

The happiest medium—is color—a red chair to brighten up a dark corner, or a blue table to break the monotony of gray walls. It is a pleasure to renew old things, and there is a new pride of ownership and a joy in the task.

It is to meet this instinct for beauty in the home that *Luco-Lac* has been perfected by *Lucas*. *Luco-Lac* provides a soft satin-like finish, possessing the beauty of a fine enamel—with the ruggedness of a tough varnish. Unless subjected to abuse, a *Luco-Lac* finish actually improves with time.

A *selection of* 20 *colors,* as well as black, white and clear, provides all the dainty pastel colors that thrill the soul of woman—and makes the transforming of an unsatisfactory room—a delightful adventure.

Our Color Card sent free—shows all the lovely shades. Get it. Also our booklet, "The Way to *Luco-Lac*"—which shows the new "half-hour" way to beautify and protect anything—everything—about your home. Write our Dept. A-4, Philadelphia, or your nearest branch.

EASY—VERY EASY
Any One Can "*Luco-Lac*"

Luco-Lac flows on easily and does not show brush marks. Yes! it's different in many ways.

It will stand weather exposure.
It is waterproof and will not turn white.
It will not mar easily.
It will not show hot dish marks.
It will not stick to clothing.

You'll Like It—Immensely

The "Do *and* Don't" *of Home Decoration*

For those little painting jobs around the house that every home owner loves to do himself, there is a handy little *Lucas* book that simplifies the work and improves the results. Any of these books will be sent free. Address our Dept. A-4, Philadelphia, or your nearest branch.

Booklet J—"The Way to Luco-Lac"
Booklet L—"House Paints—Their Uses and Application"
Booklet U—"Treatment and Care of Floors"
Booklet C—"Treatment of Walls with Paint and Color"
Booklet A—"Enameling Inside and Out"
Booklet S—"How to Paint Furniture and Other Household Articles"

taken half the falls Roddy got and kept trying. It was more than a year from the time he was hurt before he was steady again upon his feet, and then there was a new member of the little family.

From the first Roddy was thoughtfully interested in the baby. Perhaps dogs do not think—that is, arrive at a conclusion by mental processes—but I should hate to believe it. At any rate, his attitude and demeanor were suggestive of thoughtfulness. He never approached the baby to touch her; but he watched her with quiet attentiveness whenever she was visible to him. It plainly distressed him to hear her cry. When she was tucked away in the nursery to sleep, he lay at the door, and he abandoned his usual place and slept there at night. Perhaps it all just happened, but his conduct was so marked as to attract attention. He was credited with watchful interest in the baby.

When the baby grew old enough to be wheeled out of doors for a daily nap in her carriage, Roddy's purpose became unmistakable. The little dog stretched beside the carriage for whatever time the baby was there alone. He never wandered away, and he would permit no stranger to approach. He had assumed a responsibility, and he was faithful.

THEN came the transfer to another station, this time to West Point, and later there was another baby. It is blustery on the heights along the Hudson, even when comparatively mild in New York. When the new baby went out for her daily nap, bundled up from the cold, Roddy went too. Daily, for hours at a time and in all sorts of weather, Roddy remained with and guarded the new baby, as he had watched over her sister in a milder clime.

When warm weather came and the two little ones spent the sunny hours outside, Roddy was always near. No stranger could pass the little dog to where the children played. And yet, Roddy never romped with the children. Always he evaded the clutch or pat of the baby hands. When they came where he lay watching, Roddy quietly moved to another spot. But he never left them far.

Then we planned to have the family with us for a time—the mother, the two babies, the little dog, and the father over week-ends. We acquired a rambling old house at Inwood, in New York City, with wide shaded grounds, and sand piles, and a swing, and we acquired with it a cat and a great mongrel dog. Some people are surprised to hear that all of New York City is not built up. But it is an extensive city, and within its borders are all sorts of places. The locality we had selected for a home was one of the spots that had not been "settled up."

I am no lover of felines; I have yet to discover an admirable trait in a cat. But we were assured that in this place a cat was a necessity, and that this animal was a doughty ratter. At the same time, we were warned that her temper was evil. I anticipated trouble from these additions to our ménage, that included, also, an English bulldog.

Due, perhaps, to some hidden chapter in his experience, Roddy had ever displayed a wholesome respect for cats; but I anticipated no trouble between Roddy and this one; he would give her a wide berth. The bulldog was a different matter. He scorned to attack or even to retaliate upon a small dog; but the cat that stands against a bulldog is lost. However, I hoped for the best in regard to the cat, though I entertained little hope that our two dogs would accept the strange mongrel and dwell with him in amity.

But there was no trouble in the beginning. The cat spent most of the day curled up on her cushion in a kitchen chair, and the dogs paid no attention to her. The great mongrel appeared a friendly, inoffensive animal, and our dogs, while they did not fraternize with him, made no hostile demonstrations.

FOR a month all had been peaceful, when one day the youngest baby toddled over to where the cat lay upon the floor and bent to pat her. The cat snarled viciously, and struck with a flashing paw at the baby hand. With a rush, Roddy, who was afraid of cats, was upon her. There was no warning as there was no hesitation. Roddy saw and, regardless of consequences, he sprang to the defense of one whom he had ever guarded. I would not have believed that a dog so small as Roddy would have had a chance against a cat of the size and temper of this one. But Roddy would have killed her—very nearly did before I could tear him away.

It was a subdued and apprehensive cat thereafter, though Roddy made no effort to molest her further. But when, as happened, the children and the cat were in a room together, Roddy's eyes never left her. His intent watchfulness was something to see. The cat never endured it long.

It was one of the wonderful Indian summer days we were favored with that fall, when Bob drove down for the week-end. We were all out, thronging around the car to greet him. The great mongrel lay upon the grass at the edge of the driveway. We had accepted him, in that no decision had been arrived at as to his future; but the children had not been permitted to come in contact with him. There was no warrant for my suspicion, but I did not trust him.

Now in the laughter and chatter and confusion of greetings, Baby Barbara, who displays a vast fondness for animals, toddled to the great mongrel's side. The cur growled and snapped at her.

Standing less than a dozen feet away, I heard the menacing growl, saw the jerk of the great brute's head topple the baby over, frightened but unhurt.

But one quicker far than I saw it, too. With a choking snarl Roddy hurled himself upon the cur. Swinging clear of the ground he was clinging to the great brute's neck when I snatched up the frightened baby. Again, watchful, faithful Roddy had struck in defense of his charge.

Thereafter, I lived in fear for Roddy. His enmity toward the great dog was unappeasable. Doughty little battler that he was, he would have stood no chance with the gaunt brute that measured three feet at his shoulders to Roddy's scant twelve inches, and whose formidable jaws could have torn the life out of the smaller dog in a single bite. But Roddy, whose dauntless spirit had never considered odds, remembered the other's offense, and yearned for battle.

I shall always regret that I temporized. But the great dog was Karo. He had be-

New Styles in NOGAR Utility Clothes

Men's Suits & Topcoats $12.50 & $13.50. Boys' Suits, $9.85 & $10.85

These new garments are absolutely the last word in work clothing—in service, appearance and fit. Popular old features have been improved still further and important refinements added.

The new NOGAR coats have cling-fitting collars and roomy shoulders; large inside bellows pocket; flaps on outside side pockets; stitched armholes for uniformity; piped seams throughout. All NOGAR garments are double sewed; seams *can't* rip; pockets of same material and guaranteed to last as long as the garment. In NOGAR coats there is no lining to wear ragged and conceal poor workmanship. They are neatly finished inside and the material is in a pleasing pattern.

There is *only one NOGAR Cloth* and we make it. Only garments shipped direct to you from our factory at Reading, Pa., are made of genuine NOGAR Cloth. NOGAR garments are sold only through our Authorized Representatives and by *nobody else.*

Join the ranks of the money-makers!

"Spread good will at Easter" says Dr. Frank Crane

"LET us celebrate this glorious occasion by spreading love and good fellowship." These are the words of Dr. Frank Crane, beloved by thousands through his kindly philosophy as expressed in his writings.

How easy for each of us to do a little toward spreading sunshine and good will among those we love or admire. Easter is a particularly appropriate occasion for remembrance. And Greeting Cards make it so easy for you to remember.

EASTER SUNDAY IS APRIL 17

In any good shop you will find a generous assortment of tasteful cards not only for Easter but for birthdays, anniversaries, congratulations, condolences—all the many occasions when it is proper to send some message of cheer or sympathy.

Scatter Sunshine with Greeting Cards

longed to my friend Jesse R. Grant. Mr. Grant had requested me to keep him if possible. He had considered him kind and harmless, a gaunt, friendly dog whose greatest failing was the inexplicable habit of absenting himself for days upon end. In consideration of my friend's wishes I would give Karo every chance.

Karo was a descendant of the "wild dogs of Inwood." Before his birth, his mother left the pack for the seclusion of a fastness under the barn here, and there Karo was born. One night when out foraging the pack attacked her. The gateman at the Inwood Station has told that there were five or six dead dogs on the River Road that morning. Karo was the sole survivor of the litter of puppies left motherless under the barn. Mr. Grant adopted him, and he grew a tall, gaunt dog, solid dark brindle, almost black, his short thick coat surprisingly soft. In size and conformation he was suggestive of a great Dane.

A neighbor has told me that his father was a German police dog, and the breeding of his mother an insolvable mystery. She is reported to have been a great shaggy animal, who led the pack.

"The first time I saw her," said my neighbor, "was at twilight one summer evening. She came over a ridge, and ran diagonally down a weed-grown slope, the pack behind her. At first I thought it a sheep the pack was chasing, until, through a field glass, I saw that it was a dog."

I HEARD many tales of the wild dogs of Inwood, before and after we came here, tales at which I smiled incredulously. There is a dearth of legendary lore about New York City, and I considered the stories of smugglers at Inwood, before the Americans built Cock Hill fort and the British took it, of a prehistoric cave dwelling, and of the wild dog pack, all part of a fanciful fiction, pleasing enough to read and not too incredible to find space in the Sunday supplements.

But wild dogs, really—absurd! Inwood is a part of New York City; far within its northernmost boundaries. And in New York City dogs are required to be licensed and muzzled and led upon a leash. Perhaps there were wolves here once; but wild dogs—never!

And I thought this, even after I knew that no wilder section exists within fifty miles of New York than this unknown corner of Manhattan that stretches north from Dyckman Street and along the Hudson to Spuyten Duyvil.

Here a narrow dirt road wound along the river, weed-grown and close bordered by jungle growths of sumac, alder, and wild cherry, while higher up, along the precipitous sides and uneven ridges of tumbled hills, oaks and maples, pines and hemlocks, and great tulip trees reared above the matted underbrush in scattered patches of woods, between which grew impenetrable tangles of bushes, weeds, and briars.

There was an Indian settlement here when Henry Hudson came, and in the striated cliffs at the upper end are caves, in which Mohawk relics have been found. Fateful things have happened here, and it is wild enough, still, for almost anything to happen; but just around the corner is a busy city street. Wild dogs? I did not believe it, and for weeks after we came here, I saw nothing that looked like a wild dog.

But the days passed, bringing to me no increase of confidence in Karo. Always he fawned upon me. Frequently he appeared beside me as I strolled about, unconscious of his presence until the great jaws would close upon my hand. They never closed to pinch, but always his tail was carried low and it was never wagging. It impressed me that there was a speculation in the act, a conjecture in his mind as to just what would happen if he closed the great jaws down. Then I would withdraw my hand, and a moment later Karo would be gone, disappearing as quietly as he had come.

Comfortable quarters were provided for Karo in the stable. The other dogs slept in the house. Frequently he would sleep there through the entire day; but he would not remain through the night. If shut up at night, sooner or later he would begin to howl, and continue until released. Then from time to time he would disappear and we would not see him for days. And always he was gaunt and thin, his hip bones standing up, the ribs ridging under the soft coat. But he seldom appeared to be hungry, and frequently he rejected the food the other dogs ate greedily.

But Roddy's hatred of the great dog increased as the days sped by. He had never displayed such bitter antagonism toward another dog. Several times I intervened to break up Roddy's attacks, until I came, almost, to believe that the indomitable little warrior had the great dog cowed.

Then the gray days of late fall and early winter came, and I saw, from time to time, strange dogs—nondescript, unkempt animals, their common characteristic their great size, and, in two or three, a strong resemblance to Karo. These appeared about the place, and always Karo was with them.

These dogs, with the exception of Karo, were evidently homeless. They could not have come from the city streets beyond, for collarless and unmuzzled they would have been quickly gathered up there. I began to wonder. And my wonder increased as it became daily more evident that among these dogs Karo was a sort of leader.

When the strange dogs were about, Roddy, close guarded inside the house, became almost frantic. Individually and collectively they stirred in him the fierce antagonism he displayed toward Karo. Our English bulldog remained indifferent, and no precautions to safeguard him were taken. We considered him abundantly able to care for himself in any company. Commonly, he wandered at will about the place. Then, one afternoon, the bulldog returned, horribly mauled. After a night of suffering, and when nothing further could be done, he was mercifully put away. When Karo reappeared, after an absence of two or three days, he was limping badly.

THEN came the first light fall of snow. It melted as it fell upon the city streets, but at Inwood it lay a thin blanket through which the grass and weeds stuck stiffly. It was not heavy enough for a tracking snow, but it was the first harbinger of real winter.

There is a thrill, a tingle in the blood, a lift to the spirit, in the first snow of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

winter. I was writing near a window, often pausing to look out across the wide, snow-sprinkled slope and across the river to the reddish-brown ramparts of the Palisades beyond, almost tempted to abandon work for a long walk, when a pack of six or eight dogs swept over the hill and across the level space between the house and the stable.

At their head ran Karo and, close beside him, a white bull terrier. They kept on down the slope beyond but, turning before they reached the hedge along the River Road, they ran diagonally back up the bank to the level outside my window. Then I saw that the white bull terrier at Karo's side was a young female, sleek and shiny, with a studded collar around her neck, from which dangled her license tag. The others, all but one, were the unkempt, collarless dogs that I was beginning to think of as "the pack." The other exception was an Airedale that, also, wore a collar. In that motley company the bull terrier and the Airedale stood out sharply, two pure-breds in a pack of mongrels.

Somebody's pets that have wandered away and fallen into bad company, I thought regretfully, striving to recall where, if ever, I had seen either of them.

The Airedale was running close behind Karo. Suddenly, as I watched, Karo whirled and slashed at him. Instantly the pack stopped, gathering around in a circle. He was a large Airedale, though smaller than Karo, and he fought bravely. But I never saw a dog fight as Karo fought. Darting in and out, slashing down and sidewise, silent, with a persistent activity that made his movements difficult to follow. He also fought with his feet, striking and pawing, striving plainly to overthrow the other.

But the Airedale, too, was a battler, and strong and courageous. He kept his feet; but his movements appeared halting and sluggish beside Karo's flashing attack.

Then from the circle of watching dogs, one moved closer to the fighting pair. This was a huge dog, not unlike Karo in color and appearance, but heavier and plainly much older. Slowly the old dog edged in, while the rest of the pack kept their distance. I thought of the bull terrier and looked for her, but she had disappeared. I saw the old dog draw closer, moving about stiffly, watching for a chance to strike. Suddenly, he darted in. I could not see just how it was done, but Karo and the old dog swung the Airedale clear from the ground, between them. Fastened upon him now, they jerked him back and forth as they might have worried an old coat. For the first time, the Airedale howled, a shrill cry of terror.

THE howl awakened me to realization of the Airedale's danger, and I ran to the door. A broom stood on the porch, and as there was nothing else I seized it as I ran out. As I turned the corner of the house the two, as at some understood signal, dropped the Airedale to the ground, and as he floundered for an instant, helpless, his legs in the air, Karo slashed at his unprotected belly. I jabbed the broom in Karo's face, and he sprang back with a snarling growl. The pack had fallen back at my approach, the old dog with them. Again I stabbed at Karo with the broom, and this time he ran back to the circle of watching dogs. The Airedale staggered to

The art of smiling charmingly is the art of caring properly for one's teeth. That is why Pepsodent, urged by dental authorities, is also universally placed by experts, these days, near the top of the list of modern beauty aids.

When Teeth Are Film Free

Smiles Are Charming

The new way to combat the film on teeth—the source of many tooth and gum disorders—which numbers of leading authorities suggest

Send Coupon for 10-Day Tube Free

MOST persons' teeth and gums are imperiled, say many authorities, by a film that forms on teeth.

Ordinary brushing having failed to combat it effectively, a new way in tooth cleansing is being advised. A way that differs in formula and effect from previous methods. These are embodied in the special film-removing dentifrice Pepsodent.

Now an effective film combatant

By running your tongue across your teeth, you will feel a film; a slippery sort of coating. Ordinary brushing does not remove it.

Film absorbs discolorations from food, smoking, etc. That is why, according to leading dental opinion, teeth look dingy and "off color."

Film clings to teeth, gets into crevices and stays. It invites and breeds the germs of decay. And that is why it is judged so grave a danger to the teeth by authorities.

Film is the basis of tartar. And tartar, with germs, is the chief cause of pyorrhea. That is why regular film removal is urged as probably first in correct gum protection.

Most dental authorities urgently advise thorough film removal at least twice each day. That is every morning and every night.

For that purpose, obtain Pepsodent, the special film-removing dentifrice which leading dental authorities favor. Different from any other tooth paste.

Pepsodent curdles the film, then removes it; then polishes the teeth in gentle safety to enamel. It combats the acids of decay and scientifically firms the gums. It multiplies the alkalinity of the saliva. And meets, thus, in all ways, the exactments of modern dental science.

On dental advice, people are adopting this new way of tooth cleansing. Obtain Pepsodent, the quality dentifrice, at drug stores. Two months' supply at a moderate price—or send coupon for 10-day tube. Use twice every day. See your dentist twice each year. Make both a habit.

FREE—10-DAY TUBE

his feet and ran. With my threatening broom I held back the pack until the fugitive had gained a start of fifty yards or so, when they broke past me in pursuit. The Airedale was headed toward Dyckman Street, and running for his life. A white streak came around a corner of the stable, and the pack was in full cry, Karo at their head, the bull terrier running at his side. The Airedale escaped.

It turned warmer after that first snow, and later there were two days of rain. For two or three days after the Airedale's escape, Karo did not come to the house. I saw him several times at a distance, and always the bull terrier was with him. Late one afternoon I entered the stable and found both Karo and the bull terrier asleep in Karo's bed. Then came the rain. Looking out from the sun parlor I saw the two dogs cross the orchard below Bolton Road, skirt the garden, and disappear over the ridge beyond. The once spotless bull terrier was sodden with rain and splashed with mud to a grimy slate color. Her collar was gone. But wet, bedraggled, an object of pity, she ran gayly at Karo's side.

Then came the heavy snow. The official weather report called it an eleven-inch fall. It appeared deeper than that at Inwood. The ravines and gullies were drifted full, and a heavy white mantle of snow lay over the hills.

That morning I was shoveling a path around the house. Roddy had gone out with me. Suddenly the snarling din of a fierce dog fight came down from the hill top. A glance around showed that Roddy was gone. Dropping my shovel, I ran, stumbling through the snow. Far up the hill two men were running along Bolton Road. Just inside the orchard, a dark shape stretched on the snow. With a throb of thankfulness I saw that it was too large a shape for Roddy. Then Karo came down the hill, followed by half a dozen other great dogs, and a hundred yards behind them floundered Roddy. Despite the depth of the snow the pack ran swiftly, and Roddy toiled desperately after them, sinking to his back in the snow at every bound.

I LAUGHED at the little dog's futile effort, but he held stubbornly on. At last he was out of the house and the pack he detested was in sight. I called to him, but for the first time Roddy failed to heed my command. He had cut into the track of the pack now and on the beaten trail he ran more swiftly. Again and again I called, but Roddy paid no heed to my voice.

"He can never catch them," I thought, and turned back to the house. I was again busy at my shoveling when another thought came: Roddy could never catch the pack—but suppose it waited for him? Again I cast aside my shovel, sharp fear in my heart. Time enough had elapsed for Roddy to have given up the chase and returned. I whistled and called, but there was no response.

At last I went after him. If the pack had kept on they might be miles ahead of Roddy now. But Roddy had too great a start for me to hope to overtake him by following upon his trail. I must cut across and intercept him. And so I climbed the hill to Bolton Road and followed it to the great building that was once the "House of Mercy." There I turned to my left

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

through the thick underbrush to the top of the precipitous bank that drops down to the east of the River Road. From here I could see for a considerable distance through the trees and along the hillside. Below lay the River Road, now only a narrow footpath winding through the snow. Still further down stretched the Hudson, a mottle of broken ice, above which the gulls wheeled and turned, mewing plaintively.

There was no sight or sound of Roddy. If I failed to find him here I could only hope to come upon him by following his trail. Beyond a tangled thicket, halfway down the steep hillside, I struck the end of a freshly beaten track. Several dogs had climbed up this far and then turned back. I followed down. Just beyond a great maple, a little mangled form stretched out on the trampled snow. Brave, faithful little Roddy was gone. Tenderly I gathered up the dead body in my arms and carried it home.

We started out, three of us, to find Karo and the pack. The trail ran close to the railway drawbridge, past the great tulip tree where, legend says, Henry Hudson once met the Indians in friendly conclave; and climbing back over the cliffs, we followed where it wound to three recently occupied rock dens, in one of which remained the gnawed half of a loaf of bread. Then for a time we lost it among the rocks, and picked it up again on the top of a ridge. Further back, in a circle of blood-stained snow, we came upon the mangled body of the bull terrier. Karo had turned upon and killed his mate. Even a wolf would not do that.

THE "wild dogs" still forage along the river and den in the rocks at Inwood, but Karo no longer leads the pack. There is a grim satisfaction, but no comfort in the thought. It happened too late to save Roddy. But we shall never forget him. To us, the world is a better place, and faithfulness, courage, and duty are less abstractions, because one rare little dog once lived.

What He Learned at Fourteen Helped Him "Come Back" at Forty

(*Continued from page 61*)

was there within another two minutes. But I might as well have stayed in bed. The whole thing was in flames.

That was in 1879. Humphrey was twenty-seven. He had just married the girl who, through the coming years, was to be a partner as well as a wife and a mother. Together, in the small hours of the morning, they crossed the mill property from the books and reckoned up where they stood. On the score of the mill alone they were forty-five thousand dollars in debt!

"We need you on the farm," Harlow suggested to Dudley. "If we all put our shoulders to the wheel, we ought to make a go of it."

But they reckoned without a host of contingencies. Soon nearby properties,

"The Dictaphone gives me time to t-h-i-n-k"

"I refuse to be harried or hurried by shorthand," declares S. A. Hargraft, prominent importer

Users of high-grade pipes and tobacco know what "Sponsored by Hargraft" means. Read how he also "sponsors" The Dictaphone. Then resolve to try it yourself—using the coupon below.

LIKE many other executives of successful sales organizations, S. A. Hargraft, President of Hargraft & Sons of Chicago, does much of the big selling himself. Customers must be cultivated by frequent contacts. But to talk with them and attend to important correspondence *simultaneously* is, of course, impossible.

Mr. Hargraft and his associates met this situation squarely—by using The Dictaphone in all their offices.

"We'll not be bothered with shorthand," says Mr. Hargraft, "when The Dictaphone serves us so much better. We are out most of the day, hence do much of our dictation after hours. But even if we were always in, we'd have Dictaphones—they're so much more handy and useful.

"I use The Dictaphone to keep in touch with accounts the country over and with our factories in England and Canada. But I like The Dictaphone most because it gives me time to *think*."

Miss Mary Brooks, Mr. Hargraft's secretary, also likes The Dictaphone far better than shorthand. "Besides giving me time to relieve Mr. Hargraft of many duties," she asserts, "it enables me to arrange my day to suit myself. The Dictaphone's so much more simple and so easy to listen to!"

Executives and secretaries in all lines of business say much the same thing. But you can never enjoy The Dictaphone's benefits until you *try* it. Why not mail the coupon today?

Mary Brooks

Private secretary to Mr. Hargraft, finds that Dictaphone work is "much quicker, more systematic and much more interesting and pleasant" than nerve-wracking, round-about shorthand

DICTATE TO THE DICTAPHONE

REG. U.S. PAT. OFF.

and double your ability to get things done

What's Wrong With Shorthand?

Secretaries say:—

"He talks so fast, I'll be getting writer's cramp soon."

"No one else can read my notes."

"I'm nothing but a bell-hop."

"Yes, I do mind staying late."

"Those awful waits while he chats over the phone."

That's enough! I'll show him this trial offer right now.

that once had been worth three or four times as much, were selling as low as twenty dollars an acre. And the mortgage indebtedness of the farm had been growing, and debts bore an interest charge of ten per cent.

Mina, the eldest sister—I have not mentioned her by name before—had married and moved away. That left the two brothers, Harlow, Dave, sister Linnie, and Dudley and his wife. The five joined hands to save the farm. They didn't know that ten grim years were ahead of them.

The meanest thing about those years was that victory always seemed just around the corner. They made the farm pay almost from the outset, but the handicapping debts ate up profits almost as fast as they were made. Each year they gained a little, though it meant work from daylight until dark, and later than dark when the moon was bright.

BY 1889 they had paid off $15,000 of the debt, and that fall they harvested a potato crop of 20,000 bushels. In one day alone they dug and hauled 1,300 bushels of potatoes from four acres. They had almost sweat blood over those potatoes; they were beauties. Piled in regular heaps in the fields they seemed to represent so many heaps of cash. It was a wonderful yield, their "stake" for the year.

"What are you going to do with 'em, now you've got 'em?" asked a neighbor. "There's no market for potatoes."

Vainly the Humphreys sought to sell their potatoes. Finally they were forced to cover them in the field as they were, in the hope of carrying them over the winter for better prices in the spring. By spring, potato prices were even lower. The whole twenty thousand bushels had to be left to rot.

Their big hay crop sold for three dollars and four dollars a ton. It had cost them double that. Other crops likewise went for a song. The interest charges took every penny they could rake together.

"No potato market this year; that means a good one next year," they reasoned.

The twenty thousand bushels had been the yield of eighty acres. For the new crop they planted one hundred acres, and another one hundred acres of beans. There was a big bean market with good prices in prospect.

But other farmers had reasoned on potatoes as well. The market was glutted. When digging time came, the best potatoes were bringing only fifteen cents a bushel! It cost more than that to get them out of the ground, and those one hundred acres might have as well been planted in weeds for all their value. The bean market held excellent; but every acre of the nearly one hundred acres of beans the Humphreys had planted likewise turned into a dead loss. Wet weather ruined the whole crop!

"That finished us," said Mr. Humphrey quietly. "By now even our personal property was mortgaged. We went to the banker, who was our chief creditor, and told him we were done, that the next move in the game was his. After some figuring, he concluded that a sheriff's sale, the mortgage included everything we had, would net sufficient to pay our indebtedness, and possibly leave us something besides.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"It was a heart-breaking thing, that sale. The whole countryside turned out for it—our friends, our neighbors, folks from miles around. The name of Humphrey had stood high in that section, thanks to our father. The sale was more than a mere sale: it was an event, a public tragedy.

"At first, the bidding was fairly good. Our stuff was bringing prices fully equal to our hopes. But as article after article came up for bidding, the high bidder without exception was the banker. Every article of importance he bought. This made it apparent, even to a schoolboy, that it was the banker's intention to bid in nearly everything, regardless of what the others might bid. Also, all present knew that he was the mortgage holder.

"Just as soon as the crowd sensed this, the competitive bidding, which makes an auction, fell off, leaving the field to the banker. I hardly need tell you the consequence to us. The sale became little more than a legal formality. It was hurried through. The big crowd for the most part stood as mere spectators. When the hammer fell the last time and the bids were totaled we were penniless, and more than twenty thousand dollars still in debt. The farm, the stock, everything was gone. We were worse than bankrupt.

"This was in the fall. We stayed on the farm until spring to take care of things for the banker."

BORROWING one hundred dollars, the Humphreys in March, 1891, moved to Glenville, near Cleveland, the location of one of the famous Grand Circuit racing association's tracks. The town was a great horse center; and Harlow and David, both experienced horsemen, felt they could find work with some of the racing stables as horse breakers and trainers. Dudley was to do writing for farm papers. The women were to take in boarders. Dudley's two children, Harvey and Mabel, and Mother Humphrey were also members of the group.

That year their fortunes seemed on the mend. Harlow and Dave obtained a contract from a large stable owner to break and train all of his colts, at thirty dollars per month, per head. The contract held good for a year. Dudley's writing on farm topics "took" with the farm papers. The women's cooking attracted paying boarders.

Also, Dudley had perfected an odd and homely little invention. Walking through the streets of Cleveland he noticed the sidewalk pop-corn venders popped their corn exposed to the air, and added the seasoning afterward. He bought some of the popped corn, but didn't like it nearly so well as the corn they had popped in the old iron kettle on the farm.

"You see," he explained to me, with a smile, "we used to put our corn into the hot kettle, mix the lard and salt right with it, cover it with a lid, and stir it up with a big spoon. That kept all the sweetness of the corn in the popped kernel and seasoned it at the same time.

"Now, Harlow had already made one improvement in our farm corn popper. It was unhandy to stir the corn with a spoon, and yet keep the kettle covered. So he had made a wooden lid with a hole in its center through which the corn could be stirred with a wire. My improvement

The Radiophone's Meaning

An Advertisement of the American Telephone and Telegraph Company

AN ADVENTURE in communication was made last January when transatlantic radio telephone service was established between New York and London. There had been previous tests and demonstrations. Nevertheless, the fact that at certain hours daily this service was made available to anyone in these cities from his own telephone, created such public interest that for several days the demands for overseas connections exceeded the capacity of the service.

It was then demonstrated that there was a real use for telephone communication between the world's two greatest cities. It was further demonstrated that the American Telephone and Telegraph Company, with the co-operation of the British Post Office, was able to give excellent transmission of speech under ordinary atmospheric conditions.

In accord with announcements made at that time, there will be a continued effort to improve the service, extend it to greater areas and insure a greater degree of privacy.

It is true that static will at times cause breaks in the ether circuit, but a long step forward has been made towards international telephone communication and more intimate relationship between the United States and Great Britain.

Getting ahead Financially

is vastly different from "enjoying prosperity"

Most everyone is "enjoying prosperity." A few, too few, are getting ahead financially. The year is "netting" them a substantial surplus—a surplus which will yield a sure, second income through the years ahead.

You want to be one of the select few who profit by these prosperous times . . . . but how?

First, trim your expenditures to a point well below your income.

Second, invest the surplus regularly—systematically—in safe bonds, yielding a good interest rate.

The House of Forman can and will help you plan and follow the right program. And from its diversity of choice General List Securities and conservative First Mortgage Bonds, this institution will help select the right investments for you.

Today is a better time to start than tomorrow. As the first step, mail the coupon for descriptive literature, and a free copy of "The Science of Fortune Building."

Mail the coupon below for this free booklet

consisted of a Russia iron drum fitted to a skillet, with a stirring wire manipulated by a hand crank."

Humphrey patented his idea, made up some poppers, and set forth to sell them with high hopes. The Cleveland pop-corn venders looked on the homely device skeptically.

"You say your corn is better than ours," they said. "Suppose you show us."

It was too much for Humphrey to tote his popper and stove around Cleveland on foot, so he set it up in a decrepit old delivery wagon that a grocer had discarded.

On the strength of his demonstrations and the quality of his corn, he managed to sell twenty-five poppers at five dollars apiece, but he was weeks in doing it. Once the street venders and the smaller stores had been canvassed, his market was exhausted. Cleveland's housewives weren't interested in popping corn. He had not the means to canvass a wider territory.

THEN trouble began rising on every side. For some time, Humphrey's eyes had been causing him great pain, and he had been doing his writing for the farm papers with much difficulty. He consulted an oculist.

"Your eyes will be all right if you stop writing," he was told.

His corn popper had exhausted its market, and he no longer could write!

On top of this blow fell another: A pair of colts which Harlow and Dave had bought to be made into racers, turned out so slow that "they couldn't keep ahead of their own dust."

Then came the hardest blow of all: The stable owner who had contracted with the brothers to train and board his colts at thirty dollars a head a month, now refused to pay more than twenty dollars a head.

In desperation, Dudley resumed his writing. The paper went blank under his eyes and he swayed dizzily, unable to go on. Again he tried to market corn-poppers—at four dollars each, at three dollars. People now laughed at the seedy, pleading man with his old wagon, and shut their doors in his face.

"There's nothing in horse-breaking at twenty dollars," said Harlow gloomily, at the family council one evening after he and Dave had spent hard weeks at the stables only to find themselves up against a wall of rising expenses. "We'll have to look for jobs if we're going to eat. We can't keep this up much longer."

The income from the boarders had fallen off. The women's end, too, was losing out. Dudley turned to the want ads in the newspaper and his eyes lighted on this:

Wanted: A man experienced in the sorting of hardwood lumber; apply in person. Steady work.

"That," he exclaimed, "I can do."

And it was the next morning, almost two years after the sale of the farm, that we found him returning afoot to Glenville, unhired by the advertiser—and forty. I've told you how the burden of failure and dejection slipped from his shoulders and the swing of confidence and resolve returned to his step. I've told you the anecdote of the empty log boat and the icy logs.

"During the last two miles of that walk," related Mr. Humphrey, "I de-

liberately took stock of myself. The lumber dealer had told me to 'make my own job.' I didn't ask myself what job there was I would like to do, but what job there was *for* me to do.

"I thought over all the different kinds of work and all the businesses of which I had any knowledge. Every second step I would get back to pop corn. I was about to brush aside the thought in disgust—when I again thought of those beech logs. We hadn't been able to load the logs onto the boat in the usual way, so we had found another way.

"'Since the folks won't buy your popper and pop their own corn, why don't you pop it for them?' something suddenly seemed to ask.

"And before my eyes, like a picture in the air, I saw my old wagon, with the hot popper inside, drawn up alongside the curb, as it had been many a time. But instead of trying to sell poppers I was selling corn! I then remembered that in the same paper where I had read the want ad for a lumber sorter, I had read of a big carnival about to be held in Cleveland.

"'That,' I exclaimed, 'would be the best place to start business!'

"I couldn't get back to the folks quick enough. I got them together and told them my idea.

"'Others make a living selling pop corn,' I argued. 'Why can't we do the same th ng? All of us can do it!'

"Nobody laughed, though my wife admitted later the notion sounded crazy, and she wondered what some of the neighbors back home would say should they happen to come to the carnival. But there wasn't anything else in sight, and we hadn't the price of another square meal among us. The corn popper that wouldn't sell held our only hope.

"The day before the carnival we packed up all that we owned. You'll know it wasn't much when I say that we got it and ourselves into the delivery wagon, together with a bedding of hay. A friend was good enough to lend me fifteen dollars, with which I bought corn, gasolene for the heating stove, and some food. It was only about five miles to the scene of the carnival, and we were fortunate enough to find a house for which we did not have to pay rent until the end of the month. Next evening, on June 23d, 1893, we opened for business on the street outside the carnival ground."

IT WAS a hot evening, but the heat of the street was as nothing compared with the inside of the old wagon, where the gasolene stove had to be kept going under the popper. The whole family took turns at tending the popper, the women alternating with the men. They shouted 'Pop Corn! Hot! Nickel a bag!' until they were hoarse.

"Make no mistake," Mr. Humphrey laughed. "We sold corn. We sold it as fast as we could pop it."

That evening they made eight dollars and fifty cents, while a competitor across the street, with a fine big outfit and a better location, made only fifty cents. Humphrey bought out the man for fifteen dollars, payable at the end of the week. The second day the two stands, manned by the Humphreys, took in thirty dollars; and almost every day thereafter the daily receipts increased.

You, too, can build an INDEPENDENT INCOME

***with* 6½% SMITH BONDS**

TODAY, when means are provided for thrifty men and women to invest their savings in sound securities, the way to financial success is open, and the rules are simple and few:

1 Set aside a part of each month's income as capital;
2 Invest that capital in good bonds to produce more income;
3 Insist upon safety.

The longer you follow this method, the faster your money grows; for, obviously, the more income you receive the more bonds you can buy, and the more bonds you buy the more income you receive. As to the third rule, by insisting upon safety you make sure that you will hold all of your gains.

SMITH BONDS combine the interest rate of 6½% with the security of first mortgages on modern, income-producing city property, and with safeguards that have resulted in our record of

No Loss to Any Investor in 54 Years

As a result of this record, confidence in SMITH BONDS is world-wide. Men and women in 48 States and in 51 countries and territories abroad have bought SMITH BONDS by mail.

You may buy SMITH BONDS in $1,000, $500 and $100 denominations, outright for cash, or under an Investment Savings Plan that pays the full rate of bond interest—6½%—on regular monthly payments of $10, $20, $30, $40, $50 or more.

Mail the form below for our booklets, "Fifty-Four Years of Proven Safety" and "How to Build an Independent Income."

"Mum"
prevents all body odors

Whereupon, a strange turn was reached in the affairs of the Humphreys. They who had failed began to buy out failures—little two-wheel hand-pushed pop-corn carts of venders who weren't able to make the business go. They got them for a few dollars apiece. And the Humphreys *made them pay!* On July Fourth, they had four pop-corn rigs and took in one hundred and twenty-five dollars!

"We'll stay in this business," said Dudley Humphrey. "For every bag of pop corn we get cash. We can't lose so long as we keep selling our pop corn!"

So Humphrey and his wife, with their two youngsters, set up their stand, at what is now One Hundred and Seventh Street and Euclid Avenue, Cleveland. Incidentally, on that site to-day stands the "Elysium," one of the largest and finest indoor skating rinks in the country. It is the property of the Humphrey Company. Harlow and Dave pushed their carts to another section of the city, and Linnie established her cart near a car barn at Lakeview, a suburb of Cleveland.

"Why, it's simply peddling," protested friends; "and the city is full of starving peddlers. Take the money you've made, and get into something sensible."

But the Humphreys stuck to pop corn, and they didn't starve. They effected settlement of their outstanding debts, and made themselves "square with the board" again. And they kept buying in failures!

One day, early in 1895, Dudley noticed a little "hole in the wall" for rent in the city's very center. It was only four feet by eight feet, and the rent was forty-five dollars a month.

"I'd like to rent that room for a pop-corn stand," he informed the agent.

"'Pop corn?' repeated the other, aghast. 'You're loony! Why, three different men in real businesses have tried to make that place pay during the past twelve months. Not one of them made the rent. You wouldn't last a week there with pop corn.'

"If we don't last," suggested Humphrey, "you'll at least have a month's rent in advance, for here it is."

Before two years were out the entire building was under the lease of the Humphreys at an annual rental of four thousand five hundred dollars. Their business amounted to five hundred dollars and six hundred dollars daily!

EUCLID BEACH opened as a park in 1895. The following year the Humphreys had a pop-corn stand there, in addition to their down-town stores. They camped close by on the lake shore, partly for fun, partly for economy. At the close of each night's work they paid their help from the cash drawer. Incidentally, they paid spot cash for all their supplies. They weren't going into debt again if they could help it; and so four prosperous years went by.

"But we didn't like Euclid Beach Park," Mr. Humphrey told me. "It didn't help us to be there. The biggest attraction was a beer garden. Gamblers, fakers, and questionable side shows littered up the place.

"'Why don't you conduct the park decently?' we asked the management. 'Tear down your high board fence, so folks can see what goes on in here; close your beer garden; kick out the rotten shows. Get the decent people to coming.'

"They told me I was talking through

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

my hat. 'Close the beer garden?' they said. 'Why, that's the only feature that pays us!'

"So the beer garden, and the fakers, and the rotten shows stayed; but we closed our pop-corn stand and got out.

"A year later, I was in Chicago. Our plans were all laid for extending our pop-corn business there. We had a vision of selling pop corn in every big city of the United States. But, as chance would have it, I picked up a Cleveland paper. One of the first items I noticed was that Euclid Beach Park had failed, that the land was to be sold for building purposes by allotment. Suddenly I forgot all about our proposed chain of pop-corn stores."

Hurrying home, Dudley called the family together, took the floor and pointed to the news item.

"It's our chance to prove what we've contended all along," he said, "that decency pays, that it would pay at Euclid Beach."

THE park owners, facing a loss of much more than half of their investment if the land were sold for allotment purposes, lost no time in leasing the property to the Humphreys for five years, at twelve thousand dollars a year. They had been losing more than twenty thousand dollars a year.

Down came the high board fence about the park. Out went the beer garden, the gamblers, the fakers, and the rotten shows. Entry to the park was made free to all who behaved themselves.

"What about the others?" Humphrey was asked. "You are conducting a public park. How can you keep anybody out?"

"We'll find a way," he promised. "Wait. Nobody is going to patronize this park if we don't like him or his conduct."

He told the churches, the newspapers, and the street-car company what was going on at Euclid Beach. The preachers and newspapers commended. The street-car company agreed to carry people to and from the park for the price of one fare. With a park that contained nothing but clean and open amusements, health-giving recreations, and no dark or questionable corners, the country-bred Humphreys opened under the slogan of "One Fare, Free Gate, No Beer!" And Cleveland, in whole-hearted approval, poured its thousands into Euclid Beach! Decency *did* pay! It *was* wanted!

"The old park," said Mr. Humphrey, "had collected 90,000 gate admissions during the previous season. We had that many people visit the park in a single day. The pop-corn stand, reëstablished in the same location, was an index to the increase in business. Its best season before had been two thousand dollars. It made ten thousand dollars the first season that the park was under our management; and other park features, such as the dancing pavilion, restaurant, bathing beach, and the multitude of amusements, made corresponding gains. You will understand that, while entry to the park was free, a charge was made for each feature, or otherwise we would have had no income. Incidentally, the pop corn, this past season, did more than sixty thousand dollars net business, which is indicative of the growth we've had along all lines.

"We cleared fifty thousand dollars that first summer, and before a third of the summer had passed we were talking of buying the park. Dave suggested it. At once we got busy, buying in park stock wherever we could get it, though we had to pay seventy cents on the dollar for stock that only a few months before could have been purchased at twenty-five cents on the dollar. We couldn't pay out ready cash, but stockholders were willing to take our notes, for they, too, saw the success-to-be. Within two weeks we owned eighty per cent of the stock—and the park. The rest of the stock was acquired later, for not all holders were eager to sell."

"How did you keep out the undesirables?" I asked him.

"We went to the Supreme Court," he replied, "to establish for all time our claim that Euclid Beach, while open to the public, is not a public park, but a private park. The courts held that we need give no reason for barring the entrance to anyone, that it was simply a question of whether we wanted them on our property. The park was, and is, patrolled by uniformed private police. In those early days our police had to throw out bodily some of the undesirables; but that is rarely necessary now. The undesirables seldom come, and when they do come they don't stay. It isn't the kind of park they like."

Damage suits running into hundreds of thousands of dollars were instituted against the Humphreys when they closed Euclid Beach to various individuals. They fought, and won every suit. One man of some political influence purposely came to the park and misbehaved himself, then dared Humphrey to put him out.

"I don't need to put you out," said Humphrey; "but I am going to see that you behave while you're here."

He called the huskiest of his police officers. "Watch this man," he ordered. "Keep at his heels wherever he goes in this park. As long as he behaves, let him alone. If he misbehaves, pitch him into the street."

THE policeman obeyed his orders to the letter. Thereafter, whenever the man appeared at the park gate the big uniformed guard joined him and, keeping a few feet behind, followed him like a watchful mastiff. All of Cleveland began to laugh as the comedy kept up week after week. At length the man came to Mr. Humphrey.

"I was wrong," he apologized. "You are running this park as it should be run. Now, for Pete's sake, please call off that cop. I like to come here. My wife likes to come; but she can't come if a policeman is to be at our heels."

The man became one of the park's firmest friends.

"We have a clean park," Mr. Humphrey concluded, "because we've not been afraid to fight for it. Anybody can throw out a friendless bum in rags—but that gives only superficial cleanness. If you want *real* cleanness, you must stand ready to throw out the man in immaculate dress—if he isn't clean inside. We've done that. There has been no compromise with influence, position, or money. The success of Euclid Beach has proved that the great majority of people are decent and will patronize a decently conducted thing. True of a park, as I know it is, I reckon it also is true of men and their lives."

Concerning Husbands

(*Continued from page 43*)

Porter. She must be *good*, or the other women wouldn't hate her so."

For a perfectly devoted husband and the father of four children this was simply beneath contempt. Howard Merton trying to look devilish was enough to make any sensible person sick; but the men all laughed admiringly.

When I'd get Will home alone and tell him what I thought of the whole affair, he would be as sensible as though he weren't a man. He'd admit that everything I said about Mrs. Sam Porter was doubtless true. But would this do one particle of lasting good? Not one particle. The next time he'd be out with another man or two, he'd be just as bad as ever. And it was the same with all the other husbands.

Of course, we knew it was a joke; but it made us mad, just the same. It gave you the funny feeling of your husband's only needing another man or two to depend on, in order to express a real opinion that he wouldn't dare to say to you alone. It was very exasperating.

"You men just stick by each other because you think it's masculine to," one of us would declare, disgustedly.

They would look at each other with that smug, self-satisfied grin that made you long to hit them over the head with some blunt, heavy instrument.

"Well, nobody can accuse you girls of sticking by each other for any reason at all," one of them would answer.

WE WERE all of us getting so exasperated, having to listen to this line of talk, on top of having to see Mrs. Porter every way we turned, that there is no telling what it might eventually have led to if something hadn't happened that put a new light on the whole Porter business.

I heard of it first, on account of happening to meet Mrs. Harriman on the street one day. Mrs. Harriman had been Mrs. Beth Porter's best friend, and she had just been down to see the superintendent of schools about her.

"Beth has been teaching in Chicago," Mrs. Harriman told me; "and she's so lonesome and homesick there she can hardly stand it. She's just crazy to come back to Montrose where all her old friends live and everything."

"I'm sure I don't see why she shouldn't," I said. "Everybody likes Mrs. Beth. There's never been a word against her."

"That's just what I've been writing her," said Mrs. Harriman. "And she's decided to come. She says she's never done anything to be ashamed of, and she can't seem to be happy anywhere but in Montrose. So I've been down to see Mr. Curley to ask if he'd take her back in the school."

"Mercy!" I exclaimed. "Does she have to get a job? Doesn't she get any alimony?"

"Oh, she was awarded very good alimony when the divorce was granted; but she's never taken a penny of it. She says she's perfectly well and strong, and she feels more self-respecting to be earning her own living. You know what a plucky, in-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

dependent little thing she always was. She's never said one word against Sam, or complained about anything that's happened. All she wants is to be able to get back to Montrose."

"Well, I should certainly think she ought to have that!" I said.

"That's just what Mr. Curley said. He's tickled to get her back; he says she is a fine teacher. He's going to take her back in September and make her principal of the Whittier School, just as he'd been ready to do when she left."

WELL, of course news like that spread over Montrose like butter on a hot pancake. Everybody was talking about it, and wondering how Mr. Sam Porter and the new Mrs. Sam would take it. With Mrs. Beth safely out of the way, people had already stopped talking about the divorce and in a little while it would doubtless have been all forgotten. I heard indirectly that when Mr. Porter heard it he was simply furious.

A day or so later, I heard that Mrs. Sam had been raising a terrible row about it; said she wouldn't live in Montrose if Mrs. Beth was going to. And so on. All of us girls felt that we could bear it very well if Mrs. Sam didn't live in Montrose; but it wasn't so good for Mr. Sam. His company was here and all his business interests.

They say he just blustered around, said he'd never seen such an exhibition of poor taste, and that he wasn't going to have a delicate, sensitive young girl like his wife placed in any such position.

"A sensitive, delicate young girl!" Mrs. Frank Kirsted fairly snorted. "She's about as thin-skinned as a rhinoceros, if you ask me!"

It may have been mean, but there's no denying that we girls got quite a kick out of the idea of Mrs. Sam Porter being placed in an embarrassing situation. Dulcie, who can be pushed to the point where she'll say almost anything to almost anybody, even mentioned it to Mrs. Sam.

Mrs. Sam took an amused, lofty attitude, as though the very idea of Mrs. Beth's thinking she could settle in Montrose again was so absurd it was funny.

"Oh, it wouldn't do at all!" she said haughtily. "Naturally, Mr. Porter can't have it."

We chuckled among ourselves and wondered just what Mr. Porter could do about it. Well, we found out, quick enough. Not three days later, we heard that Mrs. Beth's appointment had been canceled.

Mrs. Harriman was wild. I met her at the Busy Bee, and she asked me to go up with her and see Mr. Curley about it. I did. Mr. Curley was as nice as could be, terribly regretful. He said again what a splendid teacher Mrs. Beth had been and how glad he would have been to have her back. The school board, he said, had gone over his head and canceled the appointment.

We ran into Rosie Merton as we came out of the schoolhouse, and told her. Rosie is the best-hearted thing in the world, and the tears came to her eyes.

The more you thought about it, the meaner it seemed. Here poor little Mrs. Beth wasn't asking a thing in the world but the chance to earn a decent living in her own old home. Mrs. Harriman felt simply awful.

"Sam Porter is back of this, you mark

Wanted a woman

Not the woman who has running water in her home, and who knows that there is a hydrant near at hand to protect her against the ever-present peril of fire. She need read no further.

The woman we want to hear from is the woman whose back is bent under the burden of carrying water from a well, whose dwelling is ready to be the prey of flames, and whose children are in the shadow of disease epidemics.

In short, she lives in a town without waterworks. We want her to write us, telling us who the leaders in her community are. We will get in touch with these people and show them how easily and inexpensively they can bring their community up to date. The woman, under whose eyes this advertisement falls, may have no influence beyond the range of her family. But at the cost of a postal card, she can make herself a public benefactor. Many a community is enjoying the benefits of a first-class water supply today, because some unknown person in this way helped us to start the ball rolling.

This Bureau exists to create waterworks where none are now, and to make existing waterworks better. Its services are available to anyone who asks for them.

THE CAST IRON PIPE PUBLICITY BUREAU
Room 566—122 South Michigan Ave., Chicago

These posters, 8½"x 11", have proven an effective aid in many campaigns for waterworks—we will gladly send a supply of them for any community.

CAST IRON PIPE

Our new booklet, "Planning a Waterworks System," which covers the problem of water for the small town, will be sent on request

FAVORED by FAMOUS FEET
DOROTHY KNAPP, *the most beautiful girl in the world*

Now . . . a daintier way to end Milady's Corns!

Always your old standby in removing corns, good old Blue-jay now offers many refinements. A new-shaped disc of medication . . . to reach even the awkwardly placed corn without spreading . . . A new creamy-white pad to blend with pink white skin . . . And a sprightly new package worthy of the most fastidious toilette cabinet.

. . .

There are many drastic ways to end a corn. But Blue-jay is the safe and gentle way. A cool pad fits over the corn and stops the pain. The medication is "controlled." And you cannot put on too much or too little. There's just the right amount in each plaster to end the corn.

The new Blue-jay costs no more, and may be had at all drug stores. *For calluses and bunions use Blue-jay Callus Plasters.*

my words," she said. "He's a terribly mean man when he's crossed. He always was."

"Let's go and see the school board about it," said Rosie, who was almost as upset as Mrs. Harriman.

We didn't know who the school board was, but we found out that it was Frank MacReady, Mr. John Manning, and Mr. Broadhurst. We all knew Mr. Broadhurst best, and he was an awfully nice man; so we went up to his coal and lumber office.

He told us very frankly that he had voted against canceling Mrs. Beth's appointment; but the board had been two to one against him. So then the three of us traipsed right over to see Mr. Manning.

He was rather vague about it, just said that it had seemed the best thing to do. Mrs. Porter had been out of the school for a long time. She would be rusty, he said. Mrs. Harriman showed him the glowing letter of praise for Mrs. Beth she'd got from the principal of her Chicago school.

Mr. Manning just got vaguer, said that it would upset the natural run of promotions to bring in anybody from the outside, and hemmed and hawed till we could see that nothing we or anybody else could say to him would change his ideas any.

I must admit that I was so thick it never even occurred to me why he had made up his mind so firmly on this, when, not a month ago, he had got the music supervisor from Kalamazoo without paying any attention to the upsetting of the natural run of promotions. Rosie and Mrs. Harriman saw through it right away, though.

"Sam Porter has put a bug in his ear," Mrs. Harriman declared. "The Samuel Porter Company is Manning's biggest customer. Of course John Manning is glad to be accommodating!"

WE REALIZED that this was the real explanation the instant we heard it. And we realized, also, that it would be hopeless to go to Mr. Frank MacReady. He was general superintendent of the whole Samuel Porter plant. We came out of Mr. Manning's office, feeling that the situation was hopeless.

I walked home alone, feeling worse and worse about it with every step. At first, I had just felt mad about the new Mrs. Porter; but this put a different face on it.

I'd keep remembering one nice thing after another about Mrs. Beth. How she used to come by for me snowy mornings and pull me to school on my sled; how, after teaching all day and going home to clean up the house and get supper, they said she used to go down to Mr. Porter's office evenings and typewrite all his letters for him; how sweet she'd been to Mother Horton when she had erysipelas. And dozens of other things.

It was funny, when you once came to think of it, how a quiet, unassuming little person like Mrs. Beth could have left so many nice memories behind her.

I thought of Mrs. Sam Porter with her two fur coats, and of the way Mrs. Beth had worn that old sweater for three years. I thought of the new Medal Heavy Six coupé Mr. Porter had bought from Scott just for his wife to use, when he had the big car at the plant, and remembered Mrs. Beth with the little old toy delivery wagon she used to pull home from the cash-and-carry, full of groceries that she'd saved a few cents on. Honestly, I was so worked

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

up about Mrs. Beth, I felt I just couldn't stand it.

By afternoon, everybody knew about it. It was Mothers' Club meeting that day, where, thanks to Mrs. Sam's opinion on babies, we didn't have to include her. Nobody paid attention to the meeting, for talking about Mrs. Beth. After meeting, six of us went over to the Oasis for banana-split sundaes.

AND while we were talking there, Mrs. Harriman came in. She saw us and came over, her eyes just afire. She's a peppy, red-headed little woman and she had a scheme.

"Listen, girls," she said, "I've been looking it all up, and there's something we can do!"

"What?" we all asked. Some way, none of us had ever thought of the situation as anything but hopeless. When the United States Government has decided anything, it does certainly seem final.

"United States Government, your grandmother!" scoffed Mrs. Harriman. "It's nothing but the school board that's decided this. And I've just found that Frank MacReady's term runs out two weeks from to-day!"

She looked so triumphant and dramatic when she said this that we all looked hopeful, though we couldn't see just what that had to do with it. He'd be elected right over again. Those same three men had been on the school board for six years. Mrs. Harriman looked disgusted at our thickness.

"He won't be elected unless he is *elected*," she said hotly. "Why don't we stop it?"

"We?" we echoed. "How could we stop it?"

"We've all got votes, haven't we?" Mrs. Harriman demanded. Of course I knew we had, but usually forgot to register, for my part. And I'd never heard of anybody paying any attention to a school board election anyway.

But Mrs. Harriman went on talking. "It only takes two out of three votes in the school board to put Mrs. Beth back," she said. "Mr. Broadhurst is strong for her. If we elected somebody else who is, in Frank MacReady's place, that would be two to one, in spite of Mr. Manning."

"But how could we elect anybody?" I asked, puzzled. I could see how we could vote for somebody; but to start it from nothing—

"Of course we could do it," Mrs. Harriman insisted. "They say only fifteen or twenty people turn out to the school board election. They hold the meeting in the high-school assembly hall, and they just stand up and nominate who they want, and then vote on slips of paper. It's all as simple as A B C. Why don't we get together and put in our man? Somebody," she added, "that Sam Porter hasn't got any hold on."

There was a little pause.

"But who would that be?" Rosie asked faintly.

None of us answered. Remembering how we'd all been jockeyed into taking Sam Porter's wife into our hearts, we all had a guilty realization of how powerful he might be, if he got started. In one way and another, Sam Porter had an awful lot of strings out in Montrose.

Why, I thought of my own husband—goodness knows Will is as high-minded as

The kind of beauty that thrills

WOMEN have found that there's a most unusual kind of beauty about these Iron Clads—a fascination that holds your glance, and makes it hard to look away. Not the kind of beauty that calls attention to the loveliness of the silk. But rather a mysterious quality that glorifies the wearer's own shapeliness and grace.

That is the kind of beauty that thrills. *Nature's* beauty. Beauty of form that's clothed in such a charming way that all its natural loveliness is revealed.

It's in the texture and the silk. And in that silk there's something else besides. There's wear—and wear—and wear.

Ask for Iron Clad 907—$1.50 a pair

Over 14,000 merchants are required to fill the great demand for Iron Clads. But if your dealer can't supply you, write us for Iron Clad 907—and we'll mail your hose *direct*. It's an exquisite full-fashioned style with silk to the hem, and mercerized top and foot for extra strength. State size (8 to 10½) and color (black, white, gun metal, mauve taupe, French nude, grain, parchment, atmosphere, champagne, blonde, toast, woodland rose, silver grey, moonlight, skin, peachbloom).

A Few Magic Minutes with Rogers brushing lacquer

You give a shabby chair a new coat of brilliant color. Thirty minutes later it is back in the living room *ready for use*

Like a fairy wand, your brush of Rogers Brushing Lacquer works magical transformations. Shabby things become works of art *before your eyes.*

Irksome preparatory work is gone. Experience is unnecessary. Merely dip the brush deep into the rich "Rogers" color. Apply it freely *right over the old finish.* "Rogers" covers perfectly. Flows together in a smooth, lustrous coating. And then it—

Dries while you wait!

Dries in thirty minutes. Dries in time for most urgent needs. Dries without laps or brush marks. Dries before dust can mar its satiny sheen. Dries before damage can come to it. Dries to a hard porcelain-like finish that wears and *wears* and WEARS; that does not print; that does not gather lint.

There are literally hundreds of uses for this amazing new home lacquer in every home, store and building. Adheres to unfinished wood, to metal, glass or any old surface. Anyone can apply it.

Dealers everywhere sell Rogers. Comes in cans ready for use, in 18 charming colors. Also black, white and clear.

Be sure to get the *genuine* Rogers in the "Oriental" can, the kind sold everywhere on a "Money-Back" Guaranty.

Armstrong's Embossed Inlaid Linoleum No. 6042

See it . . . Touch it . . . Walk on it
It is unlike any floor you know
